Thorne, Phoebe A., New York, gift to charity, \$140,000.

Throop Polytechnic Institute, gift by Mrs. R. J. Burdette, \$5000.

Tiefer, William, Philadelphia, Pa., contingent bequest to hospital, \$118,000.

Tignego, John, St. Paul, Minnesota, gift to charity, \$15,000.

Timmerman, G. H., St. Louis, Mo., gift to charity, \$5000.

T. M. Hebrew Association, New Orleans, La., gift by various donors, \$8500.

Tomb, Thomas H., Los Angeles, Cal., gift to church, \$5000.

Trades and Workers Association, gift of sanitarium by C. W. Post, \$400,000.

Transylvania University, gift by R. A. Long, \$30,000.

Trask, Mrs. Spencer, Saratoga Springs, N. Y., gift to town, \$24,500.

Travers, Annie E., Philadelphia, Pa., gift to charity, \$5000.

Tree, Lambert, Chicago, Ill., gift to Columbian University, \$10,000; gift to University of Virginia, \$5000.

Trinity College (N. C.), gift by Benjamin M. Duke, Durham, N. C., \$100,000; gift by Benjamin M. Duke, \$230,000; gift by J. Pierpont Morgan, \$'00,000; gift by various donors, \$20,000.

Tuck, Edward, gift to Dartmouth College, \$500,000.

Tucker, A. Q., gift to Baptist Guild, University of Michigan, \$5000.

Tufts, Sarah E., Boston, Mass., gift to church, \$6000.

Tufts College, gift by J. E. Smith, Norwood, Mass., \$500,000; Mary A. Richardson, \$40,000; David Cummings, \$65,000.

Tulane University, gift by F. W. Collendar, \$65,000; gift by Ida A. Richmond, \$25,000; gift by S. O. Thomas, \$60,000.

Tuskegee Institute, gift by Flora L. Dolger, \$1,000,000.

Truax, Mrs. Peter, Eau Claire, Wis., gift to church, \$5000.

Uncle Remus Fund, gift by Andrew Carnegie, \$5000.

Underwood, Carrie P., St. Johnsbury, Vt., gift to church, \$52,000; gift to charity, \$30,500; gift to schools, \$26,000.

Union Gospel Mission, gift by various donors, St. Paul, Minn., \$61,000.

United States Steel Company, gift to Y. M. C. A., Pittsburg, Pa., \$50,000.

University of California, gift by Theodore Kearney, \$500,000.

University of Chicago, gift by John D. Rockefeller, N. Y., \$10,000,000; gift by Martin A. Ryerson, \$100,000.

University of Louisiana, gift by Ida A. Richardson, \$20,000.

University of Michigan (Baptist Guild), gift by A. Q. Tucker, \$5000; gift by Catharine McGregor, \$13,000.

University of Pennsylvania, gift by C. D. Ritchie, \$60,000; gift by unnamed donor, \$100,000; gift by unnamed donor, \$150,000.

University of the South, gift by J. Pierpont Morgan, \$50,000; gift by Andrew Carnegie, \$60,000.

University of Vermont, gift by various donors, \$500,000; gift by Lewis Coburn, Chicago, \$25,000.

University of Virginia, gift by Lambert Tree, \$5000.

University of Washington, gift by Richard Huncheon, \$50,000.

Vail, Theodore N., New York, gift to Phillips-Exeter Academy, \$35,000.

Vanderbilt, A. G., New York, additional gift to Yale University, \$125,000.

Vanderbilt, F. W., New York, gift to Yale University, \$100,000.

Vanderbilt, W. K., New York, gift to State Park, \$50,000.

Vanderburg, Mary, Jersey City, N. J., gift to charity, \$5000.

Vandolah, Emily, Lexington, Ill., gift to Wesleyan University, \$10,000; gift to library, \$10,000.

Various donors, gift for relief of Minnesota forest fires, \$100,000.

Various donors, Boston, Mass., to Campbellton (N. B.) fire victims, \$5000.

Vassar College, gift by Mrs. Russell Sage, \$150,000; gift by Andrew Carnegie, \$10,000.

Vieto, George F., New York, gift to German Hospital, \$5000.

Vilas, Mrs. Henry, Madison, Wis., gift for park, \$25,000.

Voght, Rose A., St. Louis, Mo., gift to hospital, \$15,000.

Voodry, Anne, Bloomington, Ill., gift to University of Illinois, \$8000.

Voorhees, Mrs., gift to Easton College, \$30,600.

Wade, J. H., Cleveland, O., gift to hospital, \$100,000.

Walsh, Thomas F., Washington, D. C., gift to charity, \$100,000.

Wannamaker, E. Findlay, Ohio, gift to church, \$5000.

Warburg, Felix M., New York, gift to Young Men's Hebrew Association, \$60,000.

Ward, Charles S., New York, gift to charity, \$80,000.

Warner, Ezra T., Chicago, Ill., gift to Middlebury College, \$25,000; gift to charity, \$15,000.

Washington, D. C., gift to missions by various donors, \$65,000; gift for erection of Methodist Temple, by various donors, \$130,000.

Washington University, gift by W. H. Bixby, Adolphus Busch and R. S. Brooking, \$3,000,000.

Watson, Anna M., Mount Holly, N. J., gift to Baptist Inst. and Christian Workers, \$50,000.

Wells College, gift of library by Andrew Carnegie, \$40,000.

Wesleyan College, gift by various donors of Macon, Ga., \$15,000; gift by Emily Vandolah, \$10,000.

Western Reserve University, gift by H. M. Hanna, \$250,000; gift by John D. Rockefeller, \$250,000; gift by H. M. Hanna, \$200,000.

Western Theological Seminary, gift by Joanna W. B. Negley, \$20,000.

West Jersey Homeopathic Hospital, gift by various donors of Camden, N. J., \$60,000.

Weston, Frances E., Boston, Mass., gift to Institute of Technology, \$10,000.

Wharton, Ida M., Omaha, Neb., gift to Y. M. C. A., \$5,000.

Wheaton College, gift by Andrew Carnegie, \$25,000; gift by unnamed donor, \$10,000; gift by various donors, \$65,000.

Wheeler, S. D., New Haven, Conn., gift to tuberculosis sanitarium, \$40,000.

Whipple, G. C., Lebanon, N. H., gift to charity, \$10,000; gift to church, \$11,000; gift to library, \$5,000; gift to Colby Academy, \$3,000.

White, William B., Highland Park, Ill., gift to home for crippled children, \$50,000.

Whitney, Edward, Belmont, Mass., gift to Institute of Technology, \$25,000.

Wiggins, C. L., Pensacola, Fla., gift to charity, \$20,000.

Wilberforce University, gift by Hattie Q. Brown, Xenia, O., \$13,000; conditional gift by Andrew Carnegie, \$17,500.

Willamette University, gift by R. A. Booth, \$100,000.

William Jewell College, gift by various donors, \$500,000.

Williams College, gift by Charles L. Pack, Lakewood, N. J., \$10,000; gift by unnamed donor, \$10,500; gift by Francis E. Curtiss, \$25,000.

Wilson, M. H., Evanston, Ill., gift to Y. M. C. A., \$5,000; gift for small park, \$10,000.

Winnetka, Ill., gift of library by Bross estate, \$30,000.

Winters, John W., Paterson, N. J., will for spiritual temple, \$15,000.

Woerrishaefter, Anna, New York, gift to German Hospital, \$100,000.

Women's Auxiliary, gift to General Convention Episcopal Church, \$242,110.

W. C. T. U., gift by C. M. Botsford, \$10,000.

Woodman, J. W., Washington, D. C., gift to Y. M. C. A. workers, \$35,000.

Woodstock College, gift by Ellen Smyth, \$8,000.

Woodward, J. T., New York, gift to charity, \$27,500; gift to church, \$10,000.

Wooster University, gift by Mrs. J. S. Kennedy, N. Y., \$100,000.

Wormser, David, Chicago, Ill., gift to charity, \$5,000.

Wright, A. W., Alma, Mich., gift to Y. M. C. A., \$5,000; gift to Masonic Home, \$200,000.

W. U. Y. University, gift by Helen H. Jenks, \$100,000.

Wyckoff, Peter, New York, gift to Reformed Church, \$50,000.

Wyman, Isaac C., Salem, Mass., gift to Princeton University, \$4,000,000.

Yale University, gift by Samuel H. Lyman, N. Y., \$700,000; gift by National Lumber Association, \$100,000; gift by Dexter Morton, Boston, \$25,000; gift by unnamed donor, \$15,000; gift by Newton Barney, Farmington, Conn., \$20,000; gift by J. H. Whittemore family, Naugatuck, Conn., \$20,000; gift by Mrs. John Hay, \$5,000; gift by Mrs. E. H. Harriman, \$100,000; gift by S. H. Lyman, \$700,000; gift by F. W. Vanderbilt, \$100,000; gift by Geo. G. and W. S. Mason, \$250,000; gift by Mathias H. Arnot, \$15,000; additional gift by A. G. Vanderbilt, \$100,000; gift by Charles W. Lyman, \$5,000; gift by Mrs. Russell Sage, N. Y., \$850,000; gift by J. Pierpont Morgan, \$100,000; gift by J. B. Collins, \$10,000; gift by unnamed donor, \$10,000; gift by F. F. Raymond, \$5,000; gift by unnamed donor, \$25,000; gift by J. B. Collins, \$50,000; additional gift by A. G. Vanderbilt, \$25,000; gift by Mrs. George Day, \$100,000; gift by Adolph Lewisohn, \$100,000; gift by Joseph Parker, \$10,000; gift by H. T. and W. D. Sloane, \$50,000.

Yerkes, Herman, Bordentown, N. J., gift to charity, \$10,000.  
Y. M. C. A., Adrian, Mich., gift by Nathaniel A. Bryant, \$10,000.  
Y. M. C. A., Alma, Mich., gift by A. W. Wright, \$5,000.  
Y. M. C. A., Asheville, N. C., gift by unnamed donor, \$50,000.  
Y. M. C. A., gift by L. S. Starrett, Athol, Mass., \$15,000.  
Y. M. C. A., Birmingham, Ala., gift by various donors, \$211,000; gift by various donors, \$214,000.  
Y. M. C. A., Borgalusa, La., gift by L. H. Goodyear, \$30,000.  
Y. M. C. A., Buffalo, N. Y., gift by various donors, \$200,000.  
Y. M. C. A., Chicago, Ill., gift by Joseph W. Field, London, \$50,000; by various donors, \$351,438.  
Y. M. C. A., Cleveland, O., gift by various donors, \$430,000; gift by Louis H. Severance, \$50,000; gift by J. D. Rockefeller, \$100,000.  
Y. M. C. A., Colorado Springs, Colo., gift by various donors, \$65,485.  
Y. M. C. A., Erie, Pa., gift by various donors, \$200,000.  
Y. M. C. A., Franklin, Mass., gift by various donors, \$30,767.  
Y. M. C. A., Greensboro, N. C., gift by various donors, \$65,000.  
Y. M. C. A., Janesville, Wis., gift by Levi B. Carle, \$5,000.  
Y. M. C. A., Omaha, Neb., gift by Ida M. Wharton, \$5,000.  
Y. M. C. A., Ottawa, Ill., gift by S. E. King, \$50,000.  
Y. M. C. A., Pittsburg, Pa., gift by United States Steel Company, \$50,000; gift by various donors, \$300,000.  
Y. M. C. A., Reno, Nev., gift by various donors, \$176,000.  
Y. M. C. A., Saginaw, Mich., gift by Thomas Merrill, \$5,000; gift by various donors, \$65,000.  
Y. M. C. A., St. Louis, Mo., gift by various donors, \$400,000.  
Y. M. C. A., San Francisco, Cal., gift by various donors, \$60,000; gift by various donors, \$75,000; gift by various donors, \$54,000.  
Y. M. C. A., Springfield, Mass., gift by Herbert C. Platt, \$10,000.  
Y. M. C. A., Tuscaloosa, Ala., gift by various donors, \$20,000.  
Y. M. C. A., Wheeling, W. Va., gift by various donors, \$50,000.  
Y. M. C. A., gift by Mary B. Deere, \$20,000; gift by H. Ainsworth, \$5,000; gift by various

donors, \$11,000; gift by various donors, \$134,000.

Y. M. C. A., gift by James A. Patten, Evanston, Ill., \$25,000; gift by M. H. Wilson, Evanston, Ill., \$5,000; gift by various donors, Burlington, Ia., \$100,000; gift by various donors, Naperville, Ill., \$52,000.

Y. M. C. A., gift by Elizabeth R. Stevens, Swansea, Mass., \$5,000; gift by Mrs. H. A. Brayton, Fall River, Mass., \$5,000.

Y. M. C. A., gift by Mrs. T. K. Gibbs, Newport, R. I., \$15,000; gift by Wm. A. Clark, Los Angeles, Cal., \$150,000.

Y. M. C. A., gift by various donors, Evanston, Ill., \$90,000.

Y. M. C. A., gift by various donors, Burlington, Ia., \$30,000.

Y. M. C. A. workers, gift by John D. Rockefeller, \$450,000; gift by J. W. Woodman, \$35,000; gift by J. A. Stokes, \$100,000; gift by various donors, \$415,000; gift by various donors, Waukegan, Ill., \$35,000.

Young Men's Hebrew Association, gift by Felix M. Warburg, \$60,000.

Y. W. C. A., gift by Geo. H. Higbee, Burlington, Ia., \$30,000.

Y. W. C. A., gift by Mrs. Dorman, N. Y., \$10,000.

Y. W. C. A., St. Louis, Mo., gift by James G. Butler, \$50,000.

Y. W. C. A., Jackson, Mich., gift by various donors, \$45,000.

Y. W. C. A., Cleveland, O., gift by J. D. Rockefeller, \$25,000; gift by various donors, \$75,000.

Zabriskie, Mrs. H. T., Newport, R. I., gift to church, \$17,000; gift to charity, \$10,000.

**GILCHRIST, B. B.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**GILDER, RICHARD WATSON.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**GILBERT, CHARLES.** A French opera singer, died October 11, 1910. He was born in Paris in 1866 and studied at the Conservatoire in 1886, where he took the first prize in opéra comique and second prize in singing and grand opera. He went for one year to the Opéra Comique and was then called to the Théâtre de la Monnaie, where he remained until 1900, when he came to the Metropolitan Opera House in New York City. He appeared here in *Romeo and Juliet*, *La Bohème* and other operas. In the following season he made an emphatic success as the old soldier "Sulpice" in the revival of *The Daughter of the Regiment*. After the retirement of Maurice Grau as manager of the Metropolitan Opera House, Gilbert was not re-engaged. He sang, however, at the Manhattan Opera House and continued as one of the most popular artists at that institution until its close. M. Gilbert was not notable for any great volume or beauty of voice, but he was an extremely skillful actor and possessed in a high degree the beauty of diction and phrasing characteristic of the French school. His most successful achievement at the Manhattan Opera House was the part of the "Father" in *Louise*. He appeared also with success as "Prior" in *Le Jongleur de Notre Dame* and as the "Sacristan" in *Tosca*. M. Gilbert was perhaps the most popular among the male singers at the Manhattan Opera House.

**GOESSMANN, CHARLES ANTHONY.** An American chemist and educator, died September 1, 1910. He was born at Naumburg, Germany, in 1827, and was educated at the University of Göttingen, where he was assistant in the chemical laboratory from 1853 to 1857. In the latter year he removed to the United States. From 1857 to 1861 he was chemist and manager of a sugar refinery in Philadelphia and from 1862 to 1869 he was chemist of a salt company. He was appointed professor of chemistry at Rensselaer Polytechnic Institute in 1866 and remained in that position until 1869. In the following year he became professor of chemistry at the Massachusetts Agricultural College and remained in that position until the time of his death. From 1873 he was chemist of the Massachusetts State Board of Agriculture, and from 1886 was analyst of the Massachusetts State Board of Health. From 1892 to 1894 he was director of the Massachusetts Agricultural Experiment Station. In 1899 he was sent as honorary representative of the Department of Agriculture to study certain scientific matters in Germany, France and other European countries. His conclusions on the practical value of sorghum as a source of sugar and the feasibility of beet sugar production was a starting point for later studies in that line. He was the author of many reports, monographs and papers on chemical subjects, and was a member of several chemical societies.

**GOLD.** The gold production of the world in 1910, according to the preliminary estimates made by the United States Director of the Mint, shows a slight increase over the production of 1909. This will be seen from the table given on next page which shows the production of gold by countries.

It will be seen from this table that Australasia, which has been on the declining scale in the production of gold since 1903, when the value of its output was officially estimated at \$89,210,100, falls to \$71,007,900 in the final estimate for 1909 and to \$65,602,600 in the preliminary estimate for 1910. As a result of this loss and a falling off in the United States, together with the fact that South America has not maintained the rate of increase of recent years, the world's production in 1910 was but slightly greater than in 1909. Present conditions in the principal gold mining countries do not promise any increase in the production at the rate of the last decade. The great gain of the last ten years has been in South Africa, and while further increase may be expected there, the scarcity of labor and other difficulties will make the rate of increase comparatively less, while elsewhere production is scarcely hold-

Country	Gold.	
	Final 1909	Preliminary 1910
United States .....	\$ 99,673,400	\$ 96,055,200
Canada .....	9,790,000	10,000,000
Mexico .....	23,842,900	24,073,100

Total .....	\$454,422,900	\$454,874,000

ing its own. When the natural expansion of industry, commerce and wealth is considered, the fears of an embarrassing supply of gold which are often voiced may be dismissed. According to the *Engineering and Mining Journal* the year 1910 did not witness the opening or development of any important new producing gold mines except in Russia, where the new mines in the Lena Basin and in the Amur region made a notable gain. Russia shows the only large increase in the production for the year. The Transvaal had the smallest gain for years. The production of the United States decreased, as did Australasia as noted above, while other countries had only slight changes.

The value of the production of gold in the United States in 1910 fell below that of the record output of 1909, which was nearly \$100,000,000. Statistics compiled by the Director of the Mint indicate that in 1910 the total production of gold in the United States, including Alaska and the insular possessions, was \$96,055,214, a decrease of \$3,618,186 from the value of the output in 1909. Notwithstanding this increase which was mainly due to reduced production in Alaska, Colorado and South Dakota, the decrease of the two latter having been due to merely temporary suspension of production in important camps, the gold mining industry was, on the whole, during most of the year progressive and in a satisfactory condition. There were important increases in production in California, Nevada and Arizona, and smaller increases for New Mexico, North Carolina, South Carolina, Utah and Washington. There was a decreased output in Alaska, where the production from the Fairbanks and Seward Peninsula gravels has finally begun to decline. There was a decrease also in Colorado, but operations in Cripple Creek mines until near the end of the year were somewhat less active pending a completion of deep drainage by the Roosevelt tunnel. In South Dakota the great Homestake and other mines and mills made less than their normal output, owing to labor difficulties in the early part of the year. Reduced production from Alaska foreshadows a probable continued decrease in 1911, but this reduction may, to a

considerable extent, be offset by production from new placer fields in Alaska and by increased activity in working auriferous lodes. With a prospect of further increase in production in Nevada and continued good results in California gold dredging, resumption of production at their full capacity at the mines of Cripple Creek and at the Black Hills, and with normal conditions elsewhere, the outlook for 1911 is good. The following table shows the production of gold by States and Territories in 1910-11:

State or Territory	United States. Gold.	
	Final 1909	Preliminary 1910
Alabama .....	\$ 29,200	\$ 29,413
Alaska .....	20,339,500	16,987,990
Arizona .....	2,626,800	3,375,256
California .....	20,703,600	21,146,150
Colorado .....	21,845,600	20,408,641
Georgia .....	43,400	25,488
Idaho .....	1,344,200	992,930
Illinois .....	.....	.....
Michigan .....	.....	.....
Missouri .....	200	.....
Montana .....	3,750,100	3,465,364
Nevada .....	16,386,200	17,941,643
New Hampshire .....	.....	599

Total .....	\$ 99,673,400	\$ 96,055,214

It will be seen from this that California resumes first place among the States, which she lost to Colorado in 1897. The latter gained it by the development of the Cripple Creek district and California regains it by the growth of dredging operations. See ATOMIC WEIGHTS.

**GOLD COAST.** A British crown colony and protectorate on the west coast of Africa. Total area (colony, Ashanti, and protectorate), about 82,000 square miles. Population (1906), 1,696,965 (colony, 895,350), Europeans (estimated 1908), 1768. The natives are largely pagan. Accra, the capital, has 17,892 inhabitants. There are 9 government and 138 mission schools; total enrollment (1908), 14,889; government grant, £5921. Palm oil, palm kernels, cacao, rubber and valuable woods are exported. Gold output (1908), 218,762 ounces (£929,270). Statistics for two years are seen below in pounds sterling.

	Imports.	Exports.	Revenue.	Expen.
1907....	£2,366,195	£2,641,674	£703,718	£602,124
1908....	2,029,447	2,525,171	752,142	667,292

Imports of cottons (1908), £441,731; spirits, £138,571; machinery, £149,078; provisions, £100,013. Exports of rubber, £168,144; palm oil, £129,535; palm kernels, £77,821; gold, £1,151,944; lumber, £158,306; cacao, £540,821. Revenue from customs, £489,986. Debt (December 31, 1908), £2,207,164. Tonnage

entered and cleared (1908), 2,215,735 (British, 1,532,478). There are 168 miles of railway open, and 60 under construction. Telegraph lines, 1348 miles. The governor, Sir John Pickersgill Rodger, died September 12, 1910; and James Jameson Thorburn was appointed his successor. ASHANTI has its own laws and ordinances. Its chief town, Kumasi, has 7000 inhabitants. Gold output (1908), 62,489 ounces (£265,468). Revenue, £27,909; expenditure, £98,580. The NORTHERN TERRITORIES are administered under the governor by a chief commissioner, with headquarters at Tamale (area of Northern Territories, between 38,000 and 50,000 square miles; population, probably about 1,000,000; revenue (1908), £10,939; expenditure, £50,262).

Accra had bubonic plague in 1908, and on May 14, 1910, Sekondi, one of the three principal seaports, was declared by the governor of the colony to be infected with yellow fever. The Gold Coast government plans to spend large amounts on a water supply for Accra and other towns. At present the Europeans and better-class natives at Accra, Sekondi, Cape Coast Castle, and Axim depend upon water tanks, while the bulk of the people rely upon wells, shallow ponds, and stagnant streams for their supply.

**GOLF.** The national amateur championship tournament was held at Brookline, Mass., in September and was won by William C. Fownes, Jr., of Pittsburg, who defeated W. K. Wood of Chicago 4 up and 3 to play in the final round. Fownes had the most trouble in the semi-final round when he eliminated C. W. Evans, Jr., the winner of the Western open championship. R. A. Gardner, who carried off the laurels in 1909 failed to qualify. Miss Dorothy Campbell formerly of Scotland, won the women's national golf championship, for the second year in succession, over the Homewood Country Club course near Chicago. The runner-up was Mrs. S. M. Martin, an American woman who represented the Tavistock Golf Club of England. The sixteenth annual championship tournament of the United States Association took place over the course of the Philadelphia Cricket Club, the winner being Alexander Smith. There was a triple tie at 298 between A. Smith, J. J. McDermott and McDonald Smith, the first-named winning the play-off. The excellent showing made by C. W. Evans, Jr., in winning the Western open championship, a feat never before accomplished by an amateur, placed him on a par with Fownes as a player. W. Anderson, who won this event in 1909, died during the year. John Ball won the amateur golf championship of Great Britain and James Braid the open championship. The championship of Wales went to G. Renwick, Jr., and the Irish open championship to L. O. Munn.

The Intercollegiate Golf Association team championship for the third year in succession was won by Yale, whose team defeated Princeton by a score of 7 to 2 over the Essex County Club course at Boston. The individual winner was R. E. Hunter of Yale who defeated F. C. Davidson of Harvard by 1 up.

**GONDRA, MANUEL.** President of the Republic of Paraguay, inaugurated November 3, 1910. He was born in 1872 and was educated at the National College of Paraguay, where he later became one of the professors. He is one of the leading educators of the republic and has devoted many years to study and research in political government, as well as writing several valuable treatises on this subject. He has been Minister to Brazil, representative to the three Pan-American conferences and Minister of Foreign Relations.

**GOODYEAR, ELLSWORTH D. S.** An American soldier and inventor, died September 3, 1910. He was born in North Haven, Conn., in 1827. In 1846 he went to New York and began work in the rubber trade with the Goodyear family, who were manufacturing India rubber articles in Newark, N. J. He remained there until the outbreak of the Civil War, participating in many of the experiments which led to discoveries that have made the name of Goodyear famous. He invented and patented for himself a process for making hollow rubber goods, all rubber balls and like substances having been made of solid rubber until that time. Upon the outbreak of the Civil War he recruited a company of the 10th Connecticut Volunteers and served as its captain for three years. He then returned home, but soon returned to his old regiment, being mustered into service as major. He was promoted to be lieutenant-colonel and was in command of his regiment on General Grant's line of battle before Petersburg, Va. He led the assault on Ft. Gregg April 2, 1865, and succeeded in holding the position gained by his regiment, although 118 men and eight officers of the 190 men and thirteen officers of his regiment were killed or wounded. He was brevetted colonel for meritorious service and brigadier-general for special gallantry in the assault on Ft. Gregg. From 1868 to 1884 he was United States custom house inspector in New Haven. He served in the Connecticut legislature in 1867.

**GOUCHER COLLEGE,** formerly the Woman's College of Baltimore. An institution for the higher education of women at Baltimore, Md., founded in 1884. The change in the name of this college was made by order of the Board of Trustees and under an act of the General Assembly of Maryland, March 31, 1910. The reasons leading to this change were, that since the origin of the institution many other institutions quite different in actual operation have arisen that have assumed the name of Woman's College. The proximity of several such to this institution caused confusion because of similarity in names. The name selected was in recognition of J. F. and Mary Cecilia Goucher, founders of the institution and patrons of the higher education of women. The college has but one department, the academic, and there were enrolled in this in the year 1909-10, 367 students. The faculty numbered 34. The income

of the college during the year was \$129,127 and the amount of the endowment fund was about \$300,000. The college is one of the few that does distinctively college work, not complicated by special courses or extra charges.

**GRAHAM, ROBERT.** An American publicist and philanthropist, died March 8, 1910. He was born in England in 1882 and graduated from the University of Durham. After his graduation he became secretary of the Church of England Temperance Society of the Northern Provinces. In 1880 he removed to the United States where he founded the Church Temperance Society of America, and it was through his efforts that the first high license bill, introduced into the New York legislature by Theodore Roosevelt, became a law.

**GRANT, HUGH JOHN.** An American public official and capitalist, died November 3, 1910. He was born in New York City in 1858 and was educated in Berlin and at St. Francis Xavier College, New York. He studied law at the Columbia Law School and began the practice of law. As a partner of others and in his own law office he built up a large practice. In 1883 he was elected alderman as a Tammany candidate and was re-elected in the following year. At this time great frauds in the granting of street railway franchises by the Board of Aldermen developed and Grant took an active stand against the perpetration of these frauds. He thus became well known to the citizens and in 1884 was selected by Tammany Hall as a candidate for mayor against William R. Grace. He was defeated, but as a reward for his fight against Grace he was appointed sheriff of the county. In 1888 he was elected mayor over Abram S. Hewitt, of the county Democracy, and Joel B. Erhardt, Republican. He was re-elected in 1890, defeating Francis M. Scott, the Fusion candidate. During his service as mayor Mr. Grant was instrumental in compelling the telegraph and telephone companies to take down their overhead wires and place them in subways. When the companies refused to do this he went out with gangs of laborers and chopped down the poles and tore down the wires. He was the candidate again for mayor in 1894 in opposition to William L. Strong, but was de-

feated. After this defeat he practically retired from city politics. He had large business interests and was one of the best known figures in the financial life of the city. He contributed largely to charitable causes.

**GRANT, S. HASTINGS.** An American librarian and author, died May 9, 1910. He was born in 1823 at Marshall, N. Y., and graduated from Princeton College in 1847. He was for seventeen years librarian of the Mercantile Library in New York City, and for twelve years was superintendent of the New York Produce Exchange. He resigned that position to become secretary to Mayor Edson of New York City, by whom he was appointed comptroller of the city in 1883. At the expiration of his term he was for two years vice-president of the United States National Bank. While librarian of the Mercantile Library, he with D. C. Gilman and one or two others organized the first librarians' convention, of which he was the secretary. He was at various times recording and corresponding secretary and vice-president of the New York Bible Society, and was a trustee of the New York Genealogical and Geographical Society. He compiled *New York City during the American Revolution*, was a contributor to the *Historical Magazine* and was one of the founders of the *Genealogical and Geographical Record*. He was for twenty-five years a deacon and for five years an elder in the Madison Square Presbyterian Church, New York City.

**GREAT BRITAIN.** The United Kingdom of Great Britain and Ireland is a constitutional monarchy. Capital, London.

**AREA AND POPULATION.** The total area is 121,391 square miles. The estimated population of the three divisions June 30, 1910, was: England and Wales, 36,169,150; Scotland, 4,921,251; Ireland, 4,371,163; total, 45,469,564. These figures do not include the army, navy, or merchant seamen abroad. The area and population by divisions (in 1891 and 1901 (census of Apr. 1) are shown in the following table:

	Sq. mi	Pop. 1891	Pop. 1901
England and Wales.	58,324	29,002,525	32,527,843
Scotland.....	30,405	4,025,647	4,472,103
Ireland.....	32,360	4,704,750	4,458,775
	121,089	37,732,922	41,458,721
Isle of Man.....	227	55,608	54,752
Channel Islands....	75	92,234	95,618
Army, Navy and merchant seamen abroad.....		224,211	367,736
	121,391	38,104,975	41,976,827

The population of Wales in 1881 was 1,306,513; in 1891, 1,519,035. The decline of population in Ireland reflects the deplorable economic conditions which have obtained in that island; from the maximum of 8,175,124 in 1841, the number has continuously decreased to the estimated 4,371,163 of 1910. It is of interest to note that in 1841 Scotland had 2,620,184 inhabitants and England and Wales 15,914,148.

The following table shows the rate, per thousand of the population, of births (b), deaths (d) and marriages, i. e. persons married (m), for four years:

	E & W.	Scot.	Ir.	U. K.
(b) 1895 .....	30.3	30.0	23.3	29.4
(b) 1900 .....	28.7	29.6	22.7	28.2
(b) 1905 .....	27.2	28.1	23.4	26.9
(b) 1909 .....	25.6	26.4	23.5	25.5
(d) 1895 .....	18.7	19.4	18.5	18.7
(d) 1900 .....	18.2	18.5	19.6	18.4
(d) 1905 .....	15.2	15.9	17.1	15.5
(d) 1909 .....	14.5	15.3	17.2	14.8
(m) 1895 .....	15.0	13.5	10.1	14.3
(m) 1900 .....	16.0	14.6	9.5	15.1
(m) 1905 .....	15.3	13.4	10.5	14.6
(m) 1909 .....	14.6	12.3	10.4	13.9

Immigration and emigration in 1908 and 1909 (exclusive of passengers from or to Europe) were as follows:

	British.	For'gn's.	Total.	U. S.
Im., 1908.....	172,043	170,879	342,922	65,418
Im., 1909.....	149,068	112,257	261,325	53,323
Em., 1908.....	263,199	123,212	386,411	99,669
Em., 1909.....	288,761	185,617	474,378	109,700

The last column shows the number of British passengers from and to the United States; corresponding figures for British North America are: Immigration 1908 and 1909, 39,866 and 33,509 respectively; emigration, 81,321 and 85,887. Of the British and Irish emigrants in 1909, about 65 per cent. were English and 1909, about 65 per cent. were English and Welsh, 19 per cent. Scotch, and 16 per cent. Irish.

Estimated population of larger cities at middle of 1909: London, 4,833,938 ("Greater London," 7,429,740); Glasgow, 872,021; Liverpool, 760,357; Manchester, 655,435; Birmingham, 563,629; Leeds, 484,012; Sheffield, 470,958; Dublin (with suburbs), 398,356; Belfast, 386,576; Bristol, 377,642; Edinburgh, 355,366; West Ham, 321,767; Bradford, 293,983; Newcastle-on-Tyne, 281,584; Hull, 275,552; Nottingham, 263,443.

EDUCATION. Elementary instruction is compulsory in England, and Wales, and illiteracy has declined remarkably. In England and Wales on July 31, 1909, there were in the public elementary schools accommodations for 7,117,941 pupils. At the end of the school year these schools reported 32,065 departments, with 38,571 men teachers and 120,615 women teachers, and an enrollment of 3,041,699 boys and 2,983,564 girls. The average attendance was 88.98 per cent. There were 44 higher elementary schools, Dec. 31, 1909, with 521 teachers, an average enrollment for the year of 10,821, and 90.4 per cent. average attendance. There are many special elementary schools for the blind, deaf, etc. For public secondary education, there were at the end of 1909 912 schools, with 80,923 boys and 69,871 girls enrolled. Other public schools (July 31, 1909): Evening schools and classes, 7202, with 351,285 male and 244,649 female students; day technical classes, 103, with 9650 students; technical institutions, 42, with 3010 students; 46 art classes, with 2642 students; 225 schools of art, with 42,112 students. Teachers are trained at pupil-teacher centres, training classes, and hostels. The public schools here treated are not to be confounded with the many private institutions commonly known as "public schools," where pupils receive instruction at their own expense.

In Scotland, for the year ended August 31, 1909, there were 3149 public primary schools,

with accommodations for 1,015,806 pupils, 803,820 pupils enrolled, and 705,126 in average attendance; 182 higher grade public schools, with an enrollment of 22,403 and average attendance 22,118; 939 evening schools, with 87,599 enrolled and 47,002 average attendance; 756 continuation classes, with 108,813 students. Teachers in elementary (day and higher grade) schools numbered 5225 men and 13,856 women, not including 165 male and 642 female pupil teachers. Secondary public schools, 57, with 19,391 pupils enrolled (12,019 boys, 8885 girls) and an average attendance of 19,391. Students at training colleges and centres, 2991.

In Ireland, December 31, 1909, there were 8401 public primary schools, with accommodations for 760,871 pupils, 679,235 enrolled, and 501,907 in average attendance; teachers, 12,842 (5387 men). In 1909 there were seven training colleges, with 1194 students.

In the year ended Mar 31, 1908, the total payments for public elementary education in England and Wales amounted to £21,987,004 (£11,104,305 Parliamentary grant, £10,467,804 local rates), against £21,223,183 in the preceding year. In Scotland, the expenditure from Parliamentary grants was £2,001,264 in the year ended March 31, 1909, and £2,129,781 in the following year. In Ireland, the amount expended from grants and rates by the Commissioners of National Education was £1,624,490 in 1908-9 and £1,688,649 in 1909-10.

The number of students at the universities in 1908 is stated as follows: In 1908, London, 1370; Aberdeen, about 1300; St. Andrews (1909), 310; Victoria University, Manchester, 1587; Durham, 2034 (including 1100 evening students); Liverpool, 1105 (not including 1100 in affiliated schools); Bristol, 987; Birmingham, about 975; Sheffield, 2186 (including 1390 evening students); Leeds, 1115; Wales, about 1540. In 1910: Oxford 3826; Cambridge, 3726; Edinburgh, 3322; Glasgow, 3728; Dublin, about 1500.

PAUPERISM. The mean number of paupers, and the ratio per 1000 of estimated population, relieved on Jan. 1 and on July 1 preceding (exclusive of casual paupers and insane) are as follows, for England and Wales:

	In-door		Out-door		Total	
	Mean	Ratio	Mean	Ratio	Mean	Ratio
1900 ..	188,423	5.9	500,214	15.8	688,505	21.7
1905 ..	222,217	6.6	542,891	16.1	764,589	22.6
1909 ..	248,516	7.0	546,302	15.5	793,851	22.5
1910 ..	256,523	7.2	534,933	15.0	790,496	22.1
Adults, Able-bodied.						
1900 ..	34,387	1.1	59,288	2.3	93,655	3.0
1905 ..	43,987	1.3	72,379	1.9	116,366	3.4
1909 ..	50,420	1.4	71,742	2.0	122,162	3.4
1910 ..	53,797	1.5	72,832	2.0	126,629	3.5

In above table, for paupers receiving both in-door and out-door relief deductions are made from total. The number of poor of all classes in receipt of relief in parishes in Scotland on January 1, 1909, was 76,659 paupers and 40,028 dependents; on January 1, 1910, 75,628 and 40,955. The number of paupers in receipt of relief in unions in Ireland at the close of the first week in January, 1909, was 102,066 (5129 adult able-bodied); 1910, 99,002 (2354 adult able-bodied).

AGRICULTURE. Including rivers and lakes, but not including foreshore and tidal waters,

the area of the United Kingdom is 77,716,992 acres, of which England includes 32,578,178 acres, Scotland 19,472,515, Wales 4,749,301, Ireland 20,731,244, Isle of Man 145,325, and the Channel Islands 40,429. The total cultivated area in acres (in the first week of June) in Great Britain, in Ireland, and in the United Kingdom, including Man and the Channel Islands, has been as follows:

	Gr. Brit.	Ireland	U. K.
1895 .....	32 577,513	15,179,382	47,883,797
1900 .....	32,437,386	15,234,693	47,795,120
1905 .....	32,286,832	15,262,949	47,673,115
1908 .....	32,211,386	14,665,300	47,001,961
1909 .....	32,183,073	14,580,142	46,888,403

The general decrease of the cultivated area for many years is the occasion of considerable concern. There has been practically no decrease in Scotland, but in England the acreage under crop has grown smaller from year to year, coincident with the extension of public instruction and the development of great manufacturing industries.

The following table shows the area in acres under the principal crops in the first week of June, 1909:

	Gr. Brit.	Ireland	U. K.
Wheat .....	1,823,498	43,606	1,868,385
Barley .....	1,664,386	163,100	1,829,933
Oats .....	2,981,877	1,035,735	4,038,425
Rye .....	55,566	7,464	63,150
Beans .....	313,864	1,626	315,607
Peas .....	183,910	264	184,298
Total corn crops..	7,023,101	1,251,795	8,299,798
Potatoes.....	575,461	579,799	1,167,084
Turnips and swedes	1 555,548	276,944	1,840,602
Mangold.....	456,490	73,437	530,930
Cabbage, kohlrabi, and rape.....	172,031	42,383	215,064
Vetches or tares..	136,245	1,849	138,386
Other crops.....	188,126	27,259	217,421
Total green crops .	3,083,901	1,001,671	4,109,487
Clover, grass, etc., For hay .....	2 035,773	830,998	2,879,297
Not for hay ...	2,178,802	1,495,594	3,708,352
Total cultivated ..	4,214,575	2,326,592	6,587,649
Permanent grass For hay .....	4,777,388	1,447,540	6,231,341
Not for hay .....	12,675,017	8,501,851	21,199,654
Total uncultivated	17,452,405	9,949,391	27,430,995
Flax.....	295	38,110	38,405
Hops.....	32,539	.....	32,539
Grand total, with other crops, fruit, and fallow .....	32,183,073	14,580,142	46,888,403

The production of the principal crops in imperial bushels, long tons, and cwts., and the average yield per acre, are stated as follows for 1909:

	Great Britain.		Ireland.	
	Production	Per ac.	Production	Per ac.
	Bu.	Bu.	Bu.	Bu.
Wheat .....	61,442,375	33.69	1,754,321	40.23
Barley .....	60,938,561	36.61	8,006,192	49.09
Oats .....	123,025,577	41.26	55,711,393	53.79
Beans .....	8,937,439	28.66	72,399	44.53
Peas .....	4,400,934	25.89	8,098	30.67
	Tons.	Tons	Tons	Tons
Potatoes.....	3,674,453	6.39	3,202,819	5.52
Turnips & swedes	25,123,550	16.15	4,970,039	17.95
Mangold .....	9,570,604	20.97	1,442,157	19.64
Cultiv. hay.....	2,936,091	1.44	1,473,807	1.77
Uncultiv. hay ...	5,432,360	1.14	3,102,370	2.14
	Cwts.	Cwts.	Cwts.	Cwts.
Hops.....	214,484	6.59	.....	.....

The total cultivated area in acres and the area under the leading crops, except grass, etc., in England, Scotland, and Wales were as follows in 1909:

	Eng.	Scot.	Wales.
Total.....	25,540,985*	4,859,609	2,782,479
Wheat .....	1,734,236	49,679	39,583
Barley .....	1,379,133	199,981	85,272

\* Of which 21,488,862 were occupied by tenants.

The following areas are stated for the principal crops in Great Britain (England, Scotland, and Wales) in June, 1910: Wheat, 1,808,858 acres; barley, 1,728,685; oats, 3,020,966; beans, 267,378; peas, 153,049; potatoes, 539,684; turnips and swedes, 1,565,345; mangold, 442,779; cultivated grasses, clover, etc., for hay, 2,074,579; permanent grass for hay, 5,004,444.

Livestock in the first week of June, 1909 (the figures for horses include only those used for agriculture, brood mares, and unbroken horses):

	Gr. Brit.	Ireland.	U. K.*
Horses .....	1,552,993	528,806	2,091,743
Cattle .....	7,020,982	4,699,564	11,761,830
Sheep .....	27,618,419	4,133,358	31,839,799
Swine .....	2,380,887	1,149,179	3,543,331

\* Including Isle of Man and the Channel Islands.

Figures for Great Britain were distributed as follows:

	Eng.	Scot.	Wales.
Horses .....	1,187,870	204,490	160,633
Cattle .....	5,100,145	1,176,165	744,672
Sheep .....	16,494,812	7,328,265	3,795,342
Swine .....	2,046,284	129,819	204,784

**MINING AND METALS.** The following table shows the quantity and the spot value of the coal and the principal metal products of the United Kingdom:

	1900	1907	1908
Coal, tons..	225,181,300	267,830,962	261,528,795
£	121,652,596	120,527,378	116,598,848

£...	52,147	6,228	3,311

\* From British ores. † From foreign ores.

In 1895 the coal output was 189,661,362 tons, valued at £57,231,213; the output increased to 230,334,469 tons in 1903, valued at £88,227,547,

which is much less than the value of the smaller output of 1900; the largest output is for 1907, 267,830,962 tons, valued at £120,527,378; the largest valuation is for 1900, given above; output in 1909, 263,774,312 tons, valued at £106,274,888. Exclusive of coal, the spot value of the ores, stone, etc., raised in 1907 was £14,751,710; in 1908, £13,404,822. The value of all mineral produce raised (coal, ores, stone, etc.) in 1907 was £135,279,088; in 1908, £130,003,670, of which £88,617,201 in England, £23,906,434 in Wales, £17,220,218 in Scotland, £217,056 in Ireland, and £42,761 in the Isle of Man. The number of persons employed at all mines was 1,017,740 (of whom 987,813 in coal mines). At quarries there were 85,475 employed.

**FISHERIES.** The value of fish (exclusive of salmon) landed on the coasts of the United Kingdom is reported as follows:

	Eng. & W.	Scot.	Ire.	U. K.
1900				
Fish, wet	£6,610,268	£2,325,994	£306,229	£9,242,491
Fish, shell	334,882	75,906	61,426	472,214
Total...	6,945,150	2,401,900	367,655	9,714,705
1908				
Fish, wet	£7,748,183	£2,512,162	£287,316	£10,547,661
Fish, shell	294,033	74,062	50,497	418,592
Total...	8,042,216	2,586,224	337,813	10,966,253
1909				
Fish, wet	£7,497,139	£2,889,107	£304,937	£10,691,183
Fish, shell	262,900	72,392	58,864	394,156
Total...	7,760,039	2,961,499	363,801	11,085,339

**MANUFACTURES.** Great Britain, and especially England, is preëminently a manufacturing country, but recent statistics, comprehensive and reliable, are not available. The output of smelting products is shown in a foregoing section. Some statistics are available for the textile industry, in which the United Kingdom leads the world and from which about one-half of her exports are derived. In the two years 1908 and 1909, the approximate weight of raw materials used was: Cotton, 1,814,000,000 lbs.; wool, 668,000,000; flax, 219,500,000; total, 2,701,500,000 lbs. In addition, there are large manufactures of silk, jute, hemp, etc. In 1907, there were employed in cotton manufacture 576,820 persons (217,742 males and 359,078 females); wool, worsted, and shoddy, 261,192 (108,838 and 152,354); flax, jute, and hemp, 151,143 (45,910 and 105,233); silk, 28,873 (8776 and 20,097); hosiery, 39,971 (9609 and 30,362); lace, 21,024 (12,843 and 8181); elastic, cocoanut fibre, horsehair, and China grass, 8200 (3642 and 4558); all textiles, 1,087,233 persons employed (407,860 males and 679,363 females). Some idea of the importance of British manufactures may be gained from the following section, which shows the export values.

**COMMERCE.** The values of imports, as given in the following statistics, represent the cost, insurance and freight; or, when goods are consigned for sale, the latest sale value of such goods. The values of the exports represent the cost and charges of delivering the goods on board ship, and are known as "free on board" values. Total imports, imports re-exported, and net imports (i. e. imports for home consumption) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

	Total Imps.	Re-exports	Net Imports
1895 ....	£416,689,658	£59,704,161	£356,985,497
1900 ....	523,075,163	63,181,758	469,893,405
1905 ....	566,019,917	77,779,913	487,240,004
1907 ....	645,807,942	91,942,084	553,865,858
1908 ....	592,953,487	79,623,697	513,329,790
1909 ....	624,704,957	91,344,819	533,360,138

The value of diamonds imported into the United Kingdom from the Cape of Good Hope is not included in the total imports; the value of diamonds exported from the Cape of Good Hope to the United Kingdom has been: 1895, £4,754,085; 1900, £3,433,636; 1905, £6,661,957; 1907, £8,828,805; 1908, £4,607,427; 1909, £6,169,953.

Imports and exports of gold and silver specie and bullion have been as follows: 1895, £46,675,661 and £31,726,759 respectively; 1900, £39,513,173 and £31,972,039; 1907, £73,072,439 and £67,786,858; 1908, £56,472,203 and £63,252,987; 1909, £66,506,718 and £60,034,718.

Total exports, re-exports of foreign and colonial produce, and domestic exports (i. e. exports of the produce of the United Kingdom) have been valued as follows (exclusive of specie and bullion and of foreign merchandise transhipped under bond):

	Total Exps.	Re-exports	Domestic Exps.
1895 ....	£285,832,407	£59,704,161	£226,128,246
1900 ....	354,373,754	63,181,758	291,191,996
1905 ....	407,596,527	77,779,913	329,816,614
1907 ....	517,977,167	91,942,084	426,035,083
1908 ....	456,727,521	79,623,697	377,103,824
1909 ....	469,525,166	91,344,819	378,180,347

The total imports of merchandise and the domestic exports of merchandise in 1908 and 1909 are classified in the table on the following page.

Re-exports of merchandise, classified according to the table on next page, showed the following totals in 1909: Class I., £12,000,262; Class II., £54,398,260; Class III., £24,672,737; Class IV., £273,560; total £91,344,819. Leading imports not specified in the table were in 1909: Wheat, £45,272,131; butter, £22,424,962; oil, £13,634,727; silk manufactures, £12,169,205; bacon, £13,801,665; chilled and frozen beef, £10,143,401; rubber, £14,138,204; corn, £12,122,812; fresh fruit, £10,855,200; leather, etc., £11,575,931; refined sugar, £12,621,207; raw sugar, £9,070,687; tea, £9,070,687. Leading domestic exports in 1909 not specified in the table: Cotton piece-goods, £68,279,389; cotton yarn, £11,822,145; woolen and worsted yarn, £5,004,357; coal, £35,319,070.

In 1908, of the total imports of merchandise, the value of £404,817,692 was from foreign countries and £128,135,795 from British possessions; in 1909, £479,453,018 and £145,251,939 respectively. In 1908, of the domestic exports of merchandise, £250,338,797 to foreign countries and £126,765,027 to British possessions; in 1909, £250,942,263 and £117,238,084.

The relative importance of the trade by principal countries in 1908 and 1909 is shown in the table on next page; the figures indicate thousands of pounds sterling and represent total imports and total exports of merchandise.

**SHIPPING.** Total net tonnage, with cargo and in ballast, entered and cleared (exclusive of the coasting trade) in 1900, 1908 and 1909, is shown in table on next page.

Merchandise	Imports		Exports	
	1908	1909	1908	1909
I. Food, drink and tobacco:				
Grain and flour .....	£ 72,733,334	£ 83,107,421	£ 3,522,912	£ 3,399,004
Meat, including animals for food .....	49,448,334	47,623,423	1,052,701	1,070,347

## SHIPPING

	Shipping	British	Foreign	Total
Entered				
1900 .....	31,445,328	17,777,478	49,222,806	
1908 .....	38,889,588	26,579,469	65,469,057	
1909 .....	39,661,660	26,647,859	66,309,519	
Cleared				
1900 .....	31,265,508	18,035,379	49,300,887	
1908 .....	38,980,184	26,996,955	65,977,139	
1909 .....	40,102,311	26,855,852	66,958,163	

Of the total entered in 1909, 64,327,508 tons represented steamers; cleared, 64,968,655; total tonnage entered with cargo, 40,315,803; cleared with cargo, 57,194,005. Principal foreign tonnage entered in 1909: German, 6,766,591; Norwegian, 4,315,870; Danish, 2,889,986; Swedish, 2,456,144; Dutch, 2,272,075; French, 1,640,466; Spanish, 1,477,199; Belgian, 1,355,135. American tonnage entered was only 274,241. Total net tonnage entered in the coasting trade in 1909, 60,566,043 (56,662,653 British), and cleared 60,060,979 (56,258,528 British). On December 31, 1909, the merchant marine consisted of 11,797 steamers, of 10,284,818 tons net and 9392 sailing vessels, of 1,301,060 tons net; total, 21,189 vessels, of 11,535,878 tons net (18,402,201 tons gross).

COMMUNICATIONS. On December 31, 1908, the total length of railway open to traffic was 23,205 miles; on December 31, 1909, in England and Wales, 16,045, in Scotland, 3844; in Ireland, 3391; total, 23,280. The latter figure represents a paid-up capital of £1,314,406,000, with about 3.39 per cent. in 1909 as the average rate of dividend or interest. In 1909, total gross receipts, £120,174,052; working expenditure, £75,037,588; net receipts, £45,136,464; percentage of working expenditure to gross receipts, 62. Total length of tramways and light railways, December 31, 1908, 2464 miles; December 31, 1909, 2526 miles. Length of state telegraph line, March 31, 1909, 57,858 miles; wires, 1,046,912 miles; offices, 11,077; other

telegraph offices, 2498; telephone subscribers, 61,349; post-offices, 23,772 (1910, 23,925).

FINANCE. The unit of value is the sovereign, or pound sterling, worth \$4.8665. Revenue and expenditure with surplus (+) or deficiency (—), have been as follows for fiscal year, ended March 31:

	Revenue	Expenditure	+ or —
1896.....	£109,339,946	£105,130,474	+£4,209,472
1900.....	129,804,566	143,687,068	-13,882,502
1905.....	153,182,782	151,768,875	+ 1,413,907
1908.....	156,537,690	151,812,094	+ 4,725,596
1909.....	151,578,295	152,292,395	- 714,100
1910.....	131,696,456	157,944,611	-26,248,155

The very large deficit for the fiscal year 1910, was caused by the non-collection of a portion of the revenue owing to the delay in passing the finance act (the deficit occurs largely in the item of property and income tax, which is returned at £13,295,000 in 1909-10, against £33,930,000 in 1908-09). The revenue (exchequer receipts) was derived as follows in 1909-10: customs, £30,348,000; excise, £31,032,000; estate, etc., duties, £21,766,000; stamps (exclusive of fee and patent stamps), £8,079,000; land tax, £150,000; house duty, £580,000; property and income tax, £13,295,000; (total from these sources, £105,230,000, against £125,550,000 in 1908-9 and £130,320,000 in 1907-8); post-office, £18,220,000; telegraph service, £3,090,000; telephone service, £1,720,000; crown lands (net receipts), £480,000; Suez Canal dividends, £1,056,207; fee and patent stamps, £1,037,000; miscellaneous, £863,249; total, £131,696,456. Details of expenditure in the fiscal year 1910: (1) consolidated fund services: National debt, £21,757,661 (including £15,490,798 interest on funded debt and £1,000,000 new sinking fund); civil list, £470,000; annuities and pensions, £265,269; salaries and allowances, £72,332; courts of justice, £518,565; miscellaneous services, £327,389; payments to local taxation accounts, £9,445,395; total consolidated fund services, £32,856,611; (2) supply services: Army (including ordnance factories), £27,236,000; navy, £35,807,000; civil services, £31,260,000; old-age pensions, £8,750,000; customs and excise, £2,116,000; inland revenue, £1,226,000; postal services (including telegraph and telephone), £18,693,000; total supply services, £125,088,000; total expenditure chargeable against revenue, £157,944,611. For the fiscal year 1910, the total exchequer receipts (including the revenue and, on April 1, 1909, a bank balance of £6,350,427) and issues (including the expenditure and, on March 31, 1910, a bank balance of £2,831,248) balanced at £237,124,840.

The budget for 1910-11, introduced by the Chancellor of the Exchequer on June 30, 1910, showed an estimated expenditure of £171,857,000; in addition, there was the 1909-10 deficit of £26,248,000 and £908,000 granted in 1909-10 and payable in 1910-11; total, £199,482,000. The estimated revenue was £199,791,000, consisting of £30,046,000 arrears of taxation, £142,455,000 tax revenue, and £27,290,000 non-tax revenue.

On March 31, 1910, the funded debt stood at £614,868,547, the estimated capital liability of terminable annuities at £35,876,861, and the unfunded debt at £62,500,000; total so-called "dead-weight" debt, £713,245,408 (against £702,687,897 in 1909, £755,072,109 in 1905, and

£628,930,652 in 1900); in addition, there were other capital liabilities amounting to £49,218,217, so that the gross debt stood at £762,463,625 (against £754,121,309 in 1909, £796,736,491 in 1905, and £638,919,932 in 1900). Assets, March 31, 1910, £42,244,600 (including the estimated market value of Suez Canal shares, £35,295,000). Debt charges for the year 1909-10, £20,584,054 (exclusive of £173,607 for the management of the debt).

ARMY. The British Army is organized in two lines: A regular army with its Reserve and Special Reserve, and a territorial army. The first line furnishes garrisons for India, South Africa, and Egypt and maintains at home enough troops to supply the drafts for those organizations in foreign service and depots for the cavalry and artillery, while it also maintains at home sufficient troops to form an expeditionary force brought up to war strength by the reserve. The special reserve would aim to make up the losses caused by the wastage of wars. The reserve includes the former Militia, while the territorial army corresponds to the Yeomanry and the former volunteers. The reorganization proposed by the Territorial and Reserve Forces act of 1907 was carried to completion in 1910 and while much remained towards working out practical details and securing proper efficiency yet the general scheme had been carried out. The whole army establishments and effectives both officers and men is shown in the accompanying table from the Army estimates 1910-11.

	Establishments		Effectives
	1910-11	1909-10	Jan. 1, 1910.
Regular Forces (Regimental), Home & Colonial (including Regular)	1910-11	1909-10	1910.
Establishment of Special Reserves	170,083	169,141	165,686
Colonial & Native Indian Corp	8,580	8,604	8,375
Army Reserve	138,000	137,000	133,990
Special Reserves (excluding Regular Establishment)	86,539	90,664	70,486
Militia Reserve United Kingdom	700	1,650	845
Militia Reserve Division	3,163	3,163	5,010
Militia Reserve Channel Islds, Bermuda and Bermuda volunteers	2,894	2,862	2,582
Territorial Force	315,408	315,842	274,188
Officers Training Corps (Officers and Permanent Staff)	823	788	522
Total Home and Colonial Establishments	726,190	729,714	664,211
Regular Forces (Regimental) on Indian Establishments	75,884	76,009	77,825
Total	802,074	804,973	742,036

Service in the regular army is by voluntary enlistment for a term of 12 years, part of which as specified below is served with the colors and the remainder in the Reserve: Cavalry, 7 years; Royal Horse Artillery and Royal Field Artillery, 6 years, (5000 for 3 years); Royal Garrison Artillery, 8 years, Foot Guards and Line Infantry, 7 years, Royal Engineers, 7 years. On completing these periods of service a soldier serving abroad is liable to be retained with the colors for a period not exceeding one year. There are special arrangements for boys. According to the army estimates of 1910-11 the number of all ranks on the establishment of the regular army was as follows:

	1910-11	1909-10
Cavalry .....	20,378	20,110
Royal Artillery .....	48,263	48,659
Royal Engineers .....	9,989	9,793
Infantry .....	149,824	149,797
Army Service Corps .....	6,696	6,806
Army Medical Corps .....	4,961	4,963
Colonial and Native Indian Corps .....	8,580	8,804
Departmental Corps .....	3,465	2,982
Excess Numbers .....	1,850	1,300
Total .....	254,006	253,004

In addition there were permanent staff of the Territorial Force 2937; Staff and Departments 1152 and miscellaneous establishments 1448, making the grand total voted 184,200, exclusive of the army in India. The army estimates for 1910-11 gave the distribution of the total establishment of the regular army as follows: England and Wales, 96,360; Scotland, 4607; Ireland, 25,737; Jersey, 791; Guernsey and Alderney 917; colonies, Egypt, China and Cyprus, 46,702; in India, 77,866. Total, 254,325.

The expeditionary force mentioned above would consist of 5665 officers and 161,631 men available on mobilization for army service. Of this force 4992 officers and 61,977 men would be drawn from the regular peace establishment (including reserve officers), while 85,013 men would be furnished from the Reserve. From the Special Reserve and from the Territorial Force would be drawn a non-regular contingent of 757 officers and 7350 men, and 7272 men respectively.

The Territorial Army in 1910 was considered an advance over the Volunteers and Yeomanry, which it had supplanted, but it was held to be organized rather on paper than as a trained military force. The Territorial infantry was making some progress, but the artillery and mounted forces presented so many problems that only in the case of a few organizations was anything like reasonable training or proficiency attained.

The army estimates for 1910-11 gave the establishment of the Territorial Force, all ranks, as below, to which are appended the strength on January 1, 1910.

	Establishment	Strength
Cavalry .....	26 111	25,321
Artillery .....	46,061	39,575
Engineers .....	15,550	13,257
Infantry .....	209,976	173,267
Army Service Corps .....	8,884	7,674
Medical Corps .....	15,104	12,549
Veterinary Service .....	212	94
Total .....	312,898	271,737

On April 1, 1910 the establishment of the Territorial Army was given as 11,214 officers and 301,363 others and the strength at 9726 officers and 269 255 others.

The army estimates for 1910-11 amounted to £27,760,000, or an increase of £25,000 as compared with 1909-10 (£27,435,000). The cost of the Territorial Army is approximately £3,100,000 and this item in the future was expected to increase as new rifle ranges were most badly needed as well as additional equipment.

On August 2, 1910, an important Order in Council was issued in reference to the office and duties of the Inspector-General of the Forces, who since the reorganization of the army and the abolition of the position of Commander-in-Chief was the ranking officer, although his functions were advisory and he reported to the

Army Council which administers the army. The inspectional duties of this office by the order mentioned were restricted to the United Kingdom and adjacent islands and the office was to be known as Inspector-General of the Home Forces. The incumbent was Gen. Sir J. D. P. French, G. C. V. O., K. C. B., K. C. M. G., and the staff contained inspectors of cavalry, horse and field artillery, garrison artillery, royal engineers, and infantry. There was also established as an inspectional office that of General officer Commanding-in-Chief in the Mediterranean and Inspector-General of the Oversea Forces. To this office, which in its previous form, it will be remembered, was resigned by the Duke of Connaught and declined by Lord Kitchener, General Sir Ian Hamilton was appointed. The General officer Commanding-in-Chief in the Mediterranean and Inspector-General of the Oversea Forces is to deal with questions of strategy, defence, training, and tactics in communication with the war office and the subordinate commanders. During the year there were no additional schemes of reorganization, although many considered matters in the army far from satisfactory. Every effort was being made to perfect the organization and to develop the Territorial Army which in February reached a maximum of 276,000, or within 10 per cent. of such strength as it was ever likely to reach. After that time there was a decline and many authorities believe that Great Britain must resort to conscription to maintain her military position. The question of horses for cavalry and artillery was also a pressing one and attempts were being made to make up the deficiency and six new depots were proposed, but on mobilization there would be a deficiency of 120,000 horses. It was proposed to bring the establishment of a cavalry regiment up to 696 men and 523 horses. Manœuvres were held on a large scale during the year, and a number of territorial corps were in service with regulars. In the September manœuvres the Blue army was commanded by General Sir Charles Douglas and the Red by Sir Herbert Plummer. The Red army had a territorial mounted brigade, infantry brigade, and field artillery brigade, while a feature of the manœuvres was the presence of the Queen's Own Rifles brought over from Canada.

NAVY. The number and displacement of warships, built and building, of 1000 or more tons, and of torpedo craft of 50 or more tons, were as follows in 1910 (exclusive of vessels over 20 years old, unless reconstructed and rearmed since 1900, those not actually begun, although authorized, and transports, colliers, converted merchant vessels, etc.): Battleships of 10,000 tons and over, 62, of about 984,000 aggregate tons; armored cruisers, 42, of 567,500 tons; cruisers above 6000 tons, 17, of 168,900 tons; cruisers of 6000 to 3000 tons, 51, of 234,100 tons; cruisers 3000 to 1000 tons, 23, of 49,540 tons; torpedo-boat destroyers, 209, of 115,050 tons; torpedo boats, 59, of 12,710 tons; submarines, 84, of 29,378 tons; total, 548 war vessels, aggregating about 2,161,000 tons. The larger vessels of the effective navy were as follows in 1910: Second-class battleships, 8, of 14,150 tons each; 9, of 14,900 tons each; 6, of 12,950 tons each (these 23 battleships were completed between 1892 and 1902); First-class battleships, 8, of 15,000 tons each (completed between 1901 and 1904); 5, of 14,000 tons each

(completed in 1903 and 1904); 2, of 11,800 tons each (1904); 8, of 16,350 tons each (1906); one, of 17,900 tons (1906), the *Dreadnought*, with a main armament of ten 12-inch guns and a speed of 21.25 knots; 2, of 16,500 tons each (1907), the *Lord Nelson* and *Agamemnon*, four 12-inch and ten 9.2-inch guns and 18 knots speed; 3, of 18,600 tons each (1909), the *Superb*, *Téméraire*, and *Bellerophon*, ten 12-inch guns and 21 knots speed; 3, of 19,250 tons each, the *Vanguard* (commissioned March 1, 1910), *Collingwood* (April 19), and *St. Vincent* (May 3), ten 12-inch guns and 21 knots speed; one, of 19,900 tons, the *Neptune* (completed about the end of 1910), ten 12-inch guns and 21 knots speed; Armored cruisers: 6, of 12,000 tons each (1901-4); 4, of 14,100 tons each (1902-3); 9, of 9800 tons each (1903-5); 6, of 10,850 tons each (1905-6); 6, of 13,550 tons each (1906-7); 3, of 14,600 tons each (1908-9), the *Shannon*, *Minotaur*, and *Defense*, four 9.2-inch and ten 7.5-inch guns and 23 knots speed; 3, of 17,250 tons each (1908-9), the *Indomitable*, *Inflexible*, and *Invincible*, eight 12-inch guns and 25 knots speed.

The first-class battleships building in 1910 were: the *Neptune*, mentioned above; the *Colossus* and *Hercules*, of 20,250 tons each, ten 12-inch guns, 21 knots speed, to be completed in 1911; *Orion* (to be completed 1911), *Monarch*, *Conqueror* and *Thunderer* (all three laid down in April, 1910, to be completed in 1912), the four ships of 22,500 tons each, with ten 13.5-inch guns and 21 knots speed. Four ships, probably of same displacement and armament as these last were authorized, but not laid down, in 1910. The armored cruisers building in 1910 were: the *Indefatigable*, of 18,750 tons, and *Lion*, of 26,350 tons, both to be completed in 1911; *Princess Royal*, of 26,350 tons (laid down in May, 1910, to be completed in 1912); *Australia* and *New Zealand*, of 18,750 tons each, offered to the Imperial government by the Commonwealth and the Dominion respectively (both laid down in June, 1910, to be completed in 1912). The *Indefatigable* is to have a speed of 25 knots, the *Lion* and *Princess Royal* 28 knots, and the *Australia* and *New Zealand* 26 knots; all to have a main armament of eight 12-inch guns. Another armored cruiser, similar to the *Princess Royal* was authorized, but not laid down, in 1910. Five protected cruisers were passed into commission and four begun in 1910.

It should be noted that in the construction of the larger ships the all-big-gun, one-calibre principle has been adopted—a principle not confined, however, to Great Britain, but generally adopted by the chief naval powers since the Russo-Japanese war; another feature of British policy is the abandonment of torpedo-boat construction and great activity in the building of torpedo-boat destroyers. The number of officers and men provided for sea service in 1910-11 was 104,116. Naval expenditures in 1909-10, £35,807,000; estimated for 1910-11, £40,603,700. See BATTLESHIPS and NAVAL PROGRESS.

GOVERNMENT. The executive authority is vested in the king, acting through his ministers. The legislative power devolves upon the Parliament, a body of two chambers, the House of Lords and the House of Commons. The House of Lords consists of the lords spiritual—the archbishops of Canterbury and York and 24 bishops of the Church of England—and the

lords temporal, who hold their seats by hereditary right on creation of the sovereign (550 peers), by election for life (28 Irish peers), and by election for each Parliament (16 Scottish peers); total in 1910, 620. The House of Commons consists of representatives of county, borough, and university constituencies in Great Britain and Ireland, elected for each Parliament.

Edward VII. (q. v.) died May 6, 1910, and was succeeded by his second (but only surviving) son, George Frederick Ernest Albert, as George V, "by the Grace of God of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India." He was born June 3, 1865, and married, July 6, 1893, Princess (Victoria) Mary of Teck. The heir apparent is their oldest son, Edward (Albert Christian George Andrew Patrick David), born June 23, 1894, and created Prince of Wales June 23, 1910.

At the end of 1910, those of the King's ministers who form the cabinet were: Prime Minister and First Lord of the Treasury, Herbert Henry Asquith (appointed April, 1908); Lord High Chancellor, Lord Loreburn (December, 1905); Lord President of the Council, Viscount Morley of Blackburn (November, 1910, succeeding Earl Bauchamp, who had succeeded Viscount Wolverhampton); Lord Privy Seal, Earl of Crewe (October, 1908); First Lord of the Admiralty, Reginald McKenna (April, 1908). Secretaries of State: for Home Affairs, Winston Spencer Churchill (February, 1910, succeeding Herbert Gladstone—in March, 1910, the latter was raised to the peerage as Viscount Gladstone on his appointment as governor-general of the Union of South Africa); Foreign Affairs, Sir Edward Grey (December, 1905); Colonies, Lewis Vernon Harcourt (November, 1910, succeeding the Earl of Crewe); War, Richard Burton Haldane (December, 1905); India, Earl of Crewe (November, 1910, succeeding Viscount Morley); Chancellor of the Exchequer, David Lloyd-George (April, 1908); Secretary for Scotland, Lord Pentland (John Sinclair) (December, 1905); Chief Secretary to the Lord-Lieutenant of Ireland, Augustine Birrell (January, 1907); Postmaster-General, Herbert Louis Samuel (February, 1910, succeeding Sydney Charles Buxton). Presidents of committees of the Council: Board of Trade, Sydney Charles Buxton (February, 1910, succeeding Winston Spencer Churchill); Local Government Board, John Burns (December, 1905); Board of Agriculture, Earl Carrington (December, 1905); Board of Education, Walter Runciman (April, 1908); Chancellor of the Duchy of Lancaster, Joseph Albert Pease (February, 1910, succeeding Herbert Louis Samuel); First Commissioner of Works, Earl Beauchamp (November, 1910, succeeding Lewis Vernon Harcourt).

## HISTORY

INTRODUCTION. Down to the political crisis at the close of 1908, which was followed by the general elections in January, 1910, the Liberal party had been in power since January, 1906, when, for the first time in twenty years it assumed the government with an effective majority, for although it was in power from 1892 to 1895, its majority was at that time precari-

ous. During these four years, from January, 1906, to December, 1909, the Liberal Government had devoted a great part of their time to an attempt to carry through the Licensing and Education acts, both of which were unsuccessful. The other leading feature of their policy was a thorough-going plan for industrial legislation, and along this line they succeeded in passing a number of important measures. Among these may be mentioned the Trades Disputes act, making it lawful for a combination to do what an individual might lawfully do, legalizing picketing, and giving immunity to trade union funds; a Workmen's Compensation act, extending the application of the principle of compensation for injuries to additional classes; the small holdings act to facilitate the purchase or lease of Small Holdings of land; the Port of London act, establishing a port authority to purchase and henceforth manage the Port of London docks; a law establishing an eight-hour day in coal mines; the Children's Court act creating a juvenile court and containing many other provisions for promoting the health and safety of children; the Old Age Pension act of 1908, allowing all persons seventy years of age and over, except lunatics, criminals, aliens, and beneficiaries of poor law relief, a pension of 5s. (\$1.25) a week if their incomes do not exceed \$157.50 a year; a Labor Exchanges act, providing for exchanges in London and the provincial cities to facilitate the employment of labor; a Trade Boards act, designed to put an end to the sweating system and providing for commissions of workmen and employers to decide the question of minimum wages; a Development and Road Improvement Funds act, authorizing the application of money to afforestation, land reclamation, agricultural improvement, rural industries, harbor and transportation improvement, etc., and providing for a road board to improve facilities for motor traffic; and a Housing and Town Planning act, aiming to improve the condition of workmen's dwellings. The four last-named measures were passed in 1909, and in that year there was much discussion of a plan for unemployment insurance which, however, was deferred to the following year. In 1909, also, a new Irish Land act was carried through to make further financial provision for land purchase, supplementing the Wyndham act of 1903. The carrying out of this industrial programme had involved heavy expenses. The Old Age Pension act alone had brought in an extraordinary item of expense which had to be met out of the ordinary revenue. In 1909 therefore the Government was confronted with a deficit of £16,500,000. To meet this it presented the budget which contained such a radical departure from precedent in the matter of taxation as to precipitate the Parliamentary crisis.

The means by which this deficit was to be met, in accordance with the taxation scheme embodied in the budget by Mr. Lloyd-George, were as follows: First, the withdrawal of £3,500,000 from the debt reduction fund; secondly, the raising of revenue from three sources of taxation, namely, luxuries of the masses, excess of wealth, and monopolies. Under the first head were included increased duties on spirits and tobacco; under the second, an increase of the income tax on all unearned incomes and on all incomes over £3000, together with a supertax on incomes of more than £5000, in-

creased succession duties on great fortunes, and the levying of a more rapidly progressive tax on estates between £5000 and £1,000,000; under the third head, that is, monopolies, a great increase in the price of liquor licenses, and a new and very important scheme for the taxation of land values, according to which plan there was to be, first, a valuation of the selling price of all lands and then on that basis, four taxes were to be levied: First, a tax on increment value; second a tax on the site value of undeveloped land; third, a reversion tax on benefits accruing to the lessor on the termination of a lease; and fourth, a tax on mineral rights.

The Finance bill embodying these provisions became the subject of the most important and interesting debate of recent Parliamentary history. The debate did not turn on the Government's general industrial programme, although some features of it had been criticised and though the Government was charged with extravagance. It turned on the proper means of meeting the deficit, the Opposition attacking the budget scheme as unfair, discriminating against certain classes, inadequate, likely to discourage the investment of capital and, above all, as socialistic. Toward the end of the year it was evident that the House of Lords would reject the measure. This immediately raised the constitutional question as to the right of the Lords to reject a money bill and gave occasion to renewed demands for a radical reform of the Upper House and even for its suppression. The alternative plan for meeting the revenues offered by the Opposition was the taxation of imports pursuant to the policy of tariff reform which had been long advocated by the Unionists and which appeared to be gaining in public favor. The final debate in the House of Lords began on November 22 when Lord Lansdowne introduced a resolution declaring that the bill should be rejected until the country had pronounced upon it. After a noteworthy discussion this resolution was carried on November 30 by a vote of 350 to 75. Two days later, Mr. Asquith, the Premier, moved in the House of Commons, "That the action of the House of Lords in refusing to pass into law the financial provision made by this House for the service of the year is a breach of the Constitution and a usurpation of the rights of the House of Commons." This was carried by a vote of 349 to 134 and on the following day Parliament was prorogued, the date of its dissolution being fixed on January 8, to be followed by the general elections.

THE POLITICAL CAMPAIGN. The leading issues in the campaign, from the Liberal point of view, were the budget and the veto power of the House of Lords, but the Opposition pressed the question of tariff reform upon the country and the subject of Home Rule was also discussed, Mr. Asquith having committed his party in a public speech to the granting of a measure of Home Rule for Ireland. A novel feature of the campaign was the active part taken by the peers in public discussion. Never before had so many of the nobility appeared on public platforms, and their campaign was, on the whole, spirited and effective. The arguments employed in the canvass may here be briefly summarized: Early in the campaign Mr. Balfour attempted to rouse the country by the fear of a war with Germany. The alarmist spirit had already shown itself on many occa-

sions in 1909 and 1908, and he caused no small sensation in a speech on January 4 in which he declared that many intelligent observers believed war with Germany to be inevitable and that English public opinion was not alive to the danger. While he did not agree with those prophets, he maintained that in the event of conflict England would be overthrown. He declared that the country must bestir itself and organize and equip the navy on such a footing as would avert war. He referred to the remark of men in high position in Germany that their government would never permit England to adopt tariff reform, and said that such a threat made his "blood boil." The war scare was employed by the Opposition as a campaign argument on many occasions. The Liberals made light of the notion that Germany would fight and repeatedly gave assurance that the navy was in a position of unassailable superiority. They characterized the appeal of the alarmists as the desperate resort of a failing cause. As to the budget, the Liberals held that it resorted to the only equitable means of meeting the increased expenditure, that is to say, the levying of taxes in such a way as to distribute the burdens among the different classes. The alternative scheme of the tariff reformers was dismissed as unpractical. The Liberals believed in the open market for a manufacturing and insular country which was industrially supreme and controlled the world's carrying trade. The Opposition retorted that the world was passing through a period of industrial war and that the old idea that Great Britain could supply other countries with manufactures while they supplied her with raw materials was a mere fantasy. Tariff reform would greatly increase employment of labor, could be so executed by the imposition of duties on luxuries as to tax the rich and not the poor, would broaden the basis of taxation and would have the incalculable advantage of permitting Colonial preference. In answer to the Government's plea that the principles of taxation applied in the budget were equitable, the Opposition declared that they rested on the assumption that income and wealth were a fixed quantity and that all that was needed was to divide them fairly. But wealth and income were not a fixed quantity; they depended on the coöperation of many industrial factors, especially upon the investment of capital in the country, and the budget would seriously injure the interests of the working classes by discouraging the investment of capital. The Opposition declared that the main issues of the campaign were two and very simple, namely, the disruption of the House of Lords and the separation of Ireland from the United Kingdom. They told the electors that if the present Government were returned the British members of the House of Lords would support Home Rule at the price of the Irish support of the budget. As to the House of Lords, Mr. Asquith did not say that he meant the abolition of the Upper Chamber, but that was really his purpose, for if the Lords were to lose their veto power, the Upper Chamber would cease to have any reason for existence. The veto of the Lords was, they said, not imposed upon the people but upon the Commons, and the Lords would have been false to their duty if they had not thrown the budget question upon the people. The Liberals maintained that the rejection of the budget by the Lords at the instigation of the tariff reformers

after it had been exhaustively discussed and carried by an overwhelming majority in the Commons was unprecedented and violative of constitutional practice as hitherto recognized by Conservatives and Liberals alike, and marked an assumption by the Lords of a right to control taxation. For four years the Lords had persistently refused to acknowledge the supremacy of the Commons in legislation and it had now destroyed the means of providing revenue for the year.

**THE GENERAL ELECTIONS.** The chief purpose of the Liberals in the campaign was to arouse the electorate to their support in such numbers as would make it clear that the country was in accord with their views as to the House of Lords. They had already a powerful majority in the Commons and if they retained that majority intact or but slightly diminished, it would seem safe to conclude that the country was resolved seriously to curtail the authority of the Upper Chamber. The results of the election, however, were indeterminate. They were as follows, the figures in parentheses showing the strength of the party groups in the previous Parliament:

---

Liberals .....	(373)	275
Labor Party.....	(46)	40
Nationalists .....	(83)	71
Independent Nationalists .....		11
Unionists .....	(168)	273
<hr/>		
Total .....		670
Ministerial majority .....		124

---

In the former Parliament the Liberals and Laborites alone had a majority of 251 over the Conservatives. This majority was thus reduced by the elections to 42, but assuming that the Nationalist and Labor groups would vote for the Liberals, the Ministerial majority was 124. Nevertheless the Liberals received a few more votes than had been cast for them in 1906. On the other hand, the Conservative vote had increased in far greater proportion. There was not nearly so much popular enthusiasm over the question of the Lords as had been anticipated by the Liberals. This constitutional question was presented to the people in a confusing manner and it was evident that they did not form a clear idea of it. On the other hand, the Conservatives did not succeed in rousing the country for protection. Tariff reform was not a direct party issue, but in the elections it cut across party lines. Nevertheless, it was perhaps the leading feature of the election and made great progress in many parts of the country. Even where the Unionists did not gain seats they succeeded in cutting down the majorities against them. In general, in rural England, especially in the middle and southern parts of the country, and including quiet towns, villages, cathedral cities, and the like, Conservatives were chosen. On the other hand, in the industrial towns, with the exception of Birmingham (Chamberlain's headquarters) Liberals were elected. The working classes were, on the whole, either Liberal or Socialist, whereas agriculturalists, the merchant class, clerks, etc., were Conservative. The system of plural voting, that is to say, the granting of the right to vote for property, profession, or occupation, place of residence, etc., whereby certain persons were able to vote several times, especially the rich who owned more than one

HERBERT HENRY ASQUITH  
BRITISH PRIME MINISTER

1470

dwelling, worked on the whole to the advantage of the Conservatives. The verdict was generally interpreted as carrying with it no popular mandate for any radical reform of the House of Lords. It placed the Irish party in a strong position, for it was not possible for the Government to disregard them. Parliament could not, therefore, settle the main questions concerning England without regarding the demands of the Irish members, and the latter were not likely to support the Liberal party unless they received substantial concessions. The Irish opposed certain clauses in the budget, especially the whisky duties, but if the Government purchased their support by giving them Home Rule, the English voters were likely to be alienated and the Lords would certainly oppose. In short the election revealed a comparative indifference to the constitutional question and turned mainly on so-called practical issues. It did not seem that the Liberals could carry out any very radical plan for the reorganization of the Upper Chamber. On the other hand, the Conservatives could not put through their tariff reform scheme. Nevertheless, the tariff reform movement had clearly made great headway throughout the country. It was estimated that the Unionist vote was nearly eight times the Liberal and Labor vote if Scotland, Ireland, and Wales were counted. The Labor party was placed in strong position by the elections, inasmuch as the Government, if it disregarded it, must have the support of either Nationalists or Unionists on account of its diminished majority. Soon after the elections certain cabinet changes were announced. Mr. W. S. Churchill became Secretary of State of the Home Department, Mr. Sydney Buxton President of the Board of Trade, Mr. Joseph A. Pease, Chancellor of the Duchy of Lancaster, and Mr. H. Samuel, Postmaster General.

**OPENING OF PARLIAMENT.** Parliament was opened by the King on February 21. The speech from the throne referred to the consummation of the South African Union at the end of May and to the meeting of the Legislative Councils of India. As to the financial situation it said that estimates would be laid before Parliament in due course. The provisions made by the last Parliament for the year about to end had not been acted upon. The expenditures authorized by that Parliament had been incurred, recourse being had to the temporary expedient of borrowing. A substantial increase in the naval establishment had been necessary. As to the constitutional question it announced that proposals would be laid before the House of Lords to define the relation between the two Houses, and to secure the undivided authority of the Commons in financial affairs, and its predominance in legislation. In the opinion of His Majesty's ministers the House of Lords ought to be so constituted that it would adopt an impartial attitude toward proposed legislation. The debates in Parliament soon showed the necessity of conciliating the Irish party to avoid a political crisis. Mr. Redmond, the leader of the Nationalists, had referred in a speech at Dublin to certain guarantees which he understood the Government was to obtain from the throne for the passage of a veto bill this year. He reminded his hearers of the Liberal pledge that they would not retain office unless they were assured that the Lords' veto would be limited, and he declared that unless

they had some guarantees for the prompt passage of a veto measure, Ireland would not approve their policy. When this was brought up in the debate following the opening of Parliament, Mr. Asquith denied that he had ever said that the Liberal Prime Minister ought not to meet the House of Commons unless he had obtained in advance guarantees for "the contingent exercise of the royal prerogative." To demand such assurances in advance as to a measure that had not even been submitted was, in his opinion improper. The Government intended, however, to present at an early date, resolutions which could afterwards be embodied in a veto bill and this would be carried through in the present session. The budget must be reaffirmed and it was necessary for the House to deal at once with the redemption of the 1900 war loan, and then the renewal of the treasury bills as they fell due; also with the supplementary estimates and with certain necessary votes of supply which must be passed before the end of the financial year. Both the Irish and the Labor members declared their understanding of the situation to be that if the Liberals took office they would deal with the House of Lords at once. On February 28 Mr. Asquith made clear the policy of the Government in this matter, moving that down to March 24 the Government should have all the time of the House for necessary business, which must be disposed of before the end of the financial year. When the House met after Easter on March 29, the Government would, he said, present the Lords' question in the form of resolutions declaring that the Lords must be excluded from financial legislation and that in all legislation their veto power must be so far limited as to insure the predominance of the House of Commons in the life of a single Parliament. He also said that the resolutions were to make it clear that a democratic basis for the Upper Chamber was contemplated and he declared that the Government staked its existence on passing a measure that would rid the Commons of the veto of the House of Lords. In the course of the debate the Government made it known that it would not take up the budget until the Lords' resolutions were out of the way. The early days of the session were taken up with measures for temporary loans to meet the financial emergencies and after some debate and criticism these financial emergency bills, the War Loan Redemption bill and the Treasury bill, were passed by the House of Lords.

On March 14 Lord Rosebery introduced his resolutions for the reform of the House of Lords, of which the following were the leading features: First, "that a strong and efficient Upper Chamber is not merely an integral part of the British Constitution, but is necessary to the well-being of the State and the balance of Parliament;" second, "that such a Chamber can best be obtained by the reform and reconstitution of the House of Lords;" third, "that a necessary preliminary of such reform is the acceptance of the principle that the possession of a peerage should no longer of itself give the right to a seat and vote in the House of Lords." The main points brought out in the debate on these resolutions were the increasing criticism on the part of the nation of the principle of heredity in the constitution of the House of Lords; the evident need of change in spite of the services of the Lords in the

past; the necessity that the House of Lords should reform itself in view of the Government's evident intentions virtually to destroy the House of Lords, substituting for it an impotent and mongrel Upper Chamber, which would leave the House of Commons absolutely in control. The Government would endeavor, it was said, to pass a resolution declaring the complete domination of the Commons, accompanying it by a promise of some time setting up a phantom Second Chamber. Meanwhile they would pass the Home Rule measure; hence the Lords ought at once to set about their own reform. Moreover, it was necessary, that when the Government plans were made known, the Lords should have an alternative proposal to lay before the country. The Rosebery resolutions were carried in the House of Lords on March 21.

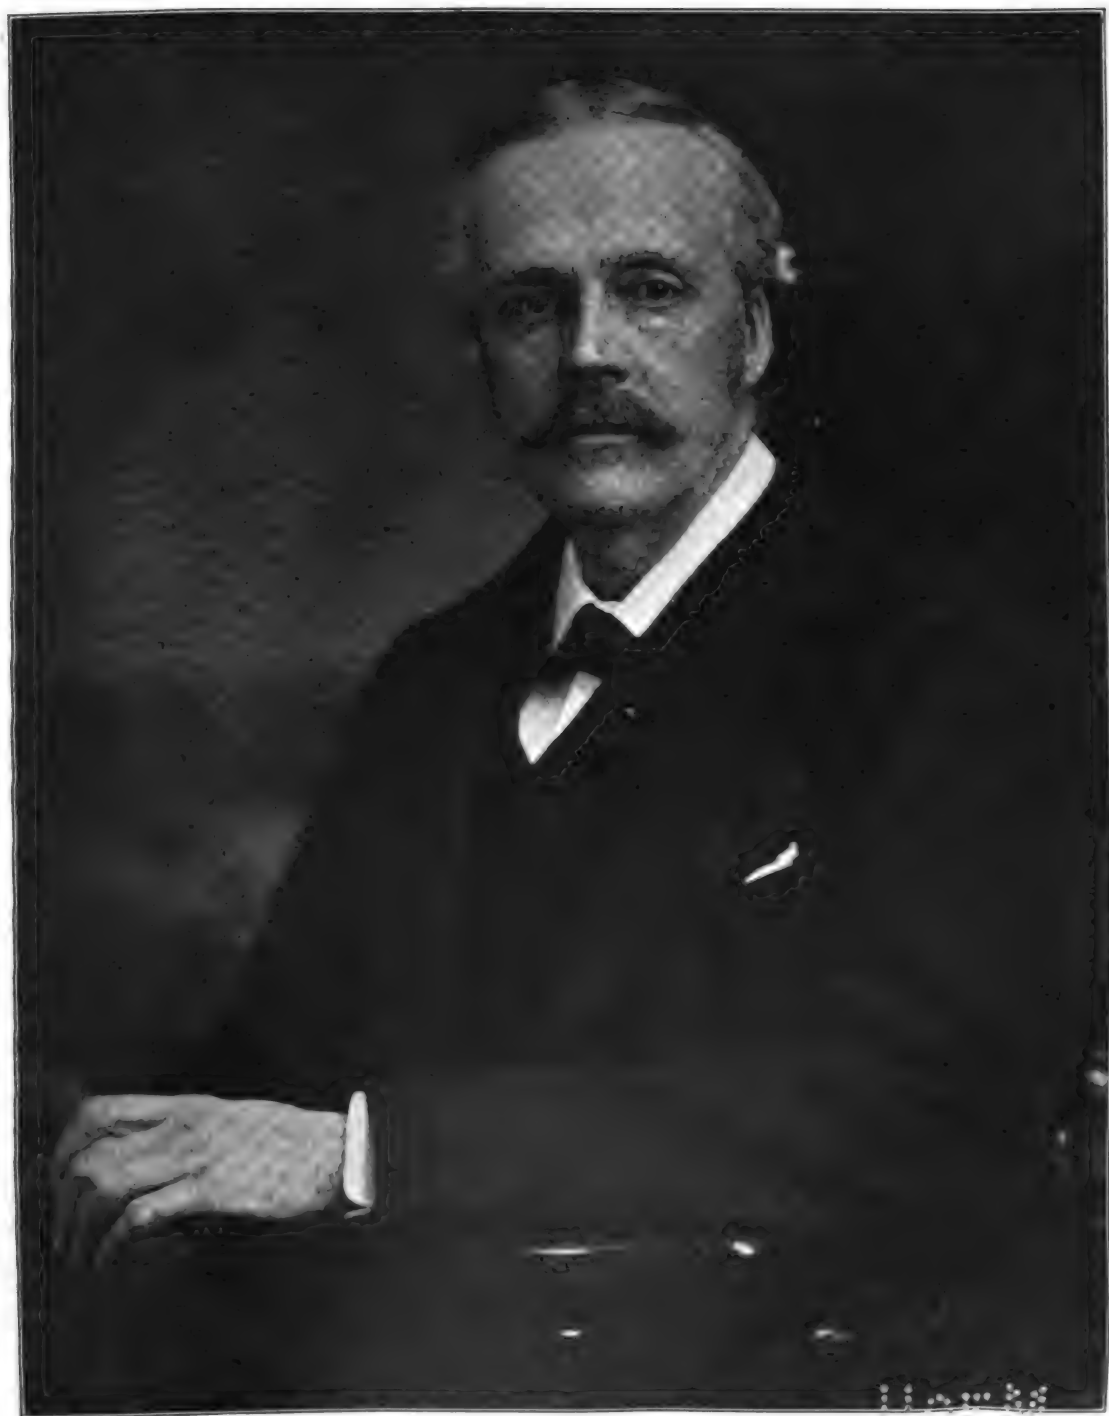

Mr. Asquith declared that the two mandates of the electorate were the passing of the budget and the limitation of the powers of the House of Lords, the latter being the more urgent problem. The Labor party at a meeting on March 21 decided to offer an amendment to the Premier's resolutions as to the relations of the two Houses. It was to be similar to the Labor resolution of 1907, that is to the effect that the Upper House is a hindrance and should be abolished. Down to this time no agreement was reached with the Nationalists as to the budget and its passage still remained doubtful. It was commonly charged by the Opposition against the Government that it had not done all it could to raise money, but wished to heighten and prolong the financial disturbance for party ends. On March 29, after the Easter recess, Mr. Asquith moved that the House go into a Committee of the Whole to consider the resolutions dealing with the relations between the two Chambers. The first of these resolutions asserted the need of preventing the Lords from rejecting or amending money bills. The second, with a view to curtailing their powers in other matters, provided that on the passage of any bill through three successive sessions of the Lower House it should become the law of the land without the consent of the House of Lords despite the latter's rejection in each session as soon as two years should have elapsed from the date of the introduction of the bill. The third resolution reduced the duration of Parliament from seven to five years. Mr. Redmond, the leader of the Irish Nationalists, assured the Prime Minister that he and his friends would support these resolutions. The resolutions were passed by the House on April 14, by a vote of 351 to 246, and at that time Mr. Asquith definitely announced that if the Lords rejected them he would approach the Crown and tender advice as to the steps to be taken if that policy were to receive statutory effect in the present Parliament.

A debate on the navy occurred in the middle of March, when Mr. McKenna offered an explanation of the heavy naval estimates, namely, £40,000,000. He said they were due chiefly to the building of new vessels. He announced that of the five new large ships, two would be in the dock-yard in October and three were under contract; that by March, 1912, 20 ships of the *Dreadnought* type, exclusive of Colonial vessels, would be ready and that by the end of 1910, 15 battleships would be building in the British yards, and that 20 destroyers would be laid

down during the present year. He said that the Admiralty programme rested on a knowledge of what the other Powers were doing and going to do, and that Germany had 13 *Dreadnoughts* now building and had called for four more which might be laid down on April 1, and could be commissioned in two years and two months from that time. The naval administration was criticised by the Labor party for its excessive expenditures, and by the Opposition for its niggardliness.

**THE DEATH OF KING EDWARD.** After a brief attack of bronchitis, King Edward died from heart failure at 11.45 on Friday, May 6. London and all England went immediately into mourning and messages of condolence came from all parts of the Empire and from all foreign nations. Impressive ceremonies were held in both Houses of Parliament and messages of sympathy were addressed to the royal family. There has never been in recent years more genuine evidences of wide-spread grief on the death of a monarch. The Privy Council was held at St. James's Palace on May 7, at which the proclamation of King George the Fifth as successor was signed. The King's body lay in state at Westminster Hall from May 17 to May 19, and the funeral was held on May 20. Seven foreign sovereigns were present, and the other powers were represented by members of the royal families. A procession of sovereigns started from the Palace on the morning of the 20th, headed by King George, with the German Emperor at his right, followed by the kings of Norway, Greece, Spain, Bulgaria, Portugal, Denmark and Belgium, and the heirs of the Austro-Hungarian and Ottoman Empires. Mr. Roosevelt, who had returned from his African hunting trip, attended the funeral in the procession of carriages, with members of the royal family and eminent representatives from foreign nations.

**THE CONFERENCE ON THE CONSTITUTIONAL QUESTION.** After the death of King Edward, there was a lull in political hostilities, both parties seeming desirous of a peaceful solution and a plan for a conference on the constitutional question was seriously considered. The Nationalists and Laborites regarded with anxiety this tendency to compromise, many of them declaring their distrust and dislike of the proposal. A conference on the constitutional question was nevertheless finally decided upon, and began its meeting on June 17. It was attended by four members of the Government, Mr. Asquith, Mr. Lloyd-George, Mr. Birrell and Lord Crewe, and four members of the Opposition, Mr. Balfour, Lord Lansdowne, Lord Cawdor, and Mr. Austin Chamberlain. The Labor Party called a meeting on the beginning of this conference and passed a resolution protesting against the assumption of authority "by the representatives of the two front benches to get behind the decision of the House of Commons." Though the Government was asked repeatedly about the proceedings of the conference, no report of its discussions was given out. After eleven meetings were held, it adjourned on July 30; meetings were resumed on October 11, and the final meeting was held on October 21. It was definitely announced on November 10, that an attempt to reach an agreement had failed. On the day before the Unionist leaders conferred with the members of the former Unionist administration and other prominent Unionist politicians, and

**ARTHUR JAMES BALFOUR**  
**LEADER OF THE BRITISH OPPOSITION**

४१५

it was decided that the terms which were finally regarded as acceptable by the Liberal leaders would not be accepted. The nature of the scheme under consideration was not made known, but it was thought to involve a joint session of representatives of both Houses in case of a deadlock. This was said to have brought up the question of excluding from the jurisdiction of this joint session matters involving organic change in the constitution, as for example, the subject of Home Rule. The failure of the Conference was received with relief by the Irish Nationalists, but in the country at large, great disappointment and concern was manifested.

**THE BUDGET.** On April 14 the House began to discuss the budget of 1910 and after some sharp debating in the course of which the government was accused of buying the Irish vote, by the promise of crippling the House of Lords so that Home Rule could be carried the Finance bill was passed. It passed the Lords soon afterwards without division and received the royal assent on April 29. The second budget was introduced by Mr. Lloyd-George, Chancellor of the Exchequer, on June 30, to replace the budget which had failed of passage on the dissolution of Parliament in the previous year. He announced an anticipated surplus of £861,000, part of which would be applied to the removal of the pauper disqualification for old age pensions after January 1, to local grants for the higher education and to other specified objects, leaving a balance of £309,000. It was necessary to provide for a deficit from last year amounting to £26,248,000 besides arrears of payments into the Local Taxation account, and the expenses of the current year amounted to £171,857,000. He admitted his failure to estimate the revenue from the whisky tax, which had been wrong by several million pounds. On behalf of that tax he declared that there had been a great reduction of drunkenness, which began to decline from the moment when the tax was imposed. (See above, *Finance*). The Chancellor announced that the Government saw its way next year to start a comprehensive national scheme for insurance against unemployment and disability on the contributory system with a liberal State subvention. Recalling last year's national financial disorder he made light of what he called the well organized attempts at despondency and declared that all signs pointed to a greater commercial prosperity than ever before. Referring to the amount of revenue that had been raised during the last ten or twelve months he asked what country could show such a record, and what fiscal system could boast of a similar success. In the debate that followed, Mr. Redmond renewed the protests of the Nationalists against the whiskey duty and repeated the reasons that he had formerly given for supporting the budget. The Nationalists upheld the Government on account of the pledge which they had given that the Veto bill would be carried against the House of Lords. The Labor Party expressed its satisfaction at the financial provisions made for the removal of the pauper disqualification of the Old Age Pension act. There was also general satisfaction with the fact that no new tax was proposed. An important feature of the Government's financial announcement was the promise that it would undertake next year the readjustment of local and Imperial taxation.

**THE QUESTION OF DISSOLUTION.** It soon appeared that the Liberal Government intended to

insist on the dissolution of Parliament at the earliest possible moment. They held that the House of Lords, as at present organized, had a veto power by which they might wreck any legislation that they did not like; that the Upper Chamber had used its veto to destroy the budget and to paralyze the executive and that the present House of Commons was subjected to the same intolerable restraint. Some of the Liberal papers charged the failure of the conference to the refusal of certain peers to be deprived of their powers on the ground that if that were to be done it could be brought about only by the constituencies and not by the conference. This, however, was denied by the Unionists. In the House of Lords, Lord Lansdowne moved a resolution, asking the Government to submit, without further delay, the provisions of the Parliament bill. He pointed to the fact that the House of Lords was willing to proceed with the reform of the House, as was shown by their readiness to deal with the Rosebery resolutions; also that if differences arose, means could be devised for an amicable adjustment. He condemned the veto resolutions as an incomplete attempt to deal with the matter, and as merely preliminary to a bill covering the whole subject. He did not see why a plan could not be devised whereby Lord Rosebery should proceed with his resolutions and the Government go on in both houses with its Parliament Bill. He said it was not reasonable to assume that because the eight gentlemen, meaning members of the late conference, had failed to agree, Parliament would not agree. Lord Crewe in reply said it was plain that Parliament would not agree and that the discussion would be an absolute waste of time. The question of reform had been before the House for many years, but nothing had been done. The Government would place the Parliament bill before the House, but would not enter into any discussion of amendments. The Parliament bill and the Rosebery resolutions were offered in the House of Lords November 15, and the former passed its first reading. At the session of the House of Commons on November 18, Mr. Asquith announced that the Government had decided upon a dissolution. He briefly reviewed the situation reminding his hearers that on April 14, the House had given its assent by large majorities to the Government resolutions upon the House of Lords. Thereupon the Parliament bill had been introduced and read the first time. After some discussion of the budget, Parliament had separated for the spring recess, expecting on its re-assembling to deal promptly with the constitutional question. Then had occurred the sudden and unforeseen death of the King, which was followed by a truce between the parties and the holding of a friendly conference on the constitutional issue. Many meetings were held and it was not until the week before that agreement was found to be hopeless. As to discussion of the subject in Parliament, it was idle to suppose that when an agreement could not be reached by the conference it could be hammered out in the din and stress of Parliamentary debate. Therefore the Government recognized that it was a matter for the electorate to decide. He mentioned November 28 as the date of dissolution. Mr. Balfour in reply referred scornfully to the course of the Government in attacking the House of Lords for delaying the budget and yet now throwing this year's financial bill over to

another Parliament. He accused the Prime Minister of regarding the Parliament bill as verbally inspired beyond all Parliamentary discussion and said that the Government was violating all constitutional traditions. Meanwhile in the House of Lords, Lord Rosebery, in moving the resolutions, said that they showed the readiness and desire of the House to proceed on the plan of reform. A further task before them if they carried these resolutions was the settling of differences between the two Houses. He did not believe that there was no other recourse than to the intolerable tyranny of a single Chamber. In the session of November 18, great excitement was manifested on the announcement of Lord Crewe that the dissolution would assuredly take place. Lord Lansdowne characterized this course as a breach of faith to Parliament and the country. Parliament had been in session only a few months and the Government had received no parliamentary check, yet in this brief period the country was obliged to pass twice through a parliamentary election. He complained bitterly of the insistence that the Parliament bill should be rushed through the House without discussion and without offering of amendments. Lord Rosebery's first resolution was passed on November 17. It read as follows: "That in future the House shall consist of Lords of Parliament (a) chosen by the whole body of hereditary peers from among themselves and by nomination by the Crown; (b) sitting by virtue of the offices and of qualifications held by them; and (c) chosen from outside." On November 21 Lord Crewe moved the second reading of the Parliament bill. Lord Lansdowne, taking it up clause by clause declared that although the Opposition were opposed to it, there were points which admitted of discussion. He asked the direct question whether this bill was not being rushed through the House. On November 23 he moved that the House go into a committee of the whole to consider his resolution as to the relations between the two Houses. These declared that after the House had been reconstituted according to the Rosebery resolutions, a joint session of both Houses should be held if differences arose in regard to any bill other than a money bill in two successive sessions and within an interval of not less than one year, but that if the difference is a very serious matter, it shall not be referred to a joint sitting, but to the popular judgment and referendum. It further decided that the Lords would forego their constitutional right to reject or amend money bills if effective provision is made against tacking. These resolutions were carried and in the general elections that followed, they constituted the Unionist platform on the constitutional bill as against the Parliament bill which represented the position of the Liberals.

**THE CONSTITUTIONAL ISSUE.** Thus at the close of the year Great Britain was facing the most serious constitutional crisis in her recent history. The general Unionist plan for the reform of the House of Lords was outlined by Mr. Balfour in the course of a political speech on November 17. After laying down the proposition that a second Chamber was necessary and must be a real and not a sham second Chamber, he declared that the House of Commons must be the dominant Chamber. The proposed reforms were to accomplish the following results: The

number of members of the Upper Chamber was to be diminished; an hereditary peerage would not carry the right to a legislative seat and the new Chamber would consist of, first, persons qualified by distinguished public service; second, persons elected by the peers; and third, persons numbering at least half of the total, who were elected or chosen from outside; deadlocks were to be broken by conferences of joint sessions and in case of disagreement on a matter of national importance the people were to decide. The position of the Liberal Party as expressed in the Veto Resolutions and the Parliament bill may be briefly summarized as follows: The Second Chamber should be constituted on a popular and not a hereditary basis, but as this could not be brought about immediately, the present powers of the House of Lords were to be restricted; the right of rejecting or amending money bills, was to be denied it, and any measure should be considered a money bill if, in the opinion of the Speaker of the House it dealt in any manner with taxes, charges of the consolidated funds, provision of money by Parliament, supply, the appropriation or regulation of public money, or the raising or guarantee of any loan or repayments thereof. If a measure other than a money bill shall pass the Commons in three successive sessions, it is to become a law in spite of any rejection or amendment by the Lords, if two years have passed after the introduction of the bill into the House of Commons, and it then be passed for the third time through that House. The Liberal plan also limited the duration of Parliament to five years.

**THE POLITICAL CAMPAIGN.** Parliament was dissolved on November 28, after a session of ten months, shorter than any preceding session of Parliament during the past 25 years, and writs for the new election were immediately issued. In the speeches by the leaders of both sides, attention was concentrated on the constitutional question. On the Conservative side the Government plan was vehemently denounced as virtually setting up a single chamber government. Moreover, they declared that the plans for the reform of the House of Lords, put forward by the Opposition were genuine and thorough-going measures and would effect the necessary improvements. They maintained that the Government in its campaign on this question had been dominated by the Socialist and Irish Nationalist elements and they made much of the effect of American dollars as an important influence in the Labor campaign. The latter charge was based on the fact that Mr. Redmond had returned from his trip to the United States and Canada with a guarantee of contributions to the Home Rule cause amounting to some \$200,000. Tariff reform was again put forward by Mr. Balfour as an issue and he caused a great sensation in a speech on November 29, in which he declared that he had not the slightest objection to submitting the principles of tariff reform to a referendum. This proposal was greeted with great enthusiasm in certain quarters as a number of the Unionists were free traders and feared that a return of the Opposition to power might mean the rushing of a protective measure through Parliament without giving the people a chance to vote upon it. On the other hand, the Liberals ridiculed the charge that they aimed at a single-chamber Government. They sought merely the means of guarding against possible abuses, and their proposals

were not revolutionary, but were for the interests of constitutional development. They declared that at present they were overridden by the overwhelmingly Tory Chamber, and could not carry out the social and economic legislation which the majority of the electors supported. They retorted that the present system was virtually a single-chamber system, the House of Lords having a complete check on legislation. Mr. Asquith ridiculed the sudden change of front on the part of the House of Lords, who, a year ago were designating that Chamber as the "Ark of the Constitutional Covenant," but were now hastening to reform it. He said this ancient and picturesque structure has been condemned by its own inmates as unsafe. The "parricidal pick-axes" were already at work. He designated Lord Rosebery's proposal as altogether nebulous and simply providing for a vague body of peers distributed in undefined proportions and elected by nobody knows whom. The Liberals charged the Conservatives with a more formidable and revolutionary innovation than anything that their own party had ventured, namely the sudden adoption of the principle of referendum. The cry of American dollars was a mere effort to frighten the timid voters and was, in fact, ridiculous in that the amount was too small to be of any importance, and moreover it had been contributed by Canadians as well as Americans, including contributions from persons like Sir Wilfrid Laurier and other well known Canadian statesmen. Mr. Redmond's position on the Home Rule question was that which had been Parnell's. His minimum demand was for an Irish Parliament, with an executive responsible to it and with full control over all purely Irish affairs. He held that the British Prime Minister and the entire Labor party was pledged to this definition of Home Rule. What was called devolution, that is to say, the creation of a Council in England, without legislative powers, had been proposed in 1907 by the Liberal Party in a parliamentary bill, and rejected by the Irish Nationalists. He considered that a dead issue. As to a federation, which should include representative bodies from Scotland, England and Wales, he held that Home Rule might be so framed as to fit into the general scheme, but Ireland could not wait until other portions of the United Kingdom were ready for it. The numerical strength of parties in the House of Commons on the eve of the election was as follows:

---

Liberals .....	275	Labor Party .....	40
Nationalists .....	72	Independents .....	10
Total .....	379	Unionists .....	273
Ministerial major.....	124		

---

**THE DECEMBER ELECTIONS.** The elections began on December 3, and were completed on December 20. The excited discussions in and outside Parliament during the year and the oratory of an exceedingly bitter campaign, seem not to have affected the opinions of the electors in the slightest degree. The Government majority remained practically the same. The elections returned 272 Liberals, 272 Unionists, 42 members of the Labor Party, 75 Nationalists, and 9 Independent Nationalists. Thus the Government could muster a majority on the constitutional question of 126, a net gain of two over the preceding Parliament, according to some reckonings a gain of only one. Discussion at once arose as

to the proper interpretation of this result in regard to the constitutional question, many Unionists insisting that as the Government had received only the same majority as before it had no warrant from the people in proceeding to any radical change in the House of Lords, and many Liberals declaring that a referendum on the constitutional question had been taken in the elections and, however small its majority, the Government was justified in carrying out the policy for which it stood. Moderates in both parties, pointing to the fact that while the Government could present a majority on the question of the Lords, it was in a precarious position as regards other issues, declared that the only reasonable course was a settlement of the veto question by agreement. The year closed amidst a great deal of perplexed comment on the indeterminate and unsatisfactory results of the elections and there was much speculation as to the course which the Government would take in the next Parliament in regard to the House of Lords and Home Rule. As to the latter, Mr. Lloyd-George had declared during the election that a Home Rule measure would be introduced "at the first available moment" and that it would not merely extend self-government to Ireland, but would aim at reconstructing the present Imperial machinery in such a way as to free Parliament from details which could be better dispatched in the districts concerned. These then were the two main problems at the close of the year: The question of altering the House of Lords, with the danger that a radical course might cause a deadlock between the two Houses and lead to the creation of new peers and that a conciliatory course on the other hand might alienate many of the Government's supporters; and the question of Home Rule with the difficulty of devising a measure thorough enough to suit the Irish Nationalists and not too radical for the English Liberals, to say nothing of the other knotty problems involved in it as for example the status under Home Rule of Protestant Ulster where the majority was bitterly hostile to it. An important feature of the year's politics was the growing belief in the principle of the referendum or appeal to the electorate on the great national issues before Parliament.

**ACCESSION DECLARATION ACT.** There had been in 1909 much discussion over the question of striking out the clauses in the declaration required of the sovereign in his accession that were offensive to the Roman Catholics. A bill for the omission of the invidious terms and at the same time removing the few remaining political disabilities from the Roman Catholics was brought in by the Government in the spring of 1909, but was dropped. The question as to the declaration was revived in 1910, and the Government introduced a bill which greatly shortened it and removed the offensive phrases. It was carried and received the royal assent on August 3. The new form of declaration is as follows:

"I (name of sovereign) do solemnly and sincerely, and in the presence of God, profess, testify and declare that I am a faithful Protestant, and that I will, according to the true intent of the enactments which secure the Protestant Accession to the Throne of my Realm, uphold and maintain the said enactments to the best of my powers according to the law."

**THE OSBORNE JUDGMENT.** In December, 1909,

the judges delivered in the House of Lords a notable judgment in the Osborne case. Suit had been brought by a colored railway porter named Osborne for the recovery of funds which had been obtained from him as a member of a Labor Union, for the support of the Labor Party. The court decided that the funds of trade unions could not be employed for that purpose. After this decision injunctions were secured against the use of funds for this purpose in one union after another. As it cut off the supplies of the Labor Party, the situation was one of great political importance. Representatives of the Labor party, the General Federation of Trades Unions and a Parliamentary Committee met in February and again on August 22, to discuss the subject. At the latter meeting they passed a resolution declaring that the decision did not merely affect Parliamentary representatives, but struck at freedom of discussion and of resolution enjoyed by the Trade Union Congress in so far as such discussion assumed a political character in the interest of the wage earner and that it really prevented trade unions from carrying out their purposes which were recognized by law, namely, the regulation of the relations between employers and employees, since in the highly organized state of modern industry Parliamentary action was a necessary means to that end, and that the decision deprived them of a right which they had enjoyed for nearly fifty years. The Board therefore demanded the restoration of these rights.

**LABOR TROUBLES.** The new labor exchanges, several of which were established on February 1, under the Labor Exchange act of 1909, did much to mitigate the evils of unemployment. Nevertheless, there were several very serious strikes and lockouts in the course of the year. In July traffic was disturbed for several weeks on the Northeastern Railway, owing by a strike of some 10,000 employees, who resented certain alleged tyrannical methods on the part of officials. On September 3, a shipyard lockout occurred on the Clyde and Northeastern coast as a result of a number of small strikes of workmen, who would not abide by the agreements between the employers and the representatives of their own unions. As a protest against this refusal to hold to collective agreements, the northern shipyard employers determined on a lockout of the boiler makers, which lasted fifteen weeks, causing an immense loss of wages. A brief strike and lockout occurred in the Lancashire cotton industry as a result of which, 700 mills were closed and some 150,000 workmen thrown out of employment for two or three weeks. The most serious disturbances of the year took place in connection with a strike in the South Wales coal field. Riots occurred among the coal miners in the Rhondda and Aberdare valleys in Wales where many conflicts took place between the strikers and the police and much damage was done to property. The town of Tonypandy fell into the hands of the mob and it was necessary to call out the troops. Riots continued for several days during the second week of November throughout the region.

By the middle of November order was restored in the Wales coal field, but the men were still in a dangerous temper and the police and military forces were retained there.

There was further rioting at Tonypandy and Pennygraig on November 21, resulting in the injury of a number of the police, but during the

following week there were signs of abatement.

**PAUPERISM.** In a speech toward the end of the year, Mr. Burns, President of the Local Government Board, declared that although there was an increase in the cost of pauperism, the amount of pauperism had greatly decreased, and there was at present the lowest out-door pauperism ever recorded for England and Wales and the lowest in London for seven years. Indoor pauperism had not changed in the past ten years. This was because the workhouse no longer had its terrors for the working classes that it formerly did as it was found that the inmates were well treated. A large portion of the paupers were treated in special institutions where their ailments were properly cared for. About 45 per cent. of pauperism was due to age infirmity and 30 per cent. to sickness. See above, paragraph on *Pauperism*, also article on **CHARITY**.

**WOMAN SUFFRAGE.** A Parliamentary Franchise bill extending the suffrage to women was introduced by Mr. Shackleton. It reached its second reading on July 12, and was referred to a committee of the whole House. Woman suffragists assaulted Mr. Churchill as he was returning to London from a political meeting at Bradford, November 26. The suffragist riots had resulted in many arrests. On November 25, 21 additional cases came up before the magistrate, the charges being window breaking and missile throwing. The judge imposed a sentence of two month's imprisonment in 15 cases and in other cases a lighter penalty. See **WOMAN SUFFRAGE**.

**GREAT LAKES, TRADE OF.** See **UNITED STATES, Commerce**.

**GREAT NORTHERN RAILWAY.** See **RAILWAYS**.

**GREECE,** A constitutional monarchy in southeastern Europe. Capital Athens.

**AREA, POPULATION, ETC.** Area, 24,973 square miles. Population (1896), 2,433,806; October 27, 1907, 2,631,952. The country is divided into 26 nomes, or departments. Emigration to the United States in 1905-6, 19,490; in 1904-5, 10,515; in 1903-4, 11,450. Athens had (1907), 167,479 inhabitants; Piræus, 73,579; Patras, 37,724; Volo, 23,563. Education, nominally compulsory, is not well enforced in the rural districts; of the army recruits, 30 per cent. are illiterate. Primary schools (1902), 3263, with 4346 teachers and 210,570 pupils; Greek schools (so-called), 285, with 833 teachers and 22,039 pupils; gymnasiums, 39, with 300 teachers and 5556 pupils; private schools, 24, with 1150 pupils; normal schools 13, with 1164 students. There are special, technical, and fine-arts schools; and the University of Athens, with 2574 students. The Greek Orthodox is the state Church, but entire religious liberty prevails.

**AGRICULTURE.** The soil is very fertile, and Greece is naturally an agricultural country; yet agriculture is not well developed. Of the productive area (5,563,100 acres), 1,112,000 acres are under cereals, 1,200,000 fallow, and 2,025,400 under forest; 5,000,000 additional acres are under natural pasture, and 53,000 acres have been acquired for agricultural purposes by the draining of Lake Copais. The currant crop is the most important, the annual yield being about 150,000 tons. The 1908-9 crop is reported at 185,000 tons; 1909-10, 155,000. The Privileged Company for the Protection of Currant Production and

Trade fixes prices. As the annual universal consumption of currants is about 115,000 tons, and shows a tendency to decrease, the problem of disposing of the large annual surplus production becomes yearly more acute. During December, 1909, a convention was passed by the Greek government authorizing the Privileged Company to raise a loan of 20,000,000 drachmas (gold drachma=19.3 cents). Of this sum about 15,000,000 drachmas is to be expended in compensating growers for the uprooting of redundant currant plantations, with the object of reducing the crop by 25 per cent. The interest of this loan is secured by increasing the export duty from 7 to 8 drachmas per 1000 Venetian pounds (Venetian pound=1.05 pounds avoirdupois) in cash, in addition to the existing export duty in kind of 35 per cent. Olive acreage, about 600,000; yield of oil (1908), 16,960,000 gallons. Annual wheat production, 8,000,000 bushels. Wine production (according to *Le Moniteur Vinicole*) in 1908, 39,600,000 gallons; in 1909, 48,400,000. Tobacco crop (1908), 5465 metric tons; valonia, 4000 tons. Estimated production of rosin (1910), between 9000 and 10,000 tons; of turpentine, 1750 to 2000 tons. Silk culture is carried on. Livestock: 100,000 horses, 360,000 cattle, 2,900,000 sheep.

**MINING.** The mineral output (in metric tons) for two years with the value in pounds sterling is given below:

	1906		1907	
	Tons	£	Tons	£
Iron .....	680,620	196,408	768,883	228,973
Manganiferous iron ore.....	96,382	46,472	92,770	44,015
Zinc ore.....	26,256	107,953	30,346	119,673

Spells .....	260	6,856	.....	.....
Gypsum .....	70	196	.....	.....

**COMMERCE.** The trade for three years is given below in drachmas (1 drachma=19.3 cents):

	1907	1908	1909
Imports .....	148,393,000	152,635,000	135,907,000
Exports .....	116,049,000	109,244,000	101,413,000

The principal articles of special trade for 1908 are given below in thousands of drachmas:

Imps.	1000 drach.	Exps.	1000 drach.
Cereals .....	35,172	Currants .....	30,476
Textiles, etc.....	21,500	Olive oil.....	14,305
Coal .....	13,628	Lead (argent.).....	10,231
Mins. and mets..	9,199	Wine .....	8,891
Timber .....	8,522	Tobacco .....	6,270
Chem. prods.....	7,693	Iron .....	5,253
Fish .....	7,063	Zinc .....	4,736
Animals .....	4,185	Olives .....	3,663
Paper .....	4,158	Figs .....	3,354
Iron mfrs.....	3,654	Grapes .....	2,727
Skins .....	3,462	Silk (raw).....	2,737

Principal countries of origin and destination with value of trade for 1908 in millions of drachmas:

	Imps.	Exps.		Imps.	Exps.
Gr. Brit.....	36.0	26.6	Bulgaria ..	9.2	.1
Russia .....	22.2	2.2	U. States ..	7.1	6.1
Aus.-Hun. ....	17.7	12.7	Italy .....	6.0	9.2
Germany .....	14.7	10.2	Belgium ..	4.2	4.1
Turkey .....	12.2	5.7	Neth's .....	2.7	9.4
France .....	10.8	11.2	Rumania ..	1.9	.7

Vessels entered (1907), 6412, of 4,812,834 tons; cleared, 6253, of 4,814,549. Merchant marine, 1092 sailing vessels, of 154,912 tons; 282 steamers, of 276,147 tons.

**COMMUNICATIONS.** Length of railways open for traffic (1909), 830 miles. The line to the frontier at Keralik is being continued; but it is thought that Turkey will not permit its extension to Gida, on the Salonika-Monastir line, as projected. Telegraph lines, 4981 miles; post-offices, 1147. The ship canal through the Isthmus of Corinth is seldom used by foreign vessels.

**FINANCE.** The monetary unit is the drachma, worth 19.3 cents. The revenue and expenditure for three years are given below in drachmas (1908 and 1910, estimates):

	1908	1909	1910
Revenue .....	128,301,087	129,719,358	148,561,837
Expenditure .....	128,767,739	126,708,010	146,041,222

The sources of revenue and items of expenditure as estimated for 1910 are given as follows:

Rev.	1000 drach.	Expend.	1000 drach.
Duties, etc.....	54,234	Debt .....	30,779
Stamps, ".....	27,055	War .....	20,068
Direct taxes.....	24,771	Interior .....	16,113
Monopolies .....	24,960	Administration ..	15,125
Domains .....	7,301	Marine .....	11,475
Deductions .....	3,592	Pensions .....	7,824
Exchange .....	96	Justice .....	5,945
Various .....	4,653	Education, etc....	5,582
		For. Affairs.....	3,313
Total ordinary.....	146,663	Finance .....	2,428
Extraordinary ..	1,899	Civil list.....	1,325
Total .....	148,562	Various .....	11,091
		Extraordinary ..	14,070
		Total .....	146,041

Outstanding external debt, December 31, 1909, 701,342,000 drachmas gold; currency debt, December 31, 1909, 102,437,125 drachmas paper. The Greek government was reported in the summer of 1910 to have placed a loan for 40,000,000 drachmas in France.

**ARMY.** The law of 1904 provided for compulsory military service on the part of all males between the ages of 21 and 51 years, which service includes 14 months with the colors, 10 years and 10 months in the reserve, 8 years in the national guard or territorial army and 10 years in its reserve. It was proposed during the year 1910 to increase the time of service, making it begin at the 19th instead of the 21st year and permit no exemptions. Thus, instead of an army of from 120,000 to 130,000 on a war footing as theoretically provided for by the law of 1904, there would be an army estimated at over 200,000. Then the second reserve and the national guard would give 250,000. The proposed increase in service would be active army 2 years, first reserve 12 years, second reserve 9 years, national guard 7 years, national guard reserve 7 years. The budget submitted in 1910 for the peace establishment provided for a force of 25,526 of which 1186 were officers, 3741 non-commissioned officers, and 19,899 men. On October 15, 1910, 3321 recruits were scheduled to be added so that the annual contingent was about 15,000 men in place of the previous quota of about 12,000. The grand total of the 1910 budget for military purposes was 23,150,238 drachmas in which all the items experienced increases. The army is largely a skeleton organ-

ization capable of expansion in time of war, but in numbers and experience the officers were believed to be inadequate for the formation of a grand army of the size contemplated. There were in the peace establishment three divisions which in case of war would become six. Each of these was composed of two infantry brigades, two battalions of chasseurs-à-pied, 1 regiment of artillery, 1 regiment of cavalry, 1 battalion of engineers, and various technical troops: There were 6 mountain and 3 heavy gun batteries while on a war basis an additional artillery regiment would be added to each infantry division.

**NAVY.** The effective navy includes 3 coast-defense vessels of 5000 tons each, and 19 old-style torpedo boats. An armored cruiser of 10,000 tons is building in Italy. Personnel, about 4000.

**GOVERNMENT.** The executive power rests in the king, aided by a responsible ministry of seven members. The king (1910), George I., was born December 24, 1845; elected King of the Hellenes by the National Assembly March 18 (30), 1863; married, October 27, 1867, to Olga, daughter of the Russian grand-duke Constantine. Heir-apparent, Prince Konstantinos. The National Assembly (the unicameral legislative body) has 235 members directly elected. The Ministry, as constituted October 19, 1910, was composed as follows: Premier, Minister of War and of Marine, E. Venezelos; Finance, L. Koromilas; Interior, E. Repoulis; Justice, N. Dimitrakopoulos; Worship and Instruction, A. Alexandris; Commerce and Agriculture, E. Benakis; Foreign Affairs, J. Gryparis.

### HISTORY

**REFORM MOVEMENT.** The Military League, which had proved its power repeatedly during the previous year, was still in control of affairs and on January 1, 1910, demanded that the Chamber should sit through the holidays and vote the budget, together with a long list of other specific measures, and that the Greek diplomatic representatives at Vienna, Paris, Berlin and Rome should immediately be recalled. The Premier acceded to these demands. The League then insisted on the dismissal of the Minister of the Interior whereupon the cabinet resigned, but at the King's request remained in office. On January 3 a new Minister of the Interior was appointed who was himself a member of the League. Thus again the League had scored a victory. The movement for the calling of a new National Assembly to revise the constitution now gained ground owing largely to the efforts of M. Venezelos, a deputy from Crete. A majority of the political leaders supported this demand and at the beginning of February the King agreed to the calling of the new convention. At the same time a new Ministry was formed under M. Stephen Dragoumis. It was decided to adjourn the Chamber and hold the National Assembly in the autumn. There did not seem to be great popular interest in the new Assembly, and fear was expressed that it might assume a revolutionary character and lead to disturbances, since for a whole year the country would be without a Chamber. But there was a general desire that the domination of the Military League should come to an end and the latter had definitely promised to dissolve as soon as the King proclaimed the National Assembly. At the beginning of March

the programme for the revision of the constitution, which would be carried out by the new Assembly, was submitted to the party leaders. The changes concerned chiefly the rules of the Chamber. The resolutions defining the changes were passed soon afterwards in the Chamber by a vote of 150 to 11. On March 30 the King and Queen attended the Chamber and the King read the proclamation summoning the National Assembly. The Military League promptly announced its dissolution. In some quarters fear was expressed that the King's assent to this new constitutional convention might prove fatal to the dynasty and tend to disturb the peace of the Balkans.

The mutiny in the navy in 1909, which had proved abortive and been promptly put down nevertheless indicated a condition of affairs in both army and navy that prevented the authorities from proceeding severely against the offenders. Typaldos, the leader of the mutineers, and eleven others were brought before the Court of Appeals which decided that they must be tried by the Civil Criminal Court. Typaldos alone was held for trial and the eleven others were released. Early in February a decree of general amnesty, including Typaldos, was signed.

The Chamber provided that the budget deficit down to 1909 should be met out of the revenue from the sugar monopolies, from the surtax on alcohol and tobacco, from the new railway and from the surplus of revenues reserved for the public debt. A bill was passed authorizing the loan of 60,000,000 dr. for the suppression of a forced currency.

**THE NATIONAL ASSEMBLY.** Elections for the Greek National Assembly, which began on August 21, passed off quietly. The Assembly was opened on September 14 by a speech from the throne which declared that the Assembly's course in revision should be limited to non-fundamental parts of the constitution, this being the condition upon which the people had been called to choose deputies. On the opening of the new body, the former Prime Minister, M. Rallis, was driven from the chair and soldiers were called in to put an end to the fracas. The question arose whether the Assembly should take its oath as a constituent body or in the manner prescribed by the constitution. The latter was finally decided upon in spite of the efforts of the Independents. There was much agitation on this subject, and M. Venezelos in the course of a moderate speech declared that extreme measures were not advisable and urged that the army should return to its proper duties. He spoke of the Assembly as a revisionary and not a constituent body. The deliberations of the National Assembly were interrupted by violent scenes in October and the Premier warned the deputies on this occasion of the great danger in which Greece found herself at the present moment, reminding them that internal dissensions might cost the country's independence. The cabinet resigned from office on October 12. M. Venezelos became the new Premier and appointed his cabinet. This caused much indignation among the aggressive members of the Young Turk party in Turkey, some of whom demanded that diplomatic relations should be broken off and that Hellenic subjects should be expelled from the Turkish dominions. M. Venezelos was regarded in Turkey as an Ottoman deserter, and to appoint him to the Premiership seemed a direct insult to

Turkish susceptibilities. The question soon arose whether the government had assumed authority to dissolve the Chamber. Receiving no satisfaction from M. Venezelos, the Premier, in response to inquiries, political leaders of the old parties withdrew, leaving less than a quorum present. In spite of a vote of confidence by the remainder, M. Venezelos offered his resignation, but was induced to withdraw it by the King. On October 23 a vote of confidence was accorded him. On October 25 the King dissolved the revisionary Assembly and announced December 11 as the date for the elections. This caused no excitement among the people, by whom, it was generally assumed, the King's action was approved. The elections resulted in a triumph for M. Venezelos whose majority in the new Chamber was estimated at 300.

**RELATIONS WITH TURKEY.** In September and October there was considerable anxiety in Greece, lest the Young Turk element which virtually controlled the army should suddenly decide upon an invasion of Greek territory. It was said that a plan for invading Thessaly was discussed by the young Chauvinistic officers in the Turkish army, who conceived that such a scheme might force the hand of the government, owing to the great hostility against Greece over the Cretan question. On September 30 a Royal decree declared the three Cretan seats in the Assembly vacant and fixed the date for the election of new members. Thus the Turkish government no longer had this pretext for proceeding against Greece. Nevertheless public opinion in Greece was alarmed over the possible designs of Turkey and favored the intervention of the Powers at Constantinople in the cause of peace. Turkish troops were stationed too near the Grecian border to admit of a feeling of security.

**GREECE, EXCAVATIONS IN.** See **ARCHAEOLOGY.**

**GREEK STUDIES.** See **PHILOLOGY, CLASSICAL.**

**GREEN, ANNA KATHARINE.** See **LITERATURE, ENGLISH AND AMERICAN, Fiction.**

**GREEN-HINMAN BILL.** See **NEW YORK, and NOMINATION REFORM.**

**GREENLAND.** A great island in the Arctic regions of the Western Hemisphere; a Danish colony. The area is variously estimated at from 500,000 to more than 800,000 square miles. The colonized area (extending along the west coast between 60° and about 72° north latitude) covers about 46,740 square miles and has a population of 11,895 (1901). Seal- and whale-oil, skins, eiderdown, feathers, and cryolite are the chief articles of export. The trade is a Danish monopoly and amounted in 1908 to £76,050 imports and £30,200 exports. The colony is administered by a director (1910, C. Ryberg) residing at Copenhagen.

**GREGH, FERNAND.** See **FRENCH LITERATURE.**

**GRENADA.** An island (the largest) of the Windward Islands (q. v.); a British crown colony. Area, 133 square miles. Population (1901), 63,438; estimated, December 31, 1909, 74,160. Marriages (1909), 277; births, 2557; deaths, 1385. Capital, St. George's, with 5188 inhabitants. Number of persons engaged in agriculture, 16,098. Total primary schools in 1909 (government, grant-in-aid, and private), 49, with 8481 pupils. Total imports (1909), £268,236 (live animals, foods, and drugs, £128,595; manufactured articles, £105,673; raw materials, £24,010; coin, bullion, etc., £9956).

Exports, £284,845 (cacao, £248,398; coin, bullion, etc., £1655). There are no railways. Telegraph connection exists with other West Indian colonies. Shipping (1909) entered and cleared, 525 vessels, of 293,007 tons. Post-offices (1900), 15. Actual revenue and expenditure in 1908-9, £73,182 and £72,661; in 1909-10, £71,224 and £73,281; estimates for 1910-11, £75,105 and £78,146. Governor of the colony in 1910, Lt.-Col. Sir James Hayes Sadler.

Of the **GRENADINE ISLANDS**, half are attached to Grenada, half to St. Lucia. Carriacou is the largest of those attached to Grenada. Area, 6913 acres; population (1908), 7660.

**GRIFFIN, W. H.** See **LITERATURE, ENGLISH AND AMERICAN, Biography.**

**GRIGGS, JAMES MATHEWS.** A Representative in Congress from Georgia, died January 4, 1910. He was born at Lagrange, Ga., in 1861, and was educated in the common schools and at the Peabody Normal College, Nashville, Tenn., from which institution he graduated in 1881. He afterwards taught school, studied law, and was admitted to the bar in 1883. He commenced the practice of law in 1884 at Alapaha, Ga. For a short time he was engaged in the newspaper business. In 1885 he removed to Dawson and in 1888 was elected solicitor-general of the Pataula judicial circuit. He was re-elected in 1892, but resigned in 1893. He was appointed judge of the same circuit and was twice re-elected. He resigned this office in 1896 to enter the contest for Representative to Congress. He was the delegate to the Democratic National Convention, 1892; chairman of the Democratic National Campaign Committee, 1904-6, and was elected to the 55th, and the six following Congresses, including the 61st.

**GRIMSHAW, B.** See **LITERATURE, ENGLISH AND AMERICAN, Travel and Description.**

**GUADELOUPE.** A French colony, composed of islands of the Lesser Antilles: Guadeloupe proper, or Basse-Terre, and Grande-Terre, separated by a narrow channel; Marie Galante, Les Saintes, Desirade, St. Barthelemy and St. Martin. Total area, 687 square miles; population (1906), 190,273. Elementary schools, 113, with 12,182 pupils; secondary, 2, with 728. Capital, Basse-Terre, with 8626 inhabitants; Pointe-à-Pitre (14,861) is the chief port and has a fine harbor. Area under sugar-cane, 27,632 hectares (persons engaged in cultivation, 28,800); coffee, 5138 (7935 persons); cacao, 2540; manioc, 6926. The forests, rich in valuable timber but little worked, cover 71,256 hectares. Bananas, sweet potatoes, tobacco, corn, and vegetables are grown for consumption. Imports and exports (1908), 15,077,000 and 17,361,000 francs respectively. Vessels entered (1907), 376, of 302,632 tons; cleared, 360, of 292,679. The local budget balanced (1908) at 4,692,322 francs. French expenditure (budget of 1910), 371,371 francs. The colony is administered by a governor (1910, M. Gautret).

**GUAM.** See **UNITED STATES.**

**GUARANTEE OF DEPOSITS.** See **BANKS.**

**GUATEMALA.** The most northern and western republic of Central America. The capital is Guatemala City.

**AREA, POPULATION, ETC.** The estimated area

of the 22 departments is 48,300 square miles. Estimated population, 1,992,000. Principal towns, with estimated populations: Guatemala City, 125,000; Cobán, 30,770; Quezaltenango, 28,940; Totonicapán, 28,310; San Pedro, 10,190. For primary instruction, which is free and nominally compulsory, there were in 1908 1330 public schools, with 51,280 pupils. There are a few institutions for secondary, higher, and professional education.

**INDUSTRIES.** Agriculture is the principal occupation of the people. The leading crops are coffee, sugar-cane, corn, bananas, tobacco, and cacao. Cattle raising is important. There is some exploitation of rubber and chicle and of valuable cabinet woods. Mining is but little developed. Manufacturing has not attained importance; but some textiles are produced, and a few breweries, sugar mills, and tanneries are profitably conducted.

**COMMERCE.** Import and export values, in thousands of U. S. dollars, have been as follows:

	1906	1907	1908	1909
Imports .....	7,221	7,817	5,812	5,261
Exports .....	7,186	10,174	6,766	10,079

Principal articles of export, 1909: Coffee, \$8,816,274; hides, \$308,685; timber, \$263,573; bananas, \$229,566; rubber, \$173,626; sugar, \$153,061. Imports from the United States were valued at \$1,745,488; Germany, \$999,648; Great Britain, \$908,334; France, \$218,492.

In 1908, 624 vessels entered, and 602 cleared.

**COMMUNICATIONS.** The total length of railways is about 435 miles. Champerico and San José, on the Pacific, are connected with Guatemala City, the lines aggregating 189 miles. The line from Puerto Barrios, on the eastern coast, to Guatemala City, 195 miles, was opened in 1908. Considerable railway extension is projected. At the end of 1908 there were 3697 miles of telegraph and 384 miles of telephone lines. A year later both systems were reported to aggregate 4196 miles. Post-offices (1908), 281.

**FINANCE.** Revenue and expenditure in thousands of paper pesos have been reported as follows:

	1906	1907	1908	1909
Revenue .....	30,501	35,298	37,336	49,240
Expenditure .....	46,733	44,560	49,930	70,554

The approximate value of the paper peso, in U. S. money, was 9 cents in 1906, 8 cents in 1907, 6½ cents in 1908, and 6 cents in 1909. Over one-half the revenue is derived from customs and one-third from spirits, tobacco, etc. Nearly one-half the expenditure is for the public debt, in 1909, 32,141,454 pesos paper. On December 31, 1908, the total gold debt amounted to \$13,694,445, including \$10,102,465 external 4 per cent. debt of 1895. The latter, whose principal is £1,482,000, amounted, with arrears of interest, to \$10,391,107 (£2,135,232) on December 31, 1909. Currency debt, at end of 1908, 71,884,745 pesos paper.

**ARMY.** There is a small regular army of about 7000 officers and men in which service is compulsory for all not exempted from the 18th to the 25th year. From the 26th year to the 50th a citizen is required to serve in the militia and the enrolled strength is estimated at about 57,000.

**GOVERNMENT.** The executive authority is vested in a president, elected for six years by direct vote and assisted by a cabinet of six members. The National Assembly consists of one chamber (69 members elected for four years by direct vote). The President in 1910 was Manuel Estrada Cabrera, who, as Vice-President, succeeded to the executive office in March, 1898, and subsequently was elected for terms ending March 15, 1905, and March 15, 1911. On April 11, 1910, he was again elected, for the term ending March 15, 1917.

**GUNS.** See **BATTLESHIPS**.

**GYMNASTICS.** The twelfth annual inter-collegiate gymnastic meet was won by the Yale team, which scored 20 points. Princeton was second with 16 points and Rutgers third with 8 points. The individual all-round championship went to J. O. Kelly of Pennsylvania, who had a total of 216.2 points. S. Melitzer of Columbia finished second, with 215.25 points, and T. F. Clark of Princeton took third place with 212.15 points. The all-round individual championship of the Amateur Athletic Union was won by Frank Jirasek of the Gymnastic Association Tyrs, Cedar Rapids, Iowa. Jirasek's score was 328.1. William Heiser of the Bohemian Gymnastic Association, New York, finished second with 307.35 points and P. M. Krimmel of the New York Turnverein third with 303.1 points. The club championship for the second successive year was captured by the Bohemian Gymnastic Association, which had a total score of 13. The Gymnastic Association Tyrs and the Washington Heights Y. M. G. A. tied for second place with 11 points each.

**GYROSCOPE.** See **RAILWAYS**, paragraph *Monorail*.

**HABERL, FRANZ XAVER.** A Roman Catholic clergyman and writer on music, died in September, 1910. He was born at Oberellenbach, Lower Bavaria, in 1840. In 1862 he was ordained to the priesthood, and in the same year he was appointed conductor of music at the cathedral of Passau, and musical director of the Catholic seminary of that city. From 1867 to 1870 he was organist of the church of Santa Maria dell' Anima at Rome, and from 1871 to 1882 served in a similar capacity at Ratisbon. In 1875 he founded in that city the celebrated school for church music which, under his management, became one of the leading institutions of its kind. In 1870 he assumed the editorship of a periodical entitled *Musica Sacra*. He was also chief editor of the works of Palestrina. He published a practical text-book on the Roman Catholic choral music and made a reputation by his investigations in the field of old Roman Catholic music. These investigations made him one of the most noted authorities on ecclesiastical music. In 1887 he was made a Doctor of Theology by the University of Würzburg.

**HABIT.** See **PSYCHOLOGY**.

**HACKWOOD, F. W.** See **LITERATURE**, **ENGLISH AND AMERICAN, History**.

**HADEN, Sir FRANCIS SEYMOUR.** An English etcher, died May, 1910. He was born in 1818 and was educated in the University College, London, and in the medical schools of Paris and Grenoble. From 1851 to 1867 he was honorary surgeon in the department of

science and art. When forty years of age he turned his attention to art, and especially to etching. He won the Grand Prix in Paris in 1900. He became an expert etcher and wrote much on that branch of art. Among his published works are *Rembrandt, True and False*; *About Etching* (1879), and *The Etched Work of Rembrandt* (1879). Among his most notable plates were "The Breaking up of the Agamemnon" and "Calais Pier," under Turner, both of which were shown in the Centennial Exhibition at Philadelphia. He was an honorary member of several societies related to art in France.

**HAGGARD, H. RIDER.** See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

**HAGUE CONFERENCE.** See ARBITRATION, INTERNATIONAL.

**HAITI.** A West Indian republic occupying the western and smaller portion of the island of Haiti. The capital is Port-au-Prince.

**AREA AND POPULATION.** The area is estimated at about 10,200 square miles. A recent estimate for 1908, based on parish registers, places the population at 2,079,700. About nine-tenths of the inhabitants are negroes, and almost all of the rest mulattoes. The principal towns, with estimated population, are: Port-au-Prince, about 100,000; Cape Haiti, 30,000; Les Cayes, 25,000; Gonaives, 18,000. The educational system is very imperfect. The prevailing religion is Roman Catholicism.

**INDUSTRIES.** Agriculture is the chief occupation of the people. The leading crop is coffee, but its production is hindered by large export duties. Sugar-cane, cacao, and cotton culture are of some importance. Various valuable woods are cut for export, logwood being the most important. Mining is almost wholly undeveloped. There are a few manufactures, including soap, candles, matches, and shoes; rum and other spirits are distilled.

**COMMERCE.** Imports and exports for years ended September 30: 1908, \$4,701,161 and \$3,478,848 respectively; 1909, \$5,880,676 and \$3,479,848. The leading exports are coffee, cacao, and logwood. Of the imports in the fiscal year 1909, the value of \$4,271,046 came from the United States, \$644,315 from France, \$586,190 from Great Britain, and \$196,886 from Germany. France receives the greater part of the exports, with Germany in second place.

**COMMUNICATIONS.** There are reported about 64 miles of railway. Several new lines and extensions are projected. Telegraph line, 124 miles. Post-offices, 31.

**FINANCE.** Revenue is derived chiefly from import and export duties; the largest item of expenditure is service of the debt. For fiscal years ending September 30, estimated revenue: 1908, \$3,875,612 (United States money) and 4,366,156 gourdes (the paper gourde is worth about 20 cents); 1909, \$2,760,887 and 7,408,542 gourdes; 1910, \$3,329,010 and 8,300,581 gourdes; estimated expenditure: 1908, \$2,651,249 and 6,885,660 gourdes; 1909, \$2,777,688 and 7,283,953 gourdes; 1910, \$3,329,010 and 8,246,842 gourdes. Public debt, March 31, 1910, \$26,336,794 and 17,309,590 gourdes.

**ARMY.** The army is recruited by conscription and by voluntary enlistment, the conscripts serving for 7 years and the volunteers for a term of 4 years. There are troops of the guard, including 1 regiment of artillery, 300 men; 4

regiments of infantry, 1300 men; 2 battalions of chasseurs, 300 men; 1 regiment of cavalry, 187 men; and 2 battalions of riflemen. In the line are 2 regiments of artillery with 300 men, 33 regiments of infantry with 9361 men, and 50 companies of gendarmes, numbering 2000 men. The combined forces aggregate about 14,000 men, but the strength varies greatly from time to time.

The navy includes three gunboats.

**GOVERNMENT.** The executive authority is vested in a president, elected for seven years by the National Assembly and assisted by six cabinet ministers. The Assembly consists of the Senate (39 members) and the Chamber of Representatives (96). The President in 1910 was Gen. Antoine F. C. Simon, who was elected December 17, 1908, after the deposition of Gen. Nord Alexis.

A revolutionary plot was formed in April to overthrow General Simon and make General Firmin President, but it was discovered in time and a number of the conspirators were imprisoned. At the same time, General Nord Alexis (q. v.), who had been supplying the funds for the revolution, died. The Senate authorized the creation of a bank for the loan which was negotiated in Paris of \$16,000,000. In July the government contracted with an American syndicate for the building of a railway from the interior to four seaports, granting the company a strip of land twelve miles wide on each side of the line.

**HALE, M.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**HALE, SUSAN.** An American artist and writer, died September 17, 1910. She was born in Boston in 1833, the daughter of Nathan Hale and sister of Edward Everett Hale. She was educated at private schools. For a time she taught, but later turned her attention to painting. Her work in water colors and landscapes was exhibited in Boston and New York. She was the author of *Life and Letters of Thomas Gold Appleton*, and with her brother the *Family Flight* series of travels for young people.

**HALEY, THOMAS.** See BOWLING.

**HALFORD, ALBERT JAMES.** An American journalist, died April 17, 1910. He was born at Hamilton, Ohio, and was educated in the common schools. He learned the printer's trade in early youth and at the age of fifteen reported proceedings in the Indiana legislature. He began newspaper work for the *Indianapolis News* and filled various positions until he became managing editor. In 1888 he went to Washington as managing editor of the *Post*. For several years he was editor of the *Congressional Directory* and filled important positions in newspaper work, mainly as a reporter of Congressional proceedings. He was a brother of Major Elijah W. Halford, who was private secretary to President Harrison.

**HALL, GERTRUDE.** See LITERATURE, ENGLISH AND AMERICAN, *Poetry and Drama*.

**HALLBERG, CARL SAVANTÉ NICANOR.** An American pharmacist and publicist, died October 22, 1910. He was born at Helsingfors, Finland, in 1856, and was educated at the gym-

nasium in that city, graduating in 1869. In the latter year he removed to the United States, graduating from the Philadelphia College of Pharmacy in 1876. From 1890 to the time of his death he was professor of pharmacy in the University of Illinois and from 1894 to 1896 was professor of pharmacology at the Illinois Medical College. He organized in 1885 and became director of the National Institute of Pharmacy, a system of home study in pharmaceutical sciences. He was a member of the National Commission for the revision of the National Formulary in 1886, 1895 and 1906 and was a member of the National Commission for the revision of the United States Pharmacopœia, 1890-1900 and 1900-1910. From 1883 to 1893 he was editor of the *Western Druggist* and from 1906 to the time of his death was editor of the *Bulletin of the American Pharmaceutical Association*.

**HAMDI BEY, OSMAN.** A Turkish statesman and scholar, died in March, 1910. He was born in Constantinople, the son of Edhem Pasha. From 1868 to 1870 he was governor of Bagdad and was a delegate to the Vienna Exposition in 1873. He was made General Secretary of Foreign Affairs and afterwards governor of Pera. In 1882 he was appointed director of the Imperial Museums at Stamboul and in 1888 he was connected with the Department of the National Debt. He was a painter of some ability, and in 1882 he founded a Turkish school of art. He edited with Reinach *La nécropole royale de Sidon* (1892-93). He built at his own expense in Constantinople a Greek building in which the sarcophagi from the Sidon Necropolis might rest.

**HAMILTON COLLEGE.** An institution of higher learning at Clinton, N. Y., founded in 1812. The number of students during the year 1909-10 was 186, and the faculty numbered 19. There were no notable changes in the faculty during the year and no noteworthy benefactions were received. The productive funds of the college in 1910 amounted to \$900,000. The library contains about 50,000 books. The president is M. W. Stryker, D. D., LL. D.

**HAMMOND, EDWARD PAYSON.** An American evangelist, died August 14, 1910. He was born at Ellington, Conn., in 1831, and graduated at Williams College in 1858. He studied theology at the Union Theological Seminary, N. Y., and at the Free Church Seminary, Edinburgh. He was ordained to the Presbyterian ministry in 1863 and engaged in evangelical work in the United States, Canada and Great Britain, meeting with remarkable success. He was the author of *Golden Evening*; *What I saw from Vesuvius*; *Roger's Travels*; *Early Conversion*; and many other books, besides hymns and tracts for use in his work.

**HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.** An institution at Hampton, Va., founded in 1868 by General Chapman Armstrong for the practical education of the children of ex-slaves. In 1870 it was chartered by a special act of the General Assembly of Virginia. The institution in 1878 opened its doors to Indian pupils. The enrollment in the year 1910-11 was 1374. The faculty and other instructors, officers and employes numbered 191. The productive funds of the institute amounted to \$2,278,822. The principal is Hollis B. Frissell.

**HANDEL-MAZETTI, ENRICA.** See GERMAN LITERATURE.

**HANFORD, BENJAMIN.** An American Socialist, died January 24, 1910. He was born at Cleveland, O., in 1869, and was educated in the public schools. He worked as a compositor and in 1879 went to Chicago and became interested in labor unions. He afterwards removed to Philadelphia and became prominent in labor movements in that city. Just before the Spanish War he removed to New York City and worked as a compositor on various papers. He was the Socialist Labor candidate for governor of the State in 1898. When this party split Hanford was the leader of the secessionists, who formed the Social Democratic party, and he was several times nominated for office—in 1900 for governor, in 1901 for mayor, in 1902 for governor again, and in 1904-8 for vice-president of the United States. He wrote a pamphlet on the labor war in Colorado, and in his later years wrote editorials for *The Call*, a New York Socialist paper.

**HANKOW-SZECHUAN RAILWAY.** See CHINA, *History*, and UNITED STATES, *Foreign Relations*.

**HANNAY, JAMES.** A Canadian historian and journalist, died January 12, 1910. He was born in 1843. For many years he was engaged in editing various newspapers in Canada, writing in the meantime many important historical works. He was also a contributor of fiction and verse to magazines and newspapers, and he edited the reports of the Supreme Court of New Brunswick in two volumes. From 1905 till his death he was employed in the Archives Department of the Canadian government. Among his published works are: *History of the War of 1812*; *History of Acadia*; *Nine Years a Captive*; *The Story of the One Hundred and Fourth Regiment*; *The Story of the Queen's Rangers in the American Revolution*; *The History of the Loyalists*; *New Brunswick: Its Resources and Advantages*; a *History of New Brunswick*, and *New Brunswick Year Book*.

**HARRINGTON, TIMOTHY.** An English public official, member of Parliament from the Harbor Division, Dublin, died March 12, 1910. He was born in 1851 and educated at the Catholic University and Trinity College, Dublin. He was a barrister by profession and was at one time proprietor of the *Kerry Sentinel* and *United Ireland*. He was elected to Parliament to represent Westmeath in 1883, and from 1885 to the time of his death represented the Harbor Division of Dublin. In 1888-9 he was counsel for Mr. Parnell at special commission. In 1901-2-3 he was Lord Mayor of Dublin. For a time he was secretary of the Irish National League.

**HARRIOTT, C.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**HARRIS, C.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**HARRISON, CHARLES CUSTIS.** An American educator, retired 1910, as provost of the University of Pennsylvania. He was born in Philadelphia in 1844, and graduated at the University of Pennsylvania in 1862. From 1863 to 1892 he was in active business as a manufacturer. He had been a trustee of the university since 1876 and in 1894 was acting provost. In the latter year he was elected provost. During his administration the university developed until it became one of the leading institutions of higher learning in the United States.

**HARTMAN, S.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**HARVARD UNIVERSITY.** An institution of higher learning at Cambridge, Mass., founded in 1636. The total attendance in the University in the year 1910-11 was 5028, divided among the various departments as follows: Faculty of Arts and Sciences, 2217; Graduate School of Arts and Sciences, 463; Graduate School of Business Administration, 72; Divinity School, 52; Law School, 802; Medical School, 278; Dental School, 116; University Extension, including summer school of 1910, 1106. The faculty numbered 634, distributed as follows: Professors, 127; Associate Professors, 4; Assistant Professors, 83; Lecturers, 38; Instructors, 178; Austin Teaching Fellows, 33; Teaching Fellows and Fellows for Research, 13; Demonstrators and Assistants, 158.

The year 1910 was the first year of the administration of President Abbott Lawrence Lowell who succeeded Charles W. Eliot. President Lowell in his first annual report pointed out the importance of the establishment of a series of freshmen dormitories and dining halls. He said that these would make possible a closer supervision and a more direct influence over the entering class, without vexatious regulation. In regard to athletics he called attention to the report of Dean Briggs, as Chairman of the Athletic Committee, in which the latter criticised the extravagance and luxury in the management of athletics, the training tables, and the general treatment of members of the teams.

Among the notable gifts of the year were the following: From James R. Rich, \$20,000; from the Duke and Duchess d'Aosta, \$20,000; from Adolphus Busch, \$100,000, and by will of Alexander Agassiz, \$200,000. The total funds of the University at the end of the year 1910 amounted to \$23,482,736. The total income was \$2,024,440. There was an excess of expenditures over income at the end of the year of \$194,821.

In Radcliffe College, which is the women's department of the University, there were in 1910-11 489 students. There were in the University library on July 1, 1910, 1,425,891 books and pamphlets. The President is Abbott Lawrence Lowell.

The activities of the University have recently been widened in scope by the establishment of three new degrees, Doctor of Law, Doctor of Public Health, and Associate in Arts; and the relations between Harvard College and secondary schools have been changed by the establishment of a new plan of administration. The degree of Doctor of Law is to be conferred upon all persons who, having already received a degree in Arts or Sciences, and having completed the requirements for the degree of Bachelor of Laws in Harvard University, accomplish one additional year of work under the regulations of the Faculty of Law, or who, having already received a degree in Arts or Sciences, and having been graduated from any other law school approved for this purpose, accomplish the work of two additional years under the regulations of the Faculty of Law. The degree of Doctor of Public Health is to be conferred upon persons who have received the degree of M. D. or who are otherwise properly qualified and who spend not less than one year upon work on a special subject and present a thesis containing some original research acceptable to the Faculty of Medicine. The degree of Associate in Arts is conferred upon non-resident students who have attended the class exercises, completed the other work, and passed the examinations in Extension courses (including Summer courses) equal in number and standard to the courses required of a resident student for the degree of Bachelor of Arts. No entrance examination is required for this degree. The new plan of admission to Harvard College is intended to connect the College more closely with public high schools, and to provide a better means of selecting for the College students of good quality. The main features of this plan are (1) an approved school course satisfactorily completed and (2) satisfactory examinations in a few subjects to test the student's quality according to College standards.

**HASBROUCK, HENRY CORNELIUS.** An American soldier, died December 17, 1910. He was born in Newburg, N. Y., in 1839, and graduated from the United States Military Academy in 1861. He was appointed second lieutenant in the fourth artillery in the same year and served throughout the Civil War, rising to the rank of captain. He was appointed major in 1887, lieutenant-colonel in 1896 and brigadier-general of United States volunteers in 1898. In 1902 he was made brigadier-general and retired. He took part in campaigns against the Indians and was prominent in the Modoc expedition. He served throughout the Spanish War as brigadier-general of volunteers. From 1882 to 1888 he was commandant of cadets at the United States Military Academy. He was a member of the commission selected from the service in 1888 to prepare a system of tactics for the United States Army.

**HAUPT, ERICH.** A German Protestant theologian, died February, 1910. He was born in Stralsund in 1841 and was educated in Berlin. He was professor of New Testament exegesis successively at Kiel (1878), Griefswald (1883) and Halle (1888). Among his published writings are the following: *Der erste Brief des*

*Johannes* (1869); *Die alttestamentlichen Citate in den vier Evangelien* (1871); *Die Kirche und die theologische Lehrfreiheit* (1881); *Plus ultra, zur Universitätsfrage* (2d ed., 1890); *Die Bedeutung der heiligen Schrift für den evangelischen Christen* (1891); *Zum Verständnis des Apostolats im Neuen Testament* (1898), etc.

**HAUPTMANN, GERHART.** See GERMAN LITERATURE.

**HAUPTMANN, PAUL.** See GERMAN LITERATURE.

**HAWAII** or **HAWAIIAN ISLANDS.** A Territory of the United States which comprises a chain of islands in the Pacific Ocean, forming the extreme northern group of Polynesia. The capital is Honolulu on the island of Oahu, 2100 miles from San Francisco, 4803 miles from Manila and 3850 miles from Salina Cruz, the Mexican Pacific terminus of the Tehuantepec Railroad.

**AREA AND POPULATION.** The total area of the Islands is 6449 square miles, and the area of the inhabited islands is as follows: Hawaii, 4015 square miles; Maui, 728 square miles; Kahulawe, 69; Molokai, 261; Lanai, 133; Oahu, 600; Kauai, 544; and Niihau, 97. The population of the Islands in 1910 according to the Thirteenth Census was 191,909, as compared with 154,001 in 1900. The racial division of the population is as follows: Hawaiians, 26,099; Part-Hawaiians, 12,485; Portuguese, 22,294; Spanish, 1962; Porto Ricans, 4828; other Caucasians, 14,684; Chinese, 21,698; Japanese, 79,663; all others, 8196. While the largest single increase in the population is among the Japanese, the total increase in Orientals in the Islands is less absolutely and in percentage than non-Orientals. The number under "all others" is made up chiefly of Koreans and Filipinos. The net increase in the entire population was 37,908 or 24.62 per cent. The population of the city of Honolulu is about 50,000, as compared with 39,300 in 1900.

**AGRICULTURE.** The chief industries of the Islands are related to agriculture, but the condition is such, owing to lack of knowledge of practical agriculture, distance from the world's markets, tariffs and other causes, that up to the present time only a few products have been produced on a sufficient scale to export any considerable quantities. A scientific study has been made in recent years, however, and marked progress has been made in knowledge of possible crops and methods of cultivation. This is especially true of the sugar industry, in which scientific cultivation has resulted in a large crop. The sugar production for the year ending September 30, 1910, was 518,127 short tons as compared with 535,156 short tons in 1909. The exports of sugar for the fiscal year were valued at \$42,625,474 as compared with a value of \$37,632,758 for the production of 1909. During 1910 the sugar planters brought in 2651 Filipinos, including 2441 men, 179 women and 31 children. The percentage of non-Asiatic laborers has increased from 19 per cent. in 1908 to 24 per cent. in 1910. On March 31, 1910, the laborers on sugar plantations aggregated 44,048, of whom the Japanese numbered 28,832. Rice is the second crop in value and it is consumed mostly in the Territory. It is raised chiefly by Chinese in terraces flooded with water on the low lands which are leased at rentals of from \$10 to \$50 per acre. There is little additional land available for this crop, but there is

much room for improvement in the method of cultivation. These improvements are now being made, chiefly as the result of the work of the Federal experiment station. The present yield is about 2½ tons per acre per annum (2 crops). The cultivation of coffee began on the Islands as early as 1817 and was at one time conducted largely by Americans. Owing to low prices it has now fallen largely into the hands of Japanese. The output varies from year to year and is never large. The crop in 1910 was about 2000 tons, a large part of which is consumed in the Territory. There are probably not more than 10,000 acres under cultivation.

Among the newer industries pineapple-growing has made the greatest progress, the output having increased from 1200 cases of two dozen cans each in 1900 to 510,000 cases in 1909. In 1910 there were invested in the industry more than \$2,000,000 and about 6000 acres were under cultivation. About 1600 tons of fresh fruit were exported during the year, but practically without profit, owing to imperfect marketing arrangements. The most marked feature in this industry during the year was the organization of a company to put up in attractive bottles the pure juice in much the same manner as grape juice.

The tobacco and cotton industries are the newest among the agricultural industries that promise to have a large growth. The tobacco industry is the more advanced of the two. There are now four plantations on the island of Hawaii, two in the District of Kona, one in Hamakua, and one in Hilo. In this industry about \$100,000 has been invested. The companies purchase crops from small planters for curing purposes besides raising crops of their own. The yield runs from 700 to 1400 pounds per acre and under favorable conditions two crops may be raised a year. The quality is good. The principal varieties of cotton are the Sea Island, Caravonica and Egyptian. The production is heavy and the quality superior.

**COMMERCE.** The imports and exports for the year ended June 30, 1910, exclusive of specie, aggregated \$71,624,659, an increase of \$9,678,175 over the aggregate of the previous year. The imports amounted to \$25,138,247, an increase of \$3,713,267 over the aggregate of the previous year. The exports amounted to \$46,486,412, an increase of \$5,964,908. A detailed statement of the exports and imports to and from various countries will be shown in the table on the following page.

Of the exports sugar continued to form about 90 per cent., but several minor products show increases. The exports of fruit and nuts increased from \$803,376 in 1908 to \$1,457,644 in 1909 and \$1,794,001 in 1910. The exports of coffee increased from \$174,216 in 1908 to \$238,083 in 1909 and \$330,228 in 1910. The marked increase in imports from as well as exports to continental United States, which has been manifested in recent years, continued. During the last six years these imports have steadily increased from \$11,703,519 to \$20,531,913.

There has been a steady increase in recent years in the tonnage of vessels entered and cleared. In the harbors of the Islands in 1910 the tonnage entered amounted to 1,308,801, an increase of 149,683, and the tonnage cleared amounted to 1,292,875, an increase of 133,126, which is exclusive of vessels engaged in inter-island traffic and vessels in the military and

## IMPORTS AND EXPORTS BY COUNTRIES, FISCAL YEARS 1909 AND 1910

Country	Imports		Exports	
	1909	1910	1909	1910

Grand total .....	21,424,980	25,138,247	40,521,504	46,456,412

naval service. For many years past, even before annexation, commerce with Hawaii has been mostly in American vessels. During 1910 about 96 per cent. of the freight was carried in American bottoms.

**TRANSPORTATION.** The question of transportation facilities both by sea and land is of the greatest importance to the development of the Islands. Many improvements were made during 1910. Between Hawaii and the mainland, one large steamer designed for perishable goods as well as for passengers and general freight, and said to be the largest vessel built in the United States during the year, was added by one large company, and a smaller passenger and freight steamer was replaced by a larger one by another company. On account of tourist travel and traffic in perishable goods, however, there is still a marked shortage in the required facilities. The Federal government has done important work on the harbors at Honolulu and Hilo and other work is to be undertaken soon. Negotiations are in progress for the construction of a wharf that will accommodate the largest steamers under the lee of the partially constructed breakwater at Hilo.

The most extensive railroad in the Territory is that of the Oahu Railway and Land Company in the island of Oahu. This road has 98.47 miles of main line and branches. During 1910 it carried 617,719 passengers, an increase of 123,232 over the number for 1909, and 531,751 tons of freight, an increase of 115,691. This road connects with over 100 miles of plantation railways along its line. There are shorter railroads in the islands of Hawaii, Maui, and Kauai. The only street railway in the Islands is at Honolulu. This is a single-track, electric line and is exceptionally well equipped and well conducted. It has a little over 22 miles of track. In 1909 this line carried 8,269,652 passengers.

**PUBLIC LANDS.** The public lands in the Islands comprise about 1,700,000 acres. Much of this, however, is so high and so precipitous and so recently formed by volcanic action, or so dry and rocky or otherwise unsuitable for marketable crops, that comparatively little is arable in its natural condition and in the present state of knowledge. Several important changes in the administration of the lands of the Territory were made by Act of Congress, approved May 27, 1910. These amendments provided for the consolidation of the administration of public lands in one department, and made provision also for the transfer of land for forestry or other public purposes. The most important

amendment, however, related to homesteading. This is aimed to prevent the taking up of land, ostensibly for homesteading, but really for speculation or investment. The land disposed of for homestead purposes in 1910 amounted to 2264 acres.

**EDUCATION.** The public schools of the Islands are under the Territorial Department of Public Instruction, consisting of a superintendent and six commissioners appointed by the governor from the four principal islands. The enrollment of all the schools in the Territory in 1910 was 25,537, an increase of 648 for the year. In the public schools were 19,909, an increase of 402; in private schools, 5628, an increase of 246. The teachers numbered 486 in the public schools, a decrease of 7; 266 in private schools, a decrease of 3. In the Territory are 152 public schools, a decrease of 1; and 55 private schools, a decrease of 1. The largest increase in all schools, 663, was in the Japanese pupils. This has been true for several years past. The pupils of this race have increased during ten years from 1352 to 7078. They now comprise 27.72 per cent. of the pupils. Next in order are the Portuguese, followed by Hawaiians, Part-Hawaiians and Chinese. Industrial training forms an important part of education, and this embraces agriculture, woodwork, printing and domestic science.

**FINANCE.** The bonded debt of the Territory at the beginning of the fiscal year 1910 was \$3,959,000, which was increased during the year by an issue of \$200,000 of 3½ per cent. bonds, and decreased by the payment of \$80,000 of the 1903 issue of 4 per cent. bonds, leaving a total bonded indebtedness of \$4,079,000 at the close of the fiscal year. The receipts for the year were \$3,641,245, an increase of \$589,718 over the amount of the receipts for 1909. The expenditures were \$3,264,364, an increase of \$329,380 over the expenditures of the previous year. The receipts exceeded the expenditures by \$260,338, as compared with an excess in 1909 of \$116,542. The receipts were increased mainly by an additional and special income tax and by a large increase in the inheritance tax. The expenditures were increased mainly by the expenditures for immigration and by a large increase in payments to counties. The principal receipts were from taxation, \$2,726,650, land revenues, \$264,933, harbor, wharf and pilot revenues, \$74,836, and Honolulu water and sewer revenues, \$184,277. The expenditures were for public instruction, \$434,423, and for the public health department, \$325,555.

**IMMIGRATION AND LABOR.** From June 14, 1900, to June 30, 1910, there arrived in the

Islands 77,421 Japanese, and there departed in the same period 75,186, leaving a net gain of immigrants of 2235. Of Chinese there arrived in the same period 3580 and departed, 13,918. There arrived in this period 7602 Koreans, and departed 2280. The total arrival of Orientals in the period was 88,603 and the total departures were 91,384.

Attempts have been made to induce immigrants from Madeira and the Azores, but as the inducements were found insufficient, attention was turned to Russians in Siberia and Manchuria. In October, 1909, 255 Russians were introduced into the Islands. These proved so satisfactory and the need of additional laborers was so great that 1535 more were introduced in February, March, April and May, 1910. The Russians are probably the best immigrants ever brought to Hawaii and rank higher than most of the immigrants from Europe to the eastern States. The strike on the island of Oahu, involving 7000 Japanese laborers, which began before the close of the fiscal year 1909, ended early during the fiscal year 1910. Several Japanese who were mainly responsible for this strike, but who were not laborers themselves, were convicted of conspiracy and imprisoned. They have since been pardoned and the relations between Japanese generally and their employers were very satisfactory at the end of the year.

**POLITICS AND GOVERNMENT.** The Act of Congress, approved May 27, 1910, referred to above, amended the organic Act of the Territory. It provided for increases in the salaries of a number of the executive and judicial officers, and members of the legislature; it settled doubts as to the applicability of various Federal laws to Hawaii by providing that such laws, which purport to relate to all Territories, shall not apply to this Territory, the provisions of its organic Act being deemed sufficient; it settled doubts also as to the powers of the legislature with reference to appropriations and also to the validity of numerous naturalization laws made by the circuit courts; it improved in several respects the law relating to the disqualification of judges; it authorized the restoration to the Territory of land set aside, but no longer needed for Federal purposes. The principal features of the Act, however, are the provisions making changes in the land laws (see *Public Lands*, above).

As a result of the failure of Congress to enact a prohibition law for the Territory, largely in consequence of opposition from the Territory itself, there was substituted for the bill a joint resolution providing for a referendum to the voters of the Territory upon the question whether the Territorial legislature should enact a prohibitory law at its next session. This resolution was approved April 26, 1910, and the election was held July 26, 1910. Of the 13,274 registered voters, 9773 participated in the election, and of these 2262 voted for the prohibitory law and 7511 voted against it. While the vote was influenced by many considerations, not the least was the fact that the Territory has an exceptionally good high-license law.

The intention of the War Department to make large expenditures for fortifications in Hawaii is regarded with great satisfaction by the citizens of the Territory. Progress has already been made in the construction of military defenses in the island of Oahu. At Pearl Harbor the widening, deepening and straightening of

the long entrance channel has proceeded rapidly during the year and Congress has provided for the continuation of the work. Army transports call regularly on their voyages to and from the Philippines and not only many American vessels, but also British, German, French, Italian, Dutch, Portuguese and Japanese naval vessels have called at Honolulu during 1910.

**OFFICERS:** Executive: W. F. Frear, Governor; E. A. Mott-Smith, Secretary; A. Lindsay, Jr., Attorney-General; D. L. Conkling, Treasurer; M. Campbell, Superintendent of Public Works, Commissioner of Public Lands, Surveyor; W. T. Pope, Superintendent of Public Instruction; J. H. Fisher, Auditor; E. A. Mott-Smith, President Board of Health. Delegate to Congress, J. K. Kalaniana'ole. Judicial, A. S. Hartwell, Chief Justice, Supreme Court; A. Perry, Associate Justice, Supreme Court; J. T. De Bolt, Associate Justice, Supreme Court; H. Smith, Clerk, Judiciary Department; H. E. Cooper, First Judge, First Circuit; W. L. Whitney, Second Judge, First Circuit; W. J. Robinson, Third Judge, First Circuit; S. B. Kingsbury, Judge, Second Circuit, Wailuku, Maui; J. A. Matthewman, Judge, Third Circuit, Kailua, Hawaii; C. F. Parsons, Judge, Fourth Circuit, Hilo, Hawaii; J. Hardy, Judge, Fifth Circuit, Lihue, Kauai.

**HAWES, H. A.** See **LITERATURE, ENGLISH AND AMERICAN, History.**

**HAWKE, JAMES ALBERT.** Rear-admiral, retired, of the United States Navy, died July 26, 1910. He was born at Bristol, Pa., in 1841, and received a medical education at the University of Pennsylvania. He served as assistant surgeon in the Civil War and was appointed assistant surgeon in the United States Navy in 1867. He was promoted to passed assistant surgeon in 1873, and made surgeon in 1879, medical inspector in 1895, medical director in 1899, and was retired in 1903 with the rank of rear-admiral for services during the Civil War. From 1890-93 he was in charge of the naval hospital at Widows Island and from 1900 to 1903 was in charge of the naval hospital at Mare Island, California.

**HAWKINS, HAMILTON SMITH.** An American army officer, died March 27, 1910. He was born at Fort Moultrie, S. C., in 1834, and was educated at the United States Military Academy, graduating in 1854. In 1861 he was appointed second lieutenant in the sixth infantry and shortly afterward was made first lieutenant. He became a captain in 1863 and served throughout the Civil War. He received a severe wound in the head at Fredericksburg, but insisted on returning to the front before his wound was fairly healed. From 1888 until 1892 he served as commandant of cadets at the United States Military Academy and in 1894 he was made commandant of the Infantry and Cavalry School, in which position he served until 1898. In the Spanish-American War he served as brigadier-general of volunteers of the fifth army corps and commanded the first brigade of General Kent's division. At the battle of San Juan he distinguished himself by heroic conduct, leading a charge of the sixth cavalry and 16th infantry, which resulted in dislodging the Spanish troops from a blockhouse on the summit of a hill. In this he was wounded. In September, 1898, he was made a brigadier-general in the

regular army and six days later was retired at his own request, having served in the army for forty years. For seven years prior to his death he was governor of the Soldiers' Home in Washington, D. C.

**HAY.** The hay production of the United States in 1910 was below the normal crop. The average yield per acre was estimated at 1.33 tons, as compared with 1.42 tons per acre the year before, and the lowest since 1901. The crop shortage was especially marked in the States of the northwestern Mississippi Valley, which suffered severely from dry weather at the time the grass most needed moisture for its growth. This was very evident from the low yield per acre secured in most States of this section. North Dakota produced only .55 ton and South Dakota .80 ton per acre, while Minnesota, Wisconsin and Nebraska each produced one ton and Iowa 1.05 tons per acre. The highest acre yields were, of course, obtained in the irrigated regions, which was due not only to the moisture supply, but also to the fact that alfalfa is largely grown. The total production of hay for the year was estimated at 80,978,000 tons, as compared with 64,938,000 tons the year before. The value of the crop of 1910, based on the price per ton on December 1, was \$747,769,000, while the larger crop of 1909 on the corresponding basis was only \$689,345,000. The value of the hay crop in 1910 was greater than the value of wheat produced and was the highest on record. The value of the crop was 17 per cent. above the average of the preceding five years, and the quantity of the crop was 3.6 per cent. below it. The yields of the principal hay-producing States were as follows: New York produced 6,351,000 tons on 4,811,000 acres; Pennsylvania, 4,443,000 tons on 3,212,000 acres; Ohio, 3,948,000 tons on 2,840,000 acres; Iowa, 3,780,000 tons on 3,600,000 acres; Illinois, 3,717,000 tons on 2,795,000 acres; Missouri, 3,510,000 tons on 2,700,000 acres, and Michigan, 3,370,000 tons on 2,592,000 acres. All other States produced less than 3 million tons. The relative geographic distribution of the hay crop has changed quite perceptibly since 1889. According to the report of the Secretary of Agriculture, the North Atlantic States have increased their share of the crop during the past 21 years from 24.3 to 27.8 per cent.; the Western States from 7.9 to 16.4 per cent.; the South Atlantic from 3.1 to 3.9 per cent.; the South Central from 3.3 to 5.3 per cent.; the two Southern groups of States from 6.4 to 9.7 per cent.; and the North Central States decreased their share from 61.4 to 46.1 per cent.

**HAYES, CHARLES HARRIS.** An American theologian and educator, died August 17, 1910. He was born in Newark, N. J., in 1868. He received his early education in Newark and graduated from Columbia University in 1890. He studied theology at the General Theological Seminary and graduated in 1894. He studied also at the universities of Berlin, Oxford and Halle. He was ordained a priest of the Protestant Episcopal Church in 1896 and from that year to 1900 was a member of the staff of St. Mark's Pro-Cathedral in Washington. In 1900-1 he was chaplain to the Bishop of Maine. In the latter year he was made associate professor of philosophy in Trinity College and from 1902 to the time of his death was professor of Christian Apologetics in the General Theological Seminary. He was the author of *Bible Lessons on the Creed* (1906).

**HAYES, REPRESENTATIVE.** See UNITED STATES, Congress.

**HAYNES, JOHN HENRY.** An American archaeologist, died June 28, 1910. He was born in Rowe, Mass., and graduated from Williams College in 1876. He later taught school for several years in Massachusetts. He accepted an offer from W. J. Stillman, correspondent of the *London Times*, to accompany him on an expedition to Crete, which resulted in his leaving the profession of a teacher and branching into what became his life-work. He went with the American expedition to Assos and was for three years tutor in Roberts College, Constantinople. In 1884 he was sent as manager of the Wolfe expedition to Babylonia, which continued for a year, and he then went to the Central Turkey College at Amtal, where he remained as a teacher and treasurer of that institution until 1888. In that year he accompanied the expedition sent out under the direction of the University of Pennsylvania to make explorations in Babylonia. He also accompanied a second expedition under the same auspices and assumed charge of expeditions in 1892 and 1898. The time between these periods he spent as United States consul at Bagdad. Dr. Haynes' discoveries in Babylon were of great importance. He was the first man to stay through the Babylonian summer at work in the trenches by day and by night, developing photographs or carefully packing and guarding the thousands of utensils and tablets that were recovered under his direction. He found the oldest arch known to the world, about 4000 B. C., literary records of the life of 6000 years ago and many other records of great value. For three years, during the fourth expedition under his management, with the exception of a few months, he lived alone, without seeing a white face, in the midst of warlike tribes. The later years of his life were saddened by discredit thrown upon his work by Dr. Hermann V. Hilprecht of the University of Pennsylvania. For ten years previous to his death he did no scientific work, but held a position in the Internal Revenue Department of the United States in California. A few weeks before his death he made a statement in which he claimed the credit of finding the "temple library" at Nippur, a discovery to which Dr. Hilprecht had hitherto laid claim. His scientific career was characterized by modest appraisal of his own work. His researches, however, were without doubt among the most important carried on in recent years.

**HEAP, DAVID PORTER.** An American soldier, died October 25, 1910. He was born at Stefano, Turkey, in 1843, and was educated at Georgetown College and at the United States Military Academy, graduating from the latter institution in 1864. He was appointed a first lieutenant in the corps of engineers and was assigned to the Army of the Potomac. He took part in the Richmond campaign and the siege of Petersburg. For bravery at Petersburg he was breveted captain in 1865. He was promoted to a captaincy in 1867 and served as chief engineer of the department of Dakota from 1870-72. In 1895 he was made lieutenant-colonel and in 1903 colonel. He served on a number of engineering and lighthouse boards and was chief

engineer of the department of the Pacific when he died. He retired in 1905 with the rank of brigadier-general. He was the author of several books on lighthouses and electricity.

**HEIBERG, HERMANN.** A German novelist, died February, 1910. He was born at Schleswig in 1840, and was educated in that city. His father was a publisher and the son succeeded him in the business. He sold out, however, in 1870, and went to Berlin, where he edited several papers. After a few years in the banking business he devoted himself to literature. His novels are modern and of a realistic tone, dealing mostly with family life. He wrote nearly seventy works of fiction, among which the best known are the following: *Acht Novellen* (2d ed., 1895); *Apotheker Heinrich* (2d ed., 1890); *Eine vornehme Frau* (2d ed., 1889); *Esthers Ehe* (2d ed., 1890); *Menschen untereinander* (2d ed., 1896); *Hochate Liebe schweigt!* (2d ed., 1894); *Zwischen drei Feuern* (1895); *Merkur und Amor* (1898); *Vieles um Eine* (1900); *Dreissig Geschichten* (1901); *Zwei Frauen* (1901); *Heimat* (1902); and *Die schwarze Marit* (1903).

**HELIGOLAND.** It will be remembered that by the Anglo-German agreement of July 1, 1890, Great Britain ceded the island of Heligoland, which she had obtained from Denmark in 1814, to Germany. The agreement provided that those natives who so desired might declare themselves British subjects down to January 1, 1892, and that until January 1, 1910, there should be no increase in the customs dues. On that date, therefore, the period of privileges and exemptions terminated and there was nothing to prevent the complete Germanization of the island. Henceforth it is to be included in the Customs Union and is liable for its quota for military service.

**HELIUM.** See ATOMIC WEIGHTS.

**HENNING, GUSTAVUS CHARLES.** An American engineer, died December 31, 1910. He was born in Brooklyn in 1855 and was educated at the Brooklyn Polytechnic Institute and the Stevens Polytechnic Institute, graduating from the latter institution in 1876. He was engaged for several years as inspector of material in the construction of several important bridges. He spent several years in Europe installing Emery testing machines at Edinburgh and Vienna. He was inventor of apparatus for testing materials. About the year 1898 he began a translation from the German of Professor Marten's work on Testing Materials of Construc-

tion. This was not completed at the time of his death.

**HENRI, VICTOR.** See CHEMISTRY.

**HENRY, O.** See PORTER, SYDNEY WILLIAM, and LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**HENZEN, WILHELM.** A German dramatist, died in September, 1910. He was born at Bremen in 1850 and was educated at Leipzig. From 1882 to 1885 he was connected with the Stadttheatre at Bremen and in 1893 became director of the National Association of Dramatic Authors and Composers. Among his best known plays are *Die Kypseliden* (1874); *Lügen des Herzens* (1876); *Ossian* (1877); *Bettina de Monk* (1881); *Luther* (1883), and *Schillers Todesfeier* (1905). He wrote the valuable study, *Über die Träume in der altmordischen Sagalliteratur* (1885-1889).

**HERTER, CHRISTIAN ARCHIBALD.** An American pathologist, died December 5, 1910. He was born in Glenville, Conn., in 1865 and graduated from the College of Physicians and Surgeons in 1886. After postgraduate work at Johns Hopkins and at Zurich, he devoted himself to the study of the nervous system and wrote *The Diagnosis of Diseases of the Nervous System*, a text-book, published in 1892. He then took up the problems of pathological chemistry in 1897 and was appointed professor of pathological chemistry at Bellevue Medical College, and his lectures there were published in book form in 1902. In 1903 he was called to the chair of pharmacology and therapeutics in the College of Physicians and Surgeons and in 1908 was appointed physician to the hospital of the Rockefeller Institute. He was one of the group of men who developed the ideas resulting in the formation of the institute. Dr. Herter, with his wife, created two \$25,000 lectureship foundations, one at the Bellevue Hospital Medical College and the other at Johns Hopkins.

**HERZEGOVINA.** See BOSNIA AND HERZEGOVINA.

**HESSE.** See GERMANY.

**HEVESI, LUDWIG.** A German-Hungarian journalist and humorist, died Feb. 27, 1910. He was born at Heves in 1843 and studied classical philology and medicine at Vienna. In 1865 he entered journalism and in the following year became one of the editors of the *Pester Lloyd*. He then helped found the Hungarian journal *Borszem Jankó*, and from 1871 to 1874 edited the Vienna juvenile magazine, *Kleine Leute*. He became in 1875 the art and dramatic critic of the *Fremdenblatt*. He wrote mainly in German, sometimes under his own name and sometimes under the pseudonym "Onkel Tom." His works include the humorous sketches of travel and collections of stories: *Ein englischer September* (1891); *Die Althofleute* (1897); *Der aerbrockene Franz nebst andern Humoresken* (1900); *MacEck's sonderbare Reisen* (1901); biographies, *Zerline Gabillon* (1894) and *Wilhelm Junker* (1896); and books of southern travel, *Ewige Stadt, Ewiges Land* (1903), and *Sonne Homers* (1904).

**HEWLETT, MAURICE.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**HEYSE, PAUL JOHANN LUDWIG.** A German author awarded the Nobel prize for literature in 1910. He was born in Berlin in 1830 and was educated there and at the University of Bonn. He afterward travelled extensively, and carried on philological studies in libraries of Switzerland and Italy. Even earlier than this, however, he had made a dramatic essay entitled *Francesca da Rimini*. In 1851 appeared *Urica*, and in the following year, *Die Brüder*. These were republished in 1854 and made Heyse so conspicuous that King Maximilian of Bavaria invited him to make his home at Munich. In that city he resided for several years, making frequent visits to Italy. In later life he spent most of his time in that country. Heyse's many and varied productions made him a dominant figure among German men of letters. His prose fiction has been chiefly in the shape of short stories. These tales are models of their kind. The best collection is *Das Buch der Freundschaft* (1883). Perhaps the most famous single short story is *L'Arrabbiata*. He also wrote a few longer novels tinged with radical thought on social and religious questions. Among these are *Kinder der Welt* (1873), and *Im Paradies* (1875). His writings include also a large number of lyric and epic poems of high merit. The best known of the longer poems is *Thekla* (1858). In his dramas he maintained a high level, although he did not in any of them attain the highest dramatic rank. The best known of his dramas include *Maria von Magdala* (1899), *Der Heilige* (1902) and *Die Tochter der Semiramis* (1905). A collection of his novels and short stories was published in 1897-99, and tales separately in 1904. His dramatic writings are contained in thirty-four volumes (1864-1903), and a volume of *Reminiscences* from his pen appeared in 1900.

**HEYWOOD, W.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**HIBBARD, GEORGE ALBEE.** An American public official, mayor of Boston, Mass., 1908-10, died May 29, 1910. He was born in Boston in 1864 and was educated in the public schools of the city. He engaged in the wholesale produce business, and later conducted the business of an insurance broker. He was a member of the Massachusetts House of Representatives in 1894-5 and was a delegate to the Republican National Convention in 1896. In 1900 he was appointed postmaster of Boston, serving until 1908, when he resigned to become candidate for the mayoralty against John F. Fitzgerald. In this campaign he was successful. He was induced to become a candidate again in 1910 against John F. Fitzgerald and James J. Storrow, the Independent candidate. Fitzgerald was elected and the defeat of Storrow was by some attributed to the fact that Hibbard was a candidate. After this defeat Mr. Hibbard retired from public life.

**HIBBEN, J. G.** See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

**HICHBORN, PHILIP.** An American rear-admiral, retired, died May 1, 1910. He was born in Charlestown, Mass., in 1839 and received his early education at the Boston High School. He served for five years as shipwright apprentice at the Boston Navy Yard, and by direction of the government took a course of special instruction in ship construction, calculation and design. In 1860 he went from Boston to California, and in the Mare Island Navy

Yard he became master shipwright in 1862. In 1864 he declined an offer to be assistant naval constructor, but five years later he made application for an appointment to that position and was successful. From California he was ordered to the Portsmouth Navy Yard and in 1875 was made naval constructor. After this he served at the League Island Navy Yard and in 1881 was made a member of the first naval advisory board. In 1884 he was appointed assistant chief of the Bureau of Construction in the Navy Department. In the same year he went abroad to study foreign naval construction, and the report which he made of his findings was used as a text-book among naval men. He was made chief constructor in 1893 and served in this position during the period of naval expansion in 1901. Under his supervision the construction of submarine torpedo boats was inaugurated, the amount of wood in warships was materially reduced, increase was made in conveniences aboard ship for the comfort of officers and men, and the plan of the inclined turret, sometimes called the Highborn turret, was adopted. He retired in March, 1901. Among his works on naval subjects were *European Dockyards*; *Standard Boats*, and *Sheathed and Unsheathed Ships*. He was the inventor of the Franklin life-buoy.

**HILL, ADAMS SHERMAN.** An American educator, died December 25, 1910. He was born in Boston in 1833 and graduated from Harvard College in 1853. He studied law at the Harvard Law School and from 1856 to 1868 acted as law reporter, correspondent and editor in New York, Washington and Chicago. From 1872 to 1876 he was assistant professor of rhetoric at Harvard College and from 1876 to 1904 was Boylston professor of rhetoric and oratory at the same institution. In the latter year he retired with the rank of professor emeritus. He received the degree of Doctor of Laws from Harvard in 1903. He was the author of *Principles of Rhetoric* (1878; revised edition, 1895); *Our English* (1889); *Foundations of Rhetoric* (1892); *Beginning of Rhetoric and Composition* (1903). He also contributed to leading reviews and magazines.

**HILL, DAVID BENNETT.** An American public official and lawyer, former Senator of the United States and governor of New York, died October 20, 1910. He was born at Havana, N. Y., in 1843 and was educated in the district schools and in Havana Academy. His father was a carpenter in poor circumstances. He studied law in the office of Erastus B. Hart in Elmira, N. Y., and in 1864 was admitted to the bar. While he was still a law student he became actively interested in politics. When but seventeen years of age he made a speech on the

occasion of the raising of a flag-pole in honor of Stephen A. Douglas. His first office was that of city attorney of Elmira. He was elected to the Assembly in 1871 and re-elected in the following year. During his service in the Assembly he was on the judiciary committee with Samuel J. Tilden and took a prominent part in the reform legislation which the latter went to Albany to pass. From his first participation in politics, Senator Hill was lieutenant to Tilden. With Daniel S. Lamont, Edward Cooper, and Abram S. Hewitt, he helped Tilden to fight Tammany Hall. After having served two terms as alderman in Elmira he was elected mayor of that city in 1882 on a reform ticket. At this time Grover Cleveland was beginning to be a prominent figure in the Democratic party, and when the latter was nominated in 1882 for governor, Hill was placed on the ticket for lieutenant-governor. He continued to be lieutenant-governor of the State until 1885, when Cleveland was inaugurated as President. He then became governor and held this office until January, 1892, when he was succeeded by Roswell P. Flower. His tenure of office as governor was exceeded in length only three times in the history of the State, by George Clinton, De Witt Clinton, and Daniel D. Tompkins. Senator Hill was at first a strong supporter of President Cleveland and he exerted all his political ability to bring about the nomination and election of Mr. Cleveland as President. During his first term as governor the legislature was Republican and with it he carried on an uncompromising battle. He vetoed many bills, largely for party reasons, and the legislature retaliated by refusing to confirm his nominations. At the end of the regular session there was a deadlock and he was obliged to call an extraordinary session, in which, however, he was able to accomplish little. Although he was re-nominated for the governorship, there was a lack of enthusiasm for him in the party because many thought that he could not be trusted. His Republican opponent was Ira Davenport. The campaign on the part of the Republicans was carried on also with a lack of enthusiasm. At a meeting held in Brooklyn, which began apathetically, Mr. Hill, who had begun his speech quietly, suddenly changed his manner and cried out in ringing words, "I am a Democrat." The effect was electrical. The sentence was taken as the keynote of the campaign and Davenport was defeated by 11,134 votes. For the rest of his life Mr. Hill was cartooned in a small silk hat, decorated by a long feather, which bore the words "I am a Democrat."

During his second administration, Governor Hill's plan to do away with hanging and substitute death by electricity as punishment for capital crimes was brought to a successful conclusion in the face of violent opposition. Senator Hill was often accused of treachery to President Cleveland in the latter's second administration. He did not approve of the President's tariff views, and in the campaign he stated plainly that if there were any who meditated cutting the national ticket they should cut the State ticket as well. He himself worked hard in the campaign and the fact that he carried the State and Cleveland lost it was always considered by him not so much a personal tribute as evidence that the Democrats were afraid of President Cleveland's tariff doc-

trines. Following the defeat of President Cleveland in 1888, the latter's friends in New York gave themselves to the effort to have him renominated four years later. Hill was equally determined that he himself should be the Democratic nominee. He made a tour in the South for the purpose of winning delegates and in 1891 had himself elected United States Senator to succeed Senator Hiscock. In the State Convention he was declared the State's choice for President. This convention had been called together by Senator Hill and it was known as a "snap convention." It greatly angered Mr. Cleveland and his friends. Hill had the support of the regular Democratic organization, while William C. Whitney was in charge of the Cleveland forces. At the convention held in Chicago Cleveland won the nomination on the first ballot by a vote of 617½ delegates, while Hill had but 114. Following President Cleveland's election considerable trouble arose between him and Senator Hill over the distribution of patronage in New York State. The President acted in his appointments without special regard for the Democratic organization. There was no open hostility until the President nominated William B. Hornblower as Associate Justice of the Supreme Court of the United States. Senators Hill and Murphy at once announced that they would make an issue of the right of the President to ignore them. They were supported by Senator Gorman, then the chief power in the Senate. Senator Hill made an eloquent speech against nominating Hornblower and the Senate voted against the nomination. The President shortly afterwards nominated Wheeler H. Peckham and Hill and Murphy were again prepared to oppose him. After a conference with the President, however, their opposition to Peckham was withdrawn. Thereafter Senator Hill was a defender of the administration.

In 1894 he was nominated for governor against his will and was defeated by Levi P. Morton, the Republican candidate, by a majority of 156,108. Opposition to the election of Isaac H. Maynard, a candidate for the Supreme Court on the Democratic ticket, was the chief cause of the tremendous overthrow. Maynard had been proved corrupt. In the Democratic National Convention in St. Louis in 1896, Senator Hill was defeated for the temporary chairmanship by a vote of 556 to 349. At this convention William J. Bryan was nominated for the presidency on the free silver platform. Senator Hill would not speak for him in the campaign and was always in opposition to Mr. Bryan's doctrines. As a result of the election of President McKinley and the carrying of New York State by an enormous plurality, Senator Hill was succeeded in the Senate by Senator Platt in 1897. In 1898 Senator Hill came into conflict with Richard Croker, who was then the leader of Democratic politics in New York City. Croker wished the nomination of Augustus Van Wyck for governor, while Senator Hill favored the nomination of his law partner, John B. Stanchfield. The Republican candidate was Theodore Roosevelt. Van Wyck was nominated, but was defeated by only 17,794 votes. Senator Hill always maintained that Stanchfield could have beaten Roosevelt. Croker and his associates continued their measures against Senator Hill. An attempt was made at the National Convention of 1900 to humiliate him by

removing him from the committee on resolutions and substituting Van Wyck. They endeavored, in addition, to press the nomination for vice-president upon him, but he declined to be considered. He was active in the campaign of 1900 and supported the nomination of Bird S. Coler for governor. His wishes were disregarded and John B. Stanchfield, who had in the meantime joined with the Coker forces, won the nomination. He was defeated by Benjamin B. Odell, Jr. Two years later Senator Hill succeeded in bringing about the nomination of Coler, but Odell again won by 8803 votes. It was generally believed that the defeat of Coler was brought about by the insertion of a plank in the platform calling for state ownership of coal mines. Senator Hill was directly responsible for the inclusion of this plank in the platform.

In 1904 Senator Hill was largely instrumental in carrying New York State for Alton B. Parker. He controlled the Democratic State Convention, which was instructed to vote as a unit for Parker, who was nominated in the National Convention. Following the defeat of Mr. Parker for the presidency by Theodore Roosevelt, Senator Hill practically retired from politics. In spite of his political activities he had been one of the most prominent lawyers in the State, and from this time until his death he practiced law and was associated in some of the most important cases before the courts. He was unquestionably one of the ablest lawyers of his day. His personality was not inspiring, as he had a certain cool aloofness which prevented familiarity. As a political fighter New York State has probably never seen his equal. He did excellent work in the Senate and was identified with some of the most important measures passed by that body during his term of service. It was frequently said of him that while many derided him as a "peanut politician" because of his minute attention to details and his liking for quarrels, he had the mind of a statesman if not the conduct of one. He was a student of literature and of the politics of all countries.

**HISTORICAL ASSOCIATION, AMERICAN.** A society for the promotion of historical studies, organized at Saratoga, N. Y., in 1884. Its membership in 1910 was 3000. The Association has from the first pursued the policy of admitting to membership not only those professionally or otherwise actively engaged in historical work, but also those whose interest in history or in the advancement of historical science is such that they desire to ally themselves with the Association and the furtherance of its objects. Its principal office is fixed at Washington and it is required to make an annual report to the Secretary of the Smithsonian Institution, which holds annual meetings in different cities of the United States. The meeting for 1910, which was the 26th, was held at Indianapolis, December 27-30. Among the topics discussed at the various sessions were Ancient History, Modern European History, American Diplomatic History, with special reference to Latin-American relations, Mediæval History and many important subjects dealing with

American history. Among the important papers on the latter subject were those of Orin G. Libby of the University of North Dakota on *New Light on the Explorations of the Verendrye*; The American Intervention in West Florida by Isaac J. Cox of the University of Cincinnati; A Century of Steamboat Navigation on the Ohio, by Archer B. Hulbert of Marietta College; and *Early Forts on the Upper Mississippi*, by Dan E. Clark of the State Historical Society of Iowa. Upon Ancient History papers were contributed by Robert W. Rogers of Drew Theological Seminary, George W. Botsford of Columbia University, R. F. Scholz of the University of California and Walter L. Westermann of the University of Wisconsin. On December 29 a general session was held commemorating the fiftieth anniversary of secession. Interesting papers dealing with this period were those of Worthington C. Ford on *Cotton and Border Politics, 1859-1860*, of Carl R. Fish on the *Decision of the Ohio Valley*, of Edward S. Corwin on the *Dredd Scott Decision*, and of Andrew C. McLaughlin on the *Doctrine of Secession and Coercion*. A conference of archivists was also held, as well as a conference of teachers of history in teachers' colleges and normal schools and a conference of State and local historical societies. The publications of the society include the *Annual Report*, the *American Historical Review* and the *Handbook*. Under the auspices of the society is being published a series of *Original Narratives of Early American History*, and it is assisting in the publication of an annual bibliography, *Writings on American History*, and of the series of *Acts of the Privy Council of England, Colonial*. The officers of the Association in 1910 were: President, Frederick J. Turner; Vice-Presidents, William M. Sloane and Theodore Roosevelt; Secretary, Walter G. Leland; Treasurer, Clarence W. Bowen; and Secretary of the Council, Charles H. Haskins.

**HOCKEY.** The annual championship series of the American Amateur Hockey League was won for the second successive year by the New York Athletic Club seven, which only lost one game of the eight played. The final standing of the clubs in the league follows: New York A. C. won 7, lost 1; Wanderers Hockey Club won 6, lost 2; Crescent A. C. won 3, lost 5; St. Nicholas Hockey Club won 3, lost 5, and the Hockey Club of New York won 1, lost 7. The Wanderers of Montreal captured the championship of the Canadian Professional Hockey League winning 11 games and losing 1. The Ottawas finished second with 9 games won and 3 lost. In the contest for the Stanley Cup, the Wanderers were also victorious. The championship of the Intercollegiate League went to the Princeton team, which won every game played. Harvard was second with 4 victories and 1 defeat, and Cornell third with 2 victories and 2 defeats. Columbia failed to win a game.

**HOCKING VALLEY RAILROAD.** See RAILWAYS.

**HODENPYL, EUGENE.** An American pathologist, died May 5, 1910. He was born in

Plainfield, N. J., in 1863, and graduated from the College of Physicians and Surgeons in 1885. He acted as house physician and pathologist at the Roosevelt and other hospitals in New York City. In the early part of 1910, he came into prominence through the publication of a preliminary paper concerning some discoveries that he had made regarding the course and treatment of cancer. Physicians had long noticed in cancer cases that occasionally a case was presented which apparently had cured itself. Dr. Hodenpyl encountered such a case and had noted the presence of a dropsical fluid in the abdominal cavity which it was necessary to remove frequently. It occurred to him that this fluid might contain nature's cure for cancer and on that line he proceeded to experiment with gratifying results. He employed the use of this fluid in forty-seven cases, but his observation up to the time of his death had not proceeded far enough to determine whether or not the treatment was efficacious. In all cases, however, the cancerous tumors had grown smaller and in some they had completely disappeared.

**HOFMANN, JOSEF.** See MUSIC.

**HOG CHOLERA.** See VETERINARY SCIENCE.

**HOGG, JAMES.** An English publisher, died January, 1910. He was born in 1829, the son of James Hogg, the Edinburgh printer and publisher. He early engaged in business with his father. As editor of *Hogg's Instructor*, in 1850, he met De Quincey, who afterwards became a regular contributor to that magazine. In 1858, with his brother, John, he founded in London a branch publishing house which afterwards took over the entire business of James Hogg and Sons. This firm was dissolved in 1867. Mr. Hogg was the author of *De Quincey and His Friends*.

**HOLMES, D. T.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**HOLMES, LUDWIG.** A Swedish-American clergyman and poet, died in November, 1910. He was born in Sweden in 1858 and received his early education in that country. He removed to Illinois, where he spent the greater part of his life. He held important office in the Lutheran church in that State. In 1897 he was honored by King Oscar of Sweden with the jubilee token in silver and in 1901 with the blue ribbon which is the highest Swedish award for literary merit. His best-known work is a volume called *Dikter af Ludvig*.

**HOMER, WINSLOW.** An American artist, died September 30, 1910. He was born in Boston in 1834. He showed great interest in painting from childhood and began the study of art in Boston. At the age of nineteen he entered the employ of a lithographer, where he remained for two years. In 1859 he settled in New York and began to study at the school of the National Academy and under F. Rondel. He began to illustrate for various publishers and was sent to the front in the Civil War for

*Harper's Weekly*. At this time he first painted in oil. In 1864 he was elected an associate of the National Academy and in the following year was made an academician. His pictures attracted attention and in 1867 he went to Europe for a brief stay. He frequently exhibited in London and Paris and gained special success abroad in his studies of negro figures. One of his first pictures to attract attention was "Prisoners to the Front," which he painted in Washington during the war. This picture made a profound impression, owing largely to the state of mind of the country at that time. After his war pictures had become known, he turned his attention to studies of negro life and at a later stage of his career painted fisherfolk and the hunters in the Adirondacks. He also worked to some extent in the field of landscape. His studies of fishermen were made first at Gloucester, where his paintings of the sea showed his genius in a new light. "The Life Line," "Undertow," and "Perils of the Sea" are among his well-known sea studies. "The Hunter," exhibited by him at the World's Fair in Chicago, received the gold medal, and he won a gold medal at Paris in 1900. He painted also in water colors and in 1866 was one of the founders of the Water Color Society. The last two years of his life he painted altogether in water colors. Mr. Homer was perhaps the best known of contemporary American painters at the time of his death.

**HOME RULE.** See GREAT BRITAIN, *History*; also MUNICIPAL GOVERNMENT.

**HONDURAS.** A Central American republic. The capital is Tegucigalpa.

**AREA AND POPULATION.** The estimated area is 44,274 square miles; another estimate places the area at 46,250 square miles. The population, according to official figures, was 500,136 at the end of 1906. A recent estimate, probably exaggerated, is 745,000. The population is principally Indian. The larger towns, with estimated population, are: Tegucigalpa, 35,000; Juticalpa, 17,800; Nacaome, 12,040; La Esperanza, 11,500. For primary instruction, which is free, secular, and nominally compulsory, there are about 850 schools with about 30,000 pupils. There are several secondary and normal schools and, at the capital, an institution for higher and professional education.

**INDUSTRIES.** The people are engaged principally in agriculture and cattle-raising. The most important crops are bananas and corn. In 1909 the Atlantic coast district produced about 9,000,000 bunches of bananas, and the total yield of corn was reported at 478,395 bushels. Other products are coffee (5,500,000 pounds in 1909), sugar, tobacco, rubber, and fruits. There is some exploitation of the forests, which are rich in cabinet woods. Mineral deposits, which include gold, silver, copper, and many other metals, are remarkable in richness and quantity, but they are not extensively worked.

**COMMERCE.** For the fiscal year ending July 31, 1908, imports and exports were valued at 7,075,085 pesos (silver) and 4,585,157 pesos respectively; for 1909, 6,841,115 and 5,275,094. With the average gold premium at 165 during the latter year, the imports and exports are represented by \$2,581,553 and \$1,990,601 respectively. The leading imports are cotton textiles and breadstuffs and other provisions. Classified exports in 1909 were: Vegetable products, \$1,203,905; mineral products, \$662,957;

animal products, \$116,236; manufactures, \$6158; miscellaneous, \$1345. The more important exports included: Bananas, 4,630,241 bunches, valued at 2,410,193 pesos (silver); cyanide products, 1,423,193 pesos; cocoanuts, 8,035,262 in number, 300,104 pesos; silver, 267,023 pesos; coffee, 153,635 pesos; cattle hides, 139,623 pesos; cattle, 126,263 pesos. Imports from and exports to the principal countries in the fiscal year 1909 were respectively: United States, \$1,769,877 and \$1,834,565; Great Britain, \$245,258 and \$12,191; Germany, \$233,515 and \$71,793; France, \$114,891 and \$1428.

**COMMUNICATIONS.** There are about 100 miles of railway, including a line of 57 miles from Puerto Cortés to Pimienta and one of 32 miles from Ceiba into the Zacate banana lands. Several new lines and extensions are projected. Steamers ply the Ulua River from its mouth to Progreso, 125 miles. Reported miles of telegraph, 3600, with 217 offices. Post-offices, 256.

**FINANCE.** For the year ending July 31, 1909, net revenue amounted to 3,408,574 pesos (silver), of which customs duties yielded 2,379,926 pesos; expenditure, 8,548,388 pesos, of which 3,822,234 were ordinary (including 1,495,829 for war), 4,317,106 on special accounts, and 409,048 on account of the internal debt. This debt stood on that date at 4,019,253 pesos; the external debt (of which a considerable portion is in dispute), £22,470,510, of which £17,071,940 were arrears of interest. The value of the peso is about 37 cents, fluctuating with the price of silver.

**ARMY.** There is an active army of about 2000 officers and men. The effective strength of the reserves is about 50,000, latest reports giving 49,431 officers and men, of whom 955 are officers and 2900 non-commissioned officers. By law every citizen is liable for service in the active army from his 21st to 35th year and in the reserve from his 35th to 40th.

**GOVERNMENT.** The executive authority is vested in a president, elected by direct vote for four years. The legislative power rests with a unicameral congress of 42 members. The executive in 1910 was Gen. Miguel R. Dávila, who assumed provisional charge of the presidency April 18, 1907, and became president early in the following year.

**HISTORY.** In August the arrest of revolutionists under ex-President Bonilla and General Lee Christmas, who had been active on the Guatemalan border, was reported by President Cabrera. There were conflicting reports about the revolution in Honduras. President Cabrera of Guatemala was supposed by some to have encouraged the revolution and was reported that President Dávila of Honduras himself had expressed a suspicion to this effect. It was reported afterward, however, that President Cabrera denied the charge and said that Bonilla was still in confinement at the Guatemalan capital. In November, Bonilla and Christmas, having been expelled from Guatemala, were in New Orleans. There were signs of anti-British feeling in the town of Ceiba, where three British citizens of Jamaica had been killed and others maltreated. A British cruiser appeared on the coast and demanded an indemnity. Serious complaints were brought against Governor Valladares for his treatment of the foreign residents of Amapala. He was said to be especially bitter against the Americans and to have ordered the imprisonment of American and Eng-

lish residents and the confiscation of their property, also to have refused to receive the American Minister with customary honors. Finally in October the foreign residents withdrew from the city and an American gunboat was sent to protect American interests there. The diplomatic representatives urged that the governor be dismissed and the President later sent troops to remove him. Upon the arrival of the American gunboat, Governor Valladares showed a more submissive attitude and subsequently surrendered to the President and was then obliged to call upon the United States government for its help against attacks of the people. Later, however, Governor Valladares returned to Amapala and resumed his aggressive attitude toward the Americans. He also ignored the authority of his successor. The guns of the gunboat were trained on his residence and he afterwards gave assurance of his better behavior.

**HONDURAS, BRITISH.** See **BRITISH HONDURAS.**

**HONEY BEE.** See **ENTOMOLOGY.**

**HONGKONG.** An island off the southeast coast of China, constituting, with 4 square miles of the peninsula of Kowloon (which is part of Hongkong proper) and a strip of territory on the mainland leased from China, a British crown colony. Area of the island, about 30 square miles; of the leased territory, 376 square miles. Population of Hongkong (1907 estimate), 421,499 (Chinese, 401,461); of the leased territory, 100,000, exclusively Chinese. Capital, Victoria. Births 4.17, deaths 27.55 per 1000 of the population in 1908 (calculated only on the population of Hongkong and Kowloon), Chinese emigrants (1908), 71,081; Chinese immigrants, 157,809. There are government and other schools; expenditure (1908), 205,875 dollars. The important industries are cotton-spinning, sugar-refining, ship-building and repairing, rope-making, cement manufacture, flour-milling, brewing (latterly), the fabrication of knit goods, and deep-sea fishing. Hongkong is a free port (save for the ordinance passed September 17, 1909, imposing a tax on liquors) and the centre of trade for many classes of goods, mostly transit; it is fortified, and has a magnificent harbor. There are no official returns of trade, which is chiefly with Great Britain (about one-half), India, Australia, the United States, and Germany. The British Board of Trade returns give the imports into Great Britain from Hongkong for 1909 at £455,674, against £510,495 in 1908; and exports of British produce to Hongkong at £3,713,852, against £3,088,340. Registered shipping (December, 1908), 45,521 tons. Total tonnage entered (1908), 11,164,386; cleared, 11,142,731. The money of account is the Mexican dollar. Revenue (1909), 6,822,966 dollars, against 6,104,207 in 1908 (derived mainly from land taxes, licenses, quarry rent, and an opium monopoly, which together more than cover the expenses of administration). Expenditure, 6,542,839 dollars, against 7,929,477 in 1908 (a large part of which is devoted to the maintenance of a strong police force and to sanitary measures against plague). Public debt, December 31, 1908, £1,485,733. The British section of the Hongkong-Canton railway was begun in 1907, and was opened to traffic October 1, 1910. The Chinese section is expected to be finished in May or June, 1911. Total length

is to be 111 miles (British, 22; Chinese, 89). Both are controlled by British interests. Hong-kong is the headquarters of the China Squadron (about 60 vessels); the new admiralty dock was completed in 1910. Governor, 1910, Sir F. D. Lugard. The sum required for the cost of the new university buildings has been provided; the necessary endowment funds are guaranteed; and the conditional subscriptions, amounting to £111,926, are being collected. The corner-stone of the new university was laid in March. Difficulties arose with the Chinese government over the suppression of the opium traffic. The British consul-general at Canton protested against the levying of illegal charges and interference with British trade, but the Viceroy denied the justice of this claim, saying that it was a right of the internal administration to levy imposts, and accused the British of non-compliance with the terms of the opium agreement. Later, however, the Wai-wu-pu declared this opium tax illegal and agreed to give proper instructions to the Viceroy of Canton.

**HOOKWORM DISEASE.** (UNCINARIASIS, ANKYLOSTOMIASIS, MINERS' ANEMIA.) The first conference for the purpose of considering the hookworm situation in the South was held at Atlanta, January 18 and 19, 1910. Five hundred delegates were present. Dr. C. W. Stiles, of the United States Marine Hospital Service, gave a brief historical account of the disease and reviewed conditions in the United States. The hookworm was first described by a German clergyman named Goetze, in 1782, who called it *haaken wurm*. In 1837, Dubini, of Milan, found the parasites in autopsies and gave them the name *Ankylostoma duodenale*, which to-day is known as the old-world hookworm in distinction from the American variety, named by Stiles *Necator americanus*. A few years later it was discovered that hookworm infection was common in Egypt, and a similar parasite was discovered in Brazil, where its clinical manifestations were carefully studied. In 1879 an outbreak of uncinariasis occurred among the miners of the St. Gothard tunnel (miners' anemia). In the United States the first to recognize the worm and its importance was Dr. H. F. Harris, while Stiles, by his systematic study and writings, made the disease one of national interest and concern. In 1909 Mr. John D. Rockefeller gave \$1,000,000 for a campaign against the disease and a commission was formed for that purpose. The distribution of the hookworm in the South is of interest. Infection is greatest in the sandy area, next greatest in the Appalachian region, and lightest in the clay lands. As a result of personal examination of 130 mills, Stiles believes that one out of every eight cotton-mill employes has well-advanced hookworm anemia. In the sand-land mills, the proportion is as high as 60 per cent., while in the clay belt infection is 5 per cent., or less.

Stiles believes the hookworm to have been imported from Africa by the negro. The parasite is a member of the roundworm family (*Strongyloidea*), is from 7 to 11 millimetres long, and inhabits the upper part of the small intestine, to the mucous lining of which it attaches itself by means of suckers. The worm is also armed with a hollow toothlike spine, by means of which it pierces the blood-vessels

and sucks the blood, at the same time injecting a toxic substance into the circulation. The female worm lays an abundance of eggs, which are cast into the world with the feces, and, under proper conditions of soil and moisture, these develop into larvæ, which in turn enter the human body with the food or through the skin. The latter is the main avenue of entrance, the skin of the feet particularly serving as a portal. The irritation to which the larvæ give rise in the skin is known as ground itch or dew itch. The larvæ are exceedingly minute, and having pierced the skin gain access to the lymph and blood channels, reaching, by way of the heart and lungs, the mouth cavity, from which they get into the intestine. As many as 4000 worms may be present in one person at one time, and 2,000,000 eggs may be discharged in a single stool. As a result of the constant abstraction of blood, the patient becomes anemic, the hemoglobin dropping to 30 per cent. in severe cases, or even lower in fatal cases. There is a moderate decrease in the number of red blood corpuscles, and an increase in the eosin staining cells (eosinophiles), which is a distinctive characteristic of the disease. The symptoms vary with the severity of the infection, from mild pallor, dyspepsia and lack of ambition, to the manifestations of a severe anemia, with prostration, dizziness, vomiting, dilatation of the heart and dropsy. Children suffer the most. Development, both physical and mental, is very much retarded. The face has an old, tired look, puberty is delayed. Resistance to other diseases is lowered, and the mortality from intercurrent diseases is excessive. The prevention of hookworm disease lies in the adoption of sanitary methods of disposal of excreta (the reverse of which is the rule in country districts of the South); personal cleanliness, and the wearing of shoes. The most satisfactory feature of hookworm disease is the promptness with which it can be cured. Thymol and beta naphthol are the drugs most used in this country. Large single doses are given on an empty stomach. In Germany, where uncinariasis prevails extensively among miners, male fern is the favorite specific. Wijn, a Japanese physician, reports most satisfactory results from a mixture of eucalyptus oil, chloroform, and castor oil. An interesting account of the disease in Porto Rico, and of the labors of the Porto Rico Anæmia Commission, will be found in an article, "Summary of a Ten Years' Campaign against Hookworm Disease," by Ashford and Igaravidez, in the *Journal of the American Medical Association*, May 28, 1910.

**HOOSAC TUNNEL.** See RAILWAYS.

**HOPKINS, EDWARD MÜLLER.** An American Protestant Episcopal clergyman and author, died January 14, 1910. He was born at Hannibal, Mo., in 1870, and graduated from Columbia University in 1893 and for a short time following taught Latin in the Cheltenham Military Academy. He then studied Latin at Harvard University, taking a degree in philosophy. He was instructor in Latin in the University of California from 1898 to 1901 and was professor of Latin in Trinity College from 1901 to 1905. He studied for the ministry and was ordained priest in 1906. For a short time prior to his ordination he served as city missionary of Grace Church, New York City. In 1906 he became rector of the Church of the Holy Nativity in

Bronx Borough, New York City. He contributed poems to several magazines and was the author of several novels, including *The Fighting Bishop* (1902); *The Torch* (1903); *The Mayor of Warwick* (1906); and *Priest and Pagan* (1907).

**HOPS.** The world's hop crop in 1910 was below the average and was inadequate to cover normal consumption. In many hop-growing regions of Europe unfavorable weather reduced both quantity and quality of the crop. The United States produced a good crop of fair quality. The world's area in hops for the year was estimated at 235,790 acres, the yield at 1,631,000 cwt., and the consumption at about 1,800,000 cwt. The production of different countries was as follows: The United States produced 440,008 cwt. on 44,480 acres; Germany, 387,200 cwt. on 67,869 acres; Austria, 312,400 cwt. on 57,065 acres; England, 308,000 cwt. on 32,124 acres; France, 59,400 cwt. on 6920 acres; Belgium and Holland, 52,800 cwt. on 4695 acres; and Australia, 11,000 cwt. on 1850 acres. Russia produced about 60,000 cwt. and a large proportion of the crop was high in quality. In many European localities the crop got too ripe before picking on account of a scarcity of labor. The Bavarian and Bohemian crops were quite uneven. The Hallertau region harvested a satisfactory crop, while the product of the Spalt district was low in quality. The famous Saaz hop district produced a crop lacking in color, while other Austrian regions were favored with a larger yield of better quality. A large part of the European crop was not considered sufficiently good for brewing purposes and the real prime green-colored product was scarce. The English hop crop was short and the deficiency was largely covered by importations from the United States. The hop production of the Pacific coast was estimated as follows: Oregon, 100,000 bales (of from 190 to 200 lbs.), California, 70,000 bales, and Washington 21,000 bales. In 1909 the yields for these States were 82,500, 70,000, and 17,500 bales respectively. A machine for picking hops recently patented in the United States was reported as successfully in use on some of the extensive hop plantations of the Pacific coast. The hop production of New York was greater by about 10,000 bales in 1910 than in 1909, when 42,000 bales were secured.

**HORSES.** See STOCK-RAISING.

**HORTICULTURE. THE WORLD'S FRUIT CROP.** There was a rather general reduction in the world's production of horticultural crops in 1910, due chiefly to inclement weather conditions during the blooming period in some countries and throughout the season in others. Europe was the greatest sufferer. Great Britain reported a bad crop year for apples, pears, plums, and cherries. In France the grape and prune crops were practically a failure, and reduced yields of almonds, walnuts, and olives were also recorded. More or less serious shortages in the olive crop were reported from all the producing countries except Turkey. As a result the reserve stock of olive oils was being held for increasing prices. The shortage in the world's raisin, currant, and fig crops was sufficient to clear the market of old stock and to somewhat improve the prices to growers. The Canadian apple crop for 1910 was very short, and in the United States the crop was about 2 million barrels short of the average annual

output, which owing to the continued low yields of the past six years should now be placed at approximately 25 million barrels. The most serious shortage to be recorded is that of European wine grapes, which were less than half a crop. The average vintage in a normal year approximates 3000 million gallons of wine, of which about one-third is produced in France. France consumes about 100 bottles of wine per capita and the failure of the grape crop was regarded as little short of a national calamity, since it affected an army of people connected with the industry in addition to curtailing the cheap wine supply of the populace. In Germany, Switzerland, and portions of Italy the greatly reduced vintage was also seriously felt. Yields in the more southern European wine centres were nearly up to the average and of good quality. California again produced a banner crop of 45 million gallons and was beginning to supply a small portion of the European demand.

**EXPORTS AND IMPORTS.** The United States shipped 89,014,080 pounds of prunes to Europe in the fiscal year 1909-10, as compared with 22,602,288 pounds in 1908-9, and with a ten-year average annual export of 43,694,116 pounds. California made large shipments of prunes for local consumption in France, which is in normal years an export country for that fruit. Owing to the slowness of domestic buyers, a prune shortage in the large markets of the United States is expected. In 1910 California shipped 12,919 cars of fresh deciduous fruits, other than apples and mixed lots, and packed about 148,275 tons of cured fruits. The only serious decrease was the prune pack, which was about one-half of that of the previous year. California shipped 33,099 car-loads, or 9,929,700 boxes, of citrus fruits in 1909-10, and Florida shipped about 21,600 car-loads, or 6,500,000 boxes. The canned packs in the United States of tomatoes, corn, and peas in 1910 were 8,031,000, 10,063,000, and 4,137,000 cases respectively, as compared with 10,984,000, 5,787,000, and 5,028,000 cases respectively in 1909. The domestic production of raisins, prunes, and oranges in the United States is fast supplanting the imports of these fruits. On the other hand the prosperity of the country has been such that imports of foreign fruits and nuts as a whole have increased from 19 million dollars in 1900 to about 38 million dollars in 1910. Bananas constitute about one-third of the foreign fruits consumed. In 1900 the total export of all fruits and nuts from the United States approximated 12 million dollars and in 1910 about 19 million dollars. Hawaiian canned pineapple shipments to the United States increased from a value of \$1,229,647 in 1909 to \$1,548,950 in 1910. Porto Rico made a total fruit export, consisting principally of oranges and pineapples to a value of \$1,416,947, as compared with about \$125,000 five years ago.

**RECENT DEVELOPMENT.** The development of fruit industries in Australia and Africa progressed favorably. Tasmania produced the largest apple crop yet harvested, 808,842 cases of green fruit, 62,312 cases of preserved fruit, and 13,770 cases of pulp for jam being exported. By evaporating the poorer grade of apples about \$500,000 were saved to the growers from otherwise worthless fruit. The output had a ready sale in the Australian markets. Considerable

progress is being made in the Cape of Good Hope in the development of the export trade, both in fresh and dried fruits. The principal fresh fruits exported thus far are grapes, pears, plums, peaches, nectarines, and apricots. In the dried fruit industry prunes head the list, although large quantities of apricots, peaches, pears, nectarines, figs, and plums are dried as well. Fig-growers were being encouraged in developing the Smyrna fig industry by the introduction of several varieties of the caprifig for the purpose of breeding the *Blastophaga* insect necessary for caprifying the Smyrna fig. Fresh pineapples packed in peat dust were successfully shipped from Kamerun, West Africa, to Hamburg, Germany. It is believed that the packing of pineapples in peat dust may enable shippers to forward fruit on vessels not provided with cold-storage facilities.

**IMPROVED METHODS.** During the year establishments for pre-cooling fruits for shipment, costing millions of dollars, were brought into use in the United States. Australia was conducting cold-storage experiments with a view to carrying a portion of the home crop over to compete with American fruits later in the season. The first experimental station of cold storage in France was established July 23 at Château Renard (Bouches du-Rhône), under the auspices of the French Association for Cold Storage. The station is located in a marketing centre and the experiments are to include fruits, vegetables, and various food products. In the United States interest in frost-prevention devices was revived, and the use of various forms of orchard heaters promises to become a stated affair in all fruit centres where late spring frosts occur. D. C. Lefferts of the Redlands Orange Growers' Association, California, was successful in separating frost-bitten oranges from sound fruit by means of a denatured alcohol bath, the frost-bitten fruit being sufficiently light to float on the top of the liquid. A machine has been devised for carrying on the separating process. Oranges subjected to this bath and examined later in the eastern markets were particularly free from the spores of fungi which cause decay.

The fruit marketing, transportation, and storage work of the U. S. Department of Agriculture (see *INTERNATIONAL YEAR BOOK*, 1909) was continued with table grapes, lemons, and apples in California, oranges in Florida, and peaches in Georgia. The results as a whole continued to emphasize the fact that loss in general is proportionate to the amount of injury that the fruit receives prior to or during packing. For example, lemons packed in California by 8 packing houses where careful methods prevailed developed less than one-tenth as much blue mould as fruit packed by 8 houses under careless conditions. A. F. Sievers of the same Department found that heat and humidity are not the prime factors producing change of color in lemons during the "sweating" process, but that the coloring is brought about by some of the gaseous products of the incomplete combustion of oil. This conclusion suggests the simplification of modern sweat-room construction and the further adaptation of the old oil-stove device. The Jamaica Department of Agriculture found that where oranges and bananas were stored together in a tight chamber, as in a ship's hold, the emanations from the oranges brought about a premature ripening of the bananas. It

was therefore recommended that these fruits be stored in separate compartments when being shipped for long distances by sea. In this connection, the Arizona Experiment Station found that date ripening may be hastened by spraying the immature fruit with a solution of acetic acid. The Ontario Department of Agriculture made successful trial shipments of fresh peaches, pre-cooled and shipped under refrigeration to British markets. The fruit netted the growers about 80 cents per six-pound package, f. o. b. shipping point. The successful ripening of a number of the best types of imported varieties of dates at the U. S. Department of Agriculture gardens in Arizona and California led to a greatly increased interest in the possibilities of commercial date culture.

The variation of the same kind of fruit grown in different climates was indicated from studies made by the Massachusetts State Station of Ben Davis apples collected from various sections of the United States and Canada. Generally speaking this variety gradually becomes more elongated in form the farther north it is grown. A correlation of the variations in fruit characteristics with the meteorological data indicates that the poor quality of the northern-grown Ben Davis is due to an insufficient amount of heat to fully develop the fruit. P. Viala and P. Pechoutre, eminent French viticulturists, have summed up the evidence from many investigations relative to the behavior of American species of grapes as stocks for the choice wine grapes in France. The evidence as a whole showed the superiority of *Vitis berlandieri* and its hybrids with *Vitis riparia* in improving the wines of all grapes grafted thereon. This desirable property is leading to the general use of the above named stocks in nearly all soils. The claim made by Dr. T. V. Munson, the American grape authority, that all known fruiting varieties of *Rotundifolia* grapes have imperfect flowers and require staminate vines of the same species growing near was fully confirmed by the results of extensive experiments recently reported by the North Carolina Station.

As a result of experiments conducted during the past three years, J. Coffigniez, a French investigator, reported that he had successfully combated chlorosis in pear trees by the introduction of sulphate of iron into the wood. The remedy was only temporary, however, in the presence of impoverished soil or when the tree was too old or seriously diseased or weakened by insects.

**DOMESTICATION OF THE BLUEBERRY.** As a result of several years' investigations, F. V. Coville of the U. S. Department of Agriculture has found how blueberries differ from ordinary plants in their methods of nutrition and in their soil requirements. With this knowledge as a basis, he has worked out a system of pot culture under which these plants attain a development beyond all previous expectations, plants only two years of age having been successfully fruited. The indications are that ultimately improved varieties of this fruit will be grown successfully on a commercial scale. The blueberry will grow successfully only in acid soils. The most promising situations for experiments in the field culture of the blueberry appear to be either peat bogs or sandy uplands treated with upland leaf peat. A full account of Coville's investigations was reported

in Bulletin No. 193 of the Bureau of Plant Industry, entitled "Experiments in Blueberry Culture."

**PLANT BREEDING.** G. W. Oliver of the U. S. Department of Agriculture announced a new process of preventing fecundation by undesirable pollen which should prove of great importance to commercial as well as scientific plant breeders. Oliver's method, which he calls "depollination," consists in removing the pollen from the stigma before fecundation has taken place by means of a tiny jet of water played on each flower head for a few seconds. All traces of pollen may thus be removed and the stigmatic surfaces of the pistils are not injured for subsequent pollination, providing the moisture adhering to them is largely removed by means of bibulous paper. Several genera of the *Compositæ* have been worked on with complete success and the method is applicable to all flowers having reproductive organs too small to be successfully manipulated by the ordinary methods of emasculation. Water may also be applied to the stigmas of larger flowers when there is any doubt whether pollen has recently gained access to the stigmas previous to artificial pollination. Oliver's "New Methods of Plant Breeding" are fully described in Bureau of Plant Industry Bulletin No. 167.

R. Pearl and F. M. Surface of the Maine Experiment Station have been conducting experiments in breeding sweet corn with a view to helping both the farmer and the packer. They secured a marked gain in earliness after the first year's selection, but no further gain in earliness from two subsequent years' selections. The first year's selection was also followed by a marked improvement in respect to the character of the ears. Both earliness and better-shaped ears have been maintained in subsequent crops where the corn has been grown in localities to which it is well adjusted.

It is the general rule for a hybrid of two natural species not to set seed with its own pollen. Through the agency of annular decortication, J. Brzezinski, an Austrian investigator, successfully fruited the common horseradish (*Cochlearia armoracia*), which plant has rarely been known to produce seed. A study of the resulting seedlings leads Brzezinski to conclude that the common horseradish is a hybrid, the distinct parent types of which were manifested in the seedlings.

**LITERATURE.** Among the more important horticultural works appearing recently may be mentioned: A. Janson, *Der Grossobstbau* (Berlin, 1909), a treatise on commercial fruit-growing; P. Pacottet and J. Dairat, *Cultures de Serres* (Paris, 1910), treats of fruit-growing under glass; C. Mariboe, *Fortegnelse over Dansk Havebrugslitteratur fra 1546-1908* (Copenhagen, 1909), is a bibliography of Danish horticulture containing 456 separate references; W. Paddock and O. B. Whipple, *Fruit-Growing in the Arid Regions* (New York, 1910), an account of improved fruit-growing practices in the intermountain country of the western United States; L. Woolverton, *The Canadian Apple-Grower's Guide* (Toronto, 1910), a complete guide to apple culture, marketing, and varieties; H. H. Hume, *The Pecan and Its Culture* (Glen Saint Mary, Fla., 1910), a revised edition; H. J. and W. P. Wright, *The Vegetable Grower's Guide* (London, 1908), a two-volume treatise for both

private and market gardeners; J. Weathers, *French Market Gardening* (London, 1909), gives an insight into the intensive methods of growing vegetables in France, with their adaptation to English conditions; H. Rawson, *Success in Market Gardening* (New York, 1910), presents the up-to-date methods of commercial vegetable culture in the eastern United States; H. F. Macmillan, *A Handbook of Tropical Gardening and Planting* (Colombo, Ceylon, 1910). Of the works on ornamental gardening may be mentioned the following: A. Buyssens, *Manuel de Floriculture* (Vilvoorden and Paris, 1909); A. C. Apper, *Ornamental Shrubs of the United States (Hardy Cultivated)*, (New York and Chicago, 1910); H. J. and W. P. Wright, *Beautiful Flowers and How to Grow Them* (London, 1909), a valuable popular two-volume treatise on floriculture indoors and in the garden; and S. Parsons, *Landscape Gardening Studies* (New York, 1910).

**HOSPITALS.** Among the more notable gifts to hospitals in New York City during 1910 were the following: A gift of \$1,500,000 was made to the Presbyterian Hospital by Mr. E. S. Harkness and others unnamed; the will of D. O. Mills gave \$100,000 to the Home for Incurables; Mrs. Anna Woerishoffer gave \$100,000 to the German Hospital for a children's ward; Mrs. H. H. Jenkins gave \$25,000 to the Lying-in Hospital for a special study of puerperal fever; St. Luke's Hospital received about 6000 acres of coal lands by the will of N. I. Rees. In connection with the Rockefeller Institute for Medical Research, a hospital building was erected for the study of special diseases and biological problems. The building contains only seventy beds, but is rich in every form of apparatus for investigating and curing disease. A relatively large staff of physicians and nurses is in attendance, and a unique feature is that members of the medical staff will devote their entire time to the work of the hospital. No fees are accepted from patients. The new Polyclinic Hospital was started in West 50th Street. The structure will be eleven stories high and cost \$50,000. The new People's Hospital, built and opened to the public through the efforts of Austro-Hungarian citizens, was dedicated on June 21. A unique sociological experiment was undertaken through the generosity of Mrs. W. K. Vanderbilt. A hospital was planned in which delinquent children appearing in the Children's Court could be examined and treated, either medically or surgically, the idea being that a majority of mental and moral failings are dependent on physical defects, many of which are removable by medical science. The Metropolitan Insurance Company purchased a tract of land at Mount McGregor, Saratoga County, as a site for a sanitarium for its tuberculous employees. A new hospital was begun on Surf Avenue, Coney Island, by the Brooklyn Children's Aid Society at a cost of \$90,000. Ground was cleared in Philadelphia for the erection by Mr. Henry Phipps of a Tuberculosis Hospital in connection with the University of Pennsylvania. The expenditures will exceed \$5,000,000 and every phase of the subject will be investigated. Mr. Phipps also gave \$1,000,000 to the Psychiatric Clinic of the Johns Hopkins Hospital at Baltimore, for which the excavation was begun, and which is to be under the management of Director Adolf Meyer, M. D. In Iowa the new Woman's Infirmary in con-

nection with the State Hospital for the Insane at Mount Pleasant was opened for the reception of patients. The building cost \$67,500 and will accommodate seventy patients. Work was begun on the new hospital at Monmouth, Ill., the completion of which is looked for early in 1911. Plans were perfected for the new \$3,000,000 Cook County (Ill.) Hospital, comprising eleven buildings—six medical, two surgical, one administration and detention building, a pathological building and a morgue. Roof gardens and outdoor camps for tuberculosis patients are included in the plans. Among the innumerable hospitals opened or added to or projected in various parts of the country may be mentioned: The Mission Hospital at Pensacola, Fla.; the Deming (N. M.) Ladies' Hospital; the annex to the Phoenixville (Pa.) Hospital, costing \$25,000; the St. Louis Skin and Cancer Hospital, which is a new four-story modern building; the Burlington (Wash.) Hospital; the Sacred Heart Hospital at Spokane, Wash.; an annex to St. Vincent's Hospital, Portland, Ore.; the Public Hospital at San Francisco, with five new buildings costing \$220,000; the Peninsular Hospital at Palo Alto. A new State hospital for the insane at Yorktown, N. Y., was projected and operations for its development were begun.

**FOREIGN COUNTRIES.** In Canada, on account of the rapidly growing population in the Northwest, many new hospitals were rendered necessary and activity in building was notable. Hospitals were erected or in process of completion in Westminster, B. C., Regina and Areola, Sask., and Edmonton, Alberta. The new Lady Grey Hospital at Ottawa was opened on February 11th. Arrangements have been made for the construction of a hospital, to be called Melchor Ocampo, at Vera Cruz, Mexico. The building will cost \$100,000 and will replace the old San Sebastian Hospital now fallen to decay. For the purpose of caring for foundlings in Vienna, a large institution—the "Central Kinderheim"—was erected and formally opened by the Emperor of Austria. It consists of a large building capable of housing 410 children, together with 280 mothers and wet-nurses and 64 nurses. The International Hospital was opened in Adana, Turkey, to meet the pressing need following the massacres, which entailed much suffering and sickness. This is the only hospital in a district containing 70,000 people, except one for Turkish soldiers. There will always be accommodation for Americans and other foreigners; tourists and foreign workmen will be benefited especially. The new Philippine General Hospital at Manila was opened in September to government employes and the public. The building is of reinforced concrete, and when fully equipped promises to be the finest hospital plant in the Orient.

**HOURS OF LABOR.** See **LABOR LEGISLATION.**

**HOUSE FLY.** See **ENTOMOLOGY.**

**HOUSE OF GOVERNORS.** This title is applied to the conference of State executives, which began with the famous conference called together in May, 1908, by President Roosevelt. (See **CONSERVATION.**) The conference has no relation to the national government and is designed to deal almost wholly with matters of State legislation. Among the important topics discussed at its meetings have been marriage and divorce, pure food, insurance, extradition,

child labor, direct primaries, convict labor, prison reform, inheritance tax, and the conservation of natural resources. The conference was held again on January 18, 1910, in Washington, governors of thirty States meeting as an independent, deliberative body for the purpose of "initiating, inspiring, and influencing uniform laws." President Taft welcomed the governors with a reception and made an address in which he declared that he regarded the movement as of the greatest importance. "You are here," he said, "for the purpose of considering those subjects of laws in respect to which the legislation of the States ought to be uniform, and to take the course of making up for what some people point out as a defect of the Federal Constitution, in that it does not give jurisdiction to the Federal government with respect to certain purposes which can only be accomplished by joint action of the States." The opening address was made by Governor Hughes of New York. In this he outlined the scope of the conferences. This, he said, embraces at least three groups of questions: the first relates to uniform laws; the second relates to matters of State comity where, though absolute uniformity may not be expected, causes of friction may be avoided and the general welfare may be promoted by accommodating action; and the third relates to matters which, though of local concern, can be better treated in the light of the experience of other States. It would be impossible, he said, for governors in conference to undertake the consideration of uniform laws, but their united consideration of their importance and of the proposed statutes drafted by the commissioners of their appointment, will bring these matters into deserved prominence and bespeak for the progress of uniform legislation a much needed impetus.

He suggested among the topics to be considered the conservation of natural resources, financial administration, including taxation and appropriations, the supervision and the regulation of banks, insurance companies and public service corporations. He also suggested organization by which committees should be able in the intervals of the conferences to draw up a programme and present topics somewhat developed by correspondence. The Honorable Seth Low, as a representative of the Civic Federation, suggested that the conference consider uniform laws on divorce, negotiable instruments, warehouse receipts, bills of lading, pure food, the white slave traffic, and other subjects.

On the second day of the conference the various governors made addresses. Resolutions were presented by Governor Eberhart of Minnesota, defining the jurisdiction of Federal and State courts in matters involving interstate commerce. These were referred to a committee, which, however, took no action. Governor Willson of Kentucky asserted the right of the State of control over water power as against Federal control, and in this he was supported by Governor Fort of New Jersey. Governor Quinby of New Hampshire and Governor Hughes of New York called attention to the forests as well as water power, a priceless possession of the States. Governors Brooks of Wyoming and Shafroth of Colorado urged the right of the States to the water power. Governor Hadley of Missouri addressed the conference on railroad rate legislation and declared that rates should be controlled by the government and not

by the railroads. The conference adjourned on January 20, after hearing a brief plea from Mrs. Harriet Stanton Blatch of the Equality League, asking that the political position of women be one of the topics considered by the governors.

The meeting adjourned until some time between Thanksgiving and Christmas, 1910, and it was decided that the meeting should be held in a State capital instead of in Washington. A committee on arrangements was appointed to apportion the expenses of the conference among the States according to population, so that the governors might recommend to the legislatures the necessary appropriations.

The third conference met at the invitation of Governor Willson of Kentucky at Louisville and Frankfort, Ky., November 29 to December 1, 1910. Governors of 24 States were in attendance. The session was opened by Governor Willson. President Taft sent a message to the conference reaffirming his sympathy with its objects. Woodrow Wilson, governor-elect of New Jersey, made a notable address on the general functions and purposes of the conference. Other important addresses were made by Governors Hadley of Missouri, Norris of Montana, Noel of Mississippi, Draper of Massachusetts, Fort of New Jersey and others. Among the questions discussed were employers' liability, direct primaries, "new nationalism," and automobile reciprocity. The subject of woman suffrage was presented by Miss Laura Clay, president of the Kentucky Equal Rights Association.

The fourth conference will be held at Spring Lake, N. J., in 1911.

**HOWE, F. C.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**HOWE, JULIA (WARD).** An American philanthropist, publicist and poet, died October 17, 1910. She was born in New York City in 1819, the daughter of Julian Ward, a wealthy and prominent citizen of New York City. She was educated privately and acquired a knowledge of German and Italian, music and philosophy. Her father died when she was twenty years of age, and this event for a time plunged her into profound melancholy. Previous to that time she had been a liberal thinker in religious matters, but the next few years of her life she devoted to an attentive study of the Bible, and from that time to her death she was deeply religious, but never quite approached the strict Puritan orthodoxy of New England. At the age of twenty-three, when on a visit to friends in Boston, she met Samuel Gridley Howe, the noted philanthropist, and in the same year, 1842, they were married. They immediately went to Europe where her husband's heroic labors for Greece in the struggle for independence, his devotion to the education of the blind, and his activity in the anti-slavery movement had won for him the title of "the new Bayard." In London, where they lived for some time, Mrs. Howe became friendly with Dickens, Landseer, Henry Hallam, Wordsworth, Mrs. Edgeworth, Florence Nightingale, and other notable persons.

After travelling through the continent of Europe they returned to Boston. They found the city a hotbed of fermenting ideas, which included transcendentalism, abolition and liberal thought in religion. Mrs. Howe took a prominent part in these discussions. She established strong friendships with William Lloyd Garrison, Theodore Parker, Charles Sumner, James Russell Lowell and others. With her husband, she conducted the *Boston Commonwealth*, an anti-slavery paper, prior to the Civil War. She also wrote poems, articles for periodicals, and a five-act blank verse tragedy, *The World's Own*, which was produced at Wallack's Theatre in 1855. She also wrote *Hippolytus* for Edwin Booth, but this was never produced. In addition to this literary work she made excursions into the fields of philosophy, ethics and religion. After the death of her husband in 1876, she joined aggressively in the movement for woman suffrage, which she came to look upon as the foremost question of the day. She was one of the founders of the New England Woman's Club and for the remainder of her life she was an active worker for the cause of the political enfranchisement of women. Important as was her work in abolition and woman suffrage, Mrs. Howe's name will probably endure longest as the author of the famous hymn, "The Battle Hymn of the Republic" which she wrote during the Civil War. She often told how it came to be written and named. During the war she went out from Washington with the Rev. Dr. McClark to witness a review of the Union troops. "The road was so filled with soldiers," she wrote, "that our return from the parade grounds of the city was very tedious, and to pass the time away we sang 'John Brown's Body.' Some of the marching regiments took it up and it was passed along the road until the echoes reverberated for miles. My pastor asked me why I did not put the spirit of the song into some graceful and expressive words. I told him I had tried. One morning soon after that I awoke suddenly about daylight and the lines I wanted were running vaguely through my mind. I arose and put them down. They were published in the *Atlantic Monthly*, and the editor named it 'The Battle Hymn of the Republic.'"  
This was in 1861 and James Russell Lowell was at that time editor of the *Atlantic*. Mrs. Howe wrote other poems which, in point of merit, were probably superior to "The Battle Hymn of the Republic," but that is the work by which her fame was most widely established. Mrs. Howe was a contemporary and not the least of the famous company of poets, philosophers and humanitarians who lived in and around Boston in the middle and latter part of the 19th century. Her *Reminiscences*, published in 1889, are filled with anecdotes of Washington Irving, Charles Dickens, John Brown, Ralph Waldo Emerson, Wendell Phillips, Lowell, Holmes, and Longfellow. Her interest in current matters continued almost to the day of her death. In 1909 she made several appearances, preaching sermons and advocating woman suffrage. She left four children, Henry Marion Howe, Mrs. Florence Howe Hall, Mrs. Laura E. Richards and Mrs. Maude Howe Elliott. Her eldest daughter, Julia Romana, died in 1886. Among her published works were the following: *Passion Flowers* (poems); *Words for the Hour*; *A Trip to Cuba*; *The World's Own*; *From the Oak to the Olive*; *Later Lyrics*; *Sex and Education*;

*Memoir of S. G. Howe; Life of Margaret Fuller; Modern Society; Is Polite Society Polite?; From Sunset Ridge* (poems); *Reminiscences* (1899); and *Sketches of Representative Women of New England* (1905).

**HOWELLS, W. D.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*, and *Essays and Literary Criticism*.

**HOYT, HENRY MARTYN.** An American lawyer and public official, Counselor of the State Department of the United States, died November 20, 1910. He was born at Wilkes-Barre, Pa., in 1856 and graduated from Yale College in 1878. After postgraduate courses in law at the University of Pennsylvania, he received his degree from that institution in 1881. The same year he was admitted to the bar. He was appointed assistant cashier of the United States National Bank and after serving in that position for three years he became, first, treasurer, and later president, of the Investment Company of Philadelphia. He gave up his financial activities in 1893 and devoted himself to the practice of law in Philadelphia. He was appointed assistant attorney-general by President McKinley, serving in that office from 1897 to 1903. In the latter year he was appointed solicitor-general of the United States. He retained this office until 1909 when, on the creation of the office of Counselor of the State Department, he was appointed by President Taft to fill that office. He took part in 1910 in the negotiations carried on between Canadian and American officials for a reciprocity treaty between the United States and Canada.

**HOYT, LUCIUS WARNER.** An American lawyer and educator, died June 28, 1910. He was born at Hartford, Mich., in 1860 and graduated from the Michigan Agricultural College in 1882. He studied law and graduated from the law department of Columbia University in 1889. In the same year he was admitted to the bar. In 1892-3 he was associate professor of law in the University of Denver and in 1893 was made full professor. From 1902 to the time of his death he was dean of the law department of that university.

**HOYT, WAYLAND.** An American Baptist clergyman, died September 28, 1910. He was born in 1838 and graduated from Brown University in 1860 and from the Rochester Theological Seminary in 1863. In the same year he was ordained to the ministry. He occupied several pastorates from 1863 to the time of his death, including the Tabernacle Church in New York, 1873-4, Shawmut Avenue Church, Boston, 1874-6, Memorial Church, Philadelphia, 1882-89, and the First Church, Minneapolis, 1889-95. He was pastor of the Epiphany Church, Philadelphia, from the latter date until the time of his death. He was professor of religion and science and the art of public speech in the theological department of Temple University, and was a member of the Board of the American Baptist Missionary Union and of the boards of other Baptist associations. Among his published works are: *Hints and Helps in the Christian Life* (1880); *Along the Pilgrimage* (1884); *Home Ideals* (1904), and *Teaching of Jesus Concerning His Own Person* (1907). He also contributed to many newspapers and magazines.

**HUGGINS, Sir WILLIAM.** An English astronomer, died May 12, 1910. He was born in London in 1824 and was educated at the City of London School and by private teachers. He continued his studies in mathematics, classics and modern languages, natural philosophy, chemistry, electricity, magnetism and other branches of physical science, with particular attention to astronomy. In 1852 he was elected to the Microscopical Society and for several years made a microscopical study of animal and vegetable physiology. In 1856 he built an observatory at his residence at Upper Tulse Hill, London, and mounted therein a telescope with an eight-inch aperture. His first observations were of the double stars, and he made, in addition, careful drawings of Mars, Jupiter, and Saturn. His work of greatest distinction, however, was in spectrum analysis. In 1865 he was elected a fellow of the Royal Society and in the following year received one of the Society's medals for his researches and discoveries by means of the spectroscopic applied to the heavenly bodies. In 1867 the Royal Astronomical Society awarded its gold medal jointly to him and to Dr. Miller. Sir William's researches led him to the conclusion that the nebulae are not simply clusters of stars too distant to be observed singly, but isolated aggregations of a gaseous mass from which the stellar system is supposed to have been formed. From the spectra of comets he discovered that part of their light is different from the solar light and he proved the existence of carbon in them. He first introduced photography into astronomy and so opened up vast realms of which the human eye otherwise could discern nothing. He devised a spectroscopic method for observing the red prominences of the sun and proved the existence of calcium in them. After 1875, when the dry plates were available, he gave himself largely to the work of obtaining photographs of the ultra-violet section of the stellar spectra. He was the first to apply Doppler's principle to the measurement of stellar velocities toward the stellar system or away from it. In 1875 he married Margaret, daughter of John Murray, a solicitor of London. She was an astronomer of considerable attainments and many of the experiments carried on after their marriage were conducted with her aid. Sir William Huggins was president of the Royal Astronomical Society in 1876-8, of the British Association for the Advancement of Science in 1891, and of the Royal Society, 1900-1905. He received medals from most of the important English and foreign astronomical societies. With Lady Huggins he published, in 1900, *An Atlas of Representative Stellar Spectra*, which received the Actonian prize of the Royal Institution. In 1906 he published *The Royal Society, or Science in the State*. He wrote, in addition, many original papers in the transactions of various scientific societies. He was also a noted collector of antique works of art. He was one of the most eminent of British scientific men.

**HUMANE ASSOCIATION, AMERICAN.** A federation of societies and individuals for the prevention of cruelty, especially cruelty to children and animals, organized in 1877 and incor-

Copyright, Van der Weyde, New York

JULIA WARD HOWE

४१०

porated in 1903. The Association holds annual meetings in various cities, and under its auspices, in connection with its 34th annual meeting, there was held in Washington, October 10-15, 1910, the first American International Humane Conference. This conference was called to discuss certain practical problems relating to the prevention of cruelty to animals and children, to exchange views concerning methods and policies now practiced, to encourage unity and co-operation among humanitarians and to promote humane progress throughout the world. The sessions of October 10, 11, and 12 were devoted exclusively to the subject of child protection and addresses were made by experts on this subject. Among those who contributed to the discussion were Mr. A. Doria, the General Director of Prisons and Reformatories in Italy, who read a paper entitled "The Methods Followed in Italy for the Reformation of Young Girl Criminals." Mr. Nicholas Louchinsky of St. Petersburg read a paper on "The Reform of Criminal Children in Russia." Mr. Tong Kaisan of Peking, China, read a paper of unusual interest on "The Anti-Foot-Binding Movement in China." "Child Protection in Australia" was discussed by Mrs. D. R. McConnell of Brisbane, Australia, and others. "Work for the Protection of Children in Canada" was the title of a paper by Mr. W. F. Carsley, President of the Montreal Society for the Protection of Women and Children. Many other papers were read on questions relating to the care of children in the United States and in foreign countries. The sessions of October 13, 14, and 15, were devoted to animal protection. Among the important contributions were papers on "Japanese Attitude toward Animals," by M. Honda of Tokio, Japan; "Have Animals Rights?" by Henry S. Salt, Secretary of the Humanitarian League, London, Eng.; "Report of the League for the Protection of Animals for the German Empire," by Otto Hartmann of Cologne, Germany; "Humane Conditions in Norway," by Karl Schiørn of Tonsberg, Norway. There were also important papers and speakers from France, Holland, Sweden, Spain, Portugal, Argentina, and other foreign countries. The officers of the Association in 1910 were: President, Dr. W. O. Stillman; Vice-Presidents, Albert Leffingwell, Miss Caroline Earle White, and E. W. Newhall; Secretary, Nathaniel J. Walker of Albany, N. Y. President Taft acted as honorary president of the International Conference and is one of the vice-presidents of the Association.

**HUME, MARTIN ANDREW SHARP.** An English historical writer and educator, died July 1, 1910. He was born in London in 1848 and was educated in Madrid, where branches of his family had resided for over a century. During the campaign of 1878-79 he was attached to the Turkish army. In 1885 he unsuccessfully contested a seat for Parliament and again in 1886, 1892 and 1893. He travelled much in South America and Africa. His chief historical writings dealt with Spanish subjects and he was an authority on the relations of Spain and England, especially in the period of the Renaissance. He edited the Spanish State Papers of the Public Record Office, was lecturer in Spanish history and literature at Pembroke College, Cambridge, was examiner in Spanish and lecturer in the University of London and was examiner in the University of Edinburgh. He was a major, retired, of the Third Battalion, Essex

Regiment. His numerous publications include: *Chronicles of Henry VIII.* (1889); *Courtships of Queen Elizabeth* (1896-1904); *Sir Walter Raleigh* (1897); *Spain, its Greatness and Decay* (1898); *Modern Spain* (Story of the Nations Series) (1899); *A History of the Spanish People* (1901); *The Love Affairs of Mary, Queen of Scots* (1903); *Cambridge Modern History*, vols. 3 and 4 (1904-5); *Spanish Influence on English Literature* (1905); *Queens of Old Spain* (1906); *Through Portugal* (1907); *The Court of Philip IV.* (1907); *Two English Queens and Philip* (1908); *Queen Elizabeth and Her England* (1910). He wrote also many historical articles in the principal English and Spanish magazines and reviews. He was an academicien of the Royal Spanish Academy, of the Royal Spanish Academy of History, and of the Royal Galatian Academy.

**HUNNEWELL, JAMES FROTHINGHAM,** American merchant, author and bibliographer, died in November, 1910. He was born in Charlestown, Mass., in 1832. He was educated in private schools and engaged in business, but found time to write extensively on historical subjects. Among his published works are: *Bibliography of the Hawaiian Islands and Civilization in the Hawaiian Islands* (1869); *The Lands of Scott* (1871); *Bibliography of Charlestown and Bunker Hill* (1880); *Historical Monuments of France* (1884); *The Imperial Island* (1886); *A Century of Town Life* (1888); *Triumph of Early Printing* (1909) and *Historical Museums* (1909). He also edited *The Relation of Virginia* by Henry Spelman (1869-72), and *Early American Poetry* (5 vols. with introductions, 1894-1899).

**HUNT, WILLIAM.** See LITERATURE, ENGLISH AND AMERICAN, *History.*

**HUNT, WILLIAM HOLMAN.** An English artist, died Sept. 7, 1910. He was born in London in 1827. His father was a poor man of the middle class who was not able to give his son even an ordinary education. While he was still a boy he was apprenticed to an auctioneer as a clerk and a few years of uncongenial work followed. Even before this he had shown artistic aptitude, but his father would not give his consent to his following his bent. During his apprenticeship he made several drawings which attracted attention and when his indentures had expired he struck out boldly to become an artist. He painted portraits three days a week and the rest of the time he spent in the British Museum copying pictures. He tried three times to enter the Academy before he succeeded. When he was seventeen years of age he first met Millais, who was then only fifteen, but who had already won the principal medal in antique in the Academy. A friendship then began between the two artists which continued for years. Hunt worked intelligently and in 1844 he had completed his first Academy picture. It was a portrait of a child entitled "Hark." With Millais he founded in 1848 the modern school, known as the Pre-Raphaelite Brotherhood. With them other well-known artists soon allied

themselves. The letters P. R. B. were signed to all the pictures painted by these artists and it was intended that their meaning should be kept secret. Hunt asserted in a letter written shortly before his death that Rossetti had caused the breaking up of the original Pre-Raphaelite Brotherhood by revealing the mystic meaning of these initials. The pictures of the original Pre-Raphaelite Brotherhood were met with harsh criticism. They were painted in a style which was supposed to follow that of the old masters, but in which the British critics and public of that day saw little merit. In the early 50's Hunt went to the Holy Land and it was there that he gained his inspiration for many of his greatest works. He revisited Palestine many times and among the pictures painted in that country were some of his best known, including "The Finding of the Saviour in the Temple" (1860), "The Shadow of the Cross" (1873), "Christ Among the Doctors" (1890). Perhaps the best known of his works was the famous "Light of the World." The "Lady of Shalott" and "Nazareth" are two other canvases which rank high in the artist's works.

**HURD, CHARLES EDWIN.** An American literary critic, died April 21, 1910. He was born in 1833. He taught school for a short time during his youth and when about twenty years of age settled in Boston, where he found occasional employment on newspapers. He afterwards attempted a stage career, but returned soon to journalism. During the Fenian raid in Canada he acted as artist correspondent for Frank Leslie's *Illustrated Weekly*. He was successively editor of the *Erie Despatch*, and on the staff of a Providence paper and several Boston papers. In 1875 he became literary editor of the *Boston Evening Transcript*, and held this position until 1901, when he retired. He originated and conducted the notes and queries and genealogical departments on the *Transcript*, and contributed largely to the art, dramatic and editorial departments. Among his published writings are the following: *New England Library of Genealogy and Personal History* (1901); *History of the United States* (4 vols., 1906); also many translations from the French, German, Danish, Spanish, Swedish and Norwegian.

**HUTCHINS, H. B.** See UNIVERSITY OF MICHIGAN.

**HUTH, ALFRED HENRY.** An English bibliophile and author, died October 14, 1910. He was born in 1850 and was educated at Rugby and Berlin University. He inherited a magnificent collection of rare and early printed books gathered by his father, Henry Huth. His father was an intimate friend of Henry Thomas Buckle, historian, and the son became the latter's biographer in the *Life and Writings of Henry Thomas Buckle*. He wrote also *Marriage of Near Kin* (1875), Goethe's *Faust* in English verse (1880) and *Adventures of Matthew Dudgeon* (1894).

**HUTTON, E.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description, Biography*.

**HYBRIDIZATION.** See BIOLOGY.

**HYDRO-ELECTRIC PLANTS.** See TRANSMISSION OF POWER.

**HYDROGEN.** See ATOMIC WEIGHTS.

**HYGIENE.** BILL FOR A NATIONAL DEPARTMENT OF PUBLIC HEALTH. The Owen bill, "es-

tablishing a Department of Public Health and for other purposes," was read twice in the Senate and referred to the Committee on Public Health and National Quarantine. The bill aims to create a separate department of the national government and provides for a "Secretary of Public Health who shall be appointed by the President a Cabinet officer" with like tenure of office. The bill also aims to unite all the departments and bureaus concerned in medical or sanitary matters, including the Marine Hospital service, and contemplates the establishment of a Bureau of Biology, a Bureau of Chemistry, a Bureau of Veterinary Service, and a Bureau of Sanitary Engineering.

**PURIFICATION OF WATER.** The purification of water by means of bleaching-powder, an impure product composed principally of calcium hypochlorites, has assumed practical importance during the past two years. This substance had previously been used for sewage disinfection and for the purification of typhoid-infected water in Maidstone, England. The use of bleaching-powder for the purification of the Jersey City water supply in 1908-9 stimulated interest in the subject during the past year. The degree of purification is indicated by the fact that, while bacteria in the untreated water ranged from 30 to 1600, the water treated by bleaching-powder contained but 15. Out of 455 tests the colon bacillus was found in only one sample. The simplicity and low cost of the process are remarkable. In an emergency a small plant can be put in operation within a few days and the cost averages under 40 cents for 1,000,000 gallons. A number of American cities have already employed the hypochlorite method, and among these are Harrisburg, Pa., Quincy, Ill., Minneapolis, Montreal, Toronto and Milwaukee. See CHEMISTRY and WATER PURIFICATION.

A simple method of purifying drinking water is recommended to campers, prospectors and travelers by the Ontario health authorities. A level teaspoonful of chlorid of lime is rubbed up in a cup of water. This is diluted with three cups of water, and a tablespoonful of this mixture is thoroughly mixed into two gallons of the water to be purified. This will give between four and five parts of free chlorine to a million parts of water, which is sufficient to destroy in ten minutes all typhoid or cholera bacilli and dysentery-producing germs, yet leaving the water without taste or odor. This method has been found effectual in purifying the germ-laden water of Toronto Bay.

**INTERNATIONAL MEETINGS.** The Committee of the International Office of Public Hygiene held a meeting in Paris in April, 1910. Nineteen Powers were represented, viz.: Belgium, Brazil, Bulgaria, Egypt, Spain, the United States, France, Great Britain, India, Australia, Italy, Mexico, Peru, Prussia, Russia, Serbia, Sweden, Switzerland, and Tunis. At this meeting the delegates examined the various questions relating to the extermination of rats and the adoption of international regulations requiring the extermination of rats on merchant ships. They also discussed the question of a uniform method of preparing antidiaphtheritic serum, the question of weekly statistics on epidemic diseases, and the disinfection of water taken to insure the stability of water ballast ships.

The Third International Congress of Educational Hygiene was held on August 2, 1910, in Paris, at the Sorbonne, under the honorary

WILLIAM HOLMAN HUNT

11705

presidency of Professor Landouzy of the Paris College of Medicine. The Congress was attended by 1600 persons, most of whom were from the northern countries of Europe, especially Sweden, Denmark, Norway, and England.

**ICELAND.** The chief dependency of the Danish crown. Area, 40,456 square miles; population (1901), 78,470. Total imports (1907), 17,550,000 kroner; exports, 11,498,000 (1 krone = 26.8 cents). Iceland has its own constitution and administration. A minister for Iceland (1910, Bjorn Jonasson), nominated by the king and residing at Reikjavik, is the responsible head of the government. The legislative body is the Althing with 40 members, 34 elected by popular suffrage and 6 nominated by the king.

**IDAHO.** One of the Mountain Division of the United States. It has an area of 84,313 square miles, of which 534 square miles are water. Its capital is Boise.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 325,594 as compared with 161,772 in 1900 and 88,548 in 1890. The increase in the decade from 1900 to 1910 was 101.3 per cent. This was the largest percentage of increase shown in any of the States except Washington and Oklahoma. The State ranks forty-fifth in point of population, whereas in 1900 it ranked forty-sixth. For population of the larger cities and towns see the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most valuable of the mineral products of the State is lead, of which 97,183 tons were produced in 1909, as compared with 98,464 tons in 1908. The State also produced a small quantity of spelter in 1909. Next in point of value to lead is the production of silver, of which, in 1910, 6,686,016 fine ounces were produced, as compared to 6,755,900 fine ounces in 1909. The value of the gold production in the State in 1910 was \$992,930, as compared with a value of \$1,344,200 in 1909. The production of copper in 1909 was 7,096,132 pounds, as compared with 7,256,068 pounds in 1908. The copper product of 1910 was about the same as 1909. A small quantity of coal is mined. In 1909 this amounted to 4553 tons, as compared with 5429 tons in 1908. Among other mineral products of the State are lime, salt, stone and zinc.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909 and 1910 were as follows:

	Acreage	Production	Value
Corn, 1910.....	6,000	192,000	\$136,000
1909.....	6,000	184,000	138,000
Winter Wheat, 1910 ..	345,000	8,176,000	5,887,000
1909.....	315,000	9,135,000	7,947,000
Spring Wheat .. 1910 ..	217,000	4,427,000	3,187,000
1909.....	215,000	5,330,000	4,637,000
Oats, 1910.....	184,000	7,084,000	2,976,000
1909.....	175,000	7,788,000	3,844,000
Barley, 1910.....	65,000	2,145,000	1,072,000
1909.....	62,000	2,480,000	1,462,000
Rye, 1910.....	4,000	80,000	63,000
1909.....	4,000	86,000	60,000
Potatoes, 1910.....	24,000	3,408,000	2,215,000
1909.....	28,000	5,000,000	2,400,000
Hay, 1910.....	491,000	41,473,000	13,257,000
1909.....	477,000	1,359,000	12,367,000

a tons.

**FINANCE.** The report of the State Treasurer showed a balance in the treasury at the close of the fiscal year ending September 30, 1909, of \$1,211,277. The total receipts for the fiscal year 1910 were \$2,603,707 and the total disbursements amounted to \$2,847,267, leaving a bal-

ance at the close of the fiscal year of \$967,716. The total amount of State bonds outstanding October 22, 1910, amounted to \$1,397,250.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions supported by the State, with the amounts disbursed for their maintenance during the biennial period 1908-10, were as follows: State Penitentiary, \$16,357; Soldiers' Home, \$14,446; North Idaho Insane Asylum, \$22,430; State School for Deaf and Blind, \$24,999; Idaho Industrial Training School, \$5274.

#### POLITICS AND GOVERNMENT

There was no session of the legislature in 1910, as the sessions are biennial and the last was held in 1909. The next session began January 2, 1911.

**ELECTIONS.** Primaries for the nomination of candidates for governor were held in September, and as a result of these elections Governor James H. Brady was renominated by the Republicans and James B. Hawley was nominated by the Democrats. This was the first direct primary election held in the State. Burton L. French, candidate of the Progressive Republicans for Congress, defeated Congressman Thomas R. Hanner, Republican nominee. Arthur W. Bowen received the Democratic nomination for Congress over John L. Sewell. In the elections held on November 8 the Democrats were successful, electing James B. Hawley governor over Governor James H. Brady by 895 votes.

**OTHER EVENTS.** The year 1910 was marked by the most disastrous forest fires in the history of the State. These fires began early in August and raged in the Cœur d'Alene region in and around the towns of Wallace, Murray and Mullan. They continued almost without intermission for several weeks. On August 21, Wallace and several smaller towns in the State were almost entirely destroyed and many lives were lost.

The workings of the new local option law proved unsatisfactory and the 11th session of the legislature, which is in session as the YEAR BOOK is being printed, is devising means to render prohibition in "dry" territory more effective. An important development in the latter part of 1910 was the decision of the Federal government to spend about \$7,000,000 on Idaho reclamation projects. All but \$500,000 of this amount will be expended near Boise on the Payette-Boise project.

**STATE OFFICERS.** Governor, James H. Hawley; Lieutenant-Governor, Lewis H. Sweetzer; Secretary of State, W. L. Gilford; Treasurer, O. V. Allen; Auditor, S. D. Taylor; Attorney-General, D. C. McDougall; Superintendent of Education, Grace Shepard—all Republicans, except Hawley.

**JUDICIARY.** Supreme Court: Chief Justice, George H. Stewart, Rep.; Associate Justices, James F. Ailshie, Rep.; Isaac N. Sullivan, Rep.; Clerk, I. W. Hart.

**STATE LEGISLATURE, 1911.** Senate, Republicans, 14; House, 34; joint ballot, 48. Democrat-Fusion, Senate, 9; House, 25; joint ballot, 34. Republican majority, Senate, 5; House, 9; joint ballot, 14.

**IDEALISM.** See PHILOSOPHY.

**IDO.** See LANGUAGE, INTERNATIONAL.

**ILLINOIS.** One of the East North Central Division of the United States. It has an area of 58,339 square miles. Its capital is Springfield.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 5,638,591, as compared with 4,821,650 in 1900 and 3,826,352 in 1890. The gain in the decade from 1900 to 1910 was 16.9 per cent. The State ranks third in point of population, the same relative rank which it held in 1900. For population of the larger cities and towns, see UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most notable feature of the mineral history of the State in recent years has been the great increase in the production of petroleum. The total output from the field in 1909 was 30,898,339 barrels. This was a decline from the production of 1908, which was 33,686,238 barrels. In 1909 there were 3151 wells completed, of which 2593 were productive. The production of 1910, according to estimates of the United States Geological Survey, amounted to about 32,000,000 barrels. New developments were badly hindered by the severe drought in the fall. The State ranks third in the production of petroleum, being surpassed by California and Oklahoma. The coal production in 1909 was 50,893,251 short tons, having a spot value of \$53,510,211, as compared with 47,659,690 short tons, valued at \$49,978,247 in 1908. The effects of the business depression in 1908 were felt less seriously in Illinois than in some other States, and coal production was fairly well maintained, so that in 1909 the recovery was not marked by so large an increase in output as was shown in Pennsylvania and West Virginia. In 1909, 40 men were killed in explosions in the coal mines of the State, 24 of these being killed in the explosion at Zeigler on January 10. From all causes 213 men were killed in the coal mines during the year. The State is important in the manufacture of coke and also in the production of cement. It ranks fourth in extent and value of its clay products.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910....	10,809,000	414,812,000	\$157,629,000
1909....	10,300,000	369,770,000	192,280,000
Win. Wheat 1910	2,100,000	31,500,000	27,720,000
1909....	1,810,000	31,494,000	32,754,000
Oats, 1910....	4,500,000	171,000,000	51,300,000
1909....	4,346,000	159,064,000	60,444,000
Barley, 1910...	30,000	906,000	507,000
1909....	31,000	888,000	451,000
Potatoes, 1910.	169,000	12,675,000	7,478,000
1909....	164,000	14,924,000	9,104,000
Hay, 1910....	2,795,000	3,717,000 <sup>a</sup>	44,604,000
1909....	2,852,000	4,135,000	40,936,000
Tobacco, 1910.	1,600	1,264,000 <sup>b</sup>	120,080
1909....	1,500	1,125,000	123,750
Rye, 1910....	70,000	1,218,000	865,000
1909....	71,000	1,264,000	935,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**EDUCATION.** The total enrollment for the year 1910 in the schools of the State was as follows: Boys in graded schools, 360,122; girls in graded schools, 355,651; boys in ungraded schools, 148,843; girls in ungraded schools, 138,071; total, 1,002,687. There are in the State 56 districts which have no schools. Pupils in such cases are transferred to adjoining districts. The number of high schools in the fiscal year was 505; the number of graded schools, including high schools, was 2484; the number of ungraded schools was 10,615; total, 13,099. The average monthly salary paid to men teachers was \$9.73, and to women teachers, \$65.37. The total

expenditures for the year ending June 30, 1910, were \$35,259,197. The value of the school buildings and grounds was \$86,574,206 and the amount of the bonded school debt was \$6,697,541.

**FINANCE.** The receipts for the biennial period from October 1, 1908, to September 30, 1910, amounted to \$21,614,919. The balance in the treasury on October 1, 1908, was \$3,859,263, making the amount of funds in the State treasury on September 30, 1910, \$25,471,182. The total disbursements during the same period amounted to \$21,046,572, leaving a balance on October 1, 1910, of \$4,424,610. The chief receipts were from revenue funds, from the school funds, from the local bond fund and from the State game and protection fund. The bonded debt of the State outstanding on October 1, 1910, was \$17,500.

**CHARITIES AND CORRECTIONS.** The charitable institutions of the State included the Northern Hospital for the Insane at Elgin, the Eastern Hospital for the Insane at Kankakee, the Central Hospital for the Insane at Jacksonville, the Southern Hospital for the Insane at Anna, the Western Hospital for the Insane at Peoria, the Asylum for Insane Criminals at Chester, School for the Deaf at Jacksonville, School for the Blind at Jacksonville, Industrial Home for the Blind in Chicago, Soldiers' and Sailors' Home at Quincy, Soldiers' Orphans' Home at Normal, Soldiers' Widows' Home at Wilmington, Charitable Eye and Ear Infirmary at Chicago, State Training School for Girls at Geneva, and St. Charles School for Boys at St. Charles. For four years beginning with 1905, a body known as the Board of State Commissioners of Public Charities carried on investigations into the administration of charities in the State, and recommended legislation intended to improve these conditions. New laws were passed in the several legislatures as a result of the investigations of this commission. On January 1, 1910, a new administration law went into effect.

#### POLITICS AND GOVERNMENT

The State legislature met in special session beginning December 14, 1909, and ending March 2, 1910. The most important measures enacted will be found in the section *Legislation*, below.

**CONVENTIONS AND ELECTIONS.** The November elections in Illinois in 1910 were for minor State officers and for members of Congress. There was no election for governor. In March, 1910, a new primary law was enacted which was sweeping in its provisions. The first trial of this law was on September 15, 1910. The most important nominations made were for Congressmen and members of the legislature. There was a strong effort to defeat those members of the legislature who had been implicated in the alleged bribery transactions relating to the election of Senator Lorimer (see below). While some of these men were defeated, others received renominations. Among these were Speaker Shurtleff and Lee O'Neil Browne, the latter of whom, it was charged, was the chief agent in the bribes. Speaker Cannon was renominated for Congress in his own district by a large majority, and James R. Mann and Congressman Foss were renominated, the latter by a very small majority. Henry S. Boutell, one of the most conspicuous members of the House of Representatives, and a pronounced conservative, was defeated for renomination by an insurgent.

The Republican State Convention was held on

September 23. It endorsed the candidates nominated at the primaries. The platform commended the administration of President Taft and especially praised him for bringing to justice those implicated in the sugar frauds against the government. The Payne-Aldrich bill was mildly criticised and the tariff commission plan was advocated. The conservation and development of the national resources of the State and nation were urged. A prompt amendment to the age service pensions law for soldiers and sailors was recommended. The platform favored a direct primary law and such amendment to the existing law as experience might show to be necessary. An employers' liability act was advocated, together with a Workmen's Compensation Act.

The Democratic State Convention was held on September 23. The platform denounced the Republican party for its failure to revise the tariff downward and declared for a tariff for revenue only. A plank was adopted favoring conservation of national resources. The platform favored an income tax law. Legislation "conducive to the prosperity, happiness and safety of the laboring man" was urged, including adequate and just workmen's compensation acts, and safety appliance legislation acts. The highest State official voted for in the elections of November was State Treasurer. The Republican candidate, E. S. Mitchell, received 436,484 votes, as compared with 376,046 cast for the Democratic candidate, H. K. Hartley. In addition to State Treasurer, a Superintendent of Public Instruction and trustees of the University of Illinois were elected. Representatives to Congress who were candidates for re-election were for the most part elected.

**THE LORIMER CHARGES.** The most sensational episode in the political history of the State both from a local and national standpoint, was the charge of bribery in connection with the election of Senator Lorimer. These charges were first published in April as an alleged confession made by Charles A. White, a Democratic member of the House. Senator Lorimer, a Republican, was elected by the votes of 55 Republicans and 53 Democrats. In his confession White charged that he was paid \$1000 by Lee O'Neil Browne, the Democratic leader in the House, to vote for Lorimer, and also that at the end of the session in July he received \$900 from Robert E. Wilson of Chicago as a share of the general corruption fund distributed at the time of adjournment. The charges were at once taken up by a special grand jury, and on May 5, Representative Beckemeyer confessed that he had also received \$1000 and \$900. On May 6 the jury indicted Browne for bribery, Wilson for perjury and Representative Michael S. Link for perjury. The two last named had denied to the jury that they were in St. Louis when, as White had sworn, the fund was distributed there. Following his indictment Link confessed that he also had received \$1000 and \$900.

Late in May four additional legislators were indicted and several new confessions were made to the grand jury. These were the result of an inquiry concerning the award of the contract for supplying furniture to be used for the legislature. The lowest bidder was unsuccessful and it was suspected that bribery had determined the choice of his winning competitor. Senator D. W. Holstlaw, a Democrat, who had been a member of the committee that had awarded the

contract, was indicted on May 27 for perjury because of his testimony before the grand jury. On the following day he confessed not only that he was to receive \$1500 for his action in relation to the furniture contract, but also that Senator Broderick of Chicago had given him \$2500 to vote for Lorimer and that he had received \$700 at the end of the session as his share of the corruption fund. Broderick was immediately indicted, and with him Senator S. C. Pemberton, Republican, and Representative Joseph S. Clark, Democrat, who were accused on account of their connection with the furniture contract. The agent of the successful bidder, a Chicago manufacturing corporation, confessed to the jury, and as a result of his confession immunity was granted to Senator Holstlaw.

Lee O'Neil Browne was placed on trial in Chicago June 7. His counsel made the unique defense that the purchase of a legislator's vote for a Senatorial candidate was not a crime against the State of Illinois, because in so voting a legislator acted as an officer of the United States. He insisted that if the sale of his vote were a criminal offense, it could only be considered by a Federal court.

In the meantime, on May 28, Senator Lorimer in Washington defended himself in a long speech in which he denounced all the confessions made and all the published accounts as lies and forgeries. A large part of his speech was an attack on the *Chicago Tribune*, which printed the first confession and which, he asserted, sought in this way to destroy a new bank which he was organizing. He asserted that not a dollar had been paid to any man for a vote in his favor. He charged also that Governor Deneen, former Senator Hopkins and Mayor Busse of Chicago had formed a combination to conspire against him. He asked for an investigation by the Committee on Elections. In accordance with Senator Lorimer's request a sub-committee of senators was appointed to investigate these charges, and these investigations were carried on during the fall and early winter of 1910. On December 12, a majority of the committee made a report to the Senate in which Senator Lorimer was exonerated from any complicity in bribery. In this report the majority members declared that the charges were made by persons who were unworthy of belief, and that in any event Senator Lorimer received enough untainted votes to ensure his election. There were two members of the committee who dissented from the views of the majority. These were Senator Beveridge of Indiana and Senator Frazier of Tennessee. No action had been taken on the report before the holiday recess began, but there were many indications that the majority report would not be accepted by the Senate without great opposition.

The trial of Browne resulted in a disagreement of the jury June 29, after it had been out for 115 hours. Eight of the jurors were for conviction and four were for acquittal. The State's attorney declared after the trial that it had been a flagrant case of jury fixing and he made the charge that the jury had been "packed" from the start. In July John E. Malby was indicted for attempting to bribe Oscar T. Morford, one of the jurors at the trial of Browne. Morford voted for conviction and did not know of the attempt to bribe him. Malby, it was alleged, sought to reach Morford by means of his wife and his father.

Browne was placed on trial a second time, in August, and September 9 was acquitted.

In connection with the investigation of the alleged Lorimer bribery, important discoveries were made relating to corruption that affected legislation. A charge was made that the bill requiring fish dealers to pay license fees was killed by a contribution of \$3500 to the corruption fund. A wealthy fish dealer testified that he had contributed money at every session for twenty years. Governor Deneen declared that it was manifest that a very extensive organization of corrupt members would have been required to carry out such a conspiracy against public interests as had been revealed. He urged all good citizens to assist the authorities engaged in the inquiry. The trials of Senator Pemberton and Representative Clark for alleged taking of bribes in connection with the contract for furniture in the Capitol resulted in a disagreement of the jury, eight standing for conviction and four for acquittal.

On November 2 an indictment was returned by the grand jury against Charles E. Erbstain, counsel for Lee O'Neil Browne, on the charge that he had corrupted the jury. The trial in December resulted in a disagreement, the jury standing six for conviction and six for acquittal. Preparations for a new trial were begun immediately by the State's attorney.

**OTHER EVENTS.** On January 27, eleven persons, city officials and contractors of Chicago, were indicted by the grand jury for alleged conspiracy to defraud the city of \$254,000 in the construction of Section N of the Lawrence Avenue sewer. Four more indictments charging conspiracy to defraud the city, in the same matter, were voted February 4. Among those indicted were John Ericson, city engineer, Paul Kadieske, formerly assistant commissioner of public works, and M. H. McGovern, contractor. Ericson and Kadieske were acquitted July 12, and the acquittal of all the others accused followed July 15.

For an account of the indictment of officials of the alleged Beef Trust in Chicago see the article TRUSTS.

**LEGISLATION.** Among the important measures passed at the legislative session of 1910 are the following: The Federal income tax amendment was passed. A commission was appointed to investigate the subject of an employers' liability law, and a law for workmen's compensation. As a result of the Cherry Mine disaster in 1909 the legislature established in the coal fields three rescue stations for rendering relief in cases of serious fires, explosions and accidents in mines. A commission of seven members is to procure the equipment for these stations and appoint a manager, who is to appoint a superintendent and assistant at each station. Every coal mine is to be provided with water for fighting underground fires, together with hose, sprinklers, mine telephones, electric gongs and fire drills. Violations of law are to be discovered and prevented by a corps of mine inspectors. The legislature also appropriated \$100,000 for the relief of the Cherry Mine victims. As the Supreme Court of the State had declared three successive primary acts unconstitutional, the legislature of 1910 was obliged to pass a new law. Two acts were passed relating to primaries. One of these deals with the selection of assemblymen and local committeemen, the other is applicable to other offices. The legislature was led to this course by

the constitutional provision for the election of assemblymen by a minority vote. By this special act each voter at the primaries has three votes which he may cumulate on one candidate or divide between two or three. For additional details in regard to this act, see **ELECTORAL REFORM**. The legislature passed important measures relating to the government of cities. Among these was an act authorizing any city or village except Chicago to establish a commission form of government. A petition of ten per cent. of the voters secures the submission of the question to any city. Rejection of the proposition settles the matter for two years. Under the plan the city government is headed by a mayor and four commissioners, elected on a general ticket without party designation for a term of four years, subsequent to a primary election at which ten candidates for the five places are selected. Vacancies on the board are filled by the survivors for the unexpired term. Each member of the Council heads a department, and the Council selects and removes the minor officials not covered by the civil service acts. The statute requires the five officials, in cities of over 20,000 population, to devote at least six hours a day to their office. The board meets weekly. All appropriations and grants of street franchises are to remain on file a week before adoption, and the latter must be approved by a vote of the citizens. The act has a recall provision, but this requires as a preliminary a petition signed by 75 per cent. of the total mayoralty vote in the last election. On petition of a certain percentage of the voters, ordinances may be submitted to the Council, or within 30 days after their passage by the Council, be referred to the people. On petition of 25 per cent. of the voters the question of abandoning the commission government must be submitted to the people.

**STATE OFFICERS.** Governor, Charles S. Deneen; Lieutenant-Governor, John G. Oglesby; Secretary of State, James A. Rose; Treasurer, Edward E. Mitchell; Auditor, J. S. McCullough; Attorney-General, W. H. Stead; Adjutant-General, Frank S. Dickson; Superintendent of Public Instruction, Francis G. Blair—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Alonzo K. Vickers, Rep.; Associate Justices, Wm. M. Farmer, Dem.; George A. Cooke, Dem.; John P. Hand, Rep.; Frank D. Dunn, Rep.; Orrin N. Carter, Rep.; James H. Cartwright, Rep.; Clerk of the Court, J. McCan Davis, Rep.

**STATE LEGISLATURE.** Senate, Republicans, 34; Democrats, 17; Independents and Prohibitionists, 0. House, Republicans, 82; Democrats, 68; Independents and Prohibitionists, 3. Joint ballot, Republicans, 116; Democrats, 85; Independents and Prohibitionists, 3. Republican majority, Senate, 17; House, 11; joint ballot, 28.

**ILLINOIS, UNIVERSITY OF.** An institution of higher learning at Urbana-Champaign, founded in 1867. The total number of students enrolled in all departments of the University in 1909-10 was 4784, of whom 3861 were men and 923 were women. The departments include the Graduate School, College of Literature and Arts, College of Science, College of Engineering, College of Agriculture, Library School, Music School, Summer Session, College of Law, College of Medicine, College of Dentistry and School of Pharmacy. The faculty numbered 538, of whom 363 were in the colleges and schools in

Urbana and 175 in the Colleges of Medicine, Dentistry and Pharmacy in Chicago. Among the important appointments for the year 1910-11 are the following: William Thomas Bawden, Assistant Dean of the College of Engineering; Dr. Arnold Emch of Switzerland, assistant professor of mathematics; Dr. J. B. Shaw, assistant professor of mathematics; David Varon, assistant professor of architectural design; Edward Sampson Thurston, professor of law, John Norton Pomeroy, assistant professor of law. There were no important benefactions during the year. The endowment of the University in 1909-10 amounted to \$647,131 and the total receipts for the year to \$1,639,792, the larger portion of this coming from the appropriations of the State legislature and the remainder from interest on the endowment, from the Federal government, from fees from students, and from receipts from the sale of agricultural products. The President is E. J. James, Ph.D., LL.D.

**ILLINOIS CENTRAL RAILROAD CASE.** See RAILWAYS.

**ILLITERATE ALIENS.** See IMMIGRATION AND EMIGRATION.

**IMMANENT PHILOSOPHY.** See PHILOSOPHY.

**IMMIGRANT BANKS.** See IMMIGRATION AND EMIGRATION.

**IMMIGRATION AND EMIGRATION.** The upward tendency in immigration foreshadowed in 1909 continued in 1910. The total immigration for the fiscal year was 1,041,570, or 289,784 more than the total for the fiscal year 1909, and 258,700 more than the total for the fiscal year 1908, and only 243,779 less than the total for the fiscal year 1907, the banner year in immigration. This increase is accounted for by the greater demand for labor, and it is due also in large measure to the activities of the transportation companies. In addition to the number of immigrants mentioned above there were 156,467 so-called non-immigrants, a name applied to aliens residing abroad who are making a temporary trip to the United States. During the fiscal year there were 202,436 emigrants and 177,982 non-emigrants. The latter name is applied to all alien residents of the United States making a temporary trip abroad. Thus the total number of emigrants was 380,418. In 1909 there were 225,802 emigrants and 174,590 non-emigrants. Thus it will be seen that while the total of all aliens arriving in 1910 exceeds such arrivals in the previous year by 253,802, the total number of aliens departing in 1910 was less by 19,974 than in 1909, indicating a larger net gain than might be supposed from a hasty examination of the figures. Of the immigrants admitted in 1910 the largest number from any individual country was from Austria-Hungary, these immigrants numbering 258,737. Next in numerical order was Italy, with 215,537. From the Russian Empire came 186,792. The immigration from the United Kingdom was 98,796 and the total immigration from Europe was 926,291. From Asia came 23,533 immigrants, of whom 15,212 were from Turkey in Asia, 2720 from Japan, and 1968 from China. From British North America came 56,555; from Mexico, 18,691, and from the West Indies, 11,244. The immigration by countries in the fiscal years 1909 and 1910 is shown in the following table:

Countries	1909	1910
Austria-Hungary .....	170,191	258,737
Belgium .....	3,602	5,402
Bulgaria, Servia and Montenegro ..	1,064	4,737
Denmark .....	4,395	6,984
France, including Co-sica .....	6,672	7,383
German Empire .....	25,540	31,283
Greece .....	14,111	25,888
Italy, inc. Sicily and Sardinia .....	183,218	215,537
Netherlands .....	4,698	7,534
Norway .....	13,627	17,538
Portugal, inc. Cape Verde Islands and Azores .....	4,956	8,229
Rumania .....	1,590	2,145
Russian Empire, and Finland .....	120,460	186,792
Spain, inc. Canary and Balearic Islands .....	2,616	3,472
Sweden .....	14,474	23,745
Switzerland .....	2,694	3,533
Turkey in Europe .....	9,015	18,405
United Kingdom .....	71,823	98,796
Other Europe .....	46	151
<b>Total Europe .....</b>	<b>654,875</b>	<b>926,291</b>
China .....	1,943	1,968
Japan .....	3,111	2,720
India .....	208	1,696
Turkey in Asia .....	7,506	15,212

South America .....	1,908	2,151
West Indies .....	11,180	11,244
Other countries .....	49	43
<b>Grand Total .....</b>	<b>751,786</b>	<b>1,041,570</b>

**OCCUPATION OF IMMIGRANTS.** Of the total number of such immigrants, 10,324 were ranked as professional, which includes all classes indicated by that term; 138,570 were classed as skilled laborers; and 632,664 were classed as miscellaneous, which includes unskilled labor. The part classed as having no occupation, which includes women and children, was 260,002.

**FINANCIAL CONDITION, LITERACY, SEX AND AGE OF IMMIGRANTS.** The total amount of money shown by immigrants admitted in 1910 was \$28,197,745. Those possessing \$50 or over numbered 111,071; those possessing less than \$50 numbered 693,595. Of the total number admitted, 188,439 men and 65,130 women could neither read nor write; 2583 men and 1988 women could read, but could not write. Of the admitted males, 52,751 were 45 years old and over; 868,310 were from 14 to 44 years; and 120,509 under 14 years. The division of sex was 736,038 males and 305,532 females.

**SOURCES OF IMMIGRATION.** As will be seen from the table above southern and southeastern Europe continue to furnish a very large percentage of the immigration to the United States. From Austria-Hungary came 25 per cent.; from Italy over 20 per cent., and from Turkey and Greece each 2½ per cent. It has been a matter of grave concern to those interested in immigration in recent years that so many of the aliens entering the United States belong to races differing radically from the Teutonic and Celtic stocks, and the overstraining of the ability to assimilate these is a general menace. The Commissioner of Immigration sees a serious problem in this condition. He questions whether we can continue to attempt to absorb many of the poorer elements of the Iberic and Slavic races. The best elements in these races, he points out, are not coming in any numbers.

Immigration from most regions is largely in-

duced by promoters and agents of steamship lines, and the prospects of immigrants when they arrive are precarious as a result of ignorance and lack of resources. The Bureau of Immigration has endeavored to ameliorate these conditions with some success. A considerable number of aliens were rejected during the year as contract laborers and a number of others as likely to become public charges. Of these a considerable proportion belonged to the class of unlawfully induced immigration.

**PHYSICAL, MENTAL AND MORAL CONDITION OF ALIENS.** During the fiscal year 3128 aliens were rejected on account of physical defects, 379 on account of mental defects and 1215 on account of moral defects. In addition 312 were rejected because certified for minor physical or mental defects sufficiently grave to affect ability to earn a living. Thus a total of 5034 were rejected for all these causes. There were, in addition, expelled from the country on warrant of deportation 215 because of physical defects, 709 because of mental defects and 554 because of moral defects, a total of 1578. In all, therefore, it was found necessary to return to the country of origin 6612 aliens physically, mentally or morally below the standard set by law. During the last few years special efforts have been made by the Bureau of Immigration toward excluding and expelling aliens of criminal and immoral classes. A total of 1580 of these classes were removed to the countries of origin in 1910. For a discussion of matters connected with the white slave traffic and its suppression, see article PROSTITUTION.

**JAPANESE IMMIGRATION.** The addition of the "Japanese Proviso" to Section I of the Act of 1907, and President Roosevelt's proclamation regarding Japanese and Korean laborers skilled and unskilled, of March 14, 1907, have with the coöperation of the Japanese government satisfactorily accomplished the exclusion of Japanese laborers as defined in the regulations putting the arrangements into effect. The law and the proclamation were supplemented by a general understanding with Japan, contemplating that the Japanese government should issue passports to Continental United States to such of its subjects only as are non-laborers who, in coming to the Continent, seek to resume a formerly acquired domicile, or for other specific reasons. With respect to Hawaii, the Japanese government stated of its own volition that the issuing of passports to members of the laboring classes proceeding to that Territory would be limited to "former residents," and "parents, wives or children of residents." During 1910 there was a slight increase in the number of Japanese admitted both to the Continent and to the Territory of Hawaii. The total number of Japanese admitted to Continental United States in 1910 was 2598. Of these 1893 were non-laborers and 705 were laborers. The total number admitted into Hawaii was 1527, of whom the greater number were laborers. The departures from Hawaii numbered 2355. These figures are significant in connection with the fear that the western coast of the country may be overrun by Japanese laborers.

**IMMIGRATION COMMISSION.** An Immigration Commission, consisting of three Senators, three Representatives and three others, created in 1907, finished its labors on December 5, 1909. Although its most interesting reports from a

popular standpoint related to restriction of immigration, it made in its published reports many important recommendations by which immigration may be restricted. The Commission was of the unanimous opinion that action should be taken at once for an amendment to the immigration laws with a particular view to keeping out undesirable aliens. The conclusions of the Commission in regard to the white slave traffic will be found under PROSTITUTION.

The Commission carried on investigations in Europe and in the United States. The main subjects which were considered in the European inquiry were: Causes of emigration, natural and artificial; economic conditions in Europe and the effect on emigration to the United States; steamship companies and their agents as factors in promoting emigration; classes and character of European emigrants; emigration of criminals; attitude of European governments toward emigration; laws of the various countries respecting emigration and emigrants; effect of the United States immigration law in preventing the embarkation of undesirable aliens; medical examination of intending emigrants at ports of embarkation and elsewhere, and practicability of having such examinations by United States medical officers; United States Consular officers as a factor in regulating emigration, and international regulation of emigration and immigration.

The investigations in the United States covered a wide field and included inquiries into the congestion of immigrants in large cities; immigrants as industrial workers in the leading industries; effect of recent immigration on wages and other conditions in various trades; the extent to which recent immigrants and their children are becoming assimilated and Americanized; the physical assimilation of immigrants; alien criminality; immigrant homes, aid societies and employment agencies, and an investigation of conditions under which immigrants are carried at sea. The Commission also made an investigation into the treatment and conditions of work of immigrants on the cotton plantations, turpentine farms, lumber camps and railway camps in southern States.

The most important recommendations made as a result of these investigations were the following:

To protect the United States more effectively against the criminal and certain other debarred classes. Aliens convicted of serious crimes within a period of five years after admission should be deported. To aid in bringing about this condition the President should appoint commissioners to make arrangements for such countries as have adequate police records to supply emigrants with copies of such records, and that thereafter immigrants from such countries should be admitted to the United States only upon the production of proper certificates showing the absence of conviction for excludable crimes. A further provision is recommended that any alien who becomes a public charge within three years after arrival in the United States should be subject to deportation at the discretion of the Secretary of Commerce and Labor.

Sufficient appropriations should be regularly made to enforce vigorously the provisions of the laws previously recommended by the Commission and enacted by Congress regarding the importation of women for immoral purposes.

It is further recommended that the government place officials, both men and women, on vessels carrying third-class or steerage passengers for the enforcement of laws relating to the carrying of immigrants and the protection of the immigrant.

The national government and the separate States should enact laws to protect the immigrant against exploitation. Efforts should be made to discourage sending savings abroad, to encourage permanent residence and naturalization and secure better distribution of alien immigrants throughout the country.

The Commission recommends that the general policy of excluding Chinese laborers, adopted by Congress in 1882, should be continued, and that the question of Japanese and Korean immigration should be permitted to stand without further legislation so long as the present method of restriction proves to be effective. An understanding should be reached with the British government whereby East Indian laborers would be effectively prevented from coming to the United States.

As the investigations of the Commission showed an oversupply of unskilled labor in basic industries, it recommends legislation which will at the present time restrict the admission of such unskilled labor. This should include exclusion of those unable to read and write in some language, the limitation of the number of each race arriving each year to a certain percentage of the average of that race arriving during a given period of years. Unskilled laborers unaccompanied by wives or families should be excluded. The number of immigrants arriving at any port at stated periods should be limited. The amount of money required to be in the possession of immigrants at the port of arrival should be materially increased. The head tax should also be materially increased and this should be levied so as to make a marked discrimination in favor of men with families.

The Commission, as a whole, recommends restriction as demanded by economic, moral and social considerations.

**LEGISLATION PROPOSED.** The 61st Congress in its first session did not pass many important measures relating to immigration, although several bills were introduced. Two measures, however, were passed, each containing important and far-reaching amendments to the provisions which contemplate the rejection and expulsion of aliens of immoral classes and the control of the white slave traffic. The Commissioner of Immigration recommends in his annual report the revision of the Chinese exclusion laws. He makes also recommendations for the further restriction of general immigration. He points out that the classification under which most of the aliens are rejected under the existing law, that is "persons likely to become public charges," is by no means broad enough to reach all undesirables. In addition to this he maintains that it is quite important that there should be excluded those who, if admitted, will be barely able to support themselves, and whose presence in any community cannot help but reduce the standards of living, work and wages, and who are therefore an economic menace. He suggests the phrase "persons economically unfit" as sufficiently inclusive for persons of this class. The Commissioner recommends that all male aliens between the ages of 16 and 50 shall be required to stand a physical test equal to

that observed with respect to recruits for the army and navy. To make any plan for the control of immigration effective, he says, complete means must be provided for compelling transportation companies to observe both the spirit and the letter of the law. This it is within the power of Congress to do, and he suggests that it be done to the fullest possible extent. Immigration is also discussed in the separate articles on countries.

**INCE, WILLIAM.** An English theologian and educator, died November 13, 1910. He was born in 1825 and was educated at Kings College, London. He was admitted in 1842 to Lincoln College and received his degree there in 1846. In the following year he was elected fellow at Exeter College and in 1850 he was appointed tutor, in which position he took high rank for his lectures, especially those on Aristotle's Ethics. In 1857 he also became sub-Rector, which office he held for twenty-one years. He was appointed canon of Christ Church in 1878, also regius professor of divinity. From 1871 to 1889 he was chaplain to the Bishop of Oxford. Among his published writings are: *Some Aspects of Christian Truth* (1862); *Religion in the University of Oxford* (1874), and *Letter on Declaration of E. O. U.* (1900).

**INDIA, BRITISH.** That part of East India governed by the King of Great Britain (Emperor of India) through the governor-general of India or the latter's subordinates. India, as defined by the British Parliament, includes British India and the Native States under the suzerainty of the British government. Popularly, the term India is still more inclusive, embracing certain territories which as yet are only under British influence. Capital of British India, Calcutta.

**AREA AND POPULATION.** Area of British territory, 1,097,901 square miles, with a population, according to the census of 1901, of 232,072,832 (including Burma, with 236,738 square miles and 10,490,824 inhabitants); area of the Native States and agencies, 675,267 square miles, with 62,288,224 inhabitants; total area of British India and of the Native States, 1,773,168 square miles, with a population in 1901 of 294,361,056. In 1891 the population of British India was returned at 221,376,957; Native States, 65,937,714; total, 287,314,671, against 253,896,330 in 1881. Distribution of population according to principal religions, in India (1901): Hindus, 207,147,026; Mohammedans, 62,458,077; Buddhists, 9,476,759; Animists, 8,-

584,148; Christians, 2,923,241; Sikhs, 2,195,339. Largest cities (1901): Calcutta, 847,796 (with suburbs, 1,106,738); Bombay, 776,006; Madras, 509,346; Hyderabad, 448,466; Lucknow, 264,049; Rangoon, 234,881; Benares, 209,331; Delhi, 208,575; Lahore, 202,964.

Coolie emigrants from India in 1907-8 numbered 15,117 and in 1908-9 11,844, while 6774 and 7918 respectively returned. Vital statistics are defective; birth and death rates in 1908, 37.78 and 38.21 respectively, against 37.66 and 37.18 in 1907.

**EDUCATION.** The census of 1901 showed that in India about one male in ten and one female in 144 could read and write. Number of scholars in educational institutions in India, March 31, 1909: public colleges, 24,892 males and 320 females; public schools, 4,631,442 and 720,981; private institutions, 543,701 and 62,774; total, 5,200,035 males and 784,075 females; grand total, 5,984,110, against 5,711,485 the year before and 4,463,735 March 31, 1900. The total number of educational institutions, March 31, 1900, was 150,584; 1908, 165,612 (40,320 private); 1909, 168,228 (39,330). Expenditure on public education (exclusive of that in British Baluchistan): in fiscal year 1900, £2,515,268; 1907, £3,734,207; 1908, £4,018,764; 1909, £4,397,552; of the last figures, £1,327,179 and £1,419,579 respectively were from provincial revenues.

**AGRICULTURE.** The following figures relate to British India in the year 1908-9: net area by survey, 623,134,032 acres; under forest, 82,489,268; not available for cultivation, 157,636,249; cultivable waste other than fallow, 113,065,769; fallow, 50,153,050; net area sown with crops, 218,039,793 (against 210,883,511 in 1907-8 and 180,150,454 in 1899-1900); irrigated, 42,486,724 (against 39,913,573 in 1907-8 and 31,508,404 in 1899-1900). Total area cropped in 1908-9, 246,189,004 acres, including 28,149,211 acres cropped more than once. The areas under principal crops in 1908-9 were: food grains and pulse, 196,837,120 acres (186,369,792 in 1907-8), including 72,800,536 rice, 21,198,764 wheat, 8,602,625 barley, 24,780,143 jawar (great millet), 16,007,989 bajra (spiked millet), and 11,264,421 gram (pulse); oil-seeds, 14,105,598 acres (12,485,973 in 1907-8), including 3,887,122 rape and mustard, 4,232,568 sesamum, 1,981,826 linseed; fibres, 16,517,145 acres (18,598,640 in 1907-8), including 12,958,974 cotton and 2,835,454 jute; sugar, 2,408,812; coffee, 97,233; tea, 520,487; indigo, 286,354; opium, 416,318 (against 538,042 in 1907-8 and 614,879 in 1906-7); tobacco, 953,712; fodder crops, 4,627,878. Statistics of acreages in the Native States are not available.

Estimated yields, including returns from some of the Native States, in 1907-8 and 1908-9 respectively: rice (cleaned), 379,211,300 and 598,909,800 cwt.; wheat, 6,106,700 and 7,590,000 tons; cotton, 4,291,000 and 4,776,000 bales (of 400 lbs.); jute, 9,817,800 and 6,310,800 bales; linseed, 163,200 and 288,800 tons; rape and mustard, 688,000 and 988,000 tons; sesamum, 285,700 and 474,600 tons; indigo, 52,300 and 37,100 cwt. (112,810 in 1901-2); cane sugar, 2,046,900 and 1,841,800 tons; tea, 248,020,397 and 247,477,324 lbs.

**MINERALS.** For the principal minerals produced in British India and the Native States, see next column. Of the coal, Bengal produced in 1909 a value of £2,337,040, Mysore £2,069,524 of

the gold, and Burma £899,343 of the petroleum.

**MANUFACTURES.** The most important manufactures are cotton and jute textiles; other manufactures include paper, woollens, indigo, foundry products, beer, kerosene, silk filatures, sugar, etc. Of the 657,585,000 lbs. of cotton yarn produced in the 232 mills in operation in 1908-9, 469,194,000 lbs. were credited to the Bombay Presidency. In the following table, the figures for cotton production include the Native States and French India:

	1899-1900	1907-8	1908-9
<b>Cotton</b>			
Mills.....	190	227	232

The figures given above for land trade are of doubtful accuracy, as registration is difficult. It should be noted that the year 1909-10 showed a recovery after the serious decline in 1908-9 as regards exports, which reached an unprecedented magnitude. The principal imports of private merchandise in the sea-borne trade were valued in 1909-10 as follows, in thousands of pounds: cotton goods and yarn, 26,247; metals, 8511; sugar, 7681; railway material, 3620; machinery, etc., 3381; mineral oil, 2097; provisions, 1932; hardware, etc., 1844; apparel, 1588; silk goods, 1511; woolen goods, 1387; liquors, 1277; spices, 858; glass, 857; dyes and tans, 739; instruments, etc., 723. Imports of government stores included: railway material, 1970; metals, 338; machinery, 185. Principal sea-borne domestic exports in 1909-10, in thousands of pounds sterling: raw cotton, 20,851; seeds, 12,484; rice, 12,163; jute manufactures, 11,398; raw jute, 10,059; hides and skins, 9080; wheat and flour, 8869; cotton yarn and cloth, 7944; tea, 7805; opium, 6209; raw wool, 1905; lac, 1848; pulse, millets, etc., 1353; fodder, etc., 863; oils, 806; coffee, 731. Principal re-exports (foreign produce): cotton yarn and cloth, 808; raw wool, 192.

The percentages shared by the leading countries in the imports of private merchandise (total, £78,038,000) and the exports of private merchandise (total, £125,150,000) were as follows in 1909-10: Great Britain, 62.5 per cent. of the imports and 26.3 per cent. of the exports; China (including Hongkong), 1.9 and 9.9; Germany, 3.6 and 9.5; United States, 3.1 and 7.6; France, 1.5 and 6.5; Belgium, 3.9 and 5.4; Japan, 2.1 and 6.7; Straits Settlements, 2.5 and 3.3; Austria-Hungary, 2.3 and 3.5; Java, 6.8 and 0.8; Ceylon, 0.6 and 3.8; Italy, 1.0 and 3.2; Mauritius, 2.1 and 0.5.

**SHIPPING.** In 1908-9 there entered in the foreign trade 4082 vessels, of 6,466,582 tons (6,347,826 steam), and cleared 3919, of 6,444,241 tons (6,333,010 steam); total number entered and cleared in 1909-10, 8042 vessels, of 14,597,091 tons. About 80 per cent. of the trade is under the British flag; about 70 per cent. is with the ports of Calcutta and Bombay.

**COMMUNICATIONS.** On December 31, 1909, there were in India 31,490 miles of railway open to traffic, against 30,576 the year before and 24,752 at the end of 1900. The mileage of 1909 was distributed as follows: State lines, 24,282 miles; assisted companies, 3353; unassisted companies, 39; Native State lines, 3742; foreign lines (French and Portuguese India), 74; total, 31,490. Most of the State and Native State lines are worked by companies under lease. For the year 1909: capital outlay for railways, £286,555,000; gross earnings, £31,376,000; working expenses, £17,590,000; net earnings, £13,786,000 (4.81 per cent., against 4.33 in 1908); employees, 515,703, of whom 498,722 were natives.

On March 31, 1909, the government telegraph had 2658 offices, with 280,955 miles of wire and 70,065 of line, against 68,940 the year before and 52,909 March 31, 1900. Post-offices in British India, March 31, 1909, 18,399, against 17,777 the year before and 12,397 in 1900.

**FINANCE.** The standard coin is the British pound sterling, worth \$4.8665, but the current coin is the rupee, valued at 32.44½ cents (15 rupees to the pound). For British India the gross revenue and the expenditure charged to

revenue, in thousands of pounds sterling, were as follows, in years ending March 31; revised estimate for fiscal year 1910:

	1900	1908	1909	1910
Rev.				
In India.....	59,211	70,285	69,160	.....
In England.....	264	719	602	.....
Total.....	59,474	71,003	69,762	74,375
Exp.				
In India.....	40,308	52,210	54,574	.....
In England.....	16,393	18,437	18,925	.....
Total.....	56,701	70,697	73,499	74,085

In addition to the above expenditure, there is a capital outlay (not charged against revenue), which in 1907-8 and 1908-9 amounted to £10,567,045 and £9,488,168 respectively for railways and £845,722 and £983,489 for irrigation.

The principal receipts in the fiscal years 1908 and 1909, with revised estimates for 1910, are shown below, in thousands of pounds:

	1908	1909	1910
Land.....	18,719	19,759	21,292
Opium.....	5,245	5,685	5,532

\* Direct demands on the revenue—this item consists of refunds and drawbacks, assignments and compensations, and collection charges, including cost of production in the salt and opium monopolies.

In the foregoing tables, the working expenses of railways are treated, not as expenditure, but as a deduction from revenue; thus, the 1909 figure for railway receipts is £9,958,041, while the gross receipts were £26,799,888. The following figures show net revenue and net expenditure, in thousands of pounds, with revised estimates for fiscal year 1910:

	1900	1908	1909	1910
Net revenue.....	39,767	47,006	45,700	49,539
Net expenditure.....	36,993	46,700	49,438	49,249
Surplus .....	2,774	306	-3,738	290

On March 31, 1909, the interest-bearing debt stood at £256,684,069; on March 31, 1910, £267,200,387; of the latter, loans raised in England (the sterling debt) amounted to £176,089,327 and loans raised in India (the rupee debt) £91,111,060 (Rs. 1,36,66,65,900). In addition, miscellaneous obligations (unconsolidated) totaled about £22,825,000. However, the assets of British India, including its railway and irrigation holdings, outstanding credits, gold reserve, etc., are reckoned as exceeding its liabilities.

**ARMY.** For 1910-11 the establishment of the British regular forces serving in India was 75,466, including 9 regiments of cavalry, 11 horse artillery batteries, 42 field batteries, 3 howitzer batteries, 8 mountain batteries, 21 garrison artillery companies, 6 heavy batteries, 52 battalions of infantry, and details of Royal engineers, Royal army medical corps, etc. The native army, amounting to about 159,446, consisted of three regiments of bodyguards, 39 regiments of cavalry and the Aden troops, the corps of guides, 12 mountain batteries, 1 frontier garrison company, 26 companies of sappers and miners, 117 infantry battalions, and 20 battalions of Gurkhas. In addition there were British volunteers, 37,040, Indian army reserves, 35,736, and Imperial service native troops, 20,736, military police and other forces making a total strength of about 340,000 troops available in India. The organization of the Indian army introduced by Lord Kitchener had been completed by 1910, and a staff college at Quetta was fully organized and the Imperial general staff scheme was made applicable to the Indian army and suitable regulations were framed. There were two great commands, a northern army under Lieut.-Gen. Sir James Willcocks, with divisions at Peshawar, Rawal Pindi, Lahore, Meerut, and Lucknow, and brigades at Kohat, Derajat, and Bannu; and the southern army under Lieut.-Gen. Sir Edmund Barrow, G. C. B., with divisions at Quetta, Mhow, Poona, Secunderabad, and in Burma, and a brigade at Aden.

**GOVERNMENT.** The government of British India is established by act of Parliament of 1858. By act of 1876 the King of Great Britain and Ireland is Emperor of India. Administration in England devolves upon the Secretary of State for India (a member of the British cabinet), assisted by a council. In November, 1910, Viscount Morley of Blackburn, the Secretary of State for India, resigned and was succeeded by the Earl of Crewe. In India, the chief executive authority is vested in the governor-general in council, sometimes styled the government of India. The governor-general is appointed by the crown, usually for five years; the Earl of Minto, who had served in this position from November, 1905, was succeeded in November, 1910, by Baron Hardinge of Penshurst. The council consists of six members, appointed by the crown, and the commander-in-chief of the army. There are ten departments of government, each headed by a secretary. A legislative council, pursuant to an act of 1909, consists of 28 official and 32 non-official members (including 25 elected), in addition to *ex-officio* members; and there are similar legisla-

tive councils in the presidencies of Madras and Bombay and in the following provinces: Bengal, Eastern Bengal and Assam, the United Provinces, the Punjab, and Burma. British India is divided into 13 local governments and administrations; in each of the presidencies, the executive authority is vested in a governor; in each of the above-named provinces, in a lieutenant-governor; and in a chief commissioner in each of the remaining divisions—the Central Provinces and Berar, Ajmer-Merwara, Coorg, British Baluchistan, the North-West Frontier Province, and the Andaman Islands.

Through British residents or agents the government of India exercises varying degrees of control over the Native States, which are governed by their princes, ministers, or councils, but are not allowed to maintain external political relations.

## HISTORY

**THE ADMINISTRATIVE REFORMS.** The annual meeting of the National Indian Congress during the last week in December, 1909, revealed a more pacific temper, owing to the execution of the reform measures upon which the government had been so long at work, and the only point on which a protest was raised was the treatment of Indians in the British colonies. The enlarged Legislative Council of Bombay met on January 4, with 46 members, 33 of whom were non-official, and the Bengal Legislative Council met at about the same time. The Imperial Legislative Council was opened on January 5, and the Viceroy, Lord Minto, in his address sketched the history of the reform measures, saying that they did not arise from suggestions of the home government, but were based entirely on views which he himself had expressed and that he was wholly responsible for them. He said that the Indian government had maintained from the first that the country was not yet ripe for the western representative system and that British supremacy ought not to be delegated. It had aimed at measures of reform and at enlargement of the councils and not at parliamentarism. At the annual meeting of the All India Moslem League the speeches were marked by a spirit of Moslem unity and loyalty to the government.

**SEDITION AND THE PRESS ACT.** In the Viceroy's speech above mentioned he had referred to the ineffectiveness of recent legislation in suppressing sedition, and declared the necessity of adopting new measures against the seditious press which was certainly responsible for the terrorism. The country was approaching a condition of anarchy; conspiracies were increasing and the press was constantly menacing a revolution. Reports of outrages in the press bore out the Viceroy's characterization. On December 21, 1909, Mr. A. M. T. Jackson, Collector of Nasik, had been murdered. It was brought out in the trial that the murder had been done under the belief that Jackson had acquitted native murderers, deceived the people and oppressed the poor. The court sentenced three of the prisoners to death, three to transportation for life and one to two years' imprisonment. The three prisoners condemned to death were executed at Thana jail on April 19. Investigations which led to the trial revealed the existence of a widespread conspiracy and 37 persons were held for trial. Another anarchist murder occurred in January when

Shams-ul-Alam, the Police Inspector of the Criminal Investigation Department, who had been charged with the investigation of the Manicktollah bomb conspiracy, was shot and killed at the High Court building by a young Bengali on January 24. The motive of the crime was the wish to remove an officer who held clues as to conspiracies, dacoities and other crimes. These and other outrages were fomented by the efforts of the native press and by the circulation of seditious literature. Numerous societies had been formed to preach violent resistance against the authorities. In the inflammable state of mind among certain classes even the reading by them of books commonly considered harmless led to acts of terrorism. For example it appeared that some of the Nasik murderers had been influenced in their course by the writings of Mazzini. The new Press act to which the Viceroy referred was passed on February 8. At the same time Lord Minto announced that the situation having changed, the prisoners sentenced fourteen months previously would be released. They had been arrested for political agitation which had since degenerated into anarchy, and they had nothing to do with the present sedition. It was thought that their release would tend to remove any feeling of injustice as to the severity of the government in the past. The principal features of the new Press law were the requirement henceforth of the deposit of Rs. 500 to Rs. 2000 by all newspapers and presses, the empowering of the authorities to open all postal matter which they suspected of containing seditious language, and the requirement that two copies of each newspaper should be placed in the hands of the government. It greatly extended the list of offenses for which newspapers might be punished, including among them an attempt to incite contempt of the ruling chief's government. It was much more comprehensive and strict than the Vernacular Press act of 1878. Upon the commission of a second offense the amount deposited by the newspaper must be forfeited. Under the new Press law the publication of a native journal, the *Swarajya*, was stopped and its editor and publisher was convicted of sedition and sentenced to ten years' transportation.

**POPULAR UNREST.** Another printer of a native paper was sentenced to six months' imprisonment in June for publication of an article in December, 1909. On June 9, members of the criminal class attacked the Fatehgarh Central jail and 7 were killed and 50 wounded. The police were also active in enforcing the Seditious Meetings act, which served its purpose well and which the government decided to renew. In the course of a speech in Parliament on the Indian budget, the Under-Secretary for India outlined the government's recent measures, and explained the necessity for its seeming harshness. The Press act in connection with the Seditious Meetings act would, in his opinion, tend to uproot the evil. He quoted the following passage from a native paper as illustration of the class with which the government had to deal: "Sacrifice white blood undiluted and pure at the call of your god on the altar of freedom. The bones of the martyrs cry out for vengeance and you will be traitors to your country if you do not adequately respond to the call. Whites, be they men, women, or children—murder them indiscriminately, and you will not commit any sin." This was signed "Editor,"

and the following postscript was added: "The editor will be extremely obliged to readers if they will translate into all languages and circulate broadcast." The new Press law did much to moderate the tone of the hitherto violent native papers.

In July and August there were several arrests in Calcutta and the police were active in Eastern Bengal in searching out authors of seditious movements. A conspiracy was discovered at Khulna and 11 Bengalis were arrested and sentenced to transportation for from three to seven years. A conspiracy trial at Dacca attracted much public attention, 42 persons having been arrested. A witness for the Crown testified that he had penetrated into a secret society and mastered their plans of organization and methods of action. In the course of the trial, Police Inspector Ghose, an important witness in the case, was shot and seriously wounded on his way home.

The Nasik conspiracy trial, which was opened at Bombay on September 15, brought out much evidence concerning the illegal activities of a secret society, including theft of jewelry for the purpose of purchasing arms and ammunition, and also preparations for bomb throwing for the removal of unpopular officials. In addition to the 37 prisoners, many of them Brahmin students, arrested early in the year, one Savarkar, also a student, was arrested in London, charged with complicity and extradited. On his way to India he escaped from the vessel in the port of Marseilles but was captured by a French policeman and restored to his pursuers. Negotiations between the British and French governments resulted in an agreement to submit the question of jurisdiction to The Hague Tribunal. He was, however, to stand trial, though sentence, if passed, was not to be carried out against him pending the decision of The Hague court. The trial ended December 24 with the discharge of 11 prisoners and the sentence of the rest to varying punishments, the most severe being that of Savarkar—transportation for life.

There were outbreaks among the frontier tribesmen early in the year. A raid by a Mullah of the Waziris was put down by the government, and there was some further trouble in May on account of the depredations of the Waziris on their neighbors. In the autumn trouble was threatened on the Afghan frontier by the Mohmands and Zakka Khels. Additional troops were stationed on the frontier for protection. The joint Anglo-Afghan Boundary Commission reached an agreement in November providing that all outlaws should be kept at least 50 miles from the frontier to prevent their raiding. Afghan outlaws living on British territory were ordered beyond the 50-mile limit.

**EMIGRATION.** The subject of emigration has been under discussion for several years past and in March, 1909, a committee was appointed to report on emigration from India and the Crown possessions. This report, which was read in June, 1910, emphatically approved the continuance of Indian emigration, and urged that it should extend only to colonies that offered a chance to the immigrant to settle there afterwards in an independent capacity. It declared that Indian emigration was of the greatest assistance in developing the resources of the British tropical colonies, and that indentured emigration was at present the only practicable form

in the case of distant colonies, if Indians were to be brought in in any considerable numbers.

The Indians of the Transvaal sent a deputation to India in 1910 to protest against their treatment by the Transvaal government. They succeeded in raising a considerable fund from their sympathizers. When they returned to South Africa the authorities refused to let some of them land and required the others to obtain official permits before going to their homes.

**END OF LORD MINTO'S ADMINISTRATION.** In June, Sir Charles Hardinge, who was later raised to the peerage under the title of Baron Hardinge of Penshurst, was appointed to succeed Lord Minto. He had been ambassador at St. Petersburg and the appointment met with general approval. Lord Minto made his final preparations for departure in October. Many public honors and farewell banquets were given to Lord Minto on the eve of his departure. In an address on October 14, he reviewed the political conditions, saying that when the government considered the situation in 1906 it found that there were two ways of dealing with the problem of Indian affairs. The first was to refuse to have anything to do with the new ideas because they were opposed to the stability of British rule. The second was to regard them as the outcome of British administration in the course of which the natives had reasonably acquired some political aspirations. After careful consideration the Indian government had come to the conclusion that the representative principle should be further extended in the administration and this had been gradually accepted by Lord Morley. He denied that the sedition and popular violence could be regarded as in any way representative of the general political conditions. The people were still loyal. In the latter part of November Lord Hardinge arrived at Bombay, where he received an imposing welcome. See also **EXPLORATION** and **PLAGUE**.

**INDIA, PORTUGUESE.** See **PORTUGUESE INDIA**.

**INDIANA.** One of the East North Central Division of the United States. It has an area of 36,584 square miles. Its capital is Indianapolis.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,700,876, as compared with 2,516,462 in 1900 and 2,192,404 in 1890. The gain in population in the decade 1900 to 1910 was 7.3 per cent. The State ranks ninth in point of population, whereas in 1900 it ranked eighth. The population of the larger cities and towns will be found in the tables in the article **CENSUS**.

**MINERAL PRODUCTION.** Indiana ranks ninth among the States in the production of petroleum. The total amount produced in 1909 was 2,296,086 barrels, valued at \$1,997,610, as compared with a production of 3,283,629 barrels, valued at \$3,203,883 in 1908. There were in the State at the end of 1909 305 completed wells, of which 219 were productive. The production in 1910, according to the United States Geological Survey, showed a continued decrease largely due to the development of unusual ventures in Illinois. The coal production of the State has shown an increase in recent years. The amount produced in 1909 was 14,881,699 tons, as compared with a production of 12,314,890 tons in 1908. The reports of the United States Geological Survey indicated a still further increased production in 1910, due largely to the curtailment of the output from Illinois. Indiana is one of the

most important of the States in the production of Portland cement, ranking second in the quantity produced and being surpassed only by Pennsylvania. There were manufactured in 1909 7,026,081 barrels of Portland cement, valued at \$5,331,468. This is an increase of nearly 1,000,000, in quantity, but a decrease in value, as compared with 1908. There was also produced a large quantity of natural cement, aggregating over 200,000 barrels. A considerable quantity of coke is manufactured and the stone products are of great value. Other mineral products include coal products, illuminating gas, pyrite and oil stones.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage.	Prod. bu.	Value
Corn, 1910.....	5,120,000	201,216,000	\$30,486,000
1909.....	4,913,000	198,520,000	98,260,000
Wint. wheat, '10	2,827,000	40,981,000	35,653,000
1909.....	2,165,000	33,124,000	26,436,000
Oats, 1910.....	1,850,000	65,490,000	20,302,000
1909.....	1,820,000	55,510,000	21,649,000
Barley, 1910...	9,000	243,000	136,000
1909.....	9,000	212,000	134,000
Rye, 1910.....	55,000	869,000	591,000
1909.....	57,000	940,000	696,000
Buckwheat, 1910	5,000	88,000	62,000
1909.....	6,000	104,000	82,000
Potatoes, 1910..	92,000	7,728,000	3,864,000
1909.....	95,000	9,025,000	4,693,000
Hay, 1910.....	2,100,000	2,730,000a	32,487,000
1909.....	2,200,000	3,080,000	32,340,000
Tobacco, 1910..	27,000	23,760,000b	2,257,000
1909..	20,000	19,000,000	2,090,000

a Tons. b Pounds.

**EDUCATION.** The number of pupils of school age in the State in the year 1909-10 was 754,972. The enrollment was 531,459 and the average attendance was 420,780. The State has a compulsory education law, a teachers' minimum wage law, a plan for accrediting the work of private normal schools that meet the proper standards, and the requirement that all teachers must have normal training in addition to the four years' high school course before they are permitted to teach. The law provides also for school consolidation and the transportation of pupils.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Indiana Reformatory at Jeffersonville, the Indiana State School for the Deaf at Indianapolis, the Central Hospital for the Insane at Indianapolis, the Indiana School for the Blind at Indianapolis, Indiana State Prison at Michigan City, Indiana Boys' School at Plainfield, Soldiers' and Sailors' Orphans' Home at Knightstown, the Indiana Women's Prison at Indianapolis, the School for Feeble-Minded at Fort Wayne, the Northern Hospital for the Insane at Logansport, Eastern Hospital for the Insane at Richmond, the Southern Hospital for the Insane at Evansville, the State Soldiers' Home at Lafayette, the Indiana Girls' School at Indianapolis, the Southeastern Hospital for the Insane at Madison, the Indiana Village for Epileptics at Newcastle, and a Hospital for the Treatment of Tuberculosis at Rockville. The legislature of 1909 passed many important measures relating to the administration of these institutions and to the general supervision of charitable work throughout the State. These include laws providing for public playgrounds, a tax for the maintenance of public hospitals in cities of the fourth and fifth class, an amend-

ment to the compulsory school attendance law, extending its benefits to the blind and deaf children and a law providing for the appointment of three members of the Indianapolis police force as humane officers.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the sessions are biennial and the last was held in 1909. The next session begins January 5, 1911.

**CONVENTIONS AND ELECTIONS.** The chief interest in the State elections in Indiana in 1910 was in the nomination and election of United States Senator. The term of Governor Marshall, who was elected on the Democratic ticket in 1908, does not expire until 1913. Senator Beveridge was a candidate for re-election and he had the support of the progressive or insurgent element in the State, but he was opposed by representatives of the regular party machine. The Republican State Convention was held on April 5. The greater number of the delegates had previously signified their support of Senator Beveridge and his renomination was a foregone conclusion. He appeared before the convention and made a speech in which he urged a permanent tariff commission as the only solution of the tariff problem. Senator Beveridge has been the warmest supporter in the Senate for the plan of a permanent tariff commission and his efforts were warmly endorsed by the convention. The platform adopted by the convention included the following utterances on the tariff: "We believe in a protective tariff measured by the difference between the cost of production here and abroad. Less than this is unjust to American laborers. More than this is unjust to American consumers. That difference should be ascertained with the utmost speed and the present law modified accordingly. We demand the immediate creation of a genuine, permanent, non-partisan tariff commission with ample powers to define duties fixed by the law itself." The platform also declared that the coal deposits of Alaska should be kept as the property of the United States, to be developed under lease on a royalty basis. It favored the income tax amendment, national legislation to end child slavery in factories, mines and sweat-shops, publicity for campaign funds, and the direct election of Senators. A paragraph was included highly commending President Taft and pledging to him the support of the party in any efforts to secure the enactment of genuine progressive legislation. The convention also pronounced for the re-election of Senator Beveridge.

The issue with the Democratic party, as with the Republican, was the nomination for Senator, but the situation was complicated by the announcement early in April by Thomas Taggart, leader of the Democratic organization in the State, that he was a candidate for the nomination. Strong opposition at once developed which centered in the desire to nominate John W. Kern, who was Democratic candidate for Vice-President in the campaign in which President Taft was elected. Primaries for the election of delegates to the State Convention were held during April. At the primary held in Indianapolis on April 26, Mr. Taggart secured 179 delegates out of a total of 183. In this primary not more than 50 per cent. of the Democrats voted. Much dissatisfaction was ex-

pressed with the result of the primaries held throughout the State. Little general interest was shown and for the most part the control remained in the hands of the professional politicians. So great was the dissatisfaction with the prospective nomination of Mr. Taggart that a combination was made between the friends of Governor Marshall and John W. Kern to defeat him in the State Convention held on April 28. So strong was this feeling that an attempt was made by Mr. Taggart's adherents to have the convention declare that it would not nominate a candidate for the Senate. After warm discussion a vote was taken which resulted in 888½ for nominating a Senator and 858½ against such nomination. Thus the supporters of Governor Marshall and Mr. Kern won by 30 in a convention of 1747 delegates. Ten names were placed in nomination, including Mr. Taggart and Mr. Kern. On the first ballot Taggart led with 228 votes, while Kern received 200. On the second ballot more delegates voted for Mr. Kern. At this point he appeared in the convention and declared that no one had been authorized to place him in nomination and that he was not a candidate. The convention, however, would not listen to him, and on the second ballot he received 647 votes. He again appeared upon the platform and declared that he would not accept if nominated. During the second ballot Mr. Taggart withdrew his name from the convention, transferring his votes to Mr. Kern. On the third roll call Mr. Kern received 772 votes and the other candidates withdrew. His nomination was thereupon made unanimous. The platform adopted by the convention was concerned chiefly with the tariff and liquor questions. The Payne-Aldrich tariff act was denounced as a masterpiece of injustice. The platform recognized the rights of the people of the State to settle the question as to whether intoxicating liquors should be sold in their respective communities and to that end favored the amendment and modification of the present local option law so as to make incorporated cities, townships and the territory in townships outside of such cities the units of electing. This declaration forced the liquor question into the campaign, although the Republican platform had ignored it. Nominations were also made for State officials, including Secretary of State, Auditor, Treasurer and Attorney-General.

The campaign carried on in the summer and fall of 1910 was of more than local interest, chiefly from the national standpoint as an indication of the attitude of the voters of the State toward the administration and the progressive element of the Republican party. In the latter part of the campaign Mr. Roosevelt made several speeches in the State in behalf of Senator Beveridge. Senator Beveridge himself made an energetic campaign and spoke in all parts of the State. He vigorously assailed the Payne-Aldrich tariff law and defended the attitude of the progressive Senators in opposing certain measures enacted in that law, as well as the general method of carrying it through the Senate. His efforts, however, were not sufficient to stem the current of Democratic success which swept the country. On November 8 the Democrats elected a majority of 38 in joint ballot in the legislature, thus insuring the election of a Democratic Senator. The head of the Democratic ticket received a majority of nearly

14,000 votes. As a result, the Democrats will have in the State Senate of 1911, 31 members and the Republicans 19, while in the House there will be 63 Democrats and 37 Republicans. In a number of representative and senatorial districts, Republican majorities in normal Republican counties were overcome by unusual Democratic majorities in other counties making up the districts. There were especially heavy Democratic majorities in the no-license districts. The defeat of Senator Beveridge was due largely to local conditions. The State was strongly Democratic in sentiment and the temperance question was involved in choosing a legislature. Undoubtedly many who would have voted for Senator Beveridge as Senator had interests at stake which led them to assist in electing a Democratic legislature. Republican candidates for Congress in the State were overwhelmingly defeated, with the exception of Representative Crumpacker, who saved his seat by a narrow margin. As the result of the election of a Democratic legislature, John W. Kern will receive the majority of votes in the United States Senate in the legislative session of 1911.

**STATE OFFICERS.** Governor, Thomas R. Marshall; Lieutenant-Governor, Frank J. Hall; Secretary of State, L. G. Ellingham; Treasurer, William H. Vollmer; Auditor, William H. O'Brien; Attorney-General, Thomas M. Honan; Adjutant-General, George W. McCoy; Superintendent of Education, Charles A. Greathouse—all Democrats.

**JUDICIARY.** Supreme Court—Chief Justice, Quincy A. Meyers; Justices, John V. Hadley, James H. Jordan, Leander J. Monks, Oscar H. Montgomery; Clerk of the Court, Edward V. Fitzpatrick—all Republicans.

**STATE LEGISLATURE, 1911.** Senate, Republicans, 20; House, 40; Joint Ballot, 60. Senate, Democrats, 30; House, 60; Joint Ballot, 90. Majority, Senate, Democrats, 10; House, Democrats, 20; Joint Ballot, Democrats, 30.

**INDIA RUBBER, SYNTHETIC.** See **CHEMISTRY**.

**INDIANS.** The efforts of the Indian Department, now under the supervision of Commissioner Robert G. Valentine, have been focused on the instruction of Indians in modern agricultural methods. For this end experts are employed and experimental farms are established in various districts in order to discover the best crops and improve the quality of the seed. Agricultural fairs are held on several reservations as stimuli to increased efforts on the part of the nation's wards. On the Fort Peck Reservation about half of the male adults cultivate their own farms, the area under cultivation having approximately doubled within the year. An elevator is being constructed to handle the grain harvested in the neighborhood. The Nez Percés of Idaho have developed great interest in the planting of fruit trees, and on the Yakima Reservation, in Washington, the white lessees have established model farms, which are exerting a favorable influence on their Indian neighbors. Extraordinary progress is reported from the Winnebago, who, in the course of the year, have more than doubled the area under cultivation. About 75 per cent. of the able-bodied Winnebago are engaged in farming, and the corn crops are said to be on a par with those of the average white planters. The work of the employment bureau also deserves notice. Two large railway systems have offered to provide employment for

Indian school boys with a mechanical bent, which means that hundreds of young men will have an opportunity of perfecting themselves at their chosen trades and securing fair wages in the railway shops. Work has been found for a large number of Indians on irrigation and railroad projects. The sugar-beet region near Rocky Ford, Colo., furnished employment for a great number, the total earnings there being \$19,868.80; as the district is one of the best irrigated agricultural districts in the country, the boys cannot fail to derive valuable practical knowledge on the important subject of irrigation.

Strenuous efforts have been made to reduce the two principal scourges of modern Indian life, trachoma and tuberculosis. The former is especially prevalent in the Southwest where a hospital with special physicians has been established for a thorough examination of about 20,000 Indians, 20 per cent. of whom were found tainted. Special sanatoria and camps for the treatment of tuberculosis were organized in several localities; of 117 patients admitted, 87 showed marked improvement. Increased attention is given to sanitary house-to-house inspections by the resident government physicians. At the same time preventive measures are also attempted by means of popular education in matters hygienic.

The Indian schools are being more closely connected with the public schools of the whites. Wherever feasible, an effort is made to have the children of the two races educated together, as this seems a ready way to effect the assimilation of the rising generation. The curriculum of Indian schools has been altered so as to conform as closely as possible to the course of study outlined for the white children's schools by the local or State authorities.

In general, it may be said that the government is steadfastly aiming to break up the old tribal relations and treat each Indian as an individual, and that during the past year great strides have been made in this direction, although a great deal yet remains to be done. **INFANTILE SPINAL PARALYSIS.** (Poliomyelitis, Anterior.) **SPREAD OF THE DISEASE.** During 1909 and 1910 this disease assumed the proportions of a widely scattered epidemic, not only in the United States, but in all parts of the world. In the five years ending

1904, only 300 cases were reported, while in the five years ending 1909, 8000 cases were reported, of which five-sevenths were in the United States. In Pennsylvania alone, up to September 3, 469 cases were reported. Prior to 1907, this disease occurred only sporadically in the United States, but since then it has spread over the whole country, few States escaping. Poliomyelitis is believed to have been imported from Europe. The earliest foci of the disease were on the Atlantic Seaboard—New York and Boston, the greatest immigrant ports—and it was known that it was already spreading in Northern Europe before 1907. An early isolated outbreak occurred in Minnesota, which receives a large number of immigrants from Norway and Sweden.

**ORIGIN.** Although it has been suspected by many to be contagious, it is only within the last year that the researches of Flexner and Lewis in the United States, and Landsteiner and Levaditi, in France, proved the infectious agent to be an extremely minute organism. This organism is ultra-microscopic, and readily passes through the pores of earthenware filters. It is fairly certain that the micro-organism is taken into the blood through the mucous membrane of the nose, that it exists in the nasal secretions, and that through these the disease is disseminated. The French observers above mentioned found the virus in the salivary glands, so that the saliva may also be implicated in the spread of the infection.

**EFFECTS.** Anterior poliomyelitis generally attacks infants and young children. The disease begins, in a typical case, like many other children's diseases, suddenly, with fever, vomiting, and possibly diarrhœa; within a few hours or days a flaccid paralysis of certain groups of muscles, or of an arm or a leg, is noticed, and the true nature of the malady is then apparent. The paralysis may partially disappear, but the muscles that remain affected soon begin to atrophy, and little improvement is thereafter attained, and various deformities and contractures appear unless prevented by orthopedic apparatus. The typical lesions of anterior poliomyelitis are seen in the ganglion nerve cells in the anterior horns of the spinal cord, but adjacent nerve cells may also suffer, and even the medulla oblongata, or the brain itself, may be involved. When the latter occurs, convulsions, hemiplegia, or occasionally epilepsy, may follow; in fact, a wide variety of nervous phenomena, depending on the part of the cerebro-spinal system attacked, may result. The mortality is not high, but few cases escape without some paralysis or deformity.

**TREATMENT.** Treatment of anterior poliomyelitis has heretofore been symptomatic during the acute attack, with electricity and massage, and later orthopedic appliances for the paralyzed muscles. Internally, hexamethylenamine, a powerful but harmless antiseptic, has been used lately, on the theory that the micro-organisms existing in the cerebro-spinal fluid are inhibited from growth by the drug, which, it is known, circulates in this fluid in appreciable amounts. Isolation and quarantine are enforced in many localities, and in New York State the disease is reportable to the various Boards of Health.

**INITIATIVE AND REFERENDUM.** The movement for the establishment of the initiative (by which the power to initiate any desired legislation is reserved to the people), the referendum (by which the power to call for a public vote upon any proposed measure is reserved in the people), and the recall (q. v.) (which is the power to compel an official to stand for re-election) is a part of the same movement that is manifesting itself in the demand for the direct nomination of candidates. They all form part of a growing desire for a more democratic form of government—a more responsive electoral machinery.

**THE EXPERIENCE OF OREGON.** For the past ten years, Oregon has retained its leadership in the effort to realize this desire, and there has been a feeling on the part of many that the initiative and referendum have been somewhat overworked in that State. It must be conceded, however, that the results so far have not justified this fear, inasmuch as the Oregon voters have shown a remarkable discrimination in their voting up or voting down propositions submitted to them under the initiative and referendum laws. There have been efforts made to submit trivial questions, but these have not interfered with the intelligent expression of opinion on the real issues submitted. That this is so is due to the fact that the voter is supplied by the State with a small pamphlet, carefully edited, giving in concise form the principal facts about the candidates and questions to be voted upon. In most instances the issues submitted were discussed in the newspapers for a year or more and public meetings were held for the presentation of arguments *pro* and *con*. The *Pacific Outlook* is authority for the statement that one-third of the questions submitted are put up by the legislature merely for the purpose of discrediting direct legislation. Another third are the result of legislative carelessness and stupidity. Still another third are *bona fide* issues upon which public expression is needed. In the 1910 campaign among the latter was the project for a State publication to fulfil for the State of Oregon what such papers as *Denver Facts*, the *Kansas City Facts*, the *Boston Record*, and other official city publications have been doing for their respective communities. (See OREGON, paragraph *Politics and Government*.) The "Oregon Plan" has become widely noted as an interesting experiment in democracy. It is likely to be extended still further if the plans of the "People's Power League of Oregon" organized in 1910, are carried out. This is the organization of which W. S. U'ren is a leading spirit.

Under the present initiative and referendum provision of the Constitution, the legislature has the right to enact urgency or emergency laws by declaring that an emergency exists, and prohibits the filing of a referendum petition against a law enacted with the emergency clause attached. That has given machine legislators ample opportunity to commit legislative outrages by tacking the emergency clause to all sorts of laws so as to shut off the referendum. Under an amendment proposed by the League, three-fourths of all the members elected to each chamber must vote, on roll call, for an emergency section, apart from the vote on the bill. A bill thus passed does not go to the governor,

but is filed with the Secretary of State. A referendum petition may be filed against it, but the law remains in force until the people approve or reject it. The amendment provides, further, that no statute, ordinance, or resolution approved by vote of the people shall be amended or repealed by the legislature or a city council except by a three-fourths vote of all the members elected, taken by yeas and nays, which is a good provision, seeing that the representatives in two cases repealed laws enacted by the people. Whether that was done ignorantly or maliciously is not of much consequence so far as the result is concerned. The purpose of this amendment, in the words of the People's Power League, is to make the people's power fence "horse high, pig tight, and bull strong" in case a legislature may try to get through it or over it or push it down.

The effort to apply the principle of the recall to the members of legislature and of Congress will, if the amendments are adopted, be watched with keen interest. It will enable the people of Oregon, to use the words of one advocate, "to snuff out a good deal of what one of the justices of the Oregon Supreme Court piously calls 'damned insolence in office.'"

An important feature of the "Oregon Plan" is the publicity pamphlet, which was originally established in 1907. In connection with the primary election the State issues a pamphlet containing cuts and statements of the party candidates who have duly filed their petitions for nomination with the Secretary of State together with arguments filed for and against the several candidates. It is required of each candidate that he shall pay for at least one page at rates varying from \$10 to \$100, and each candidate may secure additional pages, not exceeding three, at the rate of \$100 a page. In connection with the general election the Secretary of State issues a copy of all measures referred to the people by the Legislative Assembly, and of any referendum ordered by the petition of the people and proposed by initiative petition, together with the arguments for and against the measures. It was reported that these pamphlets were quite generally studied and that the quality of the arguments was distinctly superior to that of the average newspaper discussion or campaign speeches.

GROWING POPULARITY OF THE MOVEMENT. No small part of the present popularity of the initiative, referendum, and the recall has been due to the increased application of its commission form of government to American cities. A round hundred are now so governed. (See MUNICIPAL GOVERNMENT.) The results in those cities operating under that system have so far been so uniformly beneficial that long-time opponents of the initiative and the referendum are weakening in their opposition. As a matter of fact there is nothing new in the referendum, for from the beginning of our government the people have voted on the adoption of constitutions and constitutional amendments. The modern application of the principle, however, represents an improvement in that instead of submitting an entire instrument covering all phases of government, questions are submitted one by one in a form which admits of a comparatively easy formulation of a sound judgment.

RELATION TO THE SHORT BALLOT MOVEMENT. Advocates of the short ballot (q. v.) have

been fearful lest the growth of the initiative and the referendum would militate against that movement. Experience with the short ballot and the referendum and the initiative, however, has not been sufficiently long or extended to justify one in making a dogmatic assertion one way or the other. With the concentration of legislative and administrative duties in the hands of a small number of elective officers, it would seem as if there should be adequate provision for the voters to declare themselves upon questions of policy, otherwise there would not be that separation of the policy-determining functions from the policy-executing functions which is fundamentally important.

HOW FAR INTRODUCED OR PROVIDED FOR. Of the State laws providing for the commission government of cities, Iowa, Kansas (1st and 2nd class cities), Illinois, South Dakota, South Carolina, Kentucky, and Louisiana provide for both the initiative and referendum in the cities adopting the provisions of the law; Wisconsin, North Dakota, New Mexico and Mississippi provide for the referendum; and under the Minnesota law any city adopting the commission government plan may include either or both.

The following commission-governed cities have both the referendum and the initiative: Dallas, Fort Worth, Austin, Waco, Marshall, and Amarillo, Texas; Lewiston, Idaho; Haverhill, Gloucester, and Lynn, Massachusetts; Colorado Springs and Grand Junction, Colorado; Berkeley and Oakland, California; Tacoma, Washington; Sapulpa, Ardmore, Enid, Tulsa, Bartlesville, and Muskogee, Oklahoma.

Houston, El Paso, Denison, Greenville, Palestine, and Corpus Christi, Texas; Huntington, West Virginia; Memphis, Tennessee; High Point, North Carolina; and McAlester, Oklahoma, have only the referendum.

The other commission-governed cities have neither form of check.\*

Denver adopted at the November, 1910, election amendments to its charter providing for the initiative, referendum, and recall.

South Dakota was the first State to adopt a constitutional amendment for the initiative and referendum. Next came Utah, but the Utah amendment is not self-executing and the legislature has never passed an enabling act. Oregon followed in 1902; Montana in 1906, and Oklahoma in 1907. Maine and Missouri in 1908 adopted similar amendments. South Dakota, Oregon, and Oklahoma even went so far as to apply the constitutional amendments for the initiative and referendum to municipal corporations. Nevada has adopted a referendum amendment, and Illinois has an advisory referendum and initiative. Maine extends the right to cities. In 1910 Arkansas and Colorado adopted referendum and initiative amendments. In both States the majorities were substantial, that in Colorado amounting to 60,443. Arizona has in its constitutional convention provided for complete and radical referendum, initiative, and recall provisions. North Dakota's legislature defeated a proposed initiative and referendum amendment, and members of the legislatures of California and Nebraska have in large numbers promised consideration of the question. In 1907 Iowa and South Dakota each enacted a general law under which

(\*See paper of Dr. Ernest S. Bradford on "The Present Status of Commission Government" in the Buffalo Proceedings of the National Municipal League.)

cities may, if they so choose, have charters embodying the general features of the commission plan of government. In both of those States cities may not be incorporated by special act and any city choosing to adopt the new plan of government acquires with it the initiative, referendum, and recall, all three rights being a part of the general law. In South Dakota the constitution specifically gives to the people the right of the initiative and referendum, while in Iowa no mention thereof is made in the constitution. The Supreme Court of Iowa, however, in the case of *Eckerson v. Des Moines*, 115 N. W. 177, decided on February 18, 1908, that the statute conferring the right upon cities of a certain class to adopt a commission plan of government which included the initiative, referendum, and recall was constitutional, as the State constitution did not specifically forbid the granting of these rights. In Texas, however, cities of a certain size may be incorporated by special act, and since Galveston obtained its new form of government numerous cities in the State have been given, as we have already seen, charters by special acts, some embodying the initiative, referendum, and recall, others one or two of these provisions, and some none of them or only in a modified form.

**THE MOVEMENT IN ILLINOIS.** In June, 1910, a conference was held in Peoria, Illinois, to consider the breakdown of representative government in Illinois and propose measures to restore it. There was no certainty and not much probability that it would take a bold step. U. S. Senator Jonathan Bourne's speech at the night meeting of the first day's session, however, was so convincing as to the merits of the initiative and the referendum as a remedy for misrepresentation in government that on the following day the conference declared unanimously for their adoption. The value of the initiative and referendum as adjuncts to representative government in Oregon was so strongly urged that a strong and vigorous campaign for their adoption in Illinois was auspiciously organized to submit under the "little ballot" law of the State three questions for an expression of opinion: the merit system; the initiative and the referendum, and a corrupt practices act.

On the three questions submitted at the November election in Illinois on the "little ballot" the vote as to the initiative and referendum was:

Yes .....	447,908
No .....	128,398

Affirmative majority .....	319,510
----------------------------	---------

Percentage .....	78 per cent.
------------------	--------------

As to the enactment of a comprehensive and adequate civil service law, thus promoting efficiency and economy:

Yes .....	411,676
No .....	121,132

Affirmative majority .....	290,544
----------------------------	---------

Percentage .....	71 per cent.
------------------	--------------

As to the enactment of a corrupt practices act, limiting the amount a candidate and his supporters may spend in seeking office, and providing for an itemized statement under oath showing all expenditures so made, for what purposes made and from what sources received,

thus preventing the corrupt use of money at elections:

Yes .....	422,437
No .....	122,689

Affirmative majority .....	299,748
----------------------------	---------

Percentage .....	74 per cent.
------------------	--------------

The vote in Chicago was as follows:

Initiative and Referendum.. Yes..	150,941
No ..	55,369

Percentage .....	73 per cent.
------------------	--------------

Civil Service .....	Yes..147,480
No ..	51,568

Percentage .....	74 per cent.
------------------	--------------

Corrupt Practices .....	Yes..144,299
No ..	51,170

Percentage .....	73 per cent.
------------------	--------------

#### INJUNCTION. THE BUCK'S STOVE CASE.

The cases growing out of the injunction granted to the Buck's Stove and Range Co. against the American Federation of Labor et al. were merged in one suit and finally set for argument before the United States Supreme Court, January 16, 1911. General opinion with reference to these cases changed little; the two view-points which had divided the Supreme Court of the District of Columbia in its decision of November, 1909, on the violation of the injunction by leaders of the Federation were frequently reiterated. Thus, some held that the question of the rightfulness of the original injunction was not an issue, and that, therefore, the sentence for violation should be sustained; but President Gompers and other labor sympathizers held, with Chief Justice Shepard, that the original injunction exceeded the power of the Court, because it infringed the constitutional right of freedom of speech and of the press, and was, therefore, null and void. See LABOR, AMERICAN FEDERATION OF.

**INJUNCTION AGAINST SYMPATHETIC STRIKES AND THE "CLOSED SHOP."** Various notable injunctions were issued in labor disputes during the year. In Los Angeles, Judge Boardwell issued an injunction restraining metal-workers from picketing in New York City, Justice Gerard of the Supreme Court, in connection with the strike of the shirt-waist makers (see STRIKES AND LOCKOUTS), issued an injunction restraining a sympathetic strike. Such a strike is in many respects similar to a secondary boycott and was held by the Court to be an unlawful interference with the rights of an employer to a free market in which to sell his product. Still more notable was the injunction granted by Justice Goff of the New York Supreme Court on August 27 against striking cloak-makers. He declared a strike against the "open shop" and for the "closed shop" to be illegal in purpose. The purpose being illegal, the strikers were enjoined from any acts, such as peaceful picketing and patrolling, for the accomplishment of that purpose. The strikers were even enjoined from calling on non-strikers at their homes, and attempting to persuade them to strike, and from following them in the street. He held that violence, disorder and threats on the part of the union directed against the members of the Employers' Association and their employees were proof of civil conspiracy and all such acts were restrained. He refused, however, to grant injunction against holding meetings for the expression of opinion. This decision was viewed

with considerable alarm by labor leaders throughout the country. As it had been a strike primarily for the recognition of the union and was now enjoined as illegal, some trade unionists were inclined to interpret the decision as the severest blow yet delivered to the development of the trade-union movement in the United States. There were those who held that the injunction was properly issued because its direct object, the "closed shop," is obnoxious to American institutions. Still others held that the right to strike for any reason whatever should be guaranteed, but that in all cases in which the public is the most interested party the government should provide other means of settling disputes. The strikers kept up a steady resistance to the injunction, eighty-five of them being arrested in a single day. The settlement of the contest a few days later prevented the final adjudication of the issue of the legality of the injunction by a higher court.

A still more comprehensive injunction was issued in Massachusetts by Judge Richardson against the Photo-Engraving Union. It forbade picketing or engaging in a sympathetic strike by any means. It set forth the doctrine that any strike not originating in a shop where the alleged grievance is found is illegal. The Court also held that a strike for the purpose of compelling an employer to unionize his shop goes beyond the legal limits, being contrary to the principle of freedom of contract.

**PROPER SCOPE OF INJUNCTIONS. SECONDARY BOYCOTT.** Two important sessions of the American Academy of Political and Social Science were devoted in part to discussions of the law of injunctions and its administration (see *Annals of the Academy* for July and September). These discussions dealt with the meaning, scope, and proper limitation of the injunction. Court decisions were cited to sustain the contention that the use of the injunction is limited by law and practice to the protection of property only; and others were cited to show that the injunction has been used to protect personal rights and to prevent injury to a person or his business opportunities. Some held that it is an abuse of the injunction to use it to enjoin a person from doing a criminal act, because, if such an injunction be violated, one judge tries, convicts and sentences him without trial by jury; but others held that since prevention is so much more valuable than cure, the injunction is often the only means of speedily checking a criminal act. The use of the injunction in trade disputes is very intimately bound up with the legal status of the boycott, because the injunction against the Federation of Labor was to restrain a boycott. The courts have come uniformly to forbid the secondary boycott, that is, combined action against one party to prevent a third party from doing something he wishes to do or to force him to do something which he does not wish to do. It was brought out that in this country trade unions resorting to the primary boycott have been enjoined both as a conspiracy under the common law and as a combination in restraint of trade under the Sherman Anti-trust Law. Discussion brought out that a number of years ago a bill with provisions substantially the same as the British Trades Disputes Act of 1906 was reported favorably to the United States Senate by Senator Hoar of the Judiciary Committee; but it was recommitted. It also brought out that in 1903

California passed such a law. There was thus much favor and some opposition to the proposal that laws be passed in the United States making it possible for two or more persons to combine to do an act which they may lawfully do as individuals. It was also contended that what acts are to be viewed as legal and what as illegal should be determined by legislative action and not by courts. President Gompers repeated his contention that even a secondary boycott cannot be rightfully restrained by a court order so long as its primary object is not to injure an employer but to advance the interests of a trade union, or the trade-union movement in general.

**PRESIDENT TAFT'S RECOMMENDATIONS.** In his annual message President Taft urged the passage of a law authorizing the issuance of injunctions in equity without notice. His reasons were that this had been promised and that it would ward off more radical legislation legitimizing the secondary boycott. Two bills were before Congress at the close of the year. The Moon bill embodied President Taft's doctrines; the Wilson bill, dealing with the use of injunctions in trade disputes and limiting the meaning of the term "conspiracy" in certain cases, was in accord with the demands of labor leaders.

**INSANITY.** On October 1, 1909, Secretary Copp of the Massachusetts State Board of Insanity reported the number of insane in that commonwealth as 5835 males and 6217 females; total, 12,052, of which number 241 were boarded in families and 321 were resident in private institutions. The ratio, therefore, is 1 insane person to every 270 of the estimated population of the State. There were in addition 574 unrecovered insane who were temporarily absent from institutions. The increase for the year was 508, against 776 for the previous annual period. The number of commitments was 2911, and the number of voluntary admissions was 185, compared with respectively 3000 and 195 last year. First cases admitted totaled 2451. Alcohol was assigned as the causative factor in 19.30 per cent. The recovery rate was 12.60 per cent. of commitments, against 13.65 the previous year.

Dr. Ferris, president of the New York State Commission in Lunacy, reported the number of committed insane in the State and private institutions as 15,655 men and 17,003 women, on September 30, 1910. Of this number 1052 were in the licensed private houses, and 1161 were inmates of Matteawan and Dannemora hospitals for insane criminals. The net increase for the year was 1119, against 1014 the previous year, and 1246 two years ago. The total number admitted during the period was 7063, of which total 5598 were first cases and 1465 were readmissions. Of the admissions, 31 were promptly discharged as mere inebriates, 7 were simple drug cases, and 32 were not insane under the statute. Of all patients in the State hospitals, 27,950 were supported by the State, 2245 paid the bare cost of maintenance (except lodging), and 252 were rated as of the private class. From the 13 civil State hospitals 1553 were discharged recovered, 382 as much improved, and 830 as improved, while 2526 died during the year. The voluntary admission provision of the law was invoked in the case of 210 persons, omitting those received as voluntary patients by the private licensed houses. The amount disbursed for maintenance for the

year was \$5,659,942. Upon new buildings, extraordinary repairs or equipment or emergencies was expended \$1,326,961. The annual per capita cost of maintenance (exclusive of estimated cost of lodging) was \$189.14. The overcrowding amounts to 2400 patients, with buildings providing quarters for 1400 in process of completion. At the very close of the calendar year an option was practically given for the sale of 7 acres of the Creedmoor Rifle Range for \$3000 per acre, the remainder of the 200 acres being at once put upon the market, the proceeds to be used for the purposes of the Long Island State Hospital. The new Mohansic State Hospital at Yorktown, N. Y., was constituted, twelve patients were received into a farmhouse, and four farmhouses were remodeled for permanent occupancy as part of the new group, to accommodate 2000 patients. Two additional sites should be in the possession of the Commission at once, if the increase is to be accommodated in due time. The Psychiatric Institute, in connection with all the hospitals, continues in inadequate quarters on Wards Island, in a building of the Manhattan State Hospital. The former Director, Dr. Adolf Meyer, having resigned to go to the new Psychiatric Hospital in connection with Johns Hopkins Hospital at Baltimore, on February 1, Dr. August Hoch was chosen Director to succeed him, in charge of the courses of instruction and laboratory and research work. Dr. F. Lyman Wells was added to its staff as associate in experimental psychology. Six inter-hospital conferences were held by delegates from surrounding hospitals at Manhattan, Binghamton, Buffalo, Central Islip, Kings Park, and Gowanda, as arranged by the Director. The statistician continued his medical case history studies and tabulations. A campaign for the prevention of insanity was begun by a paper on "Possible Preventive Measures in Insanity," read by Dr. Ferris at the Washington, D. C., meeting of the American Medico-Psychological Association in May. After coöperation with the State Charities Aid Association was arranged, a public meeting for the enlistment of interest by physicians and social science workers was held in the N. Y. Academy of Medicine, December 23, at which addresses were delivered by Commissioner Ferris, Professor Starr, Homer Folks, and Samuel M. Lindsay. The next public meeting will be held in Rochester in March, 1911. The ratio in New York is 1 insane to 279 of the population.

The report of the Commissioners in Lunacy for England, issued in August, shows the number of certified insane persons in England and Wales on January 1, 1910, as 130,553, a net increase of 1766 over 1909, against an increase of 2703 the previous year. The average annual increase has been 2394. Increases occurred in the county and borough asylums, in the registered hospitals and in the metropolitan licensed houses, as well as in the criminal asylums (Broadmoor and Parkhurst); while decreases were shown in the provincial licensed houses, ordinary workhouses and the metropolitan district asylums. There were 11,424 in the workhouses, 858 in the criminal asylums, and 97,580 in county and borough asylums, and 593 private single patients, the total private patients under care being 10,616. The ratio of notified insane to the population was 1 to 277. Ten years ago the ratio was 1 to 302. During the

year 21,764 were admitted, of these 18,346 being first cases. The recovery rate, reckoned upon the total admissions, was 35.98 per cent., an increase of 06 over last year. As "relieved" or "not recovered" 2186 were discharged, while 10,138 died. This death-rate is more than six times as high as the general death-rate.

The Commissioners in Lunacy for Scotland report 17,845 known insane on January 1, 1910, including 53 in Perth prison, and 2963 in private houses, noting an increase of 140. Besides, there were 99 voluntary patients on the first day of the year. As recovered, 1245 were discharged, and 518 as unrecovered; while 1393 died. In private dwellings 2183 were provided for, an increase of 17 for the year, 956 of these being with relatives, and 1887 with unrelated guardians. There are 416 specially licensed houses for 2 patients each, 143 licensed to take 3 patients each, and 55 licensed to take 4 patients each, all of the poor class; while 23 houses are licensed to receive 2, 3, or 4 patients of the private class. A family which takes but one patient "requires no special license." The net annual cost per patient for maintenance is \$215.28.

The report of the Inspectors of Lunatics for Ireland shows that the total of insane on January 1, 1910, was 24,144, an increase of 213 over the previous year. Of this number 2655 are in workhouses, 901 in private asylums, and 144 single Chancery patients in unlicensed houses. During 1909, 1382 were discharged recovered, being 38.4 per cent., based on the admissions. The number of deaths was 1542. At the Purdysburn branch of the Belfast District Asylum the system of detached cottages, forming a "villa colony," was introduced into Ireland by Dr. Wm. Graham, and the 395 patients at Purdysburn are all employed. All villas are "open," and the patients, in groups of fifty, are cared for by two married attendants in each villa, other attendants performing special work. There were 174 criminal insane in Dundrum, an increase of 6 patients over last year. Next to hereditary influences, "intemperance in drink" is the most frequent cause. (See NEW YORK.)

**INSCRIPTIONS.** See ARCHÆOLOGY.

**INSECTICIDES.** See ENTOMOLOGY.

**INSECT PARASITES.** See ENTOMOLOGY.

**INSECTS AND THE PROPAGATION OF DISEASE.** The list of insects that are known to communicate disease to man is ever increasing in length, and the study of tropical diseases now goes hand in hand with entomology (q. v.). So necessary has the study of insect life become, that the English secretary of state for the colonies has appointed an Entomological Research Committee for tropical Africa, to organize and coördinate the investigations which are being made in this direction in Egypt, in the Sudan, in Rhodesia, and the South African states. This committee publishes the result of its work in the *Bulletin of Entomological Research*. The number of known insect species in tropical Africa has increased, according to one authority, from about 50,000 in 1830, to 220,000 in 1881, and to 450,000 in 1910. It is believed that there are still millions of unstudied species. How many of these are concerned in the transmission of disease can only be conjectured, but it now seems probable that all biting insects can harbor and disseminate pathogenic germs.

Sambon studied a species of sand-fly or midge, *Simulium*, found in certain pellagrous districts in Italy, and believes that this insect is intimately concerned in the spread of pellagra. His conclusions are based on the following observations: Pellagra follows the water courses, and only persons living in the open are attacked. The *Simulium* breeds in water and never enters houses. The disease is not contagious, only persons exposed to the bites of the fly being affected. Finally, the occurrence of pellagra coincides, both as to season and locality, with the distribution of the sand-fly. See PELLAGRA.

The transmission of trypanosomiasis has hitherto been thought to be due solely to the tsetse fly, but the experiments of Minchin and Thomson apparently indicate that sleeping sickness may also be communicated by the flea. In their experiments, the *Trypanosoma lewisi* and the rat flea were employed. The fact of transmission was proved—that is, the rat flea can transmit the trypanosoma from infected to healthy rats. The incubation period in the flea is six days or more, while the developmental period in the rat is twelve days. (See SLEEPING SICKNESS.) From Brazil, Chogas reported on a trypanosome especially injurious to children, and transmitted by the *Conorhizus megalus*.

Ricketts and Wilder succeeded in proving the connection of the louse (*Pediculus vestimenti*) with the transmission of tabardillo, or Mexican typhus fever. Having established the fact that certain monkeys (*Macacus sinicus*) could be inoculated with the disease by the injection of blood from human patients suffering with typhus, they allowed lice, taken from the clothing of typhus patients, to bite selected animals, which promptly gave evidence of tabardillo infection. These experiments will doubtless pave the way for the eradication of this very prevalent disease in Mexico.

Miller reported an infection of the skin due to the larvae of the *hypoderma lineata*, the "ox-warble fly," which is a common parasite of cattle. The eggs of this fly are deposited on the hair of cattle, and are carried by licking into the mouth of the esophagus, where they adhere until the larvae are developed. The latter burrow through the tissues of the neck until they reach the skin, where they do considerable damage to the hide. Miller's case is believed to be the first in which the infection has attacked human beings.

Another disease which has recently been traced to insects, is "straw itch," an eruptive skin malady due to the bite of a small mite (*Pedioulodes ventricosus*). This insect preys on the larvae of certain insects which live on grain, and especially wheat. It remains on the straw, and may attack man during the handling of the grain, or if the straw is used in filling mattresses, those sleeping on them may be attacked. The main symptoms of the disease are a severe itching, and an eruption consisting of wheals surmounted by vesicles, which develop in a few hours into pustules. Outbreaks of what is thought to be straw itch have been reported from various points in New Jersey, Maryland, Pennsylvania, Ohio, and Indiana. An exact knowledge of the nature of this disease is due to the investigations of Goldberger and Schamberg of Philadelphia.

A popular summary of the subject of insects in relation to disease will be found in a recent

book by R. W. Doane, entitled *Insects and Disease*, New York, 1910.

**INSTITUTE OF TECHNOLOGY, MASSACHUSETTS.** See MASSACHUSETTS INSTITUTE OF TECHNOLOGY.

**INSURANCE. LIFE INSURANCE. STATISTICS.** According to the report of the Superintendent of Insurance of New York there were thirty-six companies doing business in that State on December 31, 1909; these companies do fully 95 per cent. of the entire business of the country. Of these, thirteen were New York companies; twenty-two had headquarters in other States, and one was a foreign company. The total amount of insurance in force in these companies was \$13,927,405,000. This contrasted with \$6,947,096,000 of insurance reported by forty companies in 1901; and with \$10,613,333,000 reported by forty-three companies in 1906; the gross assets in 1909 were \$3,467,896,000; liabilities, including capital, \$3,305,055,000. The assets and liabilities were more than double those of 1901. The premium income was \$512,167,000, or only \$13,000,000 more than the premium income of companies reporting Dec. 31, 1906. The insurance report calls attention to the fact that the legislation of 1906 limiting the expenses of insurance companies saved to policy holders \$10,493,000 during the year. It also called attention to substantial increases in dividends paid by leading New York companies, amounting to a substantial reduction in net premiums.

**ASSOCIATION OF LIFE INSURANCE PRESIDENTS.** The fourth annual meeting of this Association was held in Chicago, December 9-10. The chief subject of discussion was vocational training in colleges, especially collegiate instruction in insurance and subjects calculated to prepare graduates for insurance as a life-work. Both President James of the University of Illinois and President Judson of the University of Chicago expressed themselves as strongly in favor of the movement toward vocational training; they were agreed in thinking training to be desirable for the prospective business man or insurance agent, as well as for the lawyer or physician. Various insurance officials presented the opportunities for college-trained men and women in the insurance field. A paper on the nature and extent of life insurance instruction in colleges and universities with complete statistical analysis, was presented. A second general topic of discussion was preventable diseases and the fight against them. Besides papers on modern sanitation and the work of the census in vital statistics, a report of the Association's Committee on Life Extension was read. This report stated that companies which have written more than 20,000,000 out of 28,000,000 policies in force in the United States were engaged in some form of activity to better the health and prolong the lives of their policy holders. Especial attention was called to the activities of the Metropolitan Life Insurance Company and the Provident Savings Life Assurance Society for spreading health information and giving free medical advice and examinations. At a meeting at Washington in January the Association considered the advantages of uniform State legislation. The larger companies have expressed a preference for Federal regulation, owing to the dissimilarity of present State requirements.

**THE METROPOLITAN LIFE INSURANCE COM-**

**PANY.** The welfare work of this company began with a campaign of education among superintendents, agents and policy holders. The first attack was on consumption. Some 4,000,000 pamphlets, printed in ten languages, and setting forth causes, extent, prevention, and treatment, were put into the hands of those of its 9,000,000 industrial policy holders most needing them. It printed for similar distribution a list of anti-tuberculosis agencies in the United States and Canada. It made arrangements with visiting nurse associations in over forty cities to supply policy holders with nurses at a fixed rate per visit. It organized more than one hundred tuberculosis exhibits; and distributed a pamphlet on directions for living and sleeping in the open air. Finally it began the establishment of a sanatorium for its own policy holders. In all this there was no pretense of charity.

**EQUITABLE LIFE ASSURANCE SOCIETY.** The agreement under which 502 shares of the capital stock of this company had been held by a voting trust for five years expired June 15. The control of the stock had meanwhile passed from Mr. Thomas F. Ryan to Mr. J. P. Morgan. The latter took up the matter with Governor Hughes and the New York State Department with a view to the mutualization of the company. Plans were partly formulated whereby this could be accomplished without protracted litigation or a reduction of the surplus. By an agreement made December 31, 1910, Messrs. Morgan J. O'Brien, Lewis Ledyard and George W. Perkins were made a new voting trust to control this stock until the mutualization plans could be completed.

**UNION CENTRAL LIFE INSURANCE COMPANY.** This company declared a stock dividend of \$400,000 in 1908 from profits accruing from non-participating policies. Suit was brought by the Attorney-General of Ohio, on the ground that this company was not a stock company and that the surplus, therefore, belonged to the policy-holders. The Circuit Court of Hamilton County, Ohio, upheld the action of the company on the ground that it is not a mutual company and that, therefore, its surplus of \$2,400,000 belongs to it and not to its policy holders.

**NEW YORK STATE DEPARTMENT ACTIVITIES.** This department made a number of important examinations of companies doing business in that State. It was shown that the Phenix Insurance Company of Brooklyn had not been examined in twenty-two years; that the president had manipulated the assets of the company with resulting loss of \$1,000,000; that its reports had been grossly falsified for years; and that a former superintendent of insurance and other officials had carried large loans with the company. The exposure resulted in the death of the president, Mr. George P. Sheldon, and the merging of the company into the Fidelity-Phenix Fire Insurance Company. A law was passed requiring an examination of such companies once in every five years. The Dutchess Fire Insurance Company, the successor of the Dutchess Insurance Company which had suffered heavy losses in the San Francisco disaster, was found to have practiced fraud in reinsuring the risks of its predecessors. Its president was indicted, but the jury disagreed as to his personal guilt. A final settlement of this affair was not reached.

The law of 1909 gave the insurance department power to liquidate the affairs of any com-

pany found to be unsound. Of twenty-nine proceedings begun under this law, ten were completed. It was found that much time, money and needless litigation were saved by this new method of winding up the affairs of delinquent and decrepit insurance companies. Of the companies liquidated two had no assets, one paid twelve per cent., and the others one hundred per cent. of the claims of policy holders. The year's experience showed this plan to be greatly superior to liquidation by receiverships. The department carried on an investigation of the legislative expenses of New York companies. It found that they had spent very large sums for legislative purposes in the years of 1901-03-04-05-06-09. These expenditures included traveling expenses, lawyers' fees, so-called retainers of legislative lawyers, contributions to political committees and politicians, and entertainment of legislators.

**LEGISLATION.** Perhaps the most important single piece of life insurance legislation was the enactment by the New York Legislature whereby the legal limitation of \$150,000,000 on the amount of new insurance to be written by any company in a single year was set aside; there was substituted for it an automatic brake permitting those companies showing the greatest savings to write slightly larger totals each year. This new law was made applicable to all companies doing business in the State, whereas the previous law checked the operations of only one or two of the largest New York companies. The Ohio law was amended so as to permit minors between fifteen and twenty-one years of age to contract for life insurance, surrender policies, and give valid discharges.

**PROMOTING COMPANIES.** The past few years have witnessed the beginnings of many new life insurance companies. Not fewer than 125 companies have begun since 1906. At least eight of these had failed by the close of 1910, and a number of others were known to be unsound. Many were run primarily in the interest of shrewd but unscrupulous organizers. Following the insurance scandals of 1906 new companies were launched in astonishing numbers, especially in the West and South. The promoters would sometimes sell stock in the new insurance company itself; but more frequently they sold the stock of a holding company, the insurance company to start operations as soon as a definite amount of capital had accumulated. These holding companies were variously known as "insurance-investment" or "securities" corporations. This device of a holding corporation gave the promoters easy control, and avoided examinations by State insurance officials. The New York Legislature ordered an investigation of 20 new promotions begun in that State within a few months; the results were made known in October. A number of promoters had fled; the public was informed of the means by which the stock is sold, and the high commissions paid before real insurance business is begun. Similar inquiries were being planned in a number of States. It must be said also that a considerable number of new companies have started right and have been operated honestly.

**FIRE INSURANCE.** The New York Insurance Department reported that there were 170 stock fire insurance companies doing business in that State in the year ending December 31, 1909. They had \$40,429,733,000 insurance in force;

\$516,866,000 assets; \$370,112,000 liabilities; and \$272,711,000 premium income. These companies although less than one-third of all the companies doing business in the United States had more than four-fifths of all the fire insurance in force and seventy-five per cent. of the premium income of all companies operating in America. The amount of risks in force was eighty-five per cent. greater than in 1900 and the premium income very nearly double that of 1900. Although there are a great many mutual fire insurance companies the total volume of their business is small; thus during 1909 mutual companies doing business in New York State wrote fire insurance risks to the amount of only \$119,918,000. The total amount of risks written by all companies doing business in that State was \$33,236,986,000. The total amount of losses paid by all these companies in 1909 was \$137,537,000. This was ninety per cent. of the fire losses paid by all companies in the United States. The aggregate losses from fires in the entire country as computed by the *Journal of Commerce and the Commercial Bulletin* was \$203,649,000 that year. The aggregate fire losses for 1910 approximated \$225,000,000, an amount almost equal to the annual average during the past eight years.

*New York Legislative Investigating Committee.* A committee of the New York Legislature of 1910 carried on an extensive investigation into fire insurance companies operating in that State. This investigation was ordered at the recommendation of Governor Hughes and the Superintendent of Insurance following the disclosures of the activities of the Phenix Insurance Company of Brooklyn mentioned in the preceding paragraphs. The investigation showed that many company officials had paid heavily for the services of legislative agents, such services often being of no value. While the chief result of the investigation was to demonstrate that heavy expenditures for lobbying are both wasteful and criminal, it was expected also to have an important bearing on the general problems of fire insurance. Thus the committee took up such matters as the licensing of agents and brokers; the authorization of a State fire marshal; improvements in fire prevention methods; the standardization of fire policies; and the regulation of mutual companies operating in special lines.

*Legislation.* The New York Legislature amended its laws by permitting fire insurance companies to do ocean marine business, and ocean marine companies to write fire insurance; by regulating the reinsurance of risks; by providing for a standard typewriter form of fire policy; by placing town and county coöperative fire insurance companies under the regulation of the State Department. Texas, which had driven many fire insurance companies out of the State by its stringent legislation, revised its law by making it somewhat more liberal, though still authorizing the State Rating Board to fix maximum rates. Louisiana created a similar rating board authorized to compel companies to lower rates deemed excessive or unreasonable, such rates being binding unless set aside by the courts.

**FRATERNAL INSURANCE.** For a number of years much interest has attached to fraternal and mutual benefit societies writing insurance policies. It has been known that a vast number of these companies were not on a sound actu-

arial basis but efforts at reform have met with serious opposition. The National Convention of Insurance Commissioners in 1910 approved a uniform fraternal bill whereby such companies would be required to issue policies based on certain general uniform requirements. The provisions of this uniform bill, which were formulated by leaders of fraternal societies and endorsed by the National Fraternal Congress and by the Associated Fraternities of America, are not sufficiently vigorous to insure the safety of such societies but are a long step in the right direction. There were 66 fraternal societies reporting to the New York department in 1909. They had \$5,701,856,000 insurance in force; \$89,080,000 assets; \$10,432,000 liabilities; and \$73,530,000 premium income. The Superintendent of Insurance stated, however, that "there are thousands of unauthorized mutual benefit associations actually doing the business of insurance in this State."

It is computed that the insurance liabilities, present and prospective of combined fraternal societies exceed their assets by four billion dollars. This is due to the fact that they are not on a sound actuarial basis. They have thrived during early years, their promoters have often become wealthy; but as their membership becomes older the death payments begin to outrun the income. The result is that they are compelled to disband or raise their rates. A study of 3500 such societies which began in the past forty years and of which 3000 have failed, showed that their average life is about fifteen years. In 1910 there were nearly 650 well-known fraternal benefit societies in the United States and Canada, with an aggregate membership of 8,000,000 and total insurance of \$9,000,000,000. In 1907 they collected \$126,000,000 and paid out \$94,000,000 in losses. Their assets then equaled \$125,000,000 and their immediate liabilities were only \$14,000,000. It is a mathematical certainty, however, that most of these societies will soon find their liabilities increasing at an accelerated rate and their assets increasing very slowly or even diminishing. For ten years some of the larger societies have agitated increases of their assessment rates. Usually all members are assessed at the same rate without regard to age. Reform plans involve assessments either graded according to age of entrance or increasing as age advances. Only a few societies have been fully successful in putting their assessments on a sound insurance basis. It is now proposed as a third plan of reform to require all members sixty years of age or over to pay sums commensurate with the risk involved in carrying them or to drop out. It is argued that such members have had the benefit of protection during previous years and have thus received full value for their payments. The agitation for reform of assessments has not in any way attacked the general soundness and desirability of fraternal insurance, provided the rates be sufficiently high to insure permanent safety.

*Legal Difficulties.* Effort was made by the Catholic Mutual Benefit Association and by the Royal Arcanum to place themselves on a sounder basis by raising their assessments. This, of course, met with objection from certain members unwilling to pay higher rates. In both cases the New York courts sustained the objection, on the ground that these societies had no reserved power whereby they could force a

member to pay higher assessments than those agreed upon in the certificate of membership. The effect of these cases must be to force many orders to disband, which otherwise would be able gradually to move to a safer basis; for it will be practically impossible for them to get the consent of the vast majority of members for a voluntary increase in assessments.

**Liquidation.** The New York department liquidated several fraternal societies during the year and examined a number of others. It found that the National Protective Legion was writing five-year endowment or dividend contracts which not only gave insurance protection but also cash dividends double the amount paid in. On this basis the Legion grew rapidly; and out of its growing income was able to meet its obligations. Under the pressure of the insurance department this form of contract was discontinued January 1, 1911.

**Conferences.** The National Fraternal Congress met in Detroit, August 15-21, and the Associated Fraternities of America met a week later at Atlantic City. Their reports showed rapid progress in fraternal insurance. The Congress advocated State supervision and periodical valuation as means necessary to the safety of their insurance. This was deemed especially important because fraternal insurance is largely workmen's insurance.

The following list includes the leading fraternal organizations in the United States, with their membership and disbursements since their founding.

**INTERNAL COMBUSTION ENGINES.** A large passenger ship was building at Glasgow for the New York and Libau service of the Russian-American Line that will be engine by Burmeister and Wain, Copenhagen, with a slight modification of the Diesel engine. The vessel was to be propelled by three screws, with two internal combustion motors driving each screw and having a total horse-power of 7000. This is expected to give her a speed of 17 knots. The oil supply will be carried in the ship's double bottom and will be pumped up to smaller supply tanks. An auxiliary engine will drive a compressor for storing air for starting as well as for ventilating the engine rooms. The vessel will carry 8000 tons of cargo and 1600 passengers, and was expected to be in service in September, 1911.

**OIL ENGINE TANK SHIP.** Progress in the application of internal combustion engines to ocean-going vessels during the past year is noted in the construction of a tank ship at Amsterdam, Holland, for service in the Dutch East Indies. She is 196 ft. long, 37 ft. 9 in. beam, and 13 ft. depth of hold, divided into three separate holds for the transportation of three grades of oil or naphtha, benzine, etc. The vessel is of 1900 tons displacement, with a mean draught of 10 ft. 2 in., and has a speed of 8.4

knots an hour. She is propelled by a six cylinder, 4 cycle, single acting Diesel engine with cylinders 15¼ inches diameter and 23½ inches stroke, which at 180 revolutions per minute develops 500 brake horse-power. The valve gear,

as well as that for reversing, is very simple and compact. There is also a 45-horse-power Diesel engine driving an air compressor. The air is stored in a tank of 620 cubic feet capacity at 300 pounds per square inch pressure and is used for starting the main engine of the ship.

**INTERNATIONAL COPYRIGHT.** The year 1910 was marked by important copyright movements. The Berlin convention came into force on September 9, ratified (without reserve) by Belgium, Germany, Haiti, Liberia, Luxemburg, Monaco, Spain and Switzerland; and (with certain reservations) by France, Japan, Norway and Tunis. Pending necessary legislation to ratify the Berlin convention, Denmark, Great Britain, Italy and Sweden still remain within the International Copyright Union by virtue of adhesion to the Bern Convention of 1886. The Berlin Convention established a new and advanced basis of international protection by guaranteeing to the authors of any one of the countries of the Union who publish for the first time in any one of those countries, copyright in all the other countries of the Union without any formalities whatever, and independent of copyright in the author's work in his own country. The authors of each country within the Union thus become, so far as copyright is concerned, citizens of the entire Union; while the extent of the protection as well as the means of redress in case of infringement is regulated according to the legislation of each country where copyright is claimed, except as the terms of the convention may secure more extended rights than are secured by law in some of these countries. The convention expressly provides, moreover, that first publication in one of the countries of the Union of works by authors outside of the jurisdiction of any of these countries secures to such writers the protection accorded national authors. By reason of these liberal provisions, notwithstanding the United States cannot enter the Union because of the obligatory "American manufacture" stipulations of our copyright law, an American author, even though he may not have copyright in the United States can, by simply publishing his work in one of the countries of the Union, e.g. England, thereby secure the full protection accorded to native authors in the other fifteen countries of the Union. The convention pro-

poses a general term of copyright, the life of the author and 50 years after his death; but provides that if this term is not uniformly adopted, the period of protection is to be that accorded by the domestic law of each country of the Union. One of these, Spain, has even a longer term, viz., life and 80 years. Another change of great moment was secured by article 13 of the convention providing that authors of musical works shall have the exclusive right to authorize (1) the adaptation of these works to instruments serving to reproduce them mechanically, and (2) the public performance of such works by means of these instruments. This right is not retroactive, and any limitations or conditions relative to its application are to be governed by the domestic legislation of each country.

**PAN-AMERICAN COPYRIGHT CONVENTION.** The delegates to the Fourth International Conference of American States met at Buenos Ayres and on August 11, 1910, signed a convention agreeing to acknowledge and protect the rights of literary and artistic property in conformity with the stipulations of the convention. The Senate of the United States expressed its consent to the ratification of this Convention upon the part of this country. The basis of convention is the full protection in all the countries (according to each country's laws) of copyright obtained in any one of them without the necessity of complying with any formality other than the insertion in the work of a notice of copyright. The duration of the protection, however, shall not exceed the term granted in the country of origin, namely, that American country in which the work was first published or if it appeared simultaneously in several countries agreeing to the convention, then that country which grants the shortest period of protection. The conventional expression "Literary and artistic works" is defined to include, books, "writings," pamphlets; dramatic and musical compositions; choreographic works; drawings, paintings, sculpture; engravings; photographs; plans, sketches or plaster works relating to geography, geology, topography (including globes) and architecture, or any other science; "all productions that can be published by any means of impression or reproduction." The copyright includes the exclusive right to publish, to translate or to reproduce in any form, or to assign. Translations may be protected as such. Detailed provisions permit reports of addresses, and also the reprinting of newspaper contributions, when not expressly prohibited, upon statement of source and when not "literary, artistic or scientific writings." Infringement is defined, and confiscation of infringing copies provided for, without prejudice to indemnities or penalties recoverable in the country where the piracy took place. The convention shall become operative three months after ratification has been communicated to the Argentine government.

**BRITISH COPYRIGHT BILL, 1910.** The "Bill to Amend and Consolidate the law relating to Copyright," presented to the Parliament of Great Britain on July 26, 1910, repeals all former English copyright laws (except provisions expressly reserved), and upon enactment would be in force not only in the United Kingdom and the self-governing Dominions (Canada, Australia, New Zealand, South Africa, and Newfoundland, but also, upon proclamation by its governor, in any other British possession.

Copyright is in express terms secured only by statute, thus abolishing common-law protection. The term proposed is the life of the author and fifty years after his death, and for composite, encyclopedic or posthumous works, fifty years after publication; but in the case of books by foreign authors, the term may by royal order not exceed that in the foreign country concerned. Copyright is expressly granted in every original literary, dramatic, musical and artistic work by a British subject, or when the author of such work is resident (domiciled) within "His Majesty's dominions;" but protection may be granted works by foreign authors by a royal "order in council," upon assurance of reciprocal protection in the foreign country. To secure protection, however, every work must be first or at least simultaneously published (*i. e.* within fourteen days) within His Majesty's dominions. A copy of every book is required to be deposited at the British Museum within one month after publication, and upon written demand, made within three months after publication, also to four specified libraries in Oxford, Cambridge, Edinburgh, and Dublin. Failure to deposit involves a fine of £5, plus the value of the book. Foreign books, however, are not required to be deposited. Registration (optional, not obligatory) may be made at Stationers' Hall. If not made, however, the defendant in a suit for infringement may plead that he is an "innocent infringer" because not aware and without reasonable means of knowing that copyright subsisted in the work, and the plaintiff shall not be entitled to any remedy other than an injunction. In the case of works by foreign authors only such conditions and formalities as are especially imposed by the order in council need be complied with.

The bill secures the sole right to produce or reproduce the work in any material form whatever, and in any language; to perform, deliver, or dramatize it, and "to make any record, perforated roll, or other contrivance by means of which the work may be mechanically performed." Such records or rolls are declared to be subject-matter of copyright, as well as cinematograph productions, "works of artistic craftsmanship" and "architectural works of art," *i. e.* any buildings or structures having an artistic character or design. Infringement may be punished on summary conviction by a fine not exceeding 40 shillings for every infringing copy (not to exceed £50 damages in all), and the destruction of copies. When copyright is infringed by the construction of a building, no injunction can be obtained, to restrain the construction of such other building or to order its demolition. Actions for infringement must be commenced within one year.

**FOREIGN COPYRIGHT LAWS, 1910.** The new Argentine law (promulgated September 23) enacts that copyright shall be governed by the common law, subject to the conditions and limitations of the Act. The term is life of author and ten years and the protection includes works by foreign authors. The new law of Turkey (May 8, 1910) is quite modern in spirit, protecting "all literary and artistic productions" (including architecture) for life of author and thirty years. Amendatory laws were enacted by Germany (May 22), Japan (June 14), and Norway (July 21), to include the alterations required to enable ratification of the Berlin convention. The most important

new provisions relate to cinematographic productions and the control of reproduction by means of mechanical instruments in the case of musical works. The provisions of the German Act resemble those of our own law in providing that when one person has been authorized to use the music for such reproduction, any other person who has his industrial establishment or his domicile in Germany may demand the same privilege for an equitable compensation. In view of this legislation a presidential proclamation was issued on December 8, 1910, to the effect that the subjects of Germany are entitled in the United States to all the benefits of Section 1 (e) of the copyright Act of March 4, 1909, including copyright controlling the mechanical reproduction of music.

**IOWA.** One of the North Central Division of the United States. It has an area of 56,147 square miles. Its capital is Des Moines.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,224,771, as compared with 2,231,853 in 1900 and 1,912,297 in 1890, a decrease of 7082 in the decade 1900 to 1910. Iowa was the only State in the Union which showed a decrease in population. This decrease, however, was confined to the rural districts, as the cities and larger towns showed an increase. The State ranked fifteenth in point of population, whereas in 1900 it ranked tenth. The population of the larger cities and towns will be found in the tables in the article **UNITED STATES CENSUS.**

**MINERAL PRODUCTION.** The chief mineral product of the State is coal. In this it ranks ninth in point of production. There were produced in 1909 7,755,362 short tons as compared with 7,161,310 short tons in 1908. A large quantity of Portland cement is also produced. The clay working industries of the State are important, giving it fourth rank in production and value. Other mineral products are coal products, including coal tar and illuminating gas, and stone. A small quantity of lead is produced.

**AGRICULTURE.** The acreage, production, and value of the principal crops in 1909-10 are shown in the table on the following page.

**EDUCATION.** The school population between the ages of 5 and 21 was on June 30, 1910, 341,683 males and 335,321 females, or a total of 677,004. There were enrolled in the public schools 510,661 scholars, with a total average attendance of 360,178. There were 12,503 ungraded schools. The male teachers numbered 2689 and the female teachers, 24,900. The average monthly compensation of male teachers was

	Acreage	Prod. bu.	Value
Corn, 1910.....	9,473,000	343,870,000	\$123,793,000

a Tons.

\$72.01 and female teachers, \$45.21. The total expenditure for schools for the fiscal year 1910 was \$1,621,683. The school population and the enrollment in the State have both fallen off since 1900. The schools in the large towns and cities, however, show a growth.

**FINANCE.** The report of the State treasurer for the biennial period ending June 30, 1910, shows the total receipts from all sources for that period to be \$8,388,280. There was a balance on hand July 1, 1908, of \$644,189, making a total of \$9,032,470. The expenditures for the same period amounted to \$8,028,554, leaving a balance on hand June 30, 1910, of \$1,003,915. The chief expenditures were for education and for general expenses of the State government.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions supported by the State are the following: College for the Blind at Vinton; Institution for Feeble-Minded at Glenwood; Industrial School for Boys at Eldora; Industrial School for Girls at Mitchellville; Hospital for the Insane at Independence; Hospital for the Insane at Mount Pleasant; Hospital for the Insane at Clarinda; Hospital for the Insane at Cherokee; State Penitentiary at Anamosa; State Penitentiary at Fort Madison; School for the Deaf at Council Bluffs; Soldiers' Orphans' Home at Davenport; Soldiers' Home at Marshalltown; Hospital for Inebriates at Knoxville and a Sanatorium for the Treatment of Tuberculosis at Oakdale. The total disbursements for the support of these institutions in the biennial period ending June 30, 1910, were \$3,949,464. The amount received by the State from these institutions was \$228,952, leaving a net cost to the State for the period of \$3,720,512.

#### POLITICS AND GOVERNMENT

There was no meeting of the legislature in Iowa in 1910, as the sessions are biennial and the last was held in 1909. The next session begins January 9, 1911. The State suffered a great political loss by the death, on October 15, of Senator Jonathan Prentiss Dolliver (q. v.). Governor Carroll appointed, to fill out his unexpired term Lafayette Young (q. v.) of Des Moines.

**CONVENTIONS AND ELECTIONS.** The campaign and elections of 1910 in Iowa were of national interest on account of the spirit of insurgency in the State. The insurgents or progressives are stronger in Iowa than in any other State in the Union, excepting possibly Kansas. The Sena-

tors from Iowa, Dolliver and Cummins, were the most aggressive and powerful opponents of the Payne-Aldrich tariff bill, and in this they represented a strong majority of the Republicans in the State. The regular Republicans, however, had an organization of considerable importance and this division strongly threatened to turn the State over to the Democrats. Primary elections for the selection of delegates to the convention and for nominations to State offices, and of Congressmen were held on June 7, and these showed the remarkable strength of the insurgents. Governor Carroll, a regular, received hardly sufficient votes for renomination, chiefly from having identified himself with the "standpat" element. In these primaries the insurgent Congressmen were all endorsed, and Congressman Hull, a conspicuous figure in the House, and one of the foremost of the so-called "standpatters" and anti-progressives, failed to secure a renomination. The campaign opened in Des Moines on May 10, when Senators Dolliver and Cummins made speeches in which they sharply criticised the Republican leaders in Congress, asserting that they were controlled by corporations; Senator Cummins named Senator Aldrich in the Senate, and Representatives Payne, Dalzell, and others of the same type in the House. Senator Dolliver bitterly denounced the new tariff.

The Democratic State Convention was held at Ottumwa on July 27. It was marked by a sharp fight over local option. The high-license wing of the party which holds the municipality to be the proper unit for local option, won a sweeping victory over the advocates of the county option plan. General James B. Weaver offered an amendment embodying the plan advocated in Nebraska by William J. Bryan (see NEBRASKA). This was defeated by a vote of 981 to 178. The convention ratified the ticket which was nominated at the primary of June 7, headed by Claude R. Porter of Centreville for governor. The platform denounced the tariff law as class legislation, declaring for initiative and referendum, and the direct election of United States Senators. The Republican State Convention met at Des Moines August 7. The convention was, to a large extent, perfunctory, as the nominations had already been made in the primaries. The chief issue was whether the progressives or the regular wing of the party should control the State. The convention was controlled from the beginning by Senators Cummins and Dolliver. Senator Cummins was elected temporary chairman, and in a remarkable speech in which he sought to eulogize Republican leaders, by beginning with Lincoln and ending with Roosevelt, he deliberately omitted the mention of President Taft. Over 500 delegates, representing the regular wing of the party, refused to allow him to continue until the name of President Taft had been included in the list. Senator Cummins, however, refused, and eventually was permitted to resume his speech. A struggle came over the election of permanent chairman. Senator Dolliver was the candidate of the progressive faction, while the regulars presented the name of J. C. Maybray. Senator Dolliver won over Mr. Maybray by 285 votes. This is the first time that a United States Senator from Iowa has ever been denied the honor of a unanimous vote by a Republican convention. Senator Dolliver in his speech of acceptance reiterated the statement expressed

by Senator Cummins and promised to stump the State in the fall elections in defense of his action at the last session of Congress. The most significant struggle came on the question of endorsing or condemning the Payne-Aldrich tariff by the Committee on Resolutions. Two reports were prepared. The majority report declared that the convention did not recognize the revision of 1909 as a satisfactory fulfillment of party promise. It favored the creation of an independent, non-partisan tariff commission and gave as its opinion that when the tariff is again revised its schedules shall be considered separately, so that each subject may be dealt with on its own merits and thus secure a fair and impartial action on the part of Congress. The minority report endorsed the action of President Taft in approving the tariff bill and commended his administration as prudent, business-like and economical. It also endorsed and commended the Iowa delegation in Congress for all efforts in support of the administration of President Taft, and for such aid and assistance as they had given him in carrying forward his administrative and legislative policies. The minority report was voted down by a vote of 834 to 549, after which the majority report was adopted by the same vote.

The campaign was a spirited one, and the loss of Senator Dolliver, who was, perhaps, the most efficient campaigner in the country, was severely felt. Several speeches in the State were made by Mr. Roosevelt. The election on November 8 resulted in the success of the Republicans, although Governor Carroll was elected by a small majority. The Democrats elected Congressmen in two districts, but the entire Republican State ticket was elected. Figures for the vote for governor were as follows: Carroll, Republican, 205,607; Porter, Democrat, 187,163.

On March 20, J. C. Maybray and thirteen others associated with him in the "Big Store" gang of swindlers were found guilty of conspiracy to use the United States mails to defraud. The prisoners were accused of conducting a vast swindle game through the aid of fake prize fights, fake wrestling matches, horse races and other confidence games. Thirty-two of their victims testified to having lost \$2,000,000. On March 21, forty-seven persons were killed in the wreck of a Rock Island passenger train near Green Mountain.

**OTHER EVENTS.** On July 20, Governor Carroll was indicted for criminal libel as an outgrowth of the grand jury investigation of the State Industrial School for Girls. The governor charged that John Cownie as a member of the State Board of Control had sold diseased cattle belonging to a State institution in the markets at Omaha, and that he had purchased goods for State institutions without first being requested to do so by the proper authorities.

**STATE OFFICERS:** Governor, B. F. Carroll; Lieutenant-Governor, George W. Clarke; Secretary of State, W. C. Hayward; Treasurer, W. W. Morrow; Auditor, J. L. Bleakly; Attorney-General, George Kosson; Superintendent of Education, A. M. Devoe; Adjutant-General, Guy E. Logan—all Republicans.

**SUPREME COURT.** Chief Justice, John C. Sherwin, Rep.; Judges, Scott M. Ladd, Rep.; Emlin McClain, Rep.; William D. Evans, Rep.; Horace E. Deemer, Rep.; S. M. Weaver, Rep.; Clerk, Burgess W. Garrett, Rep.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 34; House, 70; joint ballot, 104. Democrats, Senate, 16; House, 38; joint ballot, 54. Republican majority, Senate, 18; House, 32; joint ballot, 50.

**IOWA, STATE UNIVERSITY OF.** An institution of higher learning at Iowa City, founded in 1847. There were enrolled in the several departments of the University in 1909-10 2352 students. The faculty in 1910-11 numbered 165. Among the notable changes in the faculty during the year were the following: Professor Samuel Hays of the college of law retired from the staff of instruction and Professor Percy Bordwell of the University of Missouri succeeded him; Dr. W. L. Pierring, professor of theory and practice, and clinical medicine, and vice-dean of the college of medicine, resigned and was succeeded by Dr. Campbell Howard of McGill University, who was made professor of internal medicine and head of the department. Several other changes were made in the department of medicine. The productive funds of the University amounted in 1909-10 to \$145,571, and the income was \$579,093. The president is George E. MacLean, LL.D.

**IRELAND.** See GREAT BRITAIN.

**IRISH LAND LAW.** See GREAT BRITAIN. *History.*

**IRIDIUM.** See ATOMIC WEIGHTS.

**IRON,** See ATOMIC WEIGHTS.

**IRON AND STEEL.** The year 1910 was on the whole an unfavorable one in the iron and steel industries. This was due chiefly to the too rapid recovery in 1909 from the panic and depression of the years previous. This resulted in an overproduction which affected the trade during the year. There was a very large production and also a very large consumption. The latter, however, did not come up to what was expected and the result was large stocks of iron ore on hand.

**IRON ORE.** The production of iron ore in 1910 was slightly greater than that of 1909. It was anticipated that the increase would be much larger, but these hopes were not realized owing to the declining activity of the furnaces in the latter months of the year. The Lake Superior iron ores which furnish about 80 per cent. of the entire output, showed an increased production of nearly 900,000 tons over the production of 1909. The total production from the Lake Superior mines, according to statistics compiled by the *Iron Trade Review*, amounted to 43,470,206 tons in 1910 as compared with 42,586,869 tons in 1909. In the accompanying table, taken from the *Engineering and Mining Journal*, are estimated the production and consumption of iron ore in 1909-10:

	1909.	1910.	Changes.
Lake Superior....	42,586,869	43,470,206 I.	883,337
Southern States..	7,350,000	7,500,000 I.	150,000
Other States.....	3,150,000	3,325,000 I.	175,000
Total prod'n....	53,086,869	54,295,206 I.	1,208,337
Add imports.....	1,696,411	2,670,000 I.	973,589
Total supply....	54,783,280	56,965,206 I.	2,181,926
Deduct exports...	455,932	711,000 I.	255,068
Deduct increase in stock.....	521,000	950,000 I.	429,000
App. consump....	53,807,348	55,304,206 I.	1,497,858

**Pig Iron.** The production of pig iron in 1910 is estimated by the *Engineering and Mining Journal* at 27,295,592 tons as compared with 25,795,471 tons in 1909. The production was highest in the early part of the year, and following this the rate fell off from month to month, especially during the latter half of the year. In spite of this, however, the production shows the highest point ever reached. The pig iron produced in 1910 was divided into the following classes: Foundry and forge, 6,161,021 tons; Bessemer, 11,482,948 tons; basic, 9,007,200 tons; charcoal, 403,898 tons; spiegel and ferro, 240,525 tons. The approximate consumption of pig iron in 1910 was 25,712,592 tons, which is approximately 639 pounds per capita, a decrease of 4 pounds as compared with 1909.

**STEEL.** According to estimates based on the consumption of pig iron, the total steel output for 1910 was approximately 24,750,000 tons, of which 9,650,000 tons were Bessemer, 14,950,000 tons open-hearth, and 150,000 tons crucible and special steels. The business in structural steel was large and there was also a heavy demand for bars and plates, while the sales of pipe, wire, nails, and other construction materials were in large quantities. During the second half of the year railroad buying was light. The United States Steel Corporation made about 60 per cent. of the finished steel during the year.

**IMPORTS AND EXPORTS.** The exports and imports of iron and steel into the United States for the calendar years 1909 and 1910 are indicated in the table below, compiled by the Bureau of Statistics of the Department of Commerce and Labor:

	1909.	1910.	Changes.
Exports ....	\$157,674,894	\$201,271,903	I. 43,597,509
Imports ....	80,571,542	47,115,112	I. 16,543,570
Ex., exp....	\$127,102,852	\$154,156,791	I. \$27,053,939

The exports of iron ore in the calendar year 1910 were 644,875 tons and in 1909 they were 455,934 tons, an increase of 188,941 tons. The imports of iron ore were 694,957 in 1909 and 2,591,031 in 1910, an increase of 896,074 tons.

**WORLD'S PRODUCTION.** According to returns of the British Board of Trade, published in *Engineering*, the world's production of iron ore in 1909 amounted to 133 million tons. Of the ten principal producing countries the United States, with an output of 53 million tons, and France, with 12¼ million tons, alone exceeded their outputs of 1907. On the other hand, the United Kingdom, with an annual output of about 15 million tons, fell in 1909 even below the amount turned out in the bad year 1908, but the fluctuations were, proportionately, not so great for this country as for some others. In Spain the output likewise fell, being almost three-quarters of a million below the 1907, and also below the 1908 figure. Sweden also showed a falling off, but this was mainly due to the great strike, which dislocated all industrial conditions for some time in that country in 1909. The greatest ore-producing country is, of course, the United States, but the most active is Sweden, which has an output of over 0.82 ton per head of population when normal labor conditions prevail, against 0.60 ton per head for the United States. In Germany the production is about two-fifths of a ton per head, and in the United

Kingdom about 0.33 ton. After Sweden and the United States, Spain produces most ore per head of population—viz., nearly half a ton—although, excepting some produced in southern districts, the greater part of the output is confined to the three extreme northern provinces of Vizcaya, Santander, and Oviedo. Generally speaking, of course, the ore-producing districts cover comparatively small areas in the several countries. Of the output of the United States, for instance, about four-fifths come from Michigan and Minnesota. Among the less important countries, the outputs of Algeria and Cuba each amount to over 900,000 tons annually, and of Newfoundland to little short of that amount. The latter country was one of the few recording exceptional outputs in the poor year 1908; it then produced 964,000 tons, or about 80,000 tons more than in either 1907 or 1909.

The amount of pig iron produced in 1909 was probably about equal to that turned out in 1907—viz., 60 million tons, some 12 millions more than in the intervening year. The United States, Germany, and the United Kingdom account for four-fifths of the world's output. The United States produces about 0.3 ton per head of population, the United Kingdom and Germany each about 0.2 of a ton per head, while the consumption of pig iron in these countries is roughly of the same proportions.

The figures for steel production show great similarity to, though, of course, a slight reduction from, the figures for the output of pig iron in the several countries. The United States heads the list with nearly 24 million tons of steel. That country produced rather less than 26 million tons of pig iron in the same year. Germany had an output in 1909 of 11,856,000 tons of steel, while its output of pig iron was just under 12¼ million tons. In like manner, the United Kingdom is credited with 6.6 million tons of steel and 9.5 million of pig, this larger difference being accounted for, as pointed out above, by the greater share of this country in the total exports of pig. The United States is becoming increasingly an open-hearth country, the output of this class of steel being about 3 million tons greater in 1909 than in 1907. Open-hearth basic is produced there to an extent of thirteen times the open-hearth acid output. All the Bessemer steel produced in the United States is acid, and amounts to 9.3 million tons. Thus, while, in the United Kingdom, most of the steel is produced by the acid process, either open-hearth or Bessemer, in Germany by far the greater part of the output is basic, by one or the other of the two processes, and in the United States most of the open-hearth steel is basic and all the Bessemer is acid.

**IRON CORROSION.** See **CHEMISTRY, INDUSTRIAL.**

**IRON ORE BRIQUETTES.** See **CHEMISTRY.**

**IRREDENTISM,** See **AUSTRIA-HUNGARY, History.**

**IRRIGATION.** The year 1910 was one of unprecedented activity in the construction of irrigation works throughout the world. This activity is undoubtedly due in a large measure to the high prices of agricultural products, making it practicable to undertake the expense

necessary for the building of irrigation works. The greatest activity in the construction of new works has been in the United States, Mexico, Argentina, Australia, and Turkey, although there have been extensions of the systems already built in India and Egypt, and the various South American republics are giving considerable attention to irrigation.

**UNITED STATES.** In the United States most of the irrigation works now in operation have been built by private enterprise under varying degrees of State supervision, but most of the development now taking place is under Federal legislation—the Carey Act (Act of August 18, 1894) and the Reclamation Act (Act of June 17, 1902). There is also large development under State irrigation district laws, under which the cost of the works is taxed against the lands to be served by them.

**APPLICATIONS UNDER THE CAREY ACT.** The total area applied for by the arid States under the Carey Act up to June 3, 1910, was 6,587,508.92 acres. Applications for 2,958,985.83 acres of this were approved, for 955,272.42 acres were rejected or relinquished, and the balance are pending. Applications for nearly half the entire area applied for were made during the last fiscal year, the area being 2,765,946.47 acres which accounts for the large number of applications pending on July 1, 1910. This land is not reclaimed by the States directly, but through construction companies, which contract with the States to build the works according to plans approved by the States and sell them to the purchasers of the segregated lands at prices and terms agreed upon between the States and the construction companies. The States sell the lands at 50 cents per acre, but only to persons who have contracted with the construction companies for the purchase of an interest in the works. The areas applied for during the fiscal year ended June 30, 1910, by the several States, were as follows:

	Acres		Acres
Colorado ....	607,802.28	New Mexico..	20,164.68
Idaho .....	1,337,741.88	Oregon .....	132,884.22
Montana .....	170,997.91	Utah .....	81,918.38
Nevada .....	84,795.48	Wyoming ...	329,641.64

**PROGRESS OF RECLAMATION WORK.** In 1910 the United States Senate investigated the work done under the Reclamation Act. Its committee reported that so many projects had been begun that the fund available was not sufficient to complete these works soon enough to prevent injustice to settlers who had gone into the lands to be served with the expectation that the works would be built promptly, and recommended the issuing of bonds in the sum of \$20,000,000, the proceeds from which should be devoted to the completion of works already begun. This bond issue was authorized by Congress, which provided also for the appointment of a commission of army engineers to examine the incomplete works and determine which projects should be completed under this bond issue. This committee has reported and apportioned the funds among the incomplete projects. The condition of the Reclamation fund on June 30, 1910, leaving this bond issue out of account, was as follows:

Estl. total receipts to June 30, 1910....	\$66,866,638.50
Net expenditures to June 30, 1910....	53,781,302.88

The following statement of the progress of the works undertaken is compiled from the same report and from a statement supplied by the statistician of the Reclamation Service:

#### CONDITION OF UNITED STATES RECLAMATION PROJECTS, JUNE 30, 1910:

Estimated total cost of all projects.....	\$139,000,000
Total area to be irrigated—acres.....	3,151,983
Cost per acre .....	\$22 to \$93
Area of land for which water could be supplied in 1910—acres.....	876,684
Area actually irrigated in 1910—acres..	535,355

This table shows an increase for the fiscal year ending June 30, 1910, of 108,728 acres in the area which could have been supplied with water, and 110,806 acres in the area which was actually irrigated by the works under the control of the Reclamation Service. The estimated average cost per acre for all land included in the projects on June 30, 1909, was about \$30, while on June 30, 1910, it had increased to about \$44.

The area being reclaimed by irrigation districts is large, but figures are not available. The States of Montana and Wyoming and the Territory of New Mexico passed irrigation district laws in 1909, and districts have been formed in each. Several new districts have been formed in Colorado and Idaho also. It is probable that the total area now being reclaimed under district laws in the arid States is not much less than that being reclaimed under the Reclamation Act or the Carey Act, those two being approximately equal.

There are a great many private enterprises also, but no figures as to area are available. In the lower Mississippi Valley the ravages of the cotton boll weevil have caused many planters to abandon that crop and take up the growing of rice under irrigation. This condition exists in Arkansas, Louisiana, and Mississippi.

**MEXICO.** In addition to the creation of a bank for loaning funds for the construction of irrigation works, under the law of June 17, 1908, the Mexican government has within the last year undertaken the extension of irrigation by direct grants of funds and by Federal construction. Numerous grants of lands have been made to the Mormon Church, which is building irrigation works and colonizing the lands reclaimed with members of that church from the United States. The Federal government is making preliminary investigations for a large project in the Nazas River Valley. It involves the storage of the waters of that stream in a reservoir having a capacity of more than 1,000,000 acre-feet, the preliminary estimate of the cost being \$6,000,000 gold. A company owning 2,000,000 acres in Tamaulipas, bordering on the Rio Grande and the San Juan River, has received a subsidy of \$6,000,000 gold from the Mexican government. Under the terms of the concession the company must irrigate a tract of 250,000 acres along the Rio Grande, and later a tract of 350,000 acres along the San Juan; must supply each year 30 inches of water to the land irrigated, and must within the next five years place 12,000 families on the land. Another concession provides for a grant of \$3,000,000 and the colonization of 1,500,000 acres.

**ARGENTINE** The Argentine government has entered upon the promotion of irrigation works on a large scale. In the latter part of the year 1909 the government made an appropriation of

\$2,000,000 gold to a project in the valley of the Rio Negro. It is estimated that 2,470,000 acres can be reclaimed in that valley. On March 17, 1910, the President of the Republic laid the foundation stone of a dam on the river Neuquén, which is to divert the water of that stream into an old lake bed, having a storage capacity of 4,000,000 acre-feet. This project is to provide water for 1,235,522 acres. The Ministries of Agriculture and Public Works have appointed a commission to investigate the needs of the country and decide what additional works are needed most urgently.

**WEST INDIES.** The Porto Rican government has begun construction on the system of irrigation works provided for by the bond issue of \$4,000,000 voted in 1909; the Dominican government has appropriated \$500,000 to the irrigation of a part of a tract of 400 square miles at the mouth of the Yaque del Norte, near the port of Monte Christi; the Haitian government has appropriated \$200,000 American gold for the irrigation of the Cul de Sac plains; and the Cuban government is considering the feasibility of providing irrigation for tobacco growers who have suffered from drought for several years past.

**AUSTRALIA.** The state of Victoria has spent \$12,500,000 on irrigation works, covering about 1,000,000 acres, of which 350,000 are irrigated. During the year 1910 the state has been making special efforts to get settlers for the balance of this land. It has purchased large holdings for the purpose of subdividing them into small holdings and reselling them to settlers who will use water, at prices ranging from \$30 to \$100 per acre. A commission was sent to Europe and America to obtain settlers, the inducements offered being advances of a part of the passage money for colonists, advances for buildings and equipment, and 31½ years' time for payment for land and advances, with 4.5 per cent. interest on deferred payments. This commission is said to have been very successful. The state of New South Wales is engaged in the building of large works, but is not yet ready to supply water for irrigation. The Barren Jack reservoir now under construction by the state, at a cost of \$8,000,000, is expected to benefit 1,500,000 acres. South Australia is engaged in similar work on a smaller scale.

**TURKEY.** Elaborate plans for the reclamation of the valleys of the Tigris and Euphrates have been made by the Turkish government, the whole scheme involving the expenditure of some \$80,000,000. The work has not yet been provided for as a whole, but small parts of it have been in progress during 1910. Works for the drainage and irrigation of the Plain of Konia are being built, plans for irrigating the Plain of Adana have been approved, and other projects are being worked out.

**EGYPT.** The raising of the Assuan Dam begun in 1907 was continued during 1910. It is expected that this work will be completed in 1912, and that it will provide for the conversion of large areas from flood to perennial irrigation, and reclaim 1,000,000 acres of new land.

**OTHER COUNTRIES.** There is considerable development in other countries, but nowhere on a large scale. The Dutch are building works in Java, the Japanese in Formosa, the British in South Africa, and the Turks in various parts of Asiatic Turkey. The high prices of agri-

cultural products make irrigation possible in many sections where the cost would be prohibitive under lower prices.

**ITALIAN SOMALILAND.** An Italian protectorate on the eastern coast of Africa, composed of the sultanate of the Mijertins (Osman Mahamud), the territory of the Nogal, the sultanate of Obbia (Jusuf Ali), and the colony of Benadir. Area, estimated at 100,000 square miles; population, at about 400,000. Mogadisho (10,000 inhabitants), in Benadir, is the headquarters of the civil governor. The people raise cattle, sheep, and camels. Imports (1907-8), 2,260,944 lire (yarn, timber, petroleum, rice, sugar, cottons); exports, 1,299,201 (butter, timber, hides, durra). Total revenue and expenditure (budget of 1909-10), 672,000 lire (state subvention, 2,260,000). Governor (1910), Signor de Martino. A royal decree of January 28, 1909, provides for the minting of 1-, 2-, and 4-bese bronze coins for Italian Somaliland.

**ITALIAN UNIVERSITY QUESTION.** See **AUSTRIA-HUNGARY, History.**

**ITALY, EXCAVATIONS IN.** See **ARCHÆOLOGY.**

**ITALY.** A constitutional monarchy of southern Europe, including the Italian Peninsula, the islands of Sicily, Sardinia, and Elba, and some 66 minor islands. Capital, Rome.

**AREA AND POPULATION.** Area, as estimated by the *Almanach de Gotha*, 286,682 square kilometres, or 110,690 square miles; by the Italian Survey Department, 110,659 square miles; the sum of the areas of provinces and compartimenti, as reckoned, some by the Survey Department, others by the Military Geographical Institute and by the General Statistical Department, amounts to 110,550 square miles. Population (1901), 32,475,253; estimated January 1, 1909, 34,269,764. There is a large settled and floating foreign population. Marriages (1909), 265,042; births, 1,164,251; deaths, 786,988, including still-births, 50,267. Emigrants in 1908, 486,674 (United States, 56,098); 1909, 625,437 (U. S., 221,694). Rome had (1909) 575,000 inhabitants; other towns are given according to the census of 1901, with subsequent territorial changes to December, 1908, taken into account, as follows: Naples, 596,000; Milan, 584,000; Turin, 371,000; Palermo, 319,000; Genoa, 275,000; Florence, 227,000; Bologna, 165,000; Venice, 160,000; Messina, 149,778.

**EDUCATION.** Primary education is secular, free, and compulsory in the lower of two grades (ages 6-9), where only lower-grade schools exist, but compulsory also in the higher grade (9-12), where schools have been provided. A much-needed stimulus has been given by the law of July, 1904, imposing special disabilities on the illiterate, who prior to that date numbered 49 per cent. of the population over 20 years of age. Secondary (classical) education is supplied in the lyceums and gymnasia, mainly

state-maintained. Special schools, state-supported or -aided, have increased in numbers and attendance. There are seventeen state and four free universities, with an aggregate attendance (1908-9) of 23,644 students. No statistics for the primary schools are available later than 1901-2.

**AGRICULTURE.** Of the total area (28,668,221 hectares), 20,248,000 hectares (70.6 per cent.) are productive. The area under principal crops in 1908, and the production in 1908 and 1909, are seen below (1909 figures subject to revision):

Crops	Acres 1908	Bushels 1908	Bushels 1909
Wheat	12,616,760	147,534,000	194,000,000
Corn	4,443,530	92,988,500	94,821,000
Rice	372,970	25,830,750	546,500†
Vines	9,284,730	51,748,760*	41,398,000*
Olives	2,714,530	2,857,000†	632,000†

\* Hectoliters (of 22 gallons) of wine. † Hectoliters of olive oil. ‡ Tons.

Yield of grapes in 1909, 10,853,000 tons. Area under tobacco (1908), 13,436 acres; production (1907), 6803 metric tons. Hemp is raised. Silk culture is carried on; average annual production of silk cocoons, 55,527,000 kilograms; of silk, 5,784,000 kilograms.

About 4,093,000 hectares are under forest. Yield (1907), 1,129,000 cubic metres of timber (36,018,000 lire), 4,116,000 of firewood (49,092,000 lire), 5,064,000 quintals of charcoal (39,421,000 lire); total value, 124,531,000 lire. Value of secondary products, about 32,000,000 lire annually. The government has been instrumental in the replanting, from 1867 to the end of 1908, of 29,498 hectares.

**MINING, MANUFACTURES, ETC.** There were 796 mines in operation in 1908, employing 54,093 persons. The production is given as follows:

	Metric tons	Lire
Sulphur	2,847,943	32,095,016
Zinc	152,254	14,483,298
Iron	539,120	8,352,153
Lead	46,649	6,681,765
Coal, etc.	480,029	4,231,634
Mercury	32,534	2,522,181
Iron pyrites, etc.	131,721	2,369,236
Copper	106,629	2,252,637
Asphalt, etc.	124,694	1,892,044

\* And Ceylon. † And Hongkong.

Vessels entered (1908), 140,102, of 45,092,022 tons (Italian, 127,047, of 26,421,808); cleared, 139,985, of 45,028,061 tons (Italian, 127,000, of 26,425,544. Merchant marine (1908): 4874 sailing vessels, of 468,674 tons; steamers, 589, of 526,586.

**COMMUNICATIONS.** Total length of railways, June 30, 1909, 10,445 miles (state, 7992). Telegraph lines (June 30, 1907), 31,150 miles; wires, 137,900; offices, 7066 (5064 state, 2002 railway). Telephone lines, 11,993 miles; wires, 95,450. Post-offices (1907), 9772.

**ARMY.** Military service in Italy is universal and compulsory, but on account of emigration and other causes the quota furnished annually proves insufficient and by a law of 1908 the number of exemptions was reduced and two years' service was introduced in the infantry. The organization of the active army as provided by law consisted of 96 regiments of line infantry, making, with 12 regiments of bersaglieri, 318 battalions, and 26 battalions of Alpine troops grouped in 8 regiments. The organization further provided for 145 squadrons of cavalry formed in 24 regiments, 186 six-gun field batteries formed in 24 regiments, but with four years only on a peace basis, one regiment of six batteries of horse artillery, two regiments of 24 batteries of mountain artillery, 3 regiments of coast artillery and a brigade in Sardinia, 2 regiments of fortress artillery and 5 of engineers. The army is organized into 12 army corps, in each of which there are 2 infantry divisions, except in the district of Rome, where there are 3.

In 1910 the total war strength of the kingdom was given as follows:

Active army officers and men with the colors .....	248,111
On unlimited leave .....	486,290
Mobile militia .....	320,170
Territorial militia .....	2,275,631
Total on a war footing .....	3,330,202

Owing to the fact that the territorial militia is practically untrained, these figures for purposes of comparison with those of other Powers lose much of their impressiveness.

The total expenditures for war provided by the budget of 1910-11 were 306,728,900 lire for the ordinary expenses and 50,217,500 lire for the extraordinary expenses, or a total of 356,946,400 lire. There was an increase of about 6,600,000 lire in the ordinary budget over the figures for 1909-10, caused by the organization of new units, the promotion of officers, and increased scope of manœuvres, instruction and other activities. The increase in the extraordinary budget over 1909-10, about 9,000,000 francs, was due to providing armament for the fortifications, for the purchase of siege guns and field artillery, for the construction of new fortifications, for providing for mobilization and for small arms and ammunition. The effective strength of the army for 1910-11 was fixed by the budget at 225,000 men, or 85 per cent. of the organized strength, which was estimated at 278,466. The mean peace effective in 1910 was stated at about 13,600 officers and 236,000 men.

On July 17, 1910, legislation was passed relative to the reorganization of the army. The first of these laws provided that the Italian army shall consist of a general staff, with a chief of staff and four generals designated for eventual command of the army, twelve generals commanding the 12 army corps, into which the forces are divided, twenty-five generals commanding military territorial divisions and three generals in command of divisions of cavalry, and other general officers. Two commissions are created, one a council of defences and the other a council for the army. There was also provided a staff corps and divisions of the arms of the service. The infantry command established embraced forty-eight brigades of infantry, three Alpine brigades, two regiments of grenadiers, ninety-four regiments of the line, twelve regiments of bersaglieri and eight Alpine regiments.

The cavalry was to consist of an inspector-general of cavalry, three divisions of cavalry, divided into eight brigades and made up of twenty-nine regiments.

The artillery is reorganized with an inspector-general of artillery and an inspector of ordnance construction, nine generals commanding field artillery and four generals commanding fortress artillery. There were to be thirteen artillery commands. There were to be thirty-six regiments of field artillery, one regiment of horse artillery, two regiments of mountain artillery, two regiments of siege artillery, ten regiments of fortress artillery.

The engineering troops were to be under the inspector-general of engineers and two commanding generals and five generals in command of territorial divisions. Six regiments were divided into twenty-four battalions, sixty-nine

companies and six depots. One battalion of technical troops (five companies) and ten companies of train and a new commissary corps, consisting of various officers and twelve companies of subsistence troops, were also established by law. There was also to be a service corps.

NAVY. In 1910, the larger vessels of the effective navy were: Battleships, 11 (6 first-class), detailed as follows: 4 (1906-9), of 12,625 tons each; 2 (1904), of 13,426; 2 (1901-2), of 9800; 3 (1893-5), of 13,298. Armored cruisers, 10 (7 first-class): 4 (1908-10) (the *San Giorgio* and the *San Marco* were both completed in 1910), of 9832 tons each; 3 (1900-4), of 7400; 2 (1897-8), of 6500; 1 (1895), of 4583. There were building, in 1910, 4 first-class battleships; 3 of 21,500 tons each, and 1 of 19,000. The number of effective warships of 1000 tons and over, and of torpedo craft of 50 tons and over, built and building (actually begun) in 1910, was 171, of 327,059 aggregate tons displacement, detailed as follows: 13 battleships (10,000 tons and over), aggregating 193,600 tons; 10 armored cruisers, 78,520; 3 cruisers (6000 to 3000), 9750; 7 cruisers (3000 to 1000 tons), 14,720; 33 torpedo-boat destroyers, 13,997; 88 torpedo boats, 12,250; 17 submarines, 4222. The naval appropriation for the fiscal year ended June 30, 1911, was \$35,719,861; 1910, \$31,770,393; 1909, \$30,453,607; and the total naval expenditure, from 1900 to June 30, 1911, was placed at \$294,869,961. Personnel, 30,561 officers and men. See BATTLESHIPS, and NAVAL PROGRESS.

FINANCE. The lire (worth 10.3 cents) is the unit of value. Revenue and expenditure for three fiscal years are given below in lire:

	1906-7	1907-8	1908-9
Rev...	2,256,039,985	2,320,597,699	584,696,913
Exp.	2,154,190,700	2,253,720,348	2,502,815,599

Estimates for 1909-10, 2,492,927,020 and 2,444,459,931 lire. The details of the budget for 1910-11 are given as follows (in thousands of lire):

Total .....	2,462,458		

Public debt, July 1, 1910, 500,409,629 lire; amortization, 3,095,648.

There is no national bank. The Banca d'Italia, the Banca di Napoli, and the Banca di Sicilia are the only banks of issue; their aggregate reserves (December 31, 1908) amounted to 1,477,168,073 lire. Postal savings banks (December 31, 1908), 8804, with 4,981,920 depositors, and 1,506,781,795 lire deposits; other savings banks, 207, with 2,141,457 depositors, and 2,165,377,327 lire deposits.

**GOVERNMENT.** The king is the executive, acting through a responsible council of eleven ministers. The legislative authority rests conjointly in the king and a parliament consisting of a senate (318 members) and a representative chamber of deputies (508). The reigning king (1910), Victor Emanuel III, was born November 11, 1869; was married (1896) to Princess Elena of Montenegro; succeeded his father, July 29, 1900. Heir-apparent, Prince Umberto, born September 15, 1904. The Ministry in 1910 was composed as follows: Premier and Minister of the Interior, Luigi Luzzatti; Foreign Affairs, A. Marchese di San Giuliano; Justice and Fine Arts, C. Fani; Finance, L. Facta; Treasury, F. Tedesco; War, General Spingardi; Marine, Rear-Admiral P. Leonardi-Cattolica; Public Instruction, L. Credaro; Public Works, E. Sacchi; Agriculture, Industry, and Commerce, G. Raineri; Posts and Telegraphs, A. Ciuffelli.

**HISTORY.** After the resignation of the Giolitti Ministry on December 2, 1909, Baron Sonnino formed a new Cabinet from the Right, the Moderate Left and the Centre, retaining from the old Cabinet only General Spingardi, Minister of War. It proved to be short-lived. Discussion of the Shipping Subsidies bill was renewed on the meeting of the Chamber on February 10, 1910. As amended it provided for the payment of an annual subsidy for fifteen years to the "Italian Society for the carrying on of marine subsidized services," which comprised a group of five companies associated under that name. The majority of the Chamber soon showed their hostility to the measure and on March 21 the Sonnino Ministry resigned. Signor Luzzatti formed a new Ministry, which met the Chamber on April 28. His policy as announced on that date included the postponement of the marine conventions, the promise of fiscal reform and assistance to education, and an increased tax on tobacco. He also declared that the government would avoid all compromise with clericalism, though it would not approve any persecution of the Church. A temporary marine measure was introduced entrusting the services to a stock company and this was carried by a strong majority on May 29. During the last week in May the King and Queen visited Messina to inspect hospitals erected after the earthquake. A great disaster befell the island of Ischia on October 24, when a storm detached masses of earth and stones on the mountainsides and swept them down upon the houses and villages. The loss of life was placed at 300. The Socialist Congress of Milan, held in the latter part of October, showed a sharper division than ever between the two wings of the Italian party, the Revolutionists and the Reformists. The net result of the meeting has been to engender further hostility between the leaders. The Chamber of Deputies was re-opened on November 30. The chief measures promised were improvement of the status of post-office employees, entailing an additional expenditure of \$5,000,000. It was expected that the Electoral Reform measure would also be brought in. Much ill-feeling was caused among Catholics by the speech of Signor Nathan, the Syndic of Rome, on the fortieth anniversary of the entry into Rome on September 20, in which he attacked the doctrines and the policy of the Holy See. On September 23 a letter of the Pope was published protesting against Signor Nathan's language as blasphemous and offen-

sive and asking the Catholics to take note of this affront.

**IVORY COAST, THE.** A French colony in French West Africa (q. v.). Area 315,000 kilometres (125,538 square miles). Estimated population (1908), 1,141,743. Capital, Bingerville. The government schools (1908) numbered 22, with 658 pupils; private, 2, with 30; Mussulman, 2, with 20. The principal products and their export values in 1908 are as follows: rubber, 3,753,593 francs; palm oil, 3,000,366; cabinet woods, 2,793,198; palm kernels, 1,031,445; elephants' tusks, 136,035. Imports and exports (1908 totals), 14,223,203 and 10,854,190 francs respectively. Vessels entered, 1091, of 42,294 tons; cleared, 2181, of 71,101. Railway lines open, 162 kilometres. Length of telegraph lines, 2850 kilometres; telephone, 25. Number of post and telegraph offices, 40. Revenue in 1908, 4,321,373 francs (direct taxes, 1,713,495 francs; government subvention, 1,250,000; Grand-Bassam wharf receipts, 349,529; patents, 327,378); expenditures, 4,258,030 francs. The colony is administered by a lieutenant-governor (1910, G. Angoulvant), under the direction of the governor-general of French West Africa.

**JACKS, L. P.** See *LITERATURE, ENGLISH AND AMERICAN, Essays and Literary Criticism.*

**JAMAICA.** An island of the West Indies, constituting with its dependencies a British colony. Area of the island, 4207 square miles. Population (1891), 639,491; estimated, March 31, 1909, 846,656. Births (1908-9), 31,785; deaths, 18,928; marriages, 3526; East India immigrants, 14,348. Capital, Kingston, with 46,542 inhabitants; Spanish Town has 5019. Public elementary schools (1908-9), 690, with 85,167 pupils; government training schools, 3, with 132 students; government grant, £47,962. There are also secondary, high, and industrial schools. Area under cultivation (1908), 843,997 acres (240,816 tilled lands, 603,181 pasture). Of the tilled lands, 28,241 acres were under sugar-cane, 25,082 under coffee, 59,779 under bananas; cocoanuts, 11,822; cacao, 9679; tobacco, 997; corn, 470; Guinea grass, 138,521; common pasture, 369,184; common pasture and pimento, 95,476. Imports and exports (fiscal year 1908-9), £2,420,335 and £2,268,253 respectively; for year ending December 31, 1909, £2,555,027 and £2,278,826. Total tonnage entered and cleared in 1908, 3,000,494. Length of railways (1909-10), 184 miles, government-owned; cost of construction to 1910, £2,539,930; receipts and expenditures for the year 1909-10, £163,847 and £110,564 respectively. Irrigation canals, 79 miles. Roads, 6296 miles. Telegraph lines, 943 miles; telephone, about 650. Total general revenue (1909-10), £992,977 (1908-9, £933,751); additional: £6646 special (including £3394 from general revenue); £148,543 parochial; £20,595 immigration revenues (including £2917 from general). Total general expenditure, £1,033,795 (£911,095 in 1908-9); additional: £6646 special; £156,300 parochial; immigration expenditure, £20,841.

Public debt (1910), £3,850,697. The Government Savings Bank had (March 31, 1909) 39,446 depositors, with deposits amounting to £390,389. The colony is administered by a governor (1910, Sir Sidney Olivier). Turks and Caicos Islands and Cayman Islands (qq. v.) and the Morant Cays and Pedro Cays are attached to Jamaica.

While many piles of ruins (from the earthquake and fire of January, 1907) are still to be seen, Kingston presents a much improved appearance. The insurance money (received only after a long fight to demonstrate the precedence of the fire is being rapidly spent on new buildings. See also CANADA, *Preference*.

**JAMES, E. E. C.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**JAMES, GRACE.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**JAMES, HENRY.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**JAMES, WILLIAM.** An American philosopher and psychologist, died August 26, 1910. He was born in New York City in 1842, son of Henry James, a well known theologian, and brother of Henry James, the novelist. At the age of thirteen he was taken abroad, where he remained three years studying under tutors and in schools in France and England. He then studied painting with William M. Hunt in Newport, R. I., for a short time, and afterwards spent a winter at the Academy of Geneva. In 1861 he entered the chemical department of the Lawrence Scientific School. He did not remain to take his degree, but in 1863 entered the Harvard Medical School, taking his degree six years later. While he was still a medical student he accompanied Professor Louis Agassiz's Thayer Expedition to Brazil in 1864 and in 1867 studied physiology in Berlin. In 1872 he became instructor in vertebrate anatomy and physiology at Harvard College. He turned his attention to philosophy and from 1800 to 1885 he was assistant professor of philosophy at Harvard and from 1885 to 1889 was professor of the same department. Again changing his branch from philosophy to psychology he was professor of the latter science at Harvard in 1889-97. He was again professor of philosophy from 1897 to 1907, when he retired as professor emeritus. In the period 1899-1901 he was appointed Gifford lecturer on natural history at the University of Edinburgh, and in 1908 the Hibbert lecturer on philosophy at Oxford. Professor James, although one of the most eminent scholars and scientists of his day, was perhaps even more essentially a man of letters. He was an ideal teacher and had a remarkable facility in communicating ideas for the purpose of instruction. His first standing was won as a psychologist when in 1890 appeared his large two-volume edition of the *Principles of Psychology*. This book at once took high rank among psychological works, not only on account of its scientific standard, but nearly as much from the clearness of its style, wherein it differed widely from most works on psychological subjects. The distinctive trait of his psychology was the remarkable union of the physiological and laboratory attitude with the introspective method. He was practically the first author using the English language to base his psychology on the biological method, with which he had become familiar as a medical student and teacher. The decade from 1890 to 1900 marked a decline of Professor James's direct interest in psychology. The Gifford lectures signalized the fruition of his psychological method in a definite philosophic attitude. The rest of his life was devoted to the elaboration of this philosophy, which he named "pragmatism" from the standpoint of method, and "radical empiricism" from the standpoint of substance of doctrine.

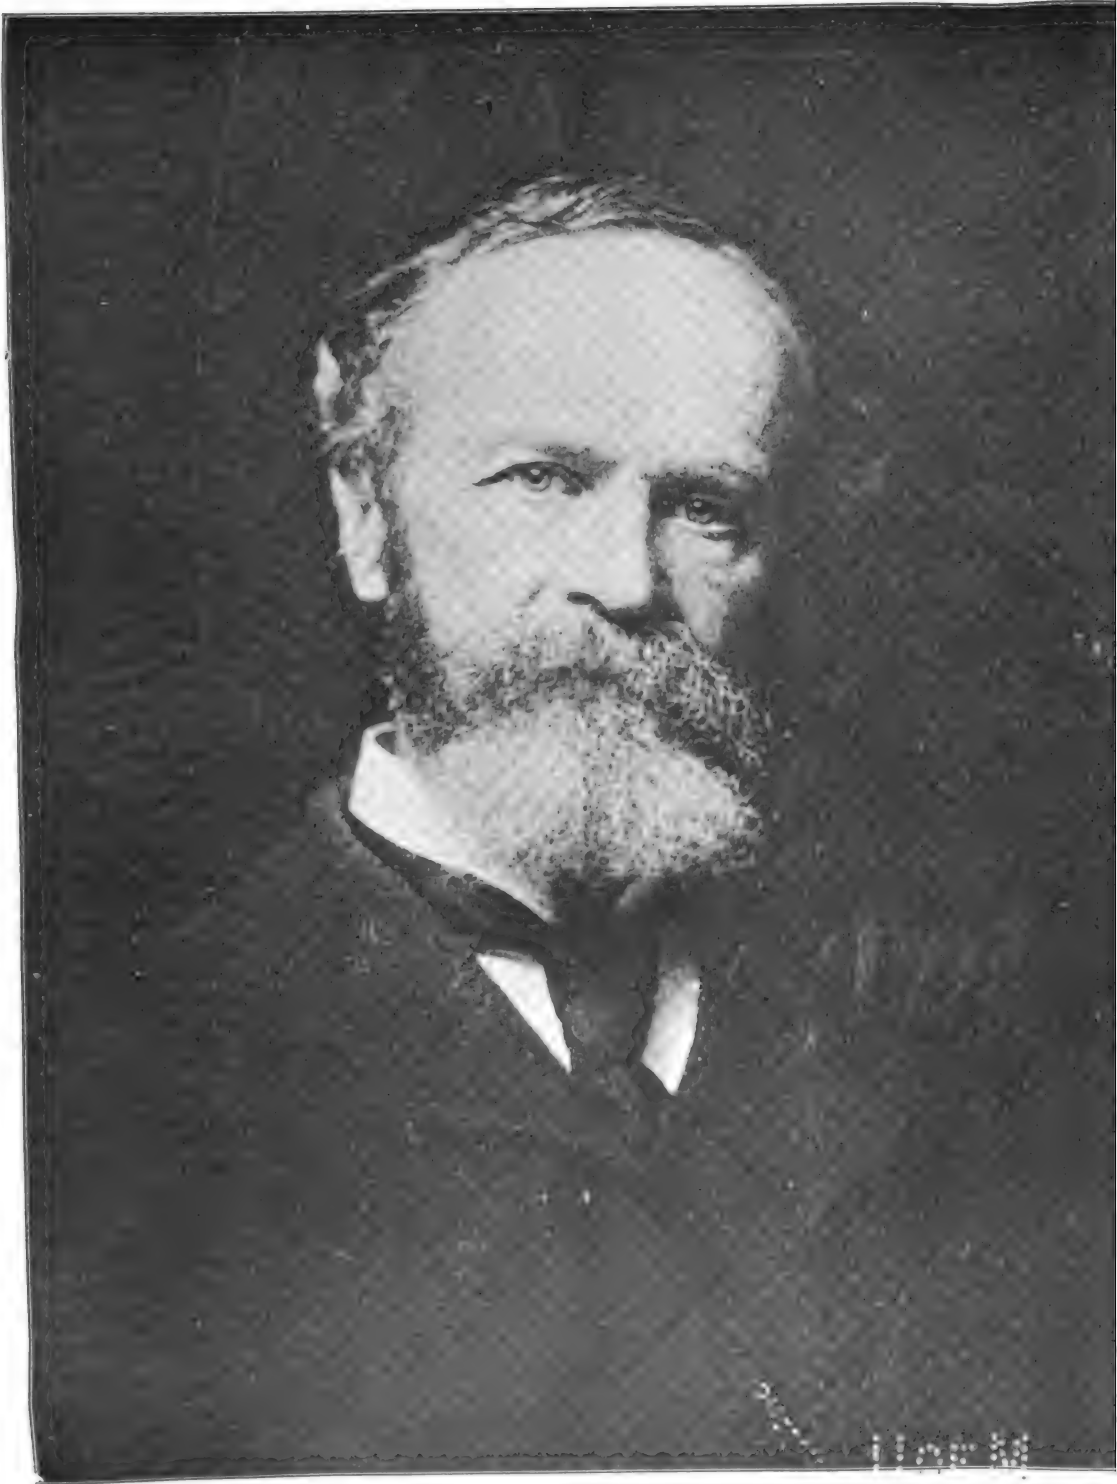

The germs of this philosophy are found in his psychology. Its main ideas were outlined in his volume on *The Will to Believe*, which contains essays of the late 80's and 90's. Professor James urged his philosophy of pragmatism as a middle way between natural science and the ideal interests of morals and religion. Professor James was probably the most widely known American scholar at the time of his death, and as a psychologist he was ranked among the very first. His doctrine of pragmatism was received with great opposition among the more conservative students of philosophy, but it does not lack warm defenders. He was a member of many learned societies, including the Institute of France, the Royal Prussian Academy of Science, the Royal Denmark Academy, the British Academy and the National Academy of Sciences. Honorary degrees were conferred upon him by the universities of Padua, Princeton, Edinburgh, Harvard, Oxford and Geneva. Among his published works are the following: *Principles of Psychology* (1890); *Psychology, a Briefer Course* (1892); *The Will to Believe, and Other Essays in Popular Philosophy* (1897); *Talks to Teachers on Psychology, and to Students on Life's Ideals* (1898); *Human Immortality, Two Supposed Objections to the Doctrine* (1899); *The Varieties of Religious Experience* (1902); *Pragmatism—a New Name for Some Old Ways of Thinking* (1907); *A Pluralistic Universe* (1908), and *The Meaning of Truth* (1909). See LITERATURE, ENGLISH AND AMERICAN.

**JANOWSKI, W.** See CHESS.

**JAPAN.** A constitutional empire consisting of Honshiu (the "mainland"), Kiushiu, Shikoku, Hokkaido, and many smaller islands off the eastern coast of Asia; together with Formosa (Taiwan), the southern half of Sakhalin (Karafuto), Korea (Chosen), and the lease-hold of Kwantung (Kwantung-shu) (qq. v.). Capital, Tokyo.

**AREA AND POPULATION.** The area of Japan proper is stated at 147,651 square miles (Honshiu, 87,485). The population, including Japanese abroad was 49,769,704 in 1903 (Honshiu, 35,460,542); estimated in 1910, 50,751,919. At the end of 1908 the reported number of Japanese in foreign countries was 326,161, of whom 219,106 were in the United States and its dependencies (especially Hawaii) and 98,001 in Korea (then classed as foreign). Foreigners in Japan proper on same date, 17,893, of whom 10,847 Chinese, 2401 English, and 1684 Americans. In 1907, there were 433,527 marriages, 1,621,973 births, and 1,024,286 deaths; in addition, 158,814 stillbirths (8.9 per cent.); illegitimate births, 147,558 (9.1 per cent.); excess of births over deaths, 597,687. The large annual increase of population in an already crowded territory in large part explains Japan's policy of expansion. But it is to be noted that the growth of urban population at the expense of rural has begun. Estimated population of the larger cities December 31, 1908: Tokyo, 2,186,079; Osaka, 1,226,500; Kyoto, 442,462; Yokohama, 394,303; Nagoya, 378,231; Kobe, 378,197; Nagasaki, 176,480.

**EDUCATION.** Elementary instruction is compulsory. In 1908 there were 27,125 elementary schools, with 122,038 teachers and 5,713,698 pupils; 288 middle schools, 5546 teachers, 111,967 pupils; 5382 special and technical schools, 8454 teachers and 283,204 students; 134 girls' high schools, 2072 teachers and 40,891 pupils;

WILLIAM JAMES

४७३

72 normal schools, 1175 teachers and 19,359 students; besides various other institutions, including several universities. The Imperial University of Tokyo in 1909 had about 5400 students; Kyoto, 1400; Tohoku, 694. Religious freedom prevails. The chief religious forms are Shintoism and Buddhism. In 1910 the number of shrines was reported at 153,726.

**AGRICULTURE.** There were reported under cultivation January 1, 1909, 5,262,867 cho; forests, 7,431,618; open field, 1,227,266 (one cho=2.45072 acres). Rice is the leading crop (2,922,973 cho in 1908); others of importance are tea, sugar, barley, rye, and wheat. The rice crop for 1910 was estimated at about 47,475,000 koku, as compared with 52,437,662 in 1909, 51,933,893 in 1908, and 41,466,422 in 1900 (one koku=about 5.11 Winchester bushels). The production of silk is very important; the output in 1908 was 3,530,171 koku of cocoons and 3,512,242 kwan of raw silk, against 3,456,967 and 3,236,692 respectively in 1907 (one kwan=8.28 lbs.). According to an official report in 1910, the yield of the chief agricultural products during the past three years averaged in annual value over 1,235,000,000 yen. Livestock in 1907: 1,495,252 horses, 1,237,161 cattle, 3949 sheep, 80,901 goats, and 317,640 swine.

**MINING.** The value of the mineral output in 1908 is stated at \$51,583,000 (\$53,412,800 in 1907). The more important minerals raised in 1908 were: coal, \$30,981,700; copper, \$11,201,900; petroleum, \$3,237,700; silver, \$2,132,800; gold, \$2,073,000.

**MANUFACTURES.** In recent years there has been a large development in manufactures, especially textiles and iron and steel. The values of woven piece goods produced in 1907 were: Silk, 90,701,894 yen; mixed silk and cotton, 20,329,200; cotton, 98,742,341 (57,745,068 in 1900); hemp, 4,090,000 yen; besides sashes and other articles, making a total of over 240,000,000 yen. In 1900, there was a domestic production of cotton yarn of 270,163,675 lbs., and an importation of 12,067,984 lbs.; in 1907, the production had increased to 394,202,183 lbs. and the importation decreased to 2,380,715 lbs. The cotton industry showed some falling off, however, in 1908, when the output of piece goods was valued at 88,105,814 yen and the production of cotton yarn amounted to 357,202,183 lbs. The production of woolen goods in 1908 was valued at 11,590,000 yen. Other manufactures, in 1907: Japanese paper, 19,506,013 yen; European paper, 12,940,658; oil, 10,943,560; leather, 8,968,946; lacquer ware, 7,561,084. In 1910 the largest paper mill in the Far East was completed at Tomakomai, Hokkaido.

**COMMERCE.** The values in yen of the imports and exports of merchandise and the import duties collected have been as follows:

	Imports	Exports	Duties
1872 .....	26,174,815	17,028,647	.....
1882 .....	29,446,634	37,721,751	.....
1892 .....	71,326,080	91,102,754	2,745,777
1902 .....	271,731,259	258,303,065	14,727,800
1905 .....	488,538,017	321,533,610	34,298,500
1906 .....	418,784,108	423,754,892	41,230,400
1907 .....	494,467,346	432,412,873	46,959,596
1908 .....	436,257,462	375,245,673	44,817,856
1909 .....	394,198,843	413,112,511	35,438,378

Not included in these figures is the movement of specie and bullion, which amounted in 1906 to 47,211,197 yen imports and 25,784,436 yen exports; in 1907, 8,256,503 and 18,759,285 re-

spectively; in 1908, 17,544,486 and 3,772,502; in 1909, 79,587,502 and 6,584,327. The percentage of dutiable imports in 1909 was about 56.2, as compared with 64.3 in 1908, 62.2 in 1907, 67.2 in 1906, 55.5 in 1902, 63.8 in 1897, and 90.0 in 1892. The average rate of duty in 1909 was 15.98 per cent., as compared with 15.93 in 1908, 9.75 in 1902, and 4.27 in 1892.

The values of the leading imports have been as follows, in yen:

	1907	1908	1909
<b>Cotton:</b>			
Raw .....	115,641,599	90,256,289	108,307,783

\* Tissues; total, with handkerchiefs, in 1907, 34,646,757 yen.

† Ingot and slab.

The values, in thousands of yen, of imports and exports of merchandise by countries in 1908 and 1909, are shown in table at top of next column.

**SHIPPING.** In the over-sea trade there entered in 1909 at Japanese ports 12,330 vessels, of 19,794,451 tons, of which 8849 vessels (9,587,222 tons) were Japanese, 1912 (5,823,376 tons) British, 575 (1,639,940 tons) German, and 189 (1,355,001 tons) American. On January 1, 1910, the merchant marine consisted of 2360 steamers, of 1,193,098 tons, and 5880 sailing vessels, of 403,203 tons; in addition, there were small native craft to the number of 22,276, aggregating 301,312 tons. A law providing for ship subsidies went into effect January 1, 1910.

	Imports		Exports	
	1908	1909	1908	1909

Rev., 1912..	492,138,000	48,796,973	540,934,973
Expend., 1911	417,682,876	116,620,985	534,303,861
Expend., 1912	407,113,274	133,821,699	540,934,973

The budget for the fiscal year 1912, as published by the Finance Department, December 16, 1910, showed the following larger items of estimated ordinary revenue: Total taxes and customs, 324,098,428 yen, including 75,072,765 yen land tax, 32,968,278 income tax, 24,184,783 business tax, 88,727,300 sake excise, 14,727,283 sugar excise, 18,617,564 textile consumption tax, 50,514,464 customs (on imports—there are no export duties); stamps, 25,026,150; state properties and industries, 126,505,991, including 61,346,402 yen monopolies and 48,589,725 yen posts, telegraphs and telephones. Estimated expenditures, ordinary and extraordinary respectively: Finance Department, 184,168,491 and 24,221,149; War, 76,371,236 and 22,021,133; Navy, 40,746,338 and 45,487,255; Communications, 56,889,810 and 20,221,990; Interior, 11,814,733 and 11,900,892; Education, 8,032,170 and 717,092; Justice, 12,017,616 and 751,876; Agriculture and Commerce, 7,323,852 and 7,655,312; Foreign Affairs, 4,249,027 and 235,000; Imperial household, 4,500,000.

Public debt, March 31, 1910: Internal, 1,498,683,089 yen; external, 1,165,675,450; total, 2,664,358,539. About May 1, 1910, a loan of 450,000,000 francs was placed in Paris and one of £11,000,000 in London, the net proceeds being 174,150,000 and 107,360,000 yen respectively.

**ARMY.** The Japanese army is formed by conscription and is divided into an active army (Geneki) where recruits serve for two or three years with the colors, a first active or reserve army (Yobi) where the remainder of the initial 7½-year period is completed, then a 10-year

service with the second reserve (Kobi) and finally a completion of the statutory time of service of about 5 years with the national army (Kokumin). There was also a recruiting reserve (Hoju) maintained to supply the wastage of war, but its advantages were not altogether apparent and its abolition was contemplated. There is available annually for the Japanese army a contingent of about 500,000 men and no difficulty would be manifested in keeping up a standing army of over that number in addition to the reserve so that a force of 1,500,000 trained and equipped men can be placed in the field and maintained. The active army and guard are divided into 19 divisions each of about 12,500 men. During the year progress was made in reorganizing the various arms, and two new cavalry brigades to comprise 1200 men each were being formed and two heavy artillery brigades were being created. In November, 1910, important manœuvres by five divisions and a reserve brigade took place under the direction of General Oku, chief of staff. Great secrecy was maintained about these manœuvres as well as about other departments of the army, including its strength. The total effective peace strength was estimated at about 250,000 men. As organized on a peace basis it consisted of 76 regiments (228 battalions) of infantry; 27 regiments (89 squadrons) of cavalry; 25 regiments (150 six-gun batteries) of field artillery; 19 battalions of engineers; 19 battalions of train; 1 brigade of railway, telegraph, and balloon troops; 6 regiments and 6 separate battalions of coast and fortress artillery; 3 battalions of mountain artillery, and 2 mixed brigades of guards for Formosa and the militia of Tsushima for defense of the islands. The Japanese army commenced military aeronautics in earnest and established an aviation park and headquarters for dirigibles and aeroplanes. In 1909 559,317 young men had reached the age for conscription, of whom 102,864 were put back from 1908. Those excused or excluded for various reasons numbered 193,321. The Japanese army in Korea was to be known as the Chosen Chuto-Gun (Korean stationary troops) and was to consist of the second division plus a frontier brigade. There is also a corps of gendarmerie commanded by a brigadier-general, which, in addition to Japanese, includes 4000 native gendarmes and 400 native police agents.

**NAVY.** Near the end of 1910 the number and displacement of warships, built and building, of 1000 or more tons, and of torpedo craft of 50 or more tons, were as follows (exclusive of transports, colliers, converted merchant vessels, etc.): Battleships of 10,000 tons and over, 15, of 233,298 aggregate tons; coast-defence vessels, 3, of 18,786 tons; armored cruisers, 13, of 138,100 tons; cruisers above 6000 tons, 2, aggregating 13,130 tons; cruisers 6000 to 3000 tons, 12, of 49,580 tons; cruisers 3000 to 1000 tons, 5, of 9158 tons; torpedo-boat destroyers, 58, of 22,907 tons; torpedo boats, 59, of 5560 tons; submarines, 13, of 3092 tons; total, 180 vessels, of 493,671 tons. In 1910 the larger vessels of the effective navy were: Second-class battleships: one, of 12,320 tons (completed in 1897); one, of 10,960 tons (1898); first-class battleships, one of 14,850 (1899); 2 of 15,200 each (1900 and 1902); 2 of 12,674 each (1901); one of 12,700 (1902); one of 13,516 (1904); one of 15,950 (1906); one of 16,400 (1906); one of 19,250 tons (1909); the *Satsuma*, with a main arma-

ment of four 12-inch and twelve 10-inch guns and a speed of 20 knots; one of 19,800 tons (1910), the *Aki*, four 12-inch and twelve 10-inch guns and 20.5 knots speed; armored cruisers: 2 of 9700 tons each (1899); 2 of 9750 each (1901); one of 9850 (1901); one of 7726 (1902); one of 7299 (1904); one of 7700 (1904); 2 of 13,750 each (1907); 2 of 14,620 tons each (1909), the *Kurama* and *Ibuki*, four 12-inch and eight 8-inch guns and 22 knots speed. Battleships building in 1910 were the *Kawachi* (launched October 15, at Yokosuka) and *Settsu*, twelve 12-inch and ten 6-inch guns and 20.5 knots. An armored cruiser of 27,000 tons, 27 knots, has been ordered built in England. The *Tone*, a scout-cruiser, was completed in 1910, and three others were building. Also three destroyers were building, of 1150 tons each, the largest of their type except the British *Swift*. Personnel, December 31, 1909, 56,806 officers and men. Naval estimate for fiscal year 1911, 75,722,122 yen; 1912, 86,233,593 yen. See BATTLESHIPS, and NAVAL PROGRESS.

**GOVERNMENT.** The executive authority is vested in the emperor, acting through a cabinet whose members are appointed by and responsible to himself. The legislative power devolves upon a parliament of two chambers, the House of Peers and the House of Representatives. The latter consists of 379 members, elected by male subjects having reached the age of 25 and possessing certain property qualifications. The emperor in 1910 was Mutsuhito, who was born November 3, 1852, married February 9, 1869, and succeeded to the throne February 13, 1867. Heir-apparent, Prince Yoshihito, born August 31, 1879. Cabinet at the end of 1910 (from July 14, 1908): Premier and Minister of Finance, General Marquis Katsura Taro; Foreign Affairs, Count Komura Jutarō; Interior, Baron Hirata; War, ———; Navy, Vice-Admiral Baron Saitō Minoru; Justice, Viscount Okabe; Agriculture and Commerce, Baron Ōura; Communications, Baron Goto; Education, Mr. Komatsubara. About June 1, 1910, the Minister of War, General Viscount Terauchi Masakata, was appointed resident-general of Chosen (Korea).

## HISTORY

**MANCHURIAN RAILWAY QUESTION.** Late in December, 1909, the United States Secretary of State, Mr. Knox, addressed a note to the governments of Japan, China, Great Britain, Russia, France and Germany proposing the neutralization of the Manchurian railways. The note was published in the United States on January 5, 1910. (See UNITED STATES, *History*.) When in the spring of 1909 the American government learned of the two railway concessions by the Chinese government to certain British, French and German groups of bankers, it decided on a plan of American coöperation and in July asked the Prince Regent to admit American bankers to a share of the loan. This was granted and the rights that had been reserved to the British, French and German capitalists were extended to the American group, which was to supply one-fourth of the loan as its share, that is, about \$30,000,000. (See CHINA, *History*.) In the course of these negotiations the American Secretary had pointed out to the other governments that the chief danger to the "Open Door" policy in China and to her proper

commercial development lay in a disagreement between the Powers and urged a union of the four great financial nations, United States, France, Great Britain and Germany on the principle of equal opportunity. The note on Manchurian neutralization was a step in this same direction. It aimed at the placing of China in control of the railroads, which should be managed directly by an international syndicate, solely for commercial and not for political purposes. Thus the roads would be taken out of Eastern politics and placed under an impartial administration. In a memorandum accompanying the proposals, the Secretary referred to the coöperation of British and American firms in the Chinchow-Aigun railway, for the construction of which the Chinese government had granted them a concession. He asked the other Powers to give it their support. Under her agreements with China in 1896 and 1898 Russia claimed exclusive and absolute right of administration over her railway zone in Manchuria and consequently adopted certain administrative regulations at Harbin and other Siberian points, which caused friction with the Chinese authorities and with foreigners. Russia still claimed these rights in spite of the treaty of Portsmouth, which had provided that the roads, except in the leased district, should be strictly economic and commercial. Such causes of friction would be removed by the proposed scheme of neutralization. Stipulation had already been made with China that the Peking government might purchase the railroads at cost in 1938, or obtain control of them without payment eighty years after the date of agreement. So the neutralization scheme merely sought to give China the privilege of anticipating this right. It was soon evident that the press of the countries concerned in the Knox proposals was hostile. The comment on it in the Japanese press was decidedly unfavorable, characterizing it as wholly contrary to the spirit of the Portsmouth treaty, and as virtually confiscating Japan's Manchurian rights. The Japanese and Russian governments addressed notes in reply on January 21, politely declining the American proposals. The reasons for the rejection were soon afterwards outlined by Count Komura, Japanese Minister of Foreign Affairs. He said that many enterprises had been started on the understanding that the railway would remain in the possession of the Japanese government; that while that government intended to observe scrupulously the principle of the "Open Door" and equal opportunity in Manchuria, the proposed neutralization would radically alter the conditions established by the treaties of Portsmouth and Peking and have serious results in the region of the South Manchurian Railway. The government had therefore to decline the American proposal, but it did so with assurances of continued friendship toward the United States and in the hope that the justice of its position would be appreciated. At intervals during the year there was much criticism of the course of the Japanese in Manchuria. They were accused of violating the "Open Door" policy and of trying to keep the markets of the three great eastern provinces exclusively for the Japanese. A specific charge was made early in the year that great quantities of Japanese goods were admitted free of duty or at more favorable rates than the goods of foreign nations. These charges were met by the Japanese with the

explanation that the goods consisted of supplies for the South Manchurian Railway or for the railway guards and were therefore exempt from duty, or were destined for the leased territory of Kwantung. Nevertheless there were repeated recriminations on this subject from time to time.

**CONVENTION WITH RUSSIA.** An agreement with Russia was signed on July 4, 1910, and its terms were communicated to the British and French governments. The main points in it were to the effect that the contracting parties, with a view to facilitating communication and developing trade between their respective countries, engaged to coöperate in improving the railway lines in Manchuria; and that they furthermore engaged to maintain the *status quo* according to all the treaties concluded between Russia and Japan or between those two Powers and China. If this *status quo* were threatened they engaged to take measures for its maintenance. The convention was taken as a definite retort to the Knox proposals.

**OTHER EVENTS.** The budget estimates for 1910-11 were presented by Marquis Katsura on January 24; ordinary revenue, 486,793,876 yen, ordinary expenditure, 417,682,876, extraordinary revenue, 47,509,985, extraordinary expenditure, 116,020,985. He proposed a 30 per cent. increase of official salaries, but in the House of Representatives this was reduced to 25 per cent. The land tax was reduced. A loan was authorized in January to the South Manchurian Railway for the improvement of Port Arthur and the carrying out of the Antung-Mukden line. A law was passed in March authorizing foreigners under certain conditions to own land in Japan outside the fortified zones and Formosa, Karafuto and Hokkaido. This was not granted unless the countries from which they came conceded the same privilege to Japanese. A scandal was brought to light in March in the Yokosuka naval arsenal involving the loss of about \$500,000, and charges of corruption were made by the press against the war office. On July 1, Port Arthur was thrown open to the shipping of all nations. Floods in August caused widespread damage and great loss of life. Reports were incomplete, but gave the number of killed at 880 and about as many injured or missing and estimated at 200,000 the number of persons in need of relief in Tokyo alone. Several persons were arrested in Tokyo on May 28, for the manufacture of bombs for anarchistic purposes. In September a plot against the Emperor was discovered. It was said to be the first time that such a conspiracy had ever been made. The 26 prisoners were convicted early in November by a specially appointed secret court, which recommended the severest sentence, namely, capital punishment. (See KOREA.)

**JAPANESE IMMIGRATION.** See CALIFORNIA, and IMMIGRATION AND EMIGRATION.

**JASTROW, J.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**JAVA.** An East Indian island; the most important of the Dutch colonial possessions. Area (Java, with Madura and several other small islands adjacent), 50,775 square miles; population (end of 1905), 30,098,088. Batavia, the capital of the Dutch East Indies, had (1905) 138,551 inhabitants. Government schools (1907), 328, with 74,526 pupils; private, 561, with 59,029. Java and Madura produce a suffi-

cient supply of food for a dense population, besides exporting sugar, tobacco, tea, coffee, etc. Special imports and exports (1908), 183,387,000 and 310,903,000 guilders respectively. Resident (1910), F. K. Overduyn. See DUTCH EAST INDIES.

**JEBB, L.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**JEFFERSON, E. P.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**JEFFERSON, JOSEPH.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**JENKINS, EDWARD.** An English politician and author, died June 4, 1910. He was born in Bangalore, India, in 1838. He was educated at McGill University, Montreal and at the University of Pennsylvania. He became a barrister of Lincoln's Inn in 1864 and for the six years following served as counsel for the coolies before the Demerara Coolie Commission. He served also as Agent-General for Canada and as a member of the Royal Commission on Copyright. In 1870 he was defeated in an attempt to win a seat in the House of Commons, but four years later was successful. He was again defeated in 1881 and in two following elections. He wrote much and his book, *Gina's Baby*, a short pamphlet ridiculing British poor law and charity methods created a veritable sensation and sold into hundreds of thousands of copies in the early 70's. Among his other works, including fiction, and economic writings are *Lord Bantam*; *The Coolie*; *The Captain's Cabin*; *Fatal Days*; *A Week of Passion*; *State Emigration*; *Statesmanship*, and *Imperial Federation*. At the time of his death he was editor of the *Overland Mail* and the *Homeward Mail*.

**JERROLD, LAWRENCE.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**JERROLD, M. F.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**JESPERSEN, D.** See FRENCH LITERATURE.

**JESSUP, HENRY HARRIS.** A Presbyterian clergyman and missionary, died April 28, 1910. He was born in Montrose, Pa., in 1832, and graduated from Yale College in 1851 and from the Andover Theological Seminary in 1855. In the same year he was ordained. From 1856 to 1860 he was a missionary at Tripoli, Syria, and from 1860 to the time of his death he was a missionary at Beirut. He was missionary-editor of the Arabic Journal, *El-Neshra*, and was professor of theology and homiletics. In 1879 he was Moderator of the General Assembly. Among his published writings were: *The Mohammedan Missionary Problem*; *The Women of the Arabs*; *The Greek Church and Protestant Missions*; *Syrian Home Life*; and *Kamil, Moslem Convert*.

**JEWETT, CHARLES.** An American surgeon and physician, died August 7, 1910. He was born at Bath, Me., in 1839 and graduated from Bowdoin College in 1864. He studied medicine at the College of Physicians and Surgeons, N. Y., and took his degree in 1871. From that time he practiced medicine in Brooklyn. From 1880 to 1900 he was professor of obstetrics at the Long Island College Hospital and was consulting surgeon at several other hospitals in Brooklyn and New York. He was the first surgeon in America to perform symphysectomy. From 1878 to 1880 he was president of the Medical Society of the County of Kings and he was a member of many

foreign and American medical societies. He was the author of several medical text-books, and contributed to medical journals.

#### JEWISH CHARITIES. See CHARITY.

**JEWS.** As it is impossible to treat the subject of the Jews as a unified body, the article below treats the most important events relating to Jews in general in the different countries of the world during 1910, which includes the Jewish year 5671.

The statistics of the number of Jews in the world are based largely upon estimates. Official figures can be obtained only in Russia, Austria-Hungary, Germany and a few other countries. According to the best available sources, the total number of Jews in the world at the latest date available was about 11,500,000. Of this number the largest portion are found in Russia, where there are something over 5,000,000; second in order is Austria-Hungary, where the Jews numbered over 2,000,000.

The religious census of the United States, made in 1906 and published in 1910, gives statistics for orthodox Jews in the United States. According to these figures, there were in 1906 101,457 heads of families of the orthodox faith, with 1769 organizations. The total number of Jews in the United States, however, is much larger than this. The Jewish population is estimated by the *American Jewish Year Book* at 1,777,185. In Germany there are 607,862; in Turkey, including Palestine, 463,686; in British Empire, 380,809; in Rumania, 250,000; in Holland, 106,000; in Morocco, 109,000. Nearly every country in the world is represented by these estimates.

**UNITED STATES.** The most important events in the history of the Jews of the United States in 1910 was in connection with the passage of measures restricting immigration. On March 11, 1910, the Committee on Immigration and Naturalization of the House of Representatives granted a hearing to those opposed to any further restriction of immigration. Many prominent Jews appeared before the committee to protest against further restrictive measures.

On February 28, two Jews of New York City interviewed President Taft regarding recognition of American passports by Russia. The President stated that he had instructed the American Ambassador at St. Petersburg to make strong recommendations to the Russian government. In March the Jews of New York, Philadelphia, Rochester and other cities boycotted kosher butchers because of the increase in prices. The butchers claimed inability to continue business under the old prices and closed their shops. The boycott was suspended during Passover. On May 24, the Presbyterian General Assembly in a meeting at Atlantic City, N. J., adopted resolutions condemning Russia for persecutions of the Jews. The protests were especially against the edict for the expulsion of the Jews at Kiev. On June 19 the Jewish community of New York City took measures to establish kosher kitchens in all Jewish and non-sectarian hospitals and Jewish orphan asylums.

**FRANCE.** On January 23, Anti-Semitic and Royalist organizations in Paris showed hostility to distinguished Jews. They disturbed the lectures of M. Lyon-Caen, Dean of the Faculty of Law, and prevented M. Schrameck, Director of the Prisons Department at the Ministry of the Interior, from delivering a lecture on the organization of this department. On April 15 a

law passed by both Houses in Parliament permitted native Tunisians to contract military engagements for three, four or five years in the regiments stationed on the Continent and in the French navy. This law was made especially in favor of young Jews who had hitherto been unable to enter African regiments of the Foreign Legion unless they bound themselves for a minimum of five years.

**BRITISH EMPIRE.** On January 20 the Jews were barred out of public schools as teachers in Montreal, Canada, as a result of the division of public school funds between Protestant and Roman Catholic School Boards. Several prominent Jews were elected to Parliament in the election in January, 1910. On April 25 the British Foreign Office was approached by a committee of the Board of Deputies and Anglo-Jewish Association in reference to the threatened expulsions at Kiev. Representations were made to the British Ambassador at St. Petersburg urging him to employ his good offices in the matter.

**RUSSIA AND FINLAND.** On January 3, the Russian Senate issued a statement that foreign Jews might visit Russia provided they pay the fee of members of the First Guild. On January 14, 800 Jewish families, ordered banished immediately from Kiev, were allowed to remain until April. The Governor-General of Turkestan expelled 300 Bokhara Jews from Tashkend. On January 23 a conference of great medical authorities on insanity and mental deficiency called attention of the public to the tragic economic and social condition of the Jews resulting in the tremendous growth of the number of lunatics among them. On March 18 the Ministry of the Interior issued a confidential circular to governors of outlying territories, excepting Poland and interior provinces, ordering the summary expulsion of all Jews who had no right of residence. Among these were persons living from ten to twenty years in one place. In order to deprive these people of right of residence, the Ministry revived an old provision of "Jewish Statutes." Expulsion of Jews from Kiev and other Russian cities went on during the year. In May a number of Jews were arrested at Lodz, Vilna and Warsaw for political offenses. On May 20 a Commission of Inquiry into the rights of residence of Jews in Kiev decided to allow only 10 per cent. of over 2500 families to remain in that city. The rest were ordered to leave during the month.

**PALESTINE.** The immigration of Jews into Palestine continued during the year and in general the Turkish government was favorable to this immigration.

#### JOAQUINITE. See MINERALOGY.

**JOHNS HOPKINS UNIVERSITY.** An institution of higher learning at Baltimore, Md., founded in 1876. The number of students enrolled in the various departments of the university for the year 1910-11 was 790, and in addition about 100 men and women, mostly public school teachers, attended the afternoon college courses, which were arranged especially for their benefit. The resident teachers in the faculty number 197. The following changes in the faculty during the year 1909-10 are noteworthy: Mr. Arthur C. Lovejoy was called to the professorship of philosophy and began his work; M. Louis Adolphe Terracher came to the university from the University of Upsala to conduct courses in French literature, with the rank of

associate professor, giving his courses in the French language. Dr. Adolf Meyer, who was elected in 1909 to the professorship of psychiatry, assumed his duties at the University. There were no especially noteworthy benefactions during the year. A promising effort was being made to secure funds which will make possible the long anticipated removal of the University to its new site.

**JOHNSON, C.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**JOHNSON, HIRAM WILLIAM.** See CALIFORNIA.

**JOHNSON, TOM L.** See OHIO.

**JOHNSTON, Sir H. H.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*, *Political and Social Science*.

**JOHORE.** A native state at the southern extremity of the Malay Peninsula, whose foreign affairs are controlled by Great Britain. Area, about 9000 square miles; population (chiefly Malays and Chinese), about 200,000. Chief town, Johore Bahru. Gambier, pepper, sago, tea, coffee and gutta-percha are exported. Sultan (1910), H. H. Ibrahim.

**JOLIET, CHARLES.** A French journalist and author, died in March, 1910. He was born at Saint Hippolyte-sur-le-Doubs in 1832 and was educated at the lyceum at Versailles. He entered the department of finance in 1854 and was attached in 1859 to the treasury of the Italian army. He continued in the government service until 1864 when he took up the profession of journalism. He had already written for several journals in Paris and had published a volume, *L'Esprit de Diderot* (1850). He also wrote several comedies which were produced at the Théâtre Français. Among his most successful writings are *Le roman de deux jeunes mariés* (1866), and *Mademoiselle Chérubin* (1870). His fame was increased during the Franco-Prussian war and subsequently by his novels treating of incidents during that period. Among the more important of these are *Les romans patriotiques* (1871); *Le train des maris* (1872), and *Trois uhlands* (1872). His later works include *Le crime du pont de Chatou* (1882) and *Violette* (1890).

**JONES, H.** See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

**JONES, H. T.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**JONES, PEMBROKE.** An American naval officer, died in May, 1910. He was born in 1824. At the time of his death he was the oldest living graduate of the United States Naval Academy. He was an officer in the United States Navy at the time of the Civil War, but resigned and joined the Confederacy. He fought with distinction throughout the war. Previous to the outbreak of the Civil War Jones had become famous as one of the participants in a duel, which was one of the last to occur on American soil. This duel was fought with James Barron Pope on May 2, 1849, at Old Point Comfort. Both men were severely wounded. Pope afterwards became a poet of considerable repute and died in 1887.

**JORDAN'S LAW.** See BIOLOGY.

**JOURDAN, JAMES.** An American soldier and public official, died November 1, 1910. He was born in New Jersey in 1832, and early in life removed to Brooklyn. In 1854 he enlisted in the 14th regiment and was a member of this command at the outbreak of the Civil War. He

served in the battle of Bull Run and in nearly every important single engagement in the war in which his regiment took part. Before the close of the first year he was appointed lieutenant-colonel of the 56th New York regiment and in 1862 was made colonel of the 158th New York regiment. He became brigadier-general of the 18th army corps in 1863, and in 1865 was brevetted major-general. From 1866 to 1872 he was colonel of the 13th regiment of the New York National Guard. In the latter year he became commander of the 5th New York brigade. Six years later he was made major-general of the second division, which rank he held until 1883. General Jourdan, with General Benjamin F. Tracy and Silas B. Dutcher (q. v.) was long the moving spirit in Republican affairs in Brooklyn. Shortly after the war he was appointed by General Grant collector of internal revenue from Brooklyn. He was an officer and director in a large number of corporations.

**JUDICIARY, FEDERAL.** See UNITED STATES, *Federal Judiciary*.

**JUPITER.** See ASTRONOMY.

**JUVENILE COURTS.** NEW YORK. A most important development in the organization of special courts for children was the enactment of the Page law in New York. Part of this dealt with special Children's Courts in the various boroughs of New York City and with the appointment of judges and probation officers for them. It had been the custom to appoint the judges of the Children's Courts in Manhattan for monthly periods and in Brooklyn for bi-monthly periods. This practice of rotation was strongly disapproved by the Page Commission, appointed in 1908 to investigate the inferior criminal courts. The new law, effective September 1, provided that judges should be appointed to the juvenile courts on account of their special fitness and, so far as possible, for substantial periods of time. The law abolished the old plans of appointing patrolmen to act as probation officers and provided for twenty-three new appointments with salaries. It also declared, however, that probation officers are confidential appointees of the presiding judge. The object of this provision was to remove the appointments from the competitive civil service rules. When he signed the bill, Governor Hughes declared that this clause would not thus remove the appointments and the Municipal Civil Service Commission agreed with this opinion in July. An examination for seventeen hundred applicants was announced for August 11; but the commission postponed it and in October reversed its previous opinion. This view was not sustained by Mayor Gaynor, and the commission again prepared to hold an examination. The law also extended the period of probation to three years for children.

**BUFFALO AND ROCHESTER.** On January 1, the law establishing a Children's Court in Buffalo became effective. One of the defects of this law was declared to be that it limited the scope of the jurisdiction of the court to the city itself, although the need in the immediately surrounding towns of the same county was equally great. A bill applying to Monroe county in which Rochester is located obviated this objection by making the jurisdiction of the court coextensive with the county. This bill, which was one of the most advanced ever presented to a State legislature, provided that the child must be

brought before the court on a petition rather than on a complaint; that proceedings should be civil rather than criminal; that hearings should be heard in the judge's chambers, the public being excluded; that a detention home should be built by the county, arranged and conducted as a home; that both paid and voluntary probation officers should be appointed; and that the judges have wide discretion in dealing with each case on its merits.

**GALVESTON.** At Galveston in the spring a special school for delinquent and incorrigible boys was formed as supplementary to the activities of the juvenile court. The school was located in an abandoned hotel in good repair and well situated in rural surroundings. The plan was to get from one hundred to one hundred and fifty of the worst boys off the streets and place them under close supervision under favorable conditions.

**RECENT TENDENCIES.** This illustrates one of the tendencies of the juvenile court movement to extend the original scope of its action. Judge Lindsay of Denver believed that he found in delinquent and dependent children the results of the cupidity and hypocrisy of established interests and proceeded to an attack on social and economic injustice in high places. Others have developed means of correcting some of the defects of bad training and environment. Detention homes and detention home schools have been erected for boys and for girls; instruction in health and sanitation, and medical and surgical attention have been provided; the number and functions of probation officers have steadily increased; and the responsibility of parents for the delinquency of their children has been established in the law.

**MEETINGS.** The third annual State conference of Probation Officers in New York was held at Rochester in November, about one hundred persons being in attendance. The discussion developed the importance of careful study and discriminating judgment in the treatment of each case individually; as well as the need of firmness of execution on the part of the probation officers. The discussion dealt with the importance of using every means to avoid the necessity of returning any incorrigible delinquent to the court; the value of mental and medical examinations for juveniles; and the desirability of preventing the names of children brought before the court from being published in the local newspapers. The next conference will be held at Watertown, November, 1911.

The National Probation Officers' Association met at St. Louis in June. Three of its five sessions were devoted to juvenile probation. The discussions dealt with methods of probation and with the judge's relation to probation. The opinion seemed to develop that volunteer probation officers are much less satisfactory in every way than salaried officers. Especial emphasis was laid on the value of establishing the best possible individual relations between probation officers and the child. The majority opinion held that while the judge should exercise general supervision over probation officers, the latter should feel an independent responsibility for the success of their own work.

**KAINZ, JOSEPH.** An Austrian actor, died September 20, 1910. He was born in Wieselburg, Hungary, in 1858. He first appeared on the stage in Vienna in 1873. He afterwards played for three years at the Court Theatre in

Munich and in 1883 was engaged by the German Theatre in Berlin. In 1899 he returned to Vienna. He visited the United States several times. His best known parts were those of Romeo, Mortimer in Schiller's *Maria Stuart*, Ferdinand in the same author's *Kabale und Liebe*, and Alceste in Molière's *Misanthrope*.

**KALISCH, BERTHA.** See DRAMA.

**KAMERUN.** A German West African protectorate on the Gulf of Guinea. Estimated area, 190,600 square miles; estimated population, 3,500,000 (white in 1908, 1128). Capital, Buša. Area under cacao, 7578 hectares; rubber, 2100; kola, 220; coffee, 21. Vanilla, ginger, pepper, palm oil, and ivory are produced; cattle raising is carried on in the hinterland. Oversea imports (1908), 16,788,864 marks; exports, 12,163,881 (rubber, 4,779,740 marks; cacao, 2,654,213; palm kernels, 2,203,628; palm oil, 987,526; ivory, 900,368). Vessels entered, 421, of 1,315,564 tons. Railways open and under construction, 320 miles. Telegraph lines, about 500 miles; a cable connects with Southern Nigeria. Revenue and expenditure (1909-10), 12,183,000 marks (subvention, 2,267,000). Dr. Gleim was appointed governor in 1910. See ANTHROPOLOGY AND ETHNOLOGY.

**KANSAS.** One of the North Central Division of the United States. Its area is 82,158 square miles. Its capital is Topeka.

**POPULATION.** The population of the State in 1910 according to the Thirtieth Census was 1,690,949, as compared with 1,470,495 in 1900 and 1,428,108 in 1890, an increase in the population in the decade from 1900 to 1910 of 15 per cent. The State ranked twenty-second in point of population, the same relative rank which it occupied in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The production of coal in Kansas increased materially in 1909 over 1908. The production in the former year was 6,979,778 tons as compared with 6,245,508 tons in 1908. The production in 1910 was reduced considerably as a result of the strike and lock-out in the coal mines of the State. In the production of petroleum Kansas ranks tenth among the States. There were produced in 1909 1,263,764 barrels as compared with 1,801,781 barrels in 1908, a decrease of 538,017 barrels. The value of the product was \$491,633 as compared with a value of the product for 1908 of \$746,695. Kansas with Oklahoma forms the Kansas-Oklahoma field, which ranks second in the output of crude petroleum among the States. In the past few years, however, Kansas has decreased in its petroleum output, while Oklahoma has increased. The smelting of zinc is one of the most important industries of the State. There were produced in 1909, 9185 tons of spelter as compared with a production of 8625 tons in 1908. The State ranks fourth in the production of spelter. The cement industry of the State is very important. In Kansas the output amounted in 1909 to 5,357,235 barrels of Portland cement, valued at \$3,790,257, a great increase over the production of 1908, which was 3,854,603 barrels valued at \$2,874,457. A large quantity of natural cement was also among the products of the State. In the production of salt Kansas ranks fourth, being surpassed only by New York, Michigan and Ohio. Among other mineral products are coal products, sand-lime brick, zinc red and zinc white.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	8,900,000	169,100,000	\$76,095,000
1909.....	7,750,000	154,225,000	83,282,000
W. Wheat, 1910	4,330,000	61,060,000	51,290,000
1909	5,895,000	85,478,000	82,059,000
Sp. Wheat 1910.	120,000	1,008,000	847,000
1909.	150,000	1,725,000	1,656,000
Oats, 1910.....	1,400,000	46,820,000	15,851,000
1909.....	964,000	27,185,000	11,690,000
Barley, 1910....	300,000	5,400,000	2,430,000
1909....	270,000	4,860,000	2,576,000
Rye, 1910.....	38,000	532,000	385,000
1909.....	40,000	568,000	426,000
Buckwheat, 1910	1,000	15,000	14,000
1909	1,000	14,000	14,000
Flaxseed, 1910..	50,000	410,000	861,000
1909..	55,000	385,000	424,000
Potatoes, 1910..	88,000	5,016,000	4,514,000
1909..	91,000	7,189,000	5,679,000
Hay, 1910.....	1,792,000	2,061,000a	16,076,000
1909.....	1,829,000	2,652,000	15,912,000

a Tons.

**FINANCE.** According to the report of the State Treasurer for the fiscal year ended June 30, 1910, there was a balance on June 30, 1909, of \$1,177,029, which taken with the receipts for the year made the total sum available for the expenses of the State, \$7,236,016. The amount of the disbursements for the year was \$6,209,851, leaving a balance June 30, 1910, of \$1,026,165. The chief disbursements were for the general revenue fund, for the permanent school fund, for the annual school fund, and for the Topeka fiscal agency account.

**CHARITIES AND CORRECTIONS.** The charitable institutions of the State under its full control include the Topeka State Hospital at Topeka, the Osawatimie State Hospital at Osawatimie, the State Hospital for Epileptics at Parsons, the State Home for Feeble-minded at Winfield, School for the Deaf at Olathe, School for the Blind at Kansas City, State Orphans' Home at Atchison, Boys' Industrial School at Topeka and Girls' Industrial School at Beloit. In addition, all private asylums and children's aid societies are subject to the visitation, inspection and supervision of the State Board of Control of State Charitable Institutions. On November 20-30, 1910, a conference of charities and corrections was held at Beloit, which was the eleventh session of this conference. Many eminent experts on charitable matters were present and made addresses.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910 as the sessions are biennial and the last was held in 1909. The next sessions begins January 10, 1911.

**CONVENTIONS AND ELECTIONS.** As in the other Central and Western States of the Union, the chief question in the political campaign of 1910 was the relative strength of the insurgent or progressive and the regular elements of the Republican party. Kansas has always been one of the most radical States in politics, and some of its representatives in the Senate and in the House have been among the most aggressive leaders of the progressive party. Governor Stubbs was elected in 1908 on the platform representing many of the reforms advocated by the progressive wing of the party. He was again a candidate for renomination in 1910 and in the primaries held on August 1 was nomi-

nated on the insurgent platform. These State primaries resulted in almost a complete victory for the progressives. In six of the eight congressional districts insurgent candidates were nominated in opposition to sitting members of the "regular" faction. National party leaders considered the contest for congressional seats so important that Speaker Cannon was sent into the State to make several speeches with the view of preventing the nomination of insurgents in place of the regular candidates, but these efforts were unavailing to stem the tide of insurgent success. The vote in the State was largely on the tariff issue and the result showed the general opposition to the Payne-Aldrich tariff law among the Republicans of the State. Representatives Murdock and Madison, the two Republican Congressmen renominated without opposition, were among the strongest opponents in the House of the tariff measure, while Senator Bristow was equally strong in the Senate in his opposition to certain features of the measure. As a result of the primaries, Alexander Mitchell, a progressive, defeated Congressman C. F. Scott, a regular in the second district; Fred S. Jackson, progressive, defeated Congressman J. M. Miller, a regular in the fourth district; R. R. Rees, progressive, defeated W. A. Calderhead, a regular in the fifth district; in the sixth district, I. D. Young, progressive, defeated W. A. Reeder a regular; in the seventh and eighth districts, E. H. Madison and Victor Murdock, insurgents, were returned without contest, no nominations having been made against them by the regulars. In the first and third districts, which are strong Republican districts of the State, D. R. Anthony and Philip P. Campbell, regulars, were nominated over their progressive antagonists.

The Republican Party Council met on August 30, and, as was foreshadowed by the primaries held on August 1, the progressives were in overwhelming control. The leaders of the regular wing of the party, under Senator Curtis, sought through the council an unqualified endorsement of President Taft. They were unable, however, to bring this about and the only endorsement the President received was an assurance that the Kansas Republicans would commend such acts as met with the approval of the Kansas insurgents. A portion of the platform relating to national matters was written under the direction of William Allen White, Senator Bristow, Victor Murdock and Governor Stubbs. In relation to the tariff, the platform declared that the Republicans of Kansas did not recognize the revision of the tariff of 1909 as a satisfactory fulfillment of the tariff pledge of the Republican platform. It pledged the people of Kansas that the Republican Senators and Representatives from the State should vote for legislation that would create an independent, non-partisan tariff commission, with ample powers and sufficient appropriation to ascertain gradually the difference between the cost of production at home and abroad, and after having obtained such information, pledged that the Republican Senators and Representatives would immediately fix the duties on the basis of this information. The platform pledged the Senators and Representatives to vote for a joint resolution that would promote the revision of the tariff one schedule at a time. It demanded the strictest enforcement of the anti-trust laws and pledged the Kansas Republican Congressional delegation to vote for a law providing for a jail sentence for wilful violation

of the anti-trust laws. The platform contained a plank pledging the Kansas Senators and Representatives to vote and work for effective laws that will prevent over-capitalization of corporations and will insure actual use of the moneys received for the sale of stocks and bonds in construction or extension or betterment of property owned by the corporations. The plank further pledged the Republican delegation to work for legislation that will give the Interstate Commerce Commission authority over the issue of stocks and bonds of common carriers. The platform also declared for a State public utilities law, the initiative and referendum, the recall law, and a declaration favoring a penitentiary sentence for men convicted the second time of violation of the State prohibitory liquor law. The Democrats at the primaries held on August 1 nominated State Senator Geo. H. Hodges for Governor. The election on November 8 was a victory for the Republicans, and Governor Stubbs was re-elected by a majority of 16,167 votes. All the Republican candidates for Congress were elected.

**OTHER EVENTS.** On February 11, Judge A. W. Dana of the District Court of Shawnee county handed down an important decision relating to the operation of fire insurance companies in the State. He declared that the eighty fire insurance companies were not a trust and did not have an iron-clad agreement as to insurance rates in the State. A suit was brought in 1907 by the Attorney-General and the State Insurance Commissioner, who contended that the insurance companies had entered into an agreement to use certain uniform insurance rating books.

On April 4, the United States Supreme Court reversed the judgment of the Kansas Supreme Court that the International Text Book Company had no right to sue in a State Court because it had not filed with the Secretary of the State a statement as a condition precedent to doing business in the State as required by Kansas law. The company carries on a correspondence school at Scranton, Pa., and its business is interstate in character, according to the opinion of the court, as written by Justice Harlan. Intercourse of this nature among the States and the transmission of intelligence should not be obstructed or unnecessarily encumbered by State legislation. The requirement for the filing of the statements as a condition precedent to doing business in the State was therefore imposing a condition upon a corporation of another State seeking to do business in Kansas, which, in the case of interstate business, directly burdened such business and could not be inflicted without violating the constitution. The court declared that the State could not thus burden interstate commerce and that that section of the Kansas law was therefore void.

**STATE OFFICERS:** Governor, W. R. Stubbs; Lieutenant-Governor, Richard C. Hopkins; Secretary of State, Charles H. Sessions; Treasurer, Mark Tullay; Auditor, W. E. Davis; Attorney-General, John S. Dawson; Adjutant-General, C. I. Martin; Superintendent of Education, E. T. Fairchild; Superintendent of Insurance, Ike S. Lewis—all Republicans.

**JUDICIARY:** Supreme Court: Chief Justice, Wm. A. Johnston; Associate Justices, Judson S. West, Silas Porter, Clark A. Smith, Rousseau A. Burch, Henry F. Mason and Alfred W.

Bensen, all Republicans; Clerk, D. A. Valentine.

**STATE LEGISLATURE, 1911:** Republicans, Senate, 35; House, 71; joint ballot, 106; Democrats, Senate, 5; House, 53; joint ballot, 58; Independent, Senate, none; House, 1; joint ballot, 1; Republican majorities, Senate, 30; House, 17; joint ballot, 47.

**KANSAS CITY, Mo.** See CIVIL SERVICE.

**KANSAS, UNIVERSITY OF.** An institution of higher learning at Lawrence, Kansas, founded in 1864. The number of students enrolled in the several departments of the university for the year 1910-11 was 2228. The faculty numbered 148. There were no notable changes in the faculty during the year, and no benefactions of especial note were received. The library contains about 65,000 volumes. The productive funds of the university amounted in 1909-10 to \$151,000, and the income to \$443,000, chiefly from the State. The President is Dr. Frank Strong.

**KASSON, JOHN ADAMS.** An American diplomat and publicist, died May 16, 1910. He was born at Charlotte, Vermont, in 1822, and graduated from the University of Vermont in 1842. He was admitted to the Massachusetts bar in 1845, but removed to Iowa and engaged in the practice of law in 1857. In 1848 he was a delegate to the Free Soil Convention. He was a delegate to the Republican National Convention in 1860. In 1861-2 he was first assistant postmaster-general. He was a member of the 38th and 39th Congresses from 1863 to 1867, and from 1868 to 1872 was a member of the Iowa General Assembly. From 1873 to 1877 he was again member of Congress. From the latter year to 1881 he was United States Minister to Austria. He was again a member of Congress from 1881 to 1884, and in 1884-5 he was United States Minister to Germany. In the latter year he acted as commissioner to the Congo International Conference. In 1893 he was appointed special envoy to the Samoan International Conference, and from 1897 to 1901 was United States special commissioner plenipotentiary to negotiate reciprocity treaties. He was a member of the American-Canadian Joint High Commission in 1898. He was the author of *Evolution of the United States Constitution*, and *History of the Monroe Doctrine* (1904), and numerous essays and speeches.

**KATSURA,** Premier. See JAPAN.

**KEDAH.** A Malay state on the west coast of the Malay Peninsula, under British protection since the conclusion of the Anglo-Siamese treaty of March 10, 1909. Capital, Alor Star. Area, including the Langkawi group of islands, about 3150 square miles. Population (according to a native census taken years ago and necessarily inaccurate), 219,000, almost entirely Malays. There are but ten European officers in the state. There are ten vernacular schools (attendance 1204), besides an English school at Alor Star. The official language is Malay; the calendar, the Mohammedan; the religion, Islam. The principal products are paddy and rice, tapioca, coconuts, pepper, fruits, and rubber. Opium is a government monopoly. The mining industry has declined, owing partly to the fact that the more considerable deposits (notably in the Kulim district) are practically worked out, and partly to the tendency to subordinate to the cultivation of rubber all other industries. Cattle and buffaloes are raised in

considerable numbers. The number of cattle reported early in 1908 was 30,000; but the rinderpest, raging from July, 1908, to November, 1909, carried off about 30 per cent.—the loss being estimated at more than 300,000 Straits dollars. Determined effort on the part of the administration was ultimately successful in stamping out the disease. The administration has also taken effective measures against systematic cattle-thievery, which was a flourishing trade under the old régime. No returns of imports and export values are given. The export of rice to Penang in 1909 was 3,278,000 gangtangs; of paddy 7,950,000. Exports of tin (1909), 12,502 piculs (744 tons) in 1909, against 12,698 piculs in 1908. Actual revenue (derived chiefly from opium farms) and expenditure (1909), 1,240,276 and 1,005,328 dollars respectively. There are 131 miles of telegraph, a telephone system, cables under the Merbok and Muda rivers, and four post-offices. The nominal ruler is (1910) Sultan Abdulhamid Halimshah ibni Ahmad Tajudin. British adviser and actual administrator, W. George Maxwell.

The debt-bondage system, under which the debtor works for the creditor until his debt is paid off, is the problem now confronting the administration; and several plans are under consideration for the abolition of the evil, without injustice to either party concerned. The principal evil of the debt-bondage system in Kedah, says Mr. Maxwell, "is not that it entails harsh treatment of the debtor, but that it deprives him of all inducement to work; for it is not in human nature to work hard when hard work brings no reward."

**KEESE, G. POMEROY.** An American writer, died April 22, 1910. He was born in New York in 1828, and was educated in Flushing, L. I. When still a boy he removed to Cooperstown, N. Y., where he took up his residence at Edgewater, an old family house built by Isaac Cooper, brother of J. Fenimore Cooper, who was his great-uncle. He became a prominent business man and was president of the Second National Bank of Cooperstown for thirty-five years. He wrote much relating to J. Fenimore Cooper and contributed magazine articles to *Harper's*, *Putnam's* and other magazines on various subjects, mostly connected with farming.

**KELANTAN.** A native state of the Malay Peninsula, transferred from Siamese to British sovereignty, March 10, 1909. Estimated area, 5,000 square miles; estimated population, about 300,000 (Siamese, 15,000; Chinese, 10,000). The prevailing religion is Shaffi Mohammedanism. Kota Bharu, the capital, has about 10,000 inhabitants. About 450,000 acres are under cultivation. The products include rice, cocoanuts and copra, betelnuts, rubber, resin and gharu, rattan, bamboo, pepper, tapioca, sugar-cane, and corn. The jungle yields valuable timber. Cattle (90,000), buffaloes (20,000), sheep, goats, and poultry are raised. Gold, galena, pyrites, and tin are mined. Silk-weaving, boat-building, and brick-making are carried on. Imports and exports (1906-7), 1,388,435 and 1,153,948 Straits Settlements dollars respectively. Revenue (1907-8), estimated at 319,700 dollars. There are few roads, internal communication being by means of the rivers. Kota Bharu is connected by telegraph with Bangkok and Penang. The government is administered by a hereditary rajah, assisted by a British adviser (1910, J. S. Mason).

**KELLOGG, V. L.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**KELLY, EDMOND.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**KELLY, MYRA.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**KENT, WILLIAM.** See CALIFORNIA.

**KENTUCKY.** One of the South Central Division of the United States. It has an area of 40,598 square miles. Its capital is Frankfort.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,289,905, as compared with 2,147,174 in 1900 and 1,858,635 in 1890. The increase in population in the decade 1900 to 1910 was 6.6 per cent. The State ranks fourteenth among the States in point of population, whereas in 1900 it ranked twelfth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most important mineral product of the State is coal and its mining has been a record of constant growth. The production in 1909 was 10,648,981 short tons, as compared with 10,246,553 short tons in 1908. The reports of the United States Geological Survey indicate an increase of 30 or 40 per cent. over the production of 1909. In the western part of the State the increase was still greater. It was estimated that 9,550,640 short tons were produced, as compared with 5,578,161 short tons in 1909. This increase is largely due to the stoppage of work in the mines in neighboring States on account of the prolonged strike in the coal fields. (See STRIKES AND LOCK-OUTS.) The State is important in the production of petroleum. In 1909 it ranked twelfth among the States and produced 639,016 barrels, valued at \$518,299, as compared with a production of 727,767 barrels, valued at \$706,811, in 1908. The State produces a small amount of iron ore and has important manufactures of pig-iron. There are also considerable manufactures of coke. The clay products are of considerable value and other mineral products include barytes, cement, lime, lead, building stone and zinc.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value.
Corn, 1910.....	3,630,000	105,270,000	\$55,793,000
1909.....	3,568,000	103,472,000	64,153,000
Win. Wheat, 1910	750,000	9,600,000	8,928,000
1909	670,000	7,906,000	8,776,000
Oats, 1910.....	170,000	4,250,000	1,912,000
1909.....	40,000	3,858,000	2,355,000
Barley, 1910....	1,000	24,000	16,000
1909.....	1,000	24,000	18,000
Rye, 1910.....	13,000	160,000	144,000
1909.....	13,000	165,000	145,000
Potatoes, 1910.	41,000	3,772,000	2,339,000
1909.	40,000	3,680,000	2,355,000
Hay, 1910.....	500,000	645,000a	8,450,000
1909.....	480,000	653,000	7,771,000
Tobacco, 1910..	470,400	381,024,000b	33,149,088
1909.	420,000	350,700,000	37,174,200

a Tons. b Pounds.

**EDUCATION.** The total enrollment in the schools of the State at the end of the fiscal year 1908-9, the latest for which statistics are available, was 448,829. Of these, 404,803 were white and 44,026 were colored. The average attendance was 257,943, of whom 233,889 were white and 24,054 colored. The total number of teachers employed was 11,027, of whom 3862

were male and 7135 were female. The total number of pupils of school age at the end of the fiscal year was 739,836.

The legislature of 1908 passed many important measures which have resulted in a great improvement in educational conditions in the State. The State Superintendent of Education has also carried on a campaign of publicity, designed to arouse public attention in educational affairs.

**CHARITIES AND CORRECTIONS.** The institutions under the State Board of Control include the Kentucky Institution for Feeble-Minded Children, the Central Kentucky Asylum for the Insane, the Western Kentucky Asylum for the Insane and the Eastern Kentucky Asylum for the Insane. For the support and repair of these institutions there was expended in the fiscal year 1909, the latest for which statistics are available, \$160,534.

#### POLITICS AND GOVERNMENT

The State legislature met in 1910 and the chief measures passed will be found in the paragraph *Legislation* below.

Kentucky was one of the few States in which gubernatorial elections were not held in 1910. The term of Governor Willson does not expire until December, 1911. The most interesting result of the primaries for nomination of candidates for Congress was the nomination in the eleventh district on September 15 of Caleb Powers, former Secretary of State, who was three times convicted of complicity in the murder of Governor Goebel in 1900. Mr. Powers was pardoned by Governor Willson in 1909 and since that time he has taken an active interest in the Republican politics of the State. He was nominated in a strongly Republican district and the nomination was equivalent to an election. He was elected on November 7. Opposition to his serving in Congress arose in certain quarters, and there was talk of an attempt to deprive him of the seat to which he was elected on the ground that a pardon did not remove the disqualification due to his indictment and prosecution in connection with the murder of Goebel. No action will be possible, however, until he takes his seat in Congress, as the House in all cases has the power to determine the qualifications of its members. With the exception of Mr. Powers and John W. Langley, in the Tenth District, the Democratic candidates for Congress were elected in the November elections.

**OTHER EVENTS.** In a feud which has long been carried on in Breathitt county, Matt Crawford, a nephew of the late Judge James Hargis (a former political leader of the county, who was shot and killed by his son in 1908), was murdered from ambush at his distillery two miles from Jackson on October 19. Charles Little was arrested for the murder and in thirty-six hours he confessed, was indicted by a special grand jury, was tried and sentenced.

On April 3, Boone Bush, one of the alleged "night riders," charged with the raid on the town of Dycusburg on the night of February 3, 1908, was found guilty by a jury at Marion and was sentenced to one year in prison. This was the first conviction of any of the alleged "night riders" arrested for the numerous raids and whippings in eastern Kentucky, although over 100 men have been arrested and indicted for these raids. Over thirty others are under indictment in the same court for the Dycusburg raid. In April a Federal jury at Covington

found eight residents of Grant county guilty of violating the Sherman Anti-Trust law. They had compelled a farmer named Osborne, by intimidation, to withhold from shipment a quantity of tobacco which he had agreed to sell in Cincinnati. They had done this in the interest of a combination or trust of tobacco growers. All the men convicted were prominent residents of Grant county, and one, John S. Steers, was a clergyman and a member of the legislature. They were punished by fines ranging from \$100 to \$1000. Three days later a jury convicted six farmers of Pendleton county on the same charge. Similar fines were imposed on these men. In still another case \$600 was awarded in damages to W. S. Henderson, a merchant, who had sued twelve farmers of Bracken county, who had forced him by threat to sign agreements concerning his tobacco. On May 31 the "Jim Crow" law of the State was affirmed in effect by the Supreme Court in a suit brought by a colored lawyer of Washington for \$1000 damages against the Chesapeake and Ohio Railway. The court declared that the only question for its decision was whether or not the accommodations furnished him in the Jim Crow car were as good as those from which he had been removed. The courts below had judged that this was the case and their judgment was affirmed.

On February 1 a gas explosion in the Browder coal mine near Drakesboro resulted in the death of 34 men.

**LEGISLATION.** Among the important measures enacted at the legislative session of 1910 were the following: Measures were passed making it lawful for farmers to agree to abstain from growing any kind of crop for any given period or season, and to combine or pool crops of certain commodities in order to obtain a higher price therefor. Such agreements may be recorded and have the same effect as chattel mortgages. The State provided for the first time for the licensing of automobiles. The measure prescribes the registration fee and defines the limit at which cars may be driven in the State. A measure was enacted permitting a corporation to be organized, or to amend its powers to carry on a trust business, banking or real estate title insurance business. The child labor act was extended in its application, which had heretofore been confined to factories, mines and mercantile establishments. It now includes business offices, telegraph offices, hotels, restaurants, farms and boarding houses. In none of these occupations are children between 14 and 16 years of age to be employed without an age and schooling certificate. A measure was enacted by which any person shall be punished who directly promotes or contributes to conditions which render any child dependent, neglected or delinquent. It was provided that the act shall be liberally construed in favor of the State to protect children from neglect of parental duty, even though the person at fault be no relative of the child's. Several important measures were enacted relating to education. County text-book commissioners were provided for. They are authorized to advertise for proposals for uniform school books throughout the county. An elaborate truant act for cities of the fourth class was passed, and the acceptance of the provisions of the Carnegie fund by the State university was approved. The Federal income tax amendment was passed.

A measure was enacted providing for the punishment of persons guilty of cruelty to animals. Several important measures relating to punishment of criminals were enacted. Among these was one permitting indeterminate sentence, the limits of which are fixed by the judge in felonies and by the jury in misdemeanors. One of the two State penitentiaries is set apart as a reformatory for prisoners under 30 years of age, who are not yet hardened criminals. The prisoners are to be educated, credited with a part of their earnings, and in the discretion of the board of managers eventually paroled and discharged. An employment agency for paroled prisoners was also established. An act was passed legalizing all marriages between slaves which were entered into before February 14, 1866. October 12 was made a legal holiday, to be known as Columbus Day. An eight hour day was established for all laborers and mechanics employed on public works either by the State or by a contractor. Several measures were passed for the prevention of coal mine disasters. The chief inspector of mines is authorized to purchase six sets of life-saving apparatus, to distribute them throughout the State and keep constantly on hand in convenient localities supplies for rescue work for mine accidents. A general registration law was passed. The State board of health takes charge of the State system for the registration of births, deaths and marriages, acting through the State bureau of vital statistics, and the local registrar in the registration district.

**STATE OFFICERS.** Governor, A. E. Willson; Lieutenant-Governor, W. H. Cox; Secretary of State, Ben L. Bruner; Treasurer, Edwin Farley; Auditor, Frank P. James; Attorney-General, James B. Breathitt; Superintendent of Education, Elsworth Regenstein; Commissioner of Agriculture, M. C. Rankin; Commissioner of Insurance, Charles W. Bell—all Republicans.

**JUDICIARY.** Court of Appeals: Chief Justice, J. P. Hobson, Dem.; Justices, W. E. Settle, Dem.; Ed. C. O'Rear, Rep.; John M. Lasing, Dem.; John D. Carroll, Dem.; T. J. Munn, Dem.; Shackelford Miller. Commissioner of Appeals, Wm. R. Clay; Clerk, Napier Adams, Rep. Miller's and Clay's politics not given.

**STATE LEGISLATURE, 1911.** Democrats, Senate, 24; House, 74; joint ballot, 98. Republicans, Senate, 13; House, 26; joint ballot, 39. Democratic majority, Senate, 11; House, 48; joint ballot, 59.

**KHIVA.** A Russian vassal state in central Asia. Area, 24,000 square miles; estimated population, 800,000 (400,000 nomad Turkomans). Capital, Khiva, with between four and five thousand inhabitants; New Urgenj has 3000. The people are Mohammedans. Chief products, cotton and silk. A war indemnity of £274,000, levied by Russia in 1872, is still being paid off in annual instalments; and the intervention of Russian troops is frequently necessary to enable the khan to raise the amount exacted. The khan, Seyid Mohammed Rakhim Bahadour Khan (born about 1845; succeeded in 1865), died August 29, 1910, and was succeeded by his son, Seyid Asfendiar Khan (born 1871). Heir-apparent, Seyid Teymour Ghazi (born 1904).

**KHUEN-HEDEVRARY,** Count. See AUSTRIA-HUNGARY, *History*.

**KIAO-CHAU.** A German protectorate, in-

cluding a harbor, town, and district on the east coast of the Chinese province of Shantung, leased (1898) from China for 99 years. Area, exclusive of the bay, about 200 square miles; population, 33,000. Area of surrounding neutral zone or "sphere of influence," about 2500 square miles, with a population of about 1,200,000. There are mission schools. Tsingtau is the seat of government. Foreign imports and exports (1908), £2,098,770 and £1,604,441 respectively. Vessels entered (1908), 473, of 587,602 tons (and 6014 junks); cleared, 474, of 590,903 (and 5550 junks). A railway (247 miles) runs from Tsingtau to Tsinan, with a 30-mile branch to Poshan. Administration expenses (1909-10), 12,352,597 marks. A governor (1910, Vice-Admiral Truppel) administers the colony under the Navy Department.

**KIEL CANAL.** See CANALS.

**KIKUYU.** See ANTHROPOLOGY AND ETHNOLOGY.

**KING, ADAM E.** An American public official, died November 19, 1910. He was born in Delaware in 1833 and having studied law was admitted to the bar. He was practicing at the outbreak of the Civil War and joined the Second Delaware regiment as second lieutenant. He was afterwards transferred to the Thirty-first New York volunteers. He was promoted for gallant services and at the close of the war was a brigadier-general. After the war he took an active interest in politics and was twice a candidate for Congress. He represented Maryland in a number of national conventions and in 1888 was chairman of the American delegation at the Convention in Chicago. He headed the electoral ticket in 1896 and was made president of the electoral college. In 1868 he was appointed appraiser of the port of Baltimore, serving until 1873. He then became naval officer in which position he served for more than four years. In 1890 he was appointed Consul-General at Paris by President Harrison and remained in that position for three years.

**KING, BASIL.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**KING, EDWARD.** An Anglican bishop, died March 8, 1910. He was born at Westminster in 1829 and received his education at Oriel College, Oxford. He was admitted to holy orders in 1854 and became curate at Wheatley. In 1858 he was appointed chaplain and assistant lecturer at Cuddesdon College. Here he remained until 1873 when he succeeded Dr. Ogilvie in the chair of pastoral theology at Oxford. Here he became identified with the extreme theological party and was recognized as one of its leading members. He exercised great influence in the University and was said to have had a gift of sympathy which was "nothing less than a form of genius." In 1885 he was appointed by Mr. Gladstone Bishop of Lincoln in the face of considerable opposition. On account of his well known views in regard to church ritual and other matters, the beginning of his career at Lincoln was carefully watched. In 1889 he was brought to trial for using the cope and mitre in other churches than the Cathedral. The verdict was, in the main, adverse to his conduct of the ritual service, but the judgment was loyally accepted by the bishop. In 1909 he was the only bishop who voted in the House of Lords for Lord Lansdowne's amendment on the motion for the second reading of the Finance Bill, which

brought about the dissolution of Parliament. Among his published writings is *Meditations on the Seven Last Words*.

**KLOPSCH, LOUIS.** An American editor and publisher, died March 7, 1910. He was born in Germany in 1852 and was educated in the public schools. He came to the United States at an early age and from 1877 to 1890 was proprietor of the *New York Daily Reporter*. From 1884 to 1890 he was proprietor of the *Pictorial Associated Press*. In 1892 he became proprietor of the *Christian Herald* and in this capacity became notable for the large sums of money raised and distributed through this paper for international charities. These contributions amounted to over \$3,500,000. Among the objects these sums were applied to were the Russian famine in 1892, the Indian famine in 1897-8, the relief of starving reconcentrados in Cuba in 1898, famine and cholera in India in 1900, famine in China in 1901, famine in Finland and Sweden in 1903, famine in Japan in 1906, famine in China in 1907, and nearly all the notable disasters up to the time of his death. For his services he received the thanks and appreciation of sovereigns in Europe and Asia.

**KNAUS, LUDWIG.** A German genre painter, died December, 1910. He was born at Wiesbaden in 1829 and studied at Düsseldorf and Paris, spending also considerable time in Italy. From 1874 to 1884 he was professor at the Berlin Academy. During these years he was considered one of the great genre painters of the world. His works were characterized by obvious feeling and sharp delineations of character. Technically he was a skillful artist and excellent colorist. Several of his important paintings, including his "Repose in Egypt of the Holy Family," "Old Woman and Cats," "Female Figure of Peace" and "A Girl's Head" are at the Metropolitan Museum in New York City. Other important pictures by him are "Funeral in the Hesse Village," "The Village Musician," "Solomon's Wisdom" and "A Peep Behind the Scenes."

**KNOXVILLE, TENN.** See EXPOSITIONS.

**KOCH, ROBERT.** A German physicist and bacteriologist, died May 27, 1910. He was born at Clausthal, Hanover, in 1843, and while still a youth manifested deep interest in scientific subjects. At the age of seventeen he had finished his work in the high school and was obliged to delay a year before entering the University of Göttingen, the legal age of entrance being eighteen. At the university he took a course of medicine. In his second year he took the prize of 80 thalers in gold offered for the best essay written by a student in any class. After securing his degree he began the practice of medicine at Posen. In the meantime, however, he had written a series of articles on the spleen, and had begun the study of bacteria. His studies were interrupted by the Franco-Prussian war, in which he served, and on its close he returned to Posen. His writings on

bacteriology had, however, already attracted attention and in 1882 he was called to Berlin where he was made a member of the Board of Health. When the cholera broke out in India and Egypt, the German government sent him to study the disease and methods of preventing its spread. He continued his researches in India, and while there announced his theory that cholera was due to a specific bacterium. His doctrine was opposed by English physicians, but Koch by microscopic examination of the bodies of cholera victims proved that he was correct. Upon his return to Berlin the Reichstag voted him 100,000 marks in recognition of his eminent service to science. He had not merely discovered the source of one disease, but promulgated a theory of all disease, which time and experiment have confirmed. Previous to his study of cholera he had already isolated the tubercle bacillus in 1882. To do this he was obliged to invent new appliances for microscopical work. With this apparatus and his new method of staining to render micro-organisms visible, he showed that consumption was due to a single specific germ and began the battle that has reduced tuberculosis from an inevitably fatal scourge to a disease which may be combated with success. The work of Dr. Koch made of bacteriology a definite science. All the present day understanding and employment of inoculation as a means to ward off disease came from his investigations and the study they induced other scientists to make. The discovery of tuberculin was one of his most noted achievements. In November, 1890, it became known prematurely that Dr. Koch had discovered and tested by a series of careful experiments a compound substance which, when administered by injection hypodermically was destructive of the tubercle bacillus and presumably curative in cases of tuberculosis. It is probable that the report of no other scientific discovery caused more world-wide excitement than this. Doctors, scientists and consumptives from all countries made pilgrimages to Berlin. In the midst of the turmoil Koch remained for a long time silent. He refused to make any unusual claim for his preparation, which is now generally known as Koch's Lymph, but in 1891 he issued a statement. While he did not state the nature of his preparation he made it plain that it is itself prepared from tubercle bacilli and that it is a poison. Moreover he stated that its reactions were so violent as to make its usefulness doubtful. The scientific value of tuberculin except in diagnosis has not become clear even at the present time.

One of the most important investigations of Dr. Koch was that of the sleeping sickness in Africa, which, until his researches, was regarded as incurable. He traced the disease to the tsetse fly and still further to the trypanosoma microbes on the body of the fly. He prepared an antitoxin which alleviated the disease. He was equally successful with malaria. After establishing thorough sanitary conditions he stamped out the disease at Brieni, a low-lying island in the Adriatic belonging to Austria. He found the malaria to be due to a mosquito parasite. While draining the swamps, he treated the sick with an antitoxin which he concocted. The undertaking, which was financed by the Austrian government, was a complete success. In 1901 Dr. Koch created considerable discussion in scientific circles by declaring that the disease of tuber-

culosis was not the same in men and animals, or rather that bovine and human tuberculosis were different types and not communicable from the one species to the other. This theory is still in question, although many scientists regard it as having been negatively proved. In 1906 he received the Nobel prize for services to medicine. He was without doubt the foremost of contemporary scientists in the bacteriological field. Among Koch's published works are the following: *Untersuchungen über die Aetiologie der Wundinfektionskrankheiten* (1878; Eng. trans. by Cheyne, 1880); *Ueber die Milzbrandimpfung Eine Entgegnung auf den von Pasteur in Genf gehaltenen Vortrag* (1882); *Beitrag zur Aetiologie der Tuberculose* (1882; Eng. trans. by Boyd, 1886); *Ueber die Cholerabakterien* (1884; Eng. trans. by Laycock, 1886); *Ueber Naturheilung und medizinische Kunst* (1885); *On Disinfection*, abstracted and translated by Whitelegge (1886); *Weitere Mitteilungen über ein Heilmittel gegen Tuberculose* (1890); *Ueber bakteriologische Forschung* (1890; trans. into English 1891); *Ergebnisse der vom Deutschen Reich ausgesandten Malaria-Expeditionen* (1900); *An Investigation of Pathogenic Organisms*, translated by Horsley (1886); *Aerztliche Beobachtungen in den Tropen* (1898); *Diagnosis, Treatment and Prophylaxis of Tropical Malaria*, translated by Shakespeare (1898).

**KOCIAN**, JAROSLAV. See MUSIC.

**KOEBEL**, W. H. See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**KOHLRAUSCH**, FRIEDRICH. A German physicist, died in January, 1910. He was born at Rinteln in 1840 and was educated at Erlangen and Göttingen. In 1866 he became professor at Göttingen and subsequently was appointed to chairs at Zurich (1870); Darmstadt (1871); Würzburg (1875) and Strassburg (1888). In 1895 he was appointed president of the Imperial Physico-Technical Institute of Charlottenburg near Berlin, and under his direction the work of this bureau was widely extended and developed. He made special researches and many important discoveries in the field of electrolysis and made a brilliant record as an experimental physicist. He devised new apparatus and methods for measurement. His researches embraced all departments, but those dealing with electricity and magnetism were of special importance. The elasticity of solids and various problems in light were also investigated by him. His *Leitfaden der praktischen Physik*, published in 1872, is considered a standard work on physical laboratory methods and measurements. He was also the author of *Ueber den absoluten Leitungswiderstand des Quecksilbers* (1888) and of many papers contributed to scientific journals.

**KOREA**, or CHO-SEN. The peninsula between the Yellow Sea and the Sea of Japan, constituting a Japanese possession since August 29, 1910. Capital, Seoul.

**AREA, POPULATION, ETC.** The area is stated at 14,123 square ri (83,083 square miles). The results of an investigation as to the number of inhabitants, published in the summer of 1910, showed a population of 12,959,981. Several semi-official figures were published in 1910 for the number of Japanese residents, varying from about 143,000 to over 146,000. Foreigners were reported to number at the end of June 13,382, of whom 11,533 were Chinese, 490 Americans, and 189 British. Seoul has perhaps 250,000

inhabitants, and Ping-Yang 50,000. In general, the Koreans are ancestor worshippers; among the upper classes Confucianism prevails. In 1910 the number of monasteries was reported at 958, with 5198 monks and 563 nuns. The reorganization of the primary school system has been undertaken, and new industrial and technical schools are being established. The progress of Christian missions in Korea has probably not been surpassed in history. As the result of about 25 years of Christian effort, native Christians numbered some 250,000 in 1910. There were under Christian auspices 874 day schools, with 18,217 pupils, and 28 boarding schools, with 1750 pupils. Missionaries were reported to number 453 on June 30, 1910; of these 308 were American, 90 British, 50 French, 4 Russian, and 3 German. In 1910 the missions were subjected to considerable criticism, emanating from Japanese sources. It was alleged that, to advance their own cause, some of the missionaries were fostering the native antagonism to Japanese usurpation and that many natives had professed Christianity for the purpose of somehow furthering their own political and nationalistic aims; but there appeared to be little truth, if any, in these statements.

**PRODUCTION, COMMERCE, ETC.** As a result of many years of incompetent government and oppressive taxation, the Korean people seem to have lost incentive; they present in general a picture of political degeneration and economic involution. The pilfering of the tax gatherer and his superiors has discouraged labor and thrift so that now a lazy population derives little more than its immediate necessities from the really large natural resources of the country. This state of affairs is by no means universal, but is far too prevalent not to arouse comment. It is to be expected that, while the Japanese annexation was effected for Japanese benefit, the new régime will bring large economic and social betterment to the masses of native population. In the spring of 1910, the cultivated area was reported at 1,806,327 cho (one cho = 2.45 acres). The staple products are rice and other cereals, beans, cotton, tobacco, and hemp. The ginseng industry is controlled by the government. The value of mining products for 1909 is reported at 4,997,059 yen, of which 4,393,923 represented gold. Copper, iron, silver, graphite, coal, etc., occur, but are little worked. The fisheries are being developed by Japanese.

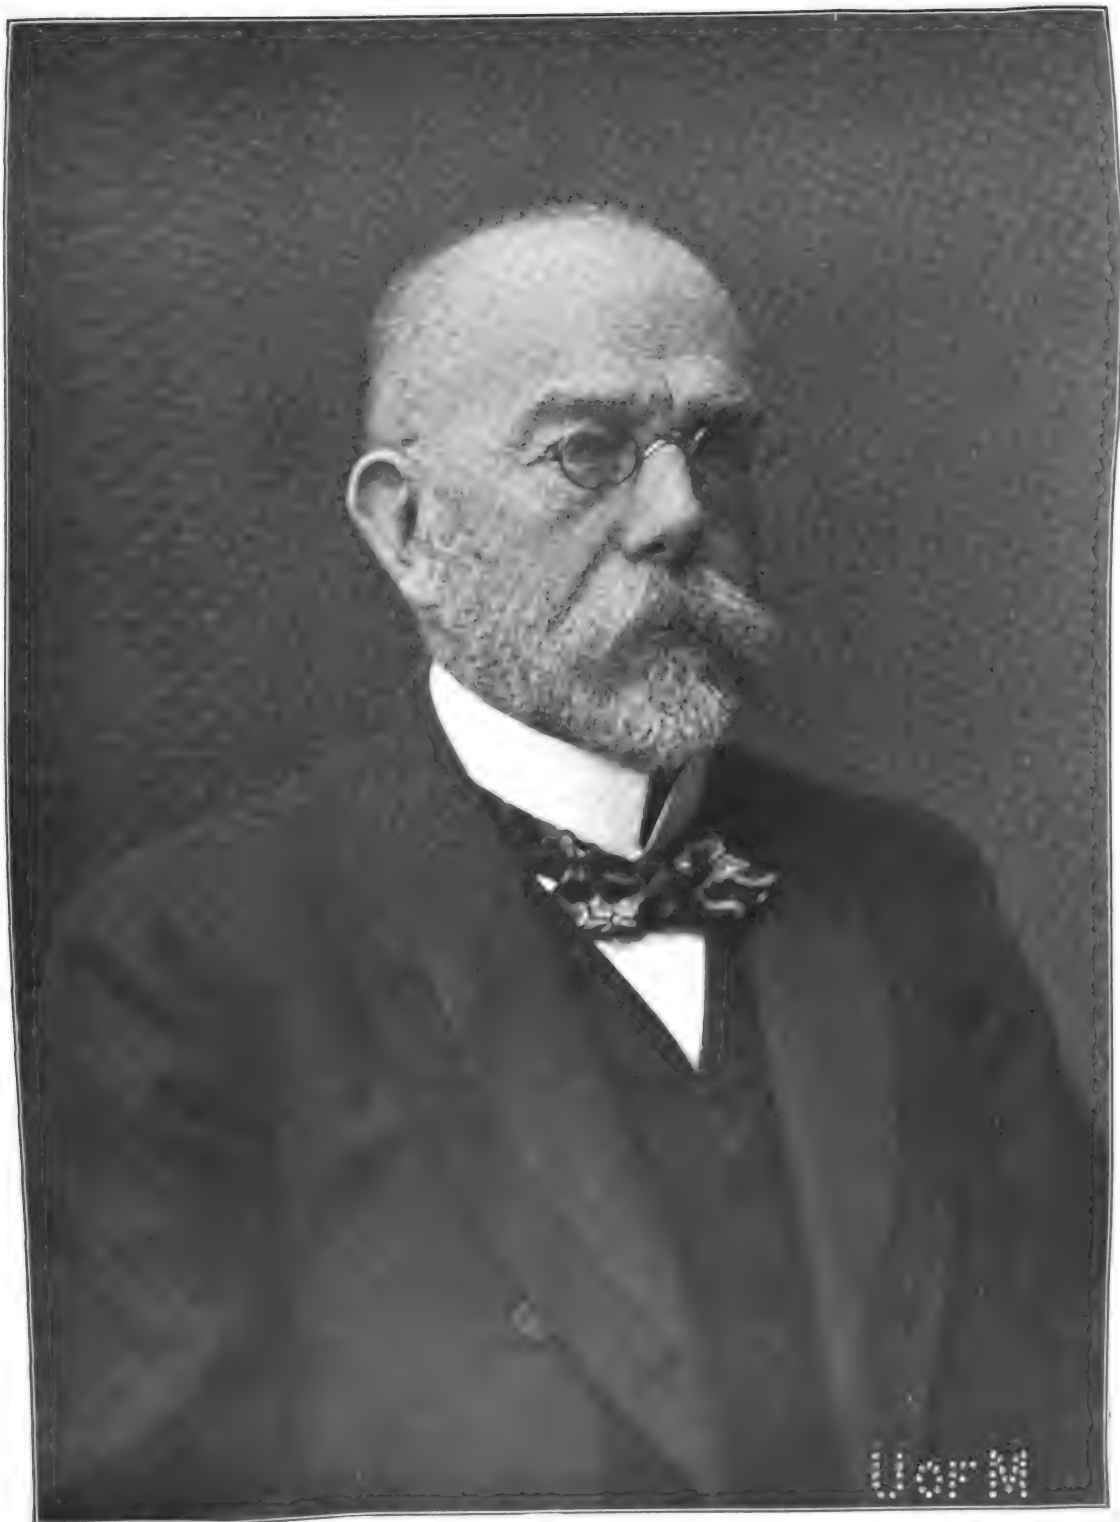

Imports and exports (exclusive of gold and silver) have been valued as follows, in yen:

	1907	1908	1909
Imports . . . .	40,050,405	41,025,523	36,686,116
Exports . . . .	17,002,234	14,113,310	16,223,193

The leading import is cotton goods; others of importance are yarn, timber, silk, kerosene, sugar and sake. The principal exports in 1909 were: rice, 5,530,580 yen; beans, 3,630,145; ginseng, 854,798; hides, 815,091; cattle, 425,799; raw cotton, 274,698; fish, 262,055. The greater part of the trade is with Japan and passes through the ports of Chemulpo and Fusan.

There are 688 miles of railway and about 2900 miles of telegraph line (7000 of wire); post-offices, over 1900.

**FINANCE.** At the time of the annexation to

ROBERT KOCH

ॐ नमः

Japan (see below), the annual state expenditure was said to be about 23,000,000 yen and the revenue from Korean sources about 14,000,000 yen, the principal items of the latter being land tax 6,000,000, customs 3,000,000, and state industries 3,250,000. Deficits for some time had been barely covered by loans and grants from Japan. Korean national existence had been one long story of extortions on the part of officials and the gradual extermination of the wealth-earning spirit among the people. Including Japanese subventions, etc., the budget for the fiscal year 1910 balanced at 20,915,678 yen. Annexation put an end to the Korean budget, thereafter the finances being treated in the same document as those of Japan. The Japanese budget of December 16, 1910, for the fiscal year 1912, showed for Korea a revenue of 48,731,782 yen (24,067,583 ordinary and 24,674,199 extraordinary) and an equal expenditure (27,891,437 ordinary and 20,850,345 extraordinary). The provision of suitable incomes for members of the Korean royal family, the issue of bonds for 30,000,000 yen to provide annuities for various nobles affected by the annexation, a Japanese grant of 17,000,000 yen for industrial and educational purposes in Korea, and the large annual deficits that will doubtless continue for several years constitute no inconsiderable demands upon the imperial treasury.

**GOVERNMENT AND HISTORY.** A brief review of Korea's governmental status may serve to explain the treaty of annexation concluded at Seoul August 22, 1910, between plenipotentiaries of the Korean and Japanese emperors, whereby the peninsula lost its last claim to independence and the Japanese protectorate administration was succeeded by prefectural government. The dynasty which came to an end in 1910 dates its existence from 1392, but China was recognized as suzerain prior to 1895. In May of that year, by the treaty of Shimonoseki, which concluded the Chino-Japanese war, China renounced her claims, and Japanese influence in Korea became manifest. Japanese interests developed rapidly, and it was mainly to protect them against Russian encroachment that the war with Russia was precipitated. On February 23, 1904, just after the war began, Japan concluded with Korea a treaty whereby the former guaranteed the independence and territorial integrity of Korea and the latter agreed to adopt Japanese advice in regard to administrative reforms. Then followed the Anglo-Japanese agreement of August 12, 1905, and the Russo-Japanese peace treaty of September 5, 1905, both of which recognized Japan's paramount interests in Korea. The Japanese government presently tightened its hold on the peninsula through its treaty with the Korean government, Nov. 17, 1905, from which officially dates the protectorate. This treaty dropped the guaranty of Korean independence, substituting therefor the much narrower undertaking to maintain the security and respect the dignity of the Korean imperial house. The treaty moreover, gave to the Japanese government the control of Korean foreign relations and provided that a Japanese resident-general be stationed at Seoul. The first resident-general was the eminent constructive statesman, the late Prince (then Marquis) Ito Hirobumi, who took up his duties March 2, 1906. Ito found himself hampered by the obstructionist tactics of the

Korean emperor, Yi Hiung, and forced his abdication, July 20, 1907, in favor of the emperor's son, Yi Chök, a more pliant executive. Nevertheless, the authority of the resident-general in internal matters was too much restricted to an advisory capacity (the Japanese "advice" being usually disregarded by the Korean functionaries), and on July 31, 1907, a Japanese-Korean agreement was concluded, whereby all administrative measures and all superior official appointments were made subject to the approval of the resident-general, and Japanese subjects became eligible for official positions in Korea. Thereupon Japanese officials were made vice-ministers in the government departments (which were six in number: Interior; Treasury; Education; Justice; Agriculture, Commerce and Industry; and Imperial Household). Soon after Ito resigned (May, 1909), a further agreement (July 24) provided that Japan take over the administration of justice and the management of prisons. Before the end of 1909 Korea had lost all semblance of an independent monarchy. A permanent Japanese army was established in the country, the police system was under Japanese direction, Japanese consuls at the treaty ports had been replaced by residents, and the Japanese were introducing manifold reforms, including the establishment of courts, the abolition of extortion, and the reorganization of the educational and financial systems. The resident-general, not the emperor, was the real ruler.

After the retirement of Ito, the administrative progress of the residency-general appeared to be not wholly satisfactory to the Tokyo government. The new resident-general, Viscount Sone Arasuke, who followed Ito in the summer of 1909, suffered extreme ill health and in May, 1910, resigned his post, being succeeded by the Japanese minister of war, General Viscount Terauchi Masakata, with Yamagata Isaburo as vice-resident-general. Sone died September 13, 1910. Prince Ito was murdered October 28, 1909, by a native Korean, who was subsequently executed.

On July 22, 1910, a treaty of annexation (which was preceded by a remarkable document in which the Korean emperor, through Japanese finesse, prayed for annexation), was signed by Viscount Terauchi and Yi Wan Yong, the Korean minister president of state, and was promulgated and took effect on August 29. The treaty stipulated the complete and permanent cession to the Emperor of Japan of all rights of sovereignty over the whole of Korea, the conferring of appropriate titles on members of the Korean imperial house and sufficient annual grants for their proper maintenance, the conferring of peerages and monetary grants upon certain Koreans deserving special recognition, and, in Japan's administration of Korea, full protection to person and property and the employment in the public service, so far as circumstances might permit, of duly qualified and loyal Koreans. Viscount Terauchi and Mr. Yamagata were appointed governor-general and vice-governor-general respectively. Upon annexation, certain determinations of the Japanese government were announced by the governor-general as follows: That the name of Korea hereafter be Cho-sen, the ancient name of the kingdom; that the governor-general of Cho-sen have the same administrative and legislative func-

tions as the governor-general of Formosa; that the present customs dues remain unaltered for ten years, but be called transit dues of entry and transit dues of exit; that amnesty be granted to political prisoners and those whose offenses deserve extenuation; that there be a 20 per cent. remission of taxes for 1910 and complete remission of unpaid taxes of former years; that bonds be issued to the extent of 20,000,000 yen to provide the grants, mentioned above, to certain Koreans; that 17,000,000 yen be advanced by the Japanese treasury for industrial and educational purposes in Cho-sen; that consular jurisdiction (extraterritoriality) in Cho-sen be abolished; that, as treaties between Korea and foreign Powers lapsed upon the annexation, Japanese treaties, so far as applicable, be extended to Cho-sen; that religious freedom prevail; and that laws existing at the time of annexation continue until amended. At the end of September, thirteen prefectural governors were appointed for the new province, comprising seven Japanese and six Koreans. The new style of the deposed emperor became Shotoku-kyu Ri O Denka (His Imperial Highness Prince Ri of the Shotoku Palace) and of his father, Tokuju-kyu Ri Tai O Denka (His Imperial Highness Great Prince Ri of the Tokuju Palace); in each case Ri is the Japanese form of the Korean family name Yi.

**KOSSEL, ALBRECHT.** A German physiologist, awarded the Nobel prize for medicine in 1910. He was born at Rostock, Germany, in 1853, and studied at Strassburg and Rostock, and after teaching in the universities of Strassburg and Berlin became professor of physiology at Marburg in 1895. In 1901 he was called to the same chair at Heidelberg. He became well known by his researches in physiological chemistry and among his works may be mentioned: *Untersuchungen über die Nukleine und ihre Spaltung sprodukte* (Strassburg 1881); *Die Gewebe menschlichen Körpers und ihre mikroskopische Untersuchung* (with Behrens and Schiefferdecker, Brunswick, 1889-91); *Leitfaden für medizinisch-chemische Kurse* (Berlin, 1904), and *Hoppe-Seylers Zeitschrift für physiologische Chemie*.

**KREISLER, FEITZ.** See MUSIC.

**KROPOTKIN, Prince.** See LITERATURE, ENGLISH AND AMERICAN, History.

**KRYPTON.** See ATOMIC WEIGHTS.

**KUMM, KARL.** See EXPLORATION.

**KURDISTAN.** See PERSIA.

**KWANG-CHOW-WAN.** A territory on the Chinese coast leased to France (1898) for 99 years. Area, 386 square miles (land area, about 190); population (1906), 177,097. Imports and exports (1906), 2,359,248 and 1,911,835 dollars respectively (1 dollar = about 50 cents). The port is free. The administrator-in-chief (1910, M. Salabelle) is subject to the control of the governor-general of French Indo-China.

**KWANTUNG, or KWANTO.** A Japanese dependency, occupying the southern part of the Liaotung Peninsula (Manchuria), leased March 27, 1898, by China to Russia for 25 years; the territory was held by Japan at the end of the Russo-Japanese war, and was leased by China to Japan under the treaty of December 22, 1905, which also conceded to Japan the control of the South Manchurian Railway to Changchun (see MANCHURIA). Area, 1221 square miles; population (1909), 445,414, of whom

nearly 400,000 were Chinese. Japanese settlers in 1910 numbered over 32,000, of whom about two-thirds were in the Dairen district. Dairen (formerly Dalny) had in 1909 41,333 inhabitants and Port Arthur (Ryojun) 15,195. Dairen is the chief port; on July 1, 1910, the western harbor of Port Arthur was opened to navigation. Total imports and exports in 1909 were valued at 24,549,283 and 42,812,302 yen respectively, the trade being chiefly with Japan. The railway, which connects Port Arthur and Dairen with Mukden and the Chinese Eastern Railway system, has a length of about 80 miles within Kwantung. The budget for 1909-10 balanced at 4,879,489 yen; for 1910-11, 4,867,988; for 1911-12, 4,984,926; of the latter figure, ordinary revenue and ordinary expenditure were 1,714,186 and 3,453,007 yen respectively. Deficits are covered by Japan. The governor-general in 1910 was General Viscount Oshima.

**LABOR.** In addition to this article, matter relating to various aspects of the labor movement and labor problems will be found under the following heads: ARBITRATION AND CONCILIATION; INDUSTRIAL; CHILD LABOR; BOYCOTT; AMERICAN FEDERATION OF LABOR; EMPLOYERS' LIABILITY; INJUNCTION; LABOR EXCHANGES; LABOR LEGISLATION; OCCUPATIONAL DISEASES; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; TRADE UNIONS; UNEMPLOYMENT; WOMEN IN INDUSTRY; and WORKMEN'S COMPENSATION. All of these and the cross references found in them should be consulted for a complete survey of the developments affecting labor during the year.

**STEEL INDUSTRY CONDITIONS.** Labor conditions in the steel industry in the Pittsburgh region received considerable attention during the year. This was particularly due to the Pittsburgh Survey, which had revealed most deplorable conditions of overwork among the steel workers, and in part to labor disturbances and to the activities of the American Federation of Labor. A strike of the workers at South Bethlehem led to an investigation by the Department of Commerce and Labor at the special request of Congress. It was found that twenty-five per cent. of the 9184 workers were employed twelve hours a day for seven days per week; that fifty-one per cent. worked twelve hours for six days; that about twenty-nine per cent. earned only twelve and one-half cents per hour; and that forty-six per cent. received less than sixteen cents per hour. There was a complete lack of organization among the workers. The strike, which was led by the skilled workers who feared they might lose their 60-hour week, was attended by no disturbances for three weeks; but as a result of the introduction of State constabulary and strike breakers there was a great deal of rioting, many assaults and some bloodshed.

The government report called out the statement by President Charles M. Schwab of the Bethlehem Steel Company, that low wages and long hours were not peculiar to his company. Private investigation showed that the 7-day week and 12-hour day were quite general in the steel industry, though no other centre paid wages below 16½ cents per hour. In March and April the United States Steel Corporation ordered a reduction of Sunday work, increased wages, and inaugurated a system of compensation for injuries. (See EMPLOYERS' LIABILITY.) Nevertheless the American Federation of Labor (q.

v.) continued its efforts for better conditions in the steel industry.

**STATE REGULATION OF RAILWAY EMPLOYMENT.** A New York law of 1907 established an eight-hour day for railway telegraphers. In 1908 the attorney-general brought suit against the Erie Railway for violation. The case finally reached the New York Court of Appeals which in April, 1910, affirmed the constitutionality of the law. It held it to be well within the powers of the police legislation and not in conflict with the Federal statute of 1907 establishing a nine-hour day for such workers. The law was held to be merely a supplement of the Federal law setting a higher standard. The case was to be appealed to the United States Supreme Court. It was of considerable importance because decisions of the highest courts of Arkansas, Missouri, Montana and Wisconsin had held similar State laws unconstitutional because of the extent of the Federal statute.

**PUBLIC CONTRACTS IN NEW YORK.** In New York State much discussion was aroused by the investigation into the conditions of the Italian and other laborers employed on the construction of the Ashokan Dam and the Catskill Aqueduct for New York City and the Barge Canal for New York State. While conditions were found to be better on the city contracts than on those of the State, yet, in both, the laborers were herded together in insanitary huts; many cooked their own food; and most of them were exploited by ignorant and avaricious padrones. While the city was taking active measures to eliminate the padrones, to standardize boarding and housing conditions, to provide schooling for the children of the workers and for the workers themselves, the State showed little concern for the human element in its great undertaking. The creation in the State Labor Department of the Bureau of Industries and Immigration with power to inspect labor camps and the conditions of employment of foreigners will establish better conditions for alien labor. This Bureau is expected to learn of demands for such labor and to aid it in finding suitable jobs.

**LABOR, AMERICAN FEDERATION OF. BOYCOTT AND CONTEMPT CASES.** The famous cases growing out of the injunction secured by the Buck's Stove and Range Co. in restraint of a boycott carried on by the Federation was not concluded at the end of the year. The case growing out of the modification of the original injunction had been appealed to the United States Supreme Court by both parties; the case which resulted in the sentence of imprisonment against the leading officials of the Federation was likewise appealed in January, 1910; these two cases were merged in one appeal to come before that Court on October 11. On that date hearing was postponed to January 16, 1911. Meanwhile an agreement had been entered into between the Buck's Stove and Range Co. and the American Federation of Labor and affiliated organizations, thus ending the long and bitter industrial struggle. This agreement provided for the closed shop. It was stated by leaders of the Federation that this agreement would have no effect on the appeal before the Supreme Court, but others held that since the real dispute had been settled and only moot questions remained the Court would not devote its time to their consideration.

Early in September C. W. Post of Battle Creek, Michigan, a minority stockholder of the Buck's Company, applied to the Circuit Court of St. Louis for an injunction restraining the company and the Federation from carrying out the closed shop agreement. This injunction was denied by Judge McPherson mainly on the ground that the persons against whom the injunction was sought had not been served with notices of the hearing. At the same time the court said that every employer of labor has the right to determine for himself whether his business shall be operated as a closed or an open shop; "whether it is for the better to have a closed shop or an open shop, men differ." At the same time Mr. Post began suit in the same Circuit Court against the officers of the Federation, some fifty other officers of international, State and local unions, and their organizations, together jointly with the Buck's Stove and Range Co., to recover damages as a result of the historic boycott. This suit alleged damages of \$250,000, and under section 2 of the Sherman Anti-Trust law sought to collect threefold this amount as legal damages. The defendants appeared in court October 3 to join the issue. The legal basis for this suit was the decision recently handed down in the *Hatters' Case* (see *BOYCOTT*). The essential difference was that in this case the company boycotted was made a co-defendant with the boycotting unions. The defendants stated that in their opinion the court would hold that Mr. Post as a small stockholder should not be allowed to interfere with the policy of his company, so long as this has been free from fraud and deception.

**ANNUAL CONVENTION.** The thirtieth annual convention of the Federation was held at St. Louis, November 14 to 26. Considerable discussion was given to the use of the boycott, especially the proper occasions, the extent to which local disputes should be supported by general union action, and the authority to control. The Executive Council of the Federation was given extensive authority over unfair lists. The new Railroad Employees Department and the Union Label Trades Department reported excellent progress. This latter association had begun the organization of union label leagues among women workers. It reported over forty international unions, having in all 500,000 members, and issuing union labels, store cards, and buttons.

**CONFLICT WITH STEEL CORPORATIONS.** Following the instructions of a conference called by the Federation at Pittsburg in December, 1909, a committee there appointed waited upon President Taft and various State governors in January with charges against the United States Steel Corporation. The Corporation was declared to be an illegal combination in restraint of trade; and was charged with favoring cheap alien labor, with exploiting its workers, and with reckless sacrifice of human life. An investigation was requested. Congress ordered an investigation into labor conditions at Bethlehem following the strike there (see *STRIKES AND LOCKOUTS*). Meanwhile the organizers of the Federation were combining the workers in the iron and steel industries under the Amalgamated Iron, Steel, and Tin Plate Workers' Association. An appeal to carry forward this plan and to finance a trade war with the iron and steel trade employers was made in January,

asking for ten cents per member from every trade union in the country.

**MEMBERSHIP.** The total membership of the unions affiliated with the Federation in September, 1910, was 1,642,000, a gain of 218,000 for the year, and exceeding the membership of any year except 1904. There were included 120 international unions, with about 28,000 local unions; other bodies affiliated were 39 State federations, 632 city central bodies, 431 local trade unions, and 216 federal trade unions. The larger bodies reported an average membership in 1909 as follows: United Brotherhood of Carpenters and Joiners, 164,000; United Mine Workers, 267,000; Brotherhood of Painters, Decorators and Paperhangers, 59,600; United Garment Workers, 53,400; United Brewery Workmen, 40,000; Cigarmakers' International Union, 39,800; International Association of Machinists, 48,400; and American Federation of Musicians, 39,400. For important decisions in 1910 see INJUNCTION.

**LABOR EXCHANGES, UNITED STATES.** Following the panic of 1907 and the great amount of unemployment in the United States there was considerable agitation in favor of a system of national employment exchanges. Nothing was accomplished except the formation of the Division of Information in the Immigration Bureau for the better distribution of aliens, and a considerable education of the public in the needs and advantages of an efficient organization of the means of getting men and jobs together.

THE NATIONAL EMPLOYMENT EXCHANGE was organized in New York City in 1909 under the leadership of Jacob H. Schiff and the Russell Sage Foundation. It was the result of an extensive investigation by Dr. Edward T. Devine into numerous State, philanthropic and commercial employment agencies throughout the country. A capital fund of \$100,000 was subscribed by private persons to guarantee its success. While it is designed primarily to give the worker the best service for the least possible charge, it is not a charitable enterprise and is expected to be self-supporting soon. It is intended rather to compete with agencies operated for gain and exploiting the helplessness of the unemployed. It has two downtown offices for laborers at 14 State Street and 211 Grand Street, and a general commercial and mercantile bureau at 47 W. 42d St. The hope of the founders is that similar exchanges will be started in all large cities.

**STATE ACTION.** Massachusetts appointed a commission to study the legal status and efficiency of all kinds of employment agencies. It is to make recommendations to the 1911 legislature, giving special attention to means of supplying farm laborers. New York placed all employment agencies for industrial workers under the inspection of the commissioner of labor, with whom they are required to register. It also created in the State Labor Department a Bureau of Industries and Immigration to ascertain the demand for and supply of immigrant labor, to inspect labor camps, and to aid in placing such labor.

**LABOR EXCHANGES IN GREAT BRITAIN.** Under a law of 1909, eighty labor exchanges were opened throughout Great Britain on February 1, 1910. For this purpose the country was divided into twelve divisions, with divisional clearing houses at London, Glasgow, Dublin,

Cardiff, Manchester, Liverpool, Newcastle, Leeds, Sheffield, Birmingham, Nottingham and Bristol. In addition, a national clearing house was established at London. Returns are made regularly from all exchanges in each district. These indicate the number of applications made, the situations filled and those still open. Divisional reports are sent regularly to the national clearing house. On the basis of the information thus exchanged surplus labor at any point will be made available for work at any other. Provision is made for the payment of transportation expenses, to be deducted from earnings. Separate rooms in the exchanges are provided for men, women, and juveniles. Advisory committees of masters and men are organized in local centres. The law provides that none are to be disqualified for refusing to work where there is a strike or for less than the current rate. False representations to obtain work are punishable by a fine of \$50. The system was inaugurated under the leadership of W. H. Beveridge, author of *Unemployment, a Problem of Modern Industry*, and chairman of the London exchange of the Central (Unemployed) Body. Sites for exchange buildings were being purchased and a general plan of construction to be carried out during ten years was inaugurated. Divisional superintendents begin with a salary of \$2000, increasing annually until \$3000 is reached. The expenses aside from the erection of buildings were estimated at \$500,000 for the first year.

An important phase of the development of these exchanges was the proper safeguarding of the interests and welfare of children. Special provision was made in the law for juvenile workers, particularly those just leaving school. In London an Advisory Committee on Juvenile Employment was formed in connection with the exchanges, including representatives of the local school authorities. The object was to secure coöperation between the boards of education and the labor exchanges; and to prevent the recruiting of casual laborers by training young workers to rely on the exchanges for occasional work.

The Trade Unions were very much concerned regarding the effect of the activities of the labor exchanges on their own development. The various conferences of trade unionists passed resolutions condemning the conduct of the exchanges during strikes; and a deputation from the Trades Unions Congress in September waited upon the President of the Board of Trade to inquire whether, in the event of a strike, employers would be able to use the exchanges to recruit a non-union labor supply. It was stated that every effort would be made to keep the exchanges out of politics; that in labor disputes the exchanges would post notices of either side but would favor neither. Experience was too short to determine whether the exchanges would prevent further labor organization; would promote strike breaking; or would be of benefit exclusively to the casual or lower grades of unskilled laborers leaving the trade unions unaffected.

By September, 105 exchanges had been opened. Reports from 103 showed 73,604 applicants, of whom 10,697 were women. Employers reported in July 39,746 vacancies, of which 85 per cent. were filled. The average number of person placed had reached 5000 weekly by September. The number of ex-

changes was being increased to 240 as rapidly as possible.

**LABOR LEGISLATION.** The International Association for Labor Legislation met at Lugano, Switzerland, September 26-28. The congress was attended by 112 delegates from 20 countries. The American Association for Labor Legislation, composed of 1400 members, sent five delegates and the United States government, which contributes to the support of the International Labor Office at Basel, Switzerland, was represented by Commissioner of Labor Charles P. Neill. The representatives from the 13 supporting governments are not entitled to vote. After thorough study of one subject after another the Association recommends either national legislation or international treaties. Each section drew up resolutions which were later accepted, modified, or rejected by the general assembly of all. The resolutions of 1910 dealt with the night work of young persons; the definition of the eight-hour shift in mining; home work; hours of work in the machinery-made embroidery industry; phosphorus poisoning; lead poisoning; caisson disease; workmen's insurance; and the execution of labor laws. The Association voted that steps be taken to secure international treaties prohibiting night work by young persons, and limiting to ten hours the working day of women and young persons. A special commission was authorized to prepare a memorial on these subjects. As the most effective means of checking the evils of home work, the Association recommended the establishment of trade boards similar to those created by the English Parliament in 1909; it declared that these boards should be authorized to establish minimum rates of pay for home workers, to extend rates made by collective bargaining to persons and places not included in the contract, and to apply these same rates to factory workers engaged in the same kinds of manufacture. It declared that insufficient wages should be made null and void and the payer subjected to penalty. Based on the careful study of the wide-spread harmful effects of white-lead poisoning and the utility of substitutes, was a resolution demanding the prohibition of the use of white lead for indoor painting. The secretary at Basel is Prof. Stephan Bauer.

**THE AMERICAN ASSOCIATION FOR LABOR LEGISLATION** held conferences during the year on industrial accidents, industrial or occupational diseases (q. v.), and labor legislation. It has done much to advance State legislation on the subject of employers' liability (q. v.), the regulation of hours, and conditions of labor in dangerous trades. For more than a year it has given special attention to the disease due to white phosphorus poisoning in the match industry and at the close of the year had before Congress the Esch bill prohibiting the use of that poison. Its office has been moved from Madison, Wis. to 1 Madison Ave., New York City. Its president is Prof. Henry W. Farnum of Yale and its secretary is Dr. J. B. Andrews.

**FEDERAL AND STATE LAWS.** Legislation relating to Child Labor, Employers' Liability, including Workmen's Compensation, Occupational Diseases, Labor Exchanges, Old-Age Pensions and Women in Industry is referred to under those headings.

**FACTORY INSPECTION.** Massachusetts appointed a commission to report on this subject

to the next legislature. Rhode Island increased the number of inspectors from two to five; one must be a woman.

**SAFETY AND SANITATION.** New York authorized the commissioner of labor to order the walls and ceilings of workrooms whitewashed at his discretion. He may also order the removal of any obstruction of doors or windows. It required the provision of sanitary waste and refuse receptacles and cuspidors; and forbade spitting except in cuspidors. It ordered that machine operators be supplied with belt throw-offs, with hoods and pipes for grinding, polishing, or buffing wheels, with saw guards and with fans running while machines are in use. Suitable washrooms, separate toilet rooms for each sex, dressing and emergency rooms for female employes with at least one window opening to the outer air must be provided. Virginia required separate toilets in industrial and mercantile establishments employing two or more persons of each sex. Massachusetts required the equipment of weaving and spinning establishments with wet and dry bulb thermometers the readings of which three times per day must conform to the standards of relative humidity. Ohio required railroads to fill frogs, switches and crossings so as to prevent any one from getting his foot caught in the angles. Ohio and Virginia required railroad cabooses to be equipped with doors and platforms at each end. Congress required railroads to increase safety devices and authorized the Interstate Commerce Commission to designate standards for such.

Several laws relating to the safety of mine workers were passed. Illinois requested its governor to appoint a commission of seven to establish three mine rescue stations; \$75,000 was appropriated for the first year's expenses. Coal mines must be equipped with water pipes and hose, with sprinklers, pails and barrels of standard size, with standard fire extinguishers, and with telephones and fire gongs. A corps of mine inspectors is provided. Kentucky authorized the purchase of six sets of life-saving apparatus of the latest design, and provided for the maintenance of such apparatus at convenient points. New York required accidents in mines, quarries, tunnel work, and factories to be recorded and reported within 48 hours to the commissioner of labor.

**RELIEF FOR MINES.** Illinois appropriated \$100,000 for the relief of the victims of the Cherry Mine disaster. In Alleghany and Garrett counties, Maryland, funds for the relief of workmen injured in coal mines or clay banks are created by an assessment of 27 cents per month on each employe. These are deposited with the county treasurer and administered by the county commissioners. Payments are provided as follows: For death within one year, \$1500; for entire loss of sight, \$750; for loss of one eye, \$375; for loss of both hands, \$750; for loss of one hand, \$375; for injury incapacitating for work, \$6 a week for one-half year. A somewhat similar law of Montana passed in 1909 and effective October 1, 1910, created a fund for the insurance of mine workers against death or total disability from accidents while at work; this fund is contributed by employes and workers.

**HOURS.** Kentucky penalized the employment of laborers or mechanics on public works for more than eight hours per day except in extra-

ordinary emergency. New York limited the work of drug clerks to 70 hours per week in all cities of the first class. Congress definitely extended the eight hour law of 1892 to all construction work on navy vessels, no matter if contract for same be let to private concerns.

**TRADE UNIONS.** Maryland required the affixing of the union label to all public printing. South Carolina penalized the counterfeiting or imitating of a union label by \$100 fine or three months' imprisonment. Massachusetts required employers who advertise for workmen during strikes or lockouts to specify the condition that exists.

**MINIMUM WAGE BOARDS IN GREAT BRITAIN.** An Act passed very late in 1909 and becoming effective early in 1910 known as the Trade Boards Act, was patterned after the minimum wage legislation of Australia. It authorizes the formation of special trade boards in the tailoring, lace making, box, and chainmaking industries. The Board of Trade is authorized to select a chairman and a secretary, and to appoint not more than one-half of the members of such a board. Employers and workers must be equally represented; and if women are employed the board must include a woman. These trade boards will consider any matters relating to the industrial conditions of a given trade upon reference from the government. Their specific duty is to fix a minimum wage for piece and time work in the trades mentioned. A fine of \$100 is imposed for each offense against the rulings of a board, and of \$25 a day for each offense if continued after conviction. The law permits the payment of incapacitated workers at rates less than the minimum standard. The burden of proof of the payment of full wages is placed upon the employer. The first attempt at application resulted in a strike of women chainmakers, for an account of which see **STRIKES AND LOCK-OUTS**.

**LABOR PARTY.** See **GREAT BRITAIN, History**.

**LABUAN.** An island off the northwest coast of Borneo, belonging to Great Britain and administered by the governor of the Straits Settlements (q. v.). Area, 30¼ square miles; population (mostly Malays), about 8411. Capital, Victoria (1500 inhabitants). There are extensive coal beds. The budget is included with that of Singapore.

**LADD, G. T.** See **LITERATURE, ENGLISH AND AMERICAN, Philosophy and Religion**.

**LADIES' GARMENT MAKERS OF AMERICA, INTERNATIONAL.** See **BOYCOTT**.

**LADRONE, OR MARIANNE, ISLANDS.** A group of islands in the western Pacific, administratively attached (excepting Guam, q. v.) to German New Guinea (q. v.). Area of German islands, 250 square miles; population (1904), 2646. Imports and exports are included with those of the Caroline Islands.

**LA FARGE, JOHN.** An American artist and man of letters, died November 14, 1910. He was born in New York City in 1835. His father was a French naval officer and his mother was the daughter of a Santo Domingo planter. The son early in life showed artistic aptitude and was taught drawing by his maternal grandfather. While still a youth he went to Paris to study art as an accomplishment and entered the studio of Couture. The latter recognized his talent at once and recom-

mended him to go away and work by himself, which he did. He made drawings from the great Italian artists and studied in Munich, Dresden and England. He then returned to New York and entered the office of a lawyer, in the meantime continuing with his painting. He formed a friendship with William M. Hunt, with whom he went to Newport. Even before his studies abroad he had been interested in architectural decoration, and his first paintings were of religious subjects, and decorative work. He also painted flowers, portraits and landscapes and for a short time made illustrations for books and magazines. His first work as an artist, however, was done in mural painting and his first great opportunity came in 1876 in the decoration of Trinity Church, Boston. He next painted the decorations for St. Thomas's Church and the Church of the Ascension, New York City. He also did mural decoration for churches and residences in Boston, Chicago, Cleveland, Philadelphia, Washington and other cities. Early in his career he became interested in stained glass, for which he invented the new methods known in Europe as "American." By these he changed and reformed the entire art of the glass stainer, from the making of the glass by new methods to the painting of it. In 1869 he was admitted to the National Academy. He was President of the Society of American Artists when it amalgamated with the former institution. He was also President of the Society of Mural Painters, honorary member of the American Institute of Architects and an officer of the Legion of Honor. Mr. La Farge possessed a strong and vivid personality. During the greater part of his life he was compelled to struggle with physical infirmities but in spite of this he became probably the most prominent of American artists. He wrote much for periodicals on subjects dealing with art and was the author of *An Artist's Letters from Japan, Artist and Writer and Lectures on Art*.

**LAFAYETTE COLLEGE.** An institution of higher learning at Easton, Pa., founded in 1832. In the year 1909-10 the number of students enrolled in the several departments of the college was 464 while the faculty numbered 41. During the year a course of mechanical engineering was started and Professor John A. Ross, Jr., was appointed its head. Among the noteworthy benefactions during the year was one of \$65,000 from Andrew Carnegie and \$10,606 from the General Education Board. The productive funds of the college amounted to \$613,429 and the income to \$99,160.

**LA FOLLETTE, SENATOR.** See **WISCONSIN and UNITED STATES, Congress**.

**LAKE MOHONK CONFERENCE.** See **ARBITRATION, INTERNATIONAL**.

**LAMAR, JOSEPH RUCKER.** An American jurist appointed by President Taft in 1910 an Associate Justice of the United States Supreme Court. See **UNITED STATES, Federal Judiciary**. He was born in Ruckersville, Ga., in 1857, the son of L. Q. C. Lamar, a prominent jurist of Georgia. He was educated at the University of Georgia, at Washington and Lee University and Bethany College. He was admitted to the bar in 1879 and from that year until 1903 he practised at Augusta, Ga. From 1886 to 1889 he was a member of the Georgia House of Representatives. In 1895 he was appointed one of the commissioners to codify the laws of the State. He was appointed an as-

sociate justice of the Supreme Court of Georgia in 1903, and continued in that position until his appointment to the United States Supreme Court. Justice Lamar is widely known as a jurist of unusual legal attainments, great energy, and unflinching moral courage.

**LAMBERT, LOUIS A.** An American Roman Catholic clergyman and scholar, died September 25, 1910. He was born in Allenport, Pa., in 1835. He was educated at St. Vincent's College, and the Diocesan Seminary at St. Louis. In 1859 he was ordained priest. During the Civil War he was chaplain of the 18th regiment of Illinois Infantry. After the war he became professor of normal theology and philosophy at the Paulist Novitiate. In the early 80's he became involved in a controversy with Robert G. Ingersoll and his replies to that famous infidel were published in book form. A disciple of Ingersoll replied and Dr. Lambert retorted with a pamphlet entitled *Tactics of Infidels*. This was used by the Y. M. C. A. About this time the late Bishop McQuaid of Rochester refused to assign Dr. Lambert to parochial duty in his diocese and the latter carried the matter to Rome for the Pope to adjudicate. The Papal decision was in his favor. He was then assigned to the rectorship of the church of the Ascension at Scottsville, N. Y., where he remained until the time of his death. Shortly before he died he celebrated the golden jubilee of his ministry. He was for many years the editor of the *Freeman's Journal*, a Roman Catholic weekly.

**LAND DENUDATION.** See GEOLOGY.

**LAND FORMATIONS.** See GEOLOGY.

**LONDON, MELVILLE DE LANCEY.** An American humorist, widely known under the pen name "Elie Perkins," died December 16, 1910. He was born at Eaton, Madison county, N. Y., in 1839. He graduated from Union College in 1861 and soon after obtained a position in the Treasury Department. At the beginning of the Civil War he helped organize, and became a member of, the Clay Battalion. He resigned from the army in 1864 with the rank of major. After leaving the army he engaged in cotton planting in Louisiana and Arkansas. In 1867 he spent a year in travel and was then appointed Secretary to the American Legation in St. Petersburg. While there he did a considerable amount of writing and when he returned to the United States in 1870 he published his first book, *Saratoga in 1901*, a humorous prophecy. A second book, *The History of the Franco-Prussian War*, followed. Shortly after his return to the United States he became the head of the New York News Association and began contributing humorous articles to various newspapers. He also began a career on the lecture platform which did not close until with advancing age his health failed him. The first of his writings which attracted wide attention was *Wit, Humor and Pathos*, published in 1875. Among his other works are *Wit and Humor of the Age* (1880); *Kings of Platform and Pulpit* (1887); *Thirty Years of Wit* (1890); *Eli Perkins on Money—Gold, Silver and Bimetallism* (1895).

**LANDS, PUBLIC.** For an understanding of recent aspects of public land questions, especially in relation to the kindred subject, conservation of national resources, it is recom-

mended that in connection with the following article be read the article CONSERVATION.

**EXTENT OF THE PUBLIC LANDS.** The original area of the public lands including the various cessions and purchases made to and by the government was in round numbers 1,835,000,000 acres. The area of unappropriated and unreserved public lands in 1910 is shown by States and Territories in the following table:

**AREA OF PUBLIC DOMAIN UNAPPROPRIATED AND UNRESERVED, BY STATES AND TERRITORIES**

	Acres
Alabama .....	108,210
Alaska .....	368,014,735
Arizona .....	41,491,369
Arkansas .....	512,705
California .....	24,864,884
Colorado .....	21,726,192
Florida .....	453,009
Idaho .....	24,743,804
Kansas .....	137,180
Louisiana .....	88,911
Michigan .....	107,890
Minnesota .....	1,563,302
Mississippi .....	47,058
Missouri .....	2,510

Washington .....	3,196,059
Wisconsin .....	14,460
Wyoming .....	34,575,159
Total .....	711,986,409

**POLICY OF DISPOSITION OF PUBLIC LANDS.** The national policy regarding the public domain has been uniformly exercised in the disposition of the public lands as follows: First, in reserving out of the public domain such parcels of public lands as may be necessary for the common defense or the general welfare, including military and naval reserves, Indian reservations, national parks, lighthouse reserves, forest reserves, national monuments, etc., consisting of approximately 300,000,000 acres; second, by granting public lands in aid of national improvements in works, such as railways and the promotion of educational and charitable purposes; third, by grants for bounties to soldiers and sailors in recognition of service in defense of the government, and donations in satisfaction of other special services which equity or merit would commend; and fourth, in selling or disposing of the remainder to private citizens under such regulations as Congress finds necessary for securing titles to bona fide settlers or purchasers.

**ADMINISTRATION OF PUBLIC LANDS.** During the last administration of President Roosevelt public opinion began to be seriously concerned with the abuses in the acquiring of public lands by which the government and the people were being defrauded of their chief asset. This public opinion crystallized into the general movement for the conservation of natural resources, and found its first expression in the Conference of Governors called together by President Roosevelt in 1908. See CONSERVATION.

In order to prevent compulsory seizure, for alleged agricultural purposes, of lands which had greater value as coal or oil lands and power sites, President Roosevelt by the exercise of the executive power withdrew from entry large tracts of such lands. It was alleged that

these acts were without legislative sanction and President Taft, as one of the first acts of his administration, asked for the enactment of laws which would give him power to withdraw such lands as came within these classes. This authority was given by an act passed in the second session of the 61st Congress.

**LAND WITHDRAWALS.** The law referred to above became effective on June 25, 1910. The President almost immediately began withdrawals under the authority thus vested in him. His first order of withdrawal on July 3 covered 8,495,731 acres, situated and classified as follows: Water power sites: Arizona, 107,550 acres; California, 47,819 acres; Colorado, 201,549 acres; Idaho, 230,971; Montana, 122,315 acres; Nevada, 14,501; New Mexico, 14,536 acres; Oregon, 176,721 acres; Utah, 379,912 acres; Washington, 55,439 acres; Wyoming, 103,396 acres; in all, 1,454,499 acres. Phosphate lands: Florida, 27,400 acres; Idaho, 1,102,317 acres; Utah, 107,545; Wyoming, 1,381,851 acres; in all, 2,594,113. Petroleum: Arizona, 230,400 acres; California, 2,482,750; Colorado, 87,474 acres; Louisiana, 314,720 acres; New Mexico, 419,901 acres; Oregon, 74,849; Utah, 581,564 acres; Wyoming, 255,461 acres; in all, 4,447,119 acres. At the same time the President withdrew all the public lands in the Alaska national forests which contain workable coal, thus confirming the order made in 1906. On July 7 he withdrew 35,073,164 acres of coal lands situated as follows: North Dakota, 17,828,182 acres; Florida, 6,191,161 acres; Utah, 5,814,287 acres; South Dakota, 2,970,287 acres; Washington, 2,207,967 acres; Arizona, 161,280 acres. Of the land withdrawn, 14,374,695 acres had been withdrawn by President Roosevelt.

On July 14, President Taft ordered additional withdrawals of coal lands, making a total of 71,518,588 acres, distributed as follows: Arizona, 161,280 acres; Colorado, 6,191,161 acres; Montana, 20,208,865 acres; New Mexico, 2,944,279 acres; North Dakota, 17,828,282 acres; Oregon, 192,562 acres; South Dakota, 2,870,287 acres; Utah, 5,814,287; Washington, 2,207,967 acres; Wyoming, 13,099,718 acres. All this land is open to agricultural entry, but with limited surface patent. The entire appraised value of the coal lands is \$449,876,208. The area of coal lands in Alaska affected by the President's orders is 7700 acres. Examination and classification by the Geological Survey caused the restoration of 1,306,655 acres, which had been withdrawn as coal lands, but which contain no coal. In Louisiana, 1,036,800 acres, withdrawn as oil lands, were restored as containing no oil.

This law made valid the withdrawals made under executive act by President Roosevelt. Other measures passed by the 61st Congress relating to public lands and conservation will be found mentioned in the article CONSERVATION.

**COAL LANDS.** Matters relating to the Alaska coal lands will be found in the section under that title below and for an account of the developments in the Ballinger-Pinchot controversy in its political aspect, see the article UNITED STATES, section on *History*.

On July 1, 1910, there were withdrawn from entry 54,461,774 acres of coal lands. Subsequently, withdrawals were made as mentioned above until the amount withdrawn by the end of December, 1910, was 81,449,223 acres. These

lands must be properly classified by the United States Geological Survey before they can be sold or opened for settlement. At the end of 1910, 14,688,839 acres had been appraised as coal lands. This was valued at \$625,944,830. A total area of 33,908,199 acres had been classified as non-coal lands.

Secretary Ballinger in his annual report declares that the most advantageous method of disposal of coal deposits is to be found in the measure authorizing the lease or sale thereof, subject to forfeiture for failure to exercise the rights guaranteed with restrictions on mining operations, in order to conserve the deposits as a public utility. It is known that President Taft differs from Secretary Ballinger in believing that the government should lease its coal lands rather than sell them.

**OIL LANDS.** The oil lands withdrawn from entry on June 30, 1910, amounted to 4,556,988 acres. Subsequent withdrawals raised this area by the end of 1910 to 4,487,819 acres. There were restored 20,424 acres. The public oil lands are, by an act of Congress, February 11, 1897, declared to be placers and are open to location and entry under the general placer mining laws. This act has proved wholly inadequate in its application to petroleum and oil lands. Under the general placer law, no valid claim can be located without discovery of mineral. Mineral is usually discovered on the surface of the so-called placer ground without much expense or time. It is not so with oil, which takes from six months to a year before an actual discovery can be made. Secretary Ballinger in his annual report recommends that this law shall be so amended as to protect the first bona fide locator and give him a reasonable time to make his discovery. The act of June 25, 1910, contained a proviso that the rights of any person who, at the date of any order of withdrawal heretofore or hereafter made is a bona fide occupant or claimant of oil or gas bearing lands, and who at such date is at diligent prosecution of work leading to the discovery of oil or gas, shall not be affected or impaired by the order of withdrawal so long as he shall continue in the prosecution of the work. The Secretary of the Interior recommends that Congress be asked to pass a law recognizing the right of the prior bona fide locator to the exclusive possession of his claim for a reasonable time for the prosecution of his work for the discovery of oil, or upon discovery a right to secure patent. Contrary to his belief as regards coal lands, Secretary Ballinger believes that oil lands should be leased.

**WATER POWER SITES.** On January 30, 1910, there were withdrawn from entry for water power sites lands amounting to 2,479,756 acres. The withdrawals on July 1, 1910, amounted to 1,454,499. Additional withdrawals, amounting to 37,972 acres, were made between July 1, 1910, and November 1, 1910, and restorations were made amounting to 40,662 acres, leaving the total withdrawals outstanding November 1, 1910, 1,451,809 acres. These lands are withdrawn pending legislation. The Secretary of the Interior recommends the passage of a bill authorizing the supervision of these lands by a leasing system. During the 61st Congress a bill was introduced authorizing the President to withdraw from all forms of settlement, entry or other disposition, any lands which are or may become chiefly valuable for the development of water power, and providing for the acquisition of any

State or Territory, under certain conditions, of any land so withdrawn. The object of this bill was to transfer these sites to the States under limitations which will compel them to retain title thereto and to secure and supervise their hydro-electrical development in behalf of the public. The bill provides for Federal enforcement and compliance by the States with the terms, conditions, and limitations of the grant, by stipulating for the reversion of the lands to the Federal government upon the failure by the States to comply therewith. This measure did not come up for passage during the session of Congress.

**PHOSPHATE LANDS.** There were withdrawn from public entry on July 1, 1910, 2,579,756 acres of phosphate land. President Taft subsequently withdrew 35,719 acres and restored 1280 acres, making the total withdrawals outstanding November 1, 1910, 2,514,195 acres.

**LAND FRAUDS.** During the year ended July 30, 1910, there were received by the Land Office 37,811 cases of land frauds. During the same period 46,153 cases were investigated and 43,554 cases were closed. Four hundred and sixty-six civil and criminal convictions were found and \$227,211 was tendered for settlement of trespasses on the public domain. As a result of investigations 4665 entries were cancelled and 12,065 acres were restored through proceedings for the removal of unlawful enclosures.

**LAND ENTRIES.** During 1910, 72,802 patents for entries for land were issued and the total area entered was 26,392,026 acres. A total of 167,804 entries of all classes was made. Of these 98,598 were for homesteads, 15,620 were for desert land, 1114 for mineral land and 248 for coal land.

**SALES OF LANDS.** The total receipts for the sales of public lands during the fiscal year 1910, including fees and commissions, were \$8,371,637; from the sales of Indian lands, \$2,037,551. The receipts from other sources brought the total to \$11,463,924.

**ALASKA PUBLIC LANDS.** The situation in respect to the coal lands of Alaska remained unchanged in 1910. No legislation was passed by Congress providing for the opening or leasing of these lands and practically no coal was mined in the Territory during the year. On July 3, President Taft ordered the withdrawal of 495,731 acres of water power sites and phosphate and petroleum lands, and in November, by order of the President, all the coal lands in the Territory were withdrawn from settlement.

A bill was introduced by Senator Beveridge in February, withdrawing from entry all public coal lands in Alaska, but providing that they may be leased for thirty years on a royalty basis, no tract to exceed 2560 acres. These leases, it was provided, were not to interfere with the patenting of the surface for agricultural purposes. In introducing this bill Senator Beveridge made the assertion that \$2,000,000,000 was not too high an estimate of the value of Alaska's coal deposits. He said that the Matanuska field and the Behring River field, of which the famous Cunningham claims were the richest part, together contained two billion dollars' worth of coal. In addition to this the Geological Survey report showed that there were other fields of an area of 12,867 square miles, in which the coal contents were estimated at more than 15,000,000,000 tons,

which might be worth \$15,000,000. His statements were based, to a large extent, upon testimony given before the Senate Committee on Territories. Before this committee there appeared voluntarily two representatives of the Guggenheim-Morgan syndicate, Stephen Birch, manager of the syndicate, and John N. Steele, the general counsel. The avowed purpose of these witnesses was to show that the holdings of the syndicate had been exaggerated in various publications. They admitted that the syndicate had taken an option on the Cunningham coal claims, agreeing to pay \$250,000 for a half interest if patent could be obtained. These claims probably covered 50,000,000 tons of coal which could be mined for a profit of \$25,000,000.

The syndicate, they declared, is in a coal field which probably contains 500,000,000 tons, having a gross value of \$900,000,000 and a net value of \$200,000,000. The syndicate, it was asserted, had spent \$10,000,000 on the Copper River Railway and was about to spend \$5,000,000 more. In addition to its railway it was shown that the syndicate owned stock in the Northwestern Commercial Company which owned steamships and a salmon cannery. It was also interested in other canneries and owned one copper mine. The only coal interest of the syndicate, it was claimed, was included in the Cunningham option. It was pointed out that the syndicate was obliged to buy coal in British Columbia at \$12 a ton and send it to Alaska, because no one was permitted to mine the coal lying beside its railway tracks.

In November three indictments charging conspiracy to defraud the government of more than 20,000 acres of coal lands in Alaska, valued at \$20,000,000, were returned by the Federal grand jury in Spokane against six men who control the claims of 131 persons in the Kayak mining field. Among those indicted were Harry White, formerly mayor of Seattle. Many other prominent business men of Spokane and Seattle were also among those indicted. It was charged that the indicted men employed many of the 131 men who filed claims or had an agreement with them.

**LANDWEHR.** See AUSTRIA-HUNGARY, and GERMANY, Army.

**LANGUAGE.** See ANTHROPOLOGY AND ETHNOLOGY, paragraph *American Languages*; PHILOLOGY, CLASSICAL; PHILOLOGY, MODERN.

**LANGUAGE, INTERNATIONAL.** The question of an international language is being constantly discussed, although the public interest in the subject is not general.

A. Dauzat, a linguist of some repute in France, has once more proposed French as the international language, taking up again the arguments of the Russian writer Novicow in his book: *Le Français, langue internationale d'Europe* (Paris, 1910). The author met with encouragement some years ago when he had proposed the same solution. Dauzat's article came out in *La Revue* of July 1, 1910. The result was that Dr. Molenar, up to then a protagonist of artificial language, leader of the system called "Universal" (which at one time nearly conquered Esperanto), joined the advocates of a natural language, saying that he had come to the conclusion that while an artificial language was by no means impossible, there

were too many practical difficulties. This little movement, however, has subsided, and at the end of the year we see that the chief contestants are the *Esperantists* and the *Idists* (representatives of Ido, a more consistent form of Esperanto).

As regards the external progress of Esperanto, it is gaining ground in Germany (among business people and Socialists) and somewhat in Central America; but not in France, nor in Russia, nor in the United States; almost everywhere it is stationary. The International Congress of Dresden (1908) counted 1500 adherents, that of Barcelona (1909) 1300. Since 1908 the *Bureau international de bibliographie*, in Brussels, has adopted "en principe" Esperanto as "second language." Messrs. Cook & Sons, and other traveling agencies have joined the society, and the *Universal Esperanto Asocio* publish traveling books (*guidiloj*). A *Pedagogio Revuo* has been founded for teachers.

We may mention a pamphlet by Antido (M. de Saussure, the scientist of Geneva, editor of the *Sciencia Internacia Revuo*). Under the title of *La construction logique des mots en Esperanto* (Geneva, 1910) he answers Couturat's famous little work *Sur la dérivation en Esperanto* (Paris, 1907). Couturat points out the looseness of Esperanto in the application of its principle of formation and insists upon consistency and thus simplicity. Antido answers that expediency requires sometimes the relinquishment of rigid logical formation.

**LANSDOWNE**, Lord. See GREAT BRITAIN, *History*.

**LANTHANUM**. See ATOMIC WEIGHTS.

**LAOS**. The largest of the five territories of French Indo-China (q. v.); a French protectorate. Estimated area, about 111,940 square miles: population (estimated 1906), 663,727. Capital, Vientiane. Laos includes the three protected states of Luang Prabang, with its capital Luang Prabang, the residence of the king (Som-Deek Phra Chao Sisawong); Bassac; and Muong Sing. The soil is fertile, but the country is undeveloped and lacking in population; it is practically inaccessible except by the Mekong River, and this river is barred at Khone by rapids. Rice, cotton, indigo, tobacco, fruits, and teak-wood are the important products; and the mines yield gold, tin, lead, and precious stones. The towns on the Mekong are connected by telegraph with Hué, in Annam, and with Saigon. Cochinchina contributes six-thirteenths, Tongking and Annam five-thirteenths, and Cambodia two-thirteenths of the cost of administration. Resident superior, M. Maché. Serious difficulties with the natives prevent the successful exploitation of the mining concessions granted to several French companies.

**LATHROP**, JOHN. American jurist, died August 24, 1910. He was born in Boston in 1835 and was educated in the public schools in Dedham, Mass., and at Burlington College, New Jersey, graduating from the latter institution in 1853. He then studied law at the Harvard Law School and graduated in 1855. He was admitted in 1856 to the Massachusetts bar and took up practice, which was abandoned when he enlisted in the 31st Massachusetts

Regiment of which he served as captain in 1862-63. Returning from the war in the latter year he resumed the practice of law. In 1874 he was appointed reporter of the Supreme Judicial Court, which post he filled until his appointment to the bench of the Superior Court in 1888. He was associate justice of the Supreme Judicial Court from 1891 until 1896 when he resigned on account of ill health. In addition to his judicial duties and general practice, he edited several law publications. He was lecturer at the Harvard Law School in 1871-73.

**LAWN TENNIS**. The majority of the tournaments held in 1910 broke all records so far as the number of entrants was concerned and in most instances considerable improvement was shown in the general methods of conducting the tournament. The rules governing the matches were also more strictly observed. The only unsatisfactory feature of the season was the failure to hold the international contest for the Davis Cup after all the preliminaries had been arranged. Both Great Britain and the United States challenged Australia, the holder of the trophy, but afterwards it was found impossible to send representative teams such a long distance.

William A. Larned won the national singles championship in 1910 for the sixth time in his career. F. B. Alexander and H. H. Hackett successfully defended their national doubles title and also won the Metropolitan, New York State and other tournaments. Miss Hazel Hotchkiss of California again won the women's national championship title. She was the victor in several Western tournaments. Miss Louise E. Hammond of New York although losing to Miss Hotchkiss in the challenge round of the national championships had a most successful season winning the Eastern States, the Middle States, the Metropolitan and other tournaments. The men's national indoor championship in singles was won by Gustave F. Touchard and in doubles by Touchard and C. R. Gardner. The women's championship in indoor singles was won by Mrs. F. G. Schmitz and in doubles by Miss Marie Wagner and Miss C. Kuttroff. In collegiate circles R. A. Holden, Jr., of Yale was victorious in the singles and Dean Mathey and B. N. Dell of Princeton carried off the laurels in the doubles. A summary of the principal championship and open tournaments of the year follows:

All-Comers' National Championship at Newport, R. I.: Singles (final), T. C. Bundy defeated Beals C. Wright 6-3, 6-3, 6-8, 10-8; challenge match, William A. Larned, holder, defeated T. C. Bundy, challenger, 6-1, 5-7, 6-0, 6-8, 6-1. Doubles—F. B. Alexander and H. H. Hackett, holders, defeated T. C. Bundy and Trowbridge Hendrick, challengers, 6-1, 8-6, 6-3. Clay Court Championship at Omaha Field Club; Singles—Melville H. Long defeated Walter Merrick Hall, 6-0, 6-1, 6-1. Doubles—F. C. Anderson and W. F. Hayes defeated M. H. Long and H. C. Scribner, 2-6, 3-6, 6-1, 6-3, 6-2. Western championship at Onwentsia Country Club, Chicago: Singles—T. C. Bundy defeated

Alfred Ludtke, 6-2, 6-1, 6-0. Doubles—L. H. Waidner and P. E. Gardner defeated J. C. Neely and H. O. Whitman, 6-2, 4-6, 9-7, 6-3. Women's National Championship at Philadelphia Cricket Club: Singles—Miss Louise E. Hammond defeated Miss Adelaide Browning, 6-2, 6-4; challenge match, Miss Hazel Hotchkiss, holder, defeated Miss Hammond, challenger 6-4, 6-2. Doubles—Miss Hotchkiss and Miss Edith Rotch defeated Miss Browning and Miss Edna Wildey, 6-4, 6-4. National Indoor Championship at New York: Singles—Gustave F. Touchard defeated R. A. Holden, Jr., 6-2, 6-1, 3-6, 6-3. Doubles—Touchard and C. R. Gardner defeated W. B. Cregin, Jr., and Miles S. Charlock, 6-1, 3-6, 7-9, 6-1, 6-4. All-England Championship: Singles—Anthony F. Wilding defeated Beals C. Wright (American), 4-6, 4-6, 6-4, 6-2, 6-3; challenge match, Wilding, challenger, defeated Arthur W. Gore, holder, 6-4, 7-5, 4-6, 6-2. Metropolitan Championship at the West Side Tennis Club, New York: Singles—William A. Larned defeated Gustave F. Touchard, 6-0, 6-1, 6-1. Doubles—F. B. Alexander and H. H. Hackett defeated Edwin P. Fischer and Raymond D. Little, 6-1, 7-5, 3-6, 6-2. Women's Singles, Miss Louise E. Hammond defeated Miss Marie Wagner, 6-2, 6-4. Women's Doubles—Miss Elizabeth C. Bunce and Miss Dorothy Green defeated Miss Hammond and Miss Elsie Little, 2-6, 6-2, 7-5. New Jersey State Championship: Singles—F. C. Anderson defeated G. E. Thomas, Jr., 6-3, 7-5, 6-4; challenge match, Richard H. Palmer defeated F. G. Anderson, 7-5, 6-3, 1-6, 8-6. Doubles—Otto H. Hinck and S. Howard Voshell defeated F. G. Anderson and Henry J. Mollenhauer, 6-2, 6-4. New York State Championship at Crescent A. C., Brooklyn: Singles—F. C. Inman defeated C. R. Gardner, 6-3, 3-6, 6-4, 6-3. Doubles—F. B. Alexander and H. H. Hackett defeated C. M. Bull, Jr., and H. C. Martin, 6-8, 8-6, 6-2. Middle States Championship: Singles—N. W. Miles defeated W. F. Johnson, 7-5, 7-9, 6-3, 7-5; challenge match, N. W. Miles, challenger, defeated H. P. Larned, holder, by default. Doubles—F. B. Alexander and H. H. Hackett defeated L. H. Waidner and P. E. Gardner, 6-2, 6-2, 6-3; challenge match, F. B. Alexander and H. H. Hackett, challengers, defeated W. A. Larned and G. L. Wrenn, holders, by default. Southampton Cup Tournament: Singles—M. E. McLoughlin defeated F. C. Colston, 6-2, 6-1, 6-2. Doubles—M. E. McLoughlin and W. A. Larned defeated T. C. Bundy and Trowbridge Hendrick, 8-6, 4-6, 7-5, 5-7, 6-4.

**LEAD.** There were smelted in the United States in 1909 457,045 tons of lead as compared with 408,523 tons in 1908. Of the lead smelted in 1909 354,188 tons came from domestic ores and 102,857 tons came from foreign ores. The largest quantity of domestic ore came from Missouri. This amounted to 142,650

tons. Second in production was Idaho, 97,183 tons and the third was Texas, 64,534 tons. Of the foreign ore 69,100 tons came from Mexico and the remainder came from Africa, Canada, Central America, China, Mexico and South America. The refined primary lead produced in the United States in 1909 was 448,112 tons as compared with 396,433 tons in 1908. The consumption of primary lead in 1909 was 370,013 tons and the exports of lead manufactures were valued at \$409,542 in 1909 as compared with a value of \$558,640 in 1908. The production of refined lead in 1910 according to the *Engineering and Mining Journal* was 492,121 tons, of which 401,524 tons were from domestic ore and 90,597 tons were from foreign ore. Missouri strengthened its position as the first of the States in the production of lead, although Idaho showed an increase in the output of 1909. The following table taken from the *Engineering and Mining Journal* shows the average price of lead in New York, St. Louis, and London in 1909-10:

AVERAGE PRICE OF LEAD

Month.	New York		St. Louis		London	
	1909.	1910.	1909.	1910.	1909.	1910
January.	4.175	4.700	4.025	4.582	13.113	13.650

New York and St. Louis, cents per pound. London, pounds sterling per long ton.

The exports of lead and its manufactures in 1910 were valued at \$2,198,970, while the imports of lead in all forms were valued at \$3,915,252. See ATOMIC WEIGHTS.

**LEATHER.** The industry in 1910 was in marked contrast to the previous year for the absence of tariff agitation or legislation. The slaughter of cattle and sheep at the leading markets is indicated for the year ending December 31, 1910, with the comparison with 1909 in the following table. Totals were estimated at 40 per cent. of the entire domestic supply of slaughtered cattle:

	1910		1909	
	Cattle	Sheep	Cattle	Sheep
Chicago ..	1,741,074	3,735,346	1,662,176	3,501,103
Kans. City	1,284,272	1,186,692	1,335,224	1,172,669
Omaha ....	773,891	1,256,893	727,522	1,186,948
St. Joseph.	353,532	412,767	356,085	483,816
St. Louis..	1,207,811	658,253	866,614	661,886
Sioux City	187,393	71,552	168,390	45,363
Fort Worth	435,435	92,768	478,373	91,719
St. Paul ...	143,934	174,696	121,405	134,495
Total...	6,127,042	7,588,967	5,715,789	7,277,999
Gain over 1909 ...	411,253	310,968		

Notwithstanding that hides had been put on the free list fewer hides and skins were imported in 1910 than in 1909 but more than in 1908. The comparative figures follow:

## IMPORTS OF HIDES AND SKIN

	Pounds	Value
1910 .....	460,607,078	\$ 86,107,728
1909 .....	572,776,503	103,671,277
1908 .....	328,446,882	57,653,781

The largest imports of hides of cattle, amounting to 57,534,654 pounds valued at \$9,952,219, came from Argentine, while Canada and Mexico were also leading sources of supply with 29,955,538 and 31,633,682 pounds respectively.

The exports of sole leather in 1910 amounted to 38,615,004 pounds valued at \$8,419,475, as compared with 32,469,344 pounds valued at \$6,979,545 in 1909.

During the year a movement was being made in England towards buying and selling leather by measurement instead of by weight, using a measuring machine for that purpose which could measure and record the sizes of the skins. An English leather journal in speaking of this proposed change said: "Should this change be come general, we may hope to see the last of leather stuffed with glucose, epsom or barium salts, merely to increase the weight; it is a result much to be desired." Leather loaded with epsom salts tends to make the feet of the wearer cold and causes the leather to offer little resistance to wet sidewalks.

**LEE, SIDNEY.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**LEES, JAMES.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**LEEWARD ISLANDS.** Islands of the British West Indies, lying north of the Windward group; a British colony made up of the five presidencies of Antigua (with Barbuda and Redonda), St. Christopher (St. Kitts) (with Nevis and Anguilla), Dominica, Montserrat, and the Virgin Islands (qq. v.). Total area (official statistics, 1909), 708 square miles. Population (1901), 127,434; births (1908), 4864 (3006, or 61 per cent., illegitimate); deaths, 3501.

Total number of children on the rolls of the government and state-aided primary schools for the year 1908-9, 26,072; average attendance, 12,181. In 1890, the year of the establishment of compulsory education, there were only 12,000 on the roll, with average attendance, 7000. Government grant (1908), £6861. There are secondary, industrial, and agricultural schools. Total cultivated area, 52,834 acres (Dominica unknown); area under sugar cane, 32,727; area in cacao and lime cultivation cannot be given with any accuracy; under cotton (estimate), 7050. Actual production cannot be ascertained, but the export of sugar in 1908 was 23,572 tons; of cotton, 1,060,996 pounds. Imports for the year 1908 are given officially as follows: From Great Britain, £225,773; British colonies, £99,976; other countries, £221,001; internal trade, £20,843; total, £567,593. Exports: To Great Britain, £159,161; British colonies, £261,529; other countries, £96,777; internal trade, £18,845; total, £536,312. Two private railway lines (16¼ miles) have been put down in Antigua. There is telegraph and cable connection with other countries. Total tonnage entered and cleared (1908), 2,507,357. Revenue and expenditure for the year 1908-9, £154,333 and £146,216 respectively. Public debt, March 31, 1909, £287,240; less amount repaid (£13,-

590), £273,650. The governor and commander-in-chief (1910 Sir Ernest Bickham Sweet-Escott) resides at St. John, in Antigua.

**LE GOFFIC, M.** See FRENCH LITERATURE.

**LEHIGH UNIVERSITY.** An institution of higher learning at South Bethlehem, Pa., founded in 1866. The attendance for the year 1910-11 was 615 and the teaching force numbered 66. Four new courses leading to the degree of bachelor of arts were established during the year: First, a course in which biological and chemical sciences predominate; second, a course in which geological sciences predominate; third, a course in which mathematical and physical sciences predominate; and fourth, a course in business administration. During the year two new laboratories were erected and equipped, the Fritz Engineering Laboratory, and the Eckley B. Coxe Mining Laboratory. The former was the gift of John Fritz, an eminent engineer who was a trustee at the founding of the university in 1866. The building is fully equipped for the testing of the strength of materials, cement, concrete, hydraulics, and road materials. The Eckley B. Coxe Mining Laboratory was so named by the trustees in memory of a leader in the profession of mining engineering and a trustee of the university from its early days. It contains a complete equipment for ore dressing, cyanide plant, with the necessary apparatus and other mining machinery. The total production funds of the university amount to \$1,178,000. The President is Henry S. Drinker, LL. D.

**LEHMANN, LIZA.** See MUSIC.

**LELAND STANFORD, JR., UNIVERSITY.** An institution of higher learning at Palo Alto, Cal., founded in 1887. The number of students in attendance in 1910-11 was 1617, of which number 157 were graduates, 1358 regular undergraduates, and 102 specials. The faculty numbered 229, of which 55 were professors, 25 associate professors, 41 assistant professors, 33 instructors, 72 assistants, and 3 lecturers. Among the notable changes in the faculty during the year were the addition of a professorship in pharmacology, establishing two new divisions in the department of medicine, which the university is gradually developing by taking over the Cooper Medical College of San Francisco. Among the benefactions received during the year was one of \$10,000 from Mr. and Mrs. F. W. West of Seattle for the endowment of a lectureship to be known as the Raymond W. West Memorial lectures on Im-

mortality, Human Conduct and Human Destiny. The first series of lectures will be given by Rev. Charles E. Jefferson of the Broadway Tabernacle, New York City. The expenditures of the education department of the university aggregated about \$500,000. The balance of the income is devoted to the work of restoration of buildings destroyed by the earthquake of 1906. The university derives no income from tuition fees of undergraduate students, requiring tuition fees only in its professional courses and law and medicine. The President is David Starr Jordan.

**LEMAÎTRE, JULES.** See FRENCH LITERATURE.

**LEMBERG, UNIVERSITY OF.** See AUSTRIA-HUNGARY, *History*.

**LEMIEUX, RODOLPHE.** See CANADA, *Government and History*.

**LENÉPVEU, CHARLES FERDINAND.** A French composer, died in August, 1910. He was born at Rouen in 1840 and was educated at the lycée at Rouen for the law, but determined to devote himself to the profession of music. He studied at the Conservatory of Paris, becoming a pupil of Savard, Ambroise Thomas, and Chauvet. In 1865 he won the Prix de Rome with a cantata. He was made professor of harmony in the Conservatory in 1881 and professor of composition in 1893. He was a successful composer and his operas have been among the most popular of modern French compositions. In 1869 he won a prize offered by the Minister of Fine Arts for the comic opera. A four-act grand opera was produced in London in 1882 and in 1886 a sacred drama in three acts, *Jeane d'Arc*, was produced at the Rouen Cathedral. Other compositions include a requiem mass, smaller church numbers, melodies, lyrics, choruses, and orchestra. He was an officer of the Legion of Honor, a member of the Institute and a member of the Superior Council of Musical Education.

**LEOPOLD II.** See BELGIUM, *History*.

**LEPROSY.** The most promising work in the investigation of this disease during the past few years is that of M. T. Clegg of the Bureau of Science, Philippine Islands, who has succeeded in growing the bacillus of leprosy on artificial media. Attempts to cultivate the *Bacillus lepræ* have heretofore been unsuccessful, the organism not flourishing outside of its natural habitat in the tissues. The value of Clegg's work lies in the fact that it not only paves the way for the development of a specific serum, but gives a basis for further investigations into the nature of the disease and its transmission. The bacilli in Clegg's experiments were taken from the spleen of patients recently dead of leprosy, grown in symbiosis with the amoeba and the cholera vibrio and then isolated from these cultures. After isolation in pure culture, the leprosy bacillus was found to be easy of cultivation in an artificial medium. Apparently, true leprosy lesions were produced in guinea-pigs when they were inoculated with the artificial cultures. The specific organism of leprosy resembles somewhat that of tuberculosis, and develops under somewhat similar cultural conditions, but it was found in these experiments that the animals inoculated did not develop tuberculous lesions, but those of true leprosy.

Lepers in the Philippine Islands are not very numerous. The number of cases may be judged

from the quarterly report of the Bureau of Health for the Philippine Islands. In the Culion Colony there were, in 1910, 1681 lepers; at the San Lazaro Hospital, 166; and in the Moro (Mohammedan) Province, 220. In addition there are 205 lepers, according to the Bureau of Health, not yet transferred to Culion. The total number is estimated at 2272 in the entire Philippine Islands, out of a population of 8,000,000. The Culion Leper Colony is on an island of the same name, south of Luzon, and is the great detention camp for Philippine lepers. It has its own civil government, under the direction of the central government, and elects its own administrative officers. It resembles a small agricultural community rather than a public institution.

After four years of research, Dr. P. G. Medina, of Bogotá, has issued a report on the conditions in regard to leprosy in Colombia. He found 3031 cases in the three leper colonies maintained by the state, and 1275 outside of these, most of whom will soon be admitted to a new colony about to be established. Serum therapy and chaulmoogra oil are used in the treatment, the latter giving the most constant and lasting results. Apparent cures have been obtained in many cases. Medical and popular opinion is undergoing a change in regard to the contagiousness and curability of leprosy. Sir Jonathan Hutchinson has long taught that the disease is not contagious. According to this authority, there are never fewer than 100 cases of leprosy in England, and there are about 50 in London itself. No instance of contagion in England is known, in spite of the fact that there is no provision for segregation and lepers go about freely to their daily work. All the cases are imported, having developed in individuals while abroad and living in leprosy districts.

**LEUPP, F. E.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**LEXOW, CLARENCE.** An American lawyer and legislator, died December 30, 1910. He was born in Brooklyn in 1852 and graduated from Columbia University in 1874. He studied afterwards at the University of Jena. He engaged in the practice of law in New York City and became senior member of the law firm of Lexow, Mackellar & Wells. From 1893 to 1898 he was a member of the New York State Senate and was head of the Senate Committee to investigate the city government of New York City. The report of this committee resulted in important reforms in the administration of the government. He introduced into the Senate the bill creating Greater New York. He was also chairman of the joint legislative committee which investigated trusts and unlawful combinations and introduced statutes regulating them. He was chairman of the committee on primary election reform, and introduced a bill regulating party primaries, etc. He was prominent in the Republican politics of the State and introduced the first gold plank in the campaign of 1896. He was a presidential elector in 1900. He was the author of a *Report on the Municipal Government* and a work on *Trusts and Unlawful Combinations*.

**LIBERALS.** See GREAT BRITAIN, *History*.

**LIBERIA.** An independent negro republic on the west coast of Africa. Area, about 35,000 square miles (estimate); population, nearly 1,500,000 (Americo-Liberians, 10,000). The in-

digenous natives belong to the Mandingo (Mohammedan), Kisi, Gola, and Kru tribes. The Kru predominate and are mostly pagans. Capital, Monrovia (6000 inhabitants). The country is undeveloped; the forests, containing valuable timber, are unworked; the fertile soil is uncultivated. The Liberian Rubber Corporation and the Liberian Development Chartered Company (Ltd) are doing much to improve conditions. The ivory trade has been diverted by lack of good roads and intertribal wars to Sierra Leone and the French possessions. Imports (1908), £240,000 (cottons, haberdashery, hardware, salt, rice, provisions, arms and ammunition, glass, rum, gin, timber, and beads); exports, £182,708 (coffee, cacao, palm kernels, palm oil, ivory, piassava, rubber, camwood, and annatto). The trade is largely with Great Britain, Germany, and the Netherlands. There are no railways, and few wagon roads. Revenue (1908), £83,000 (customs, £77,000); expenditure, no estimate given. External debt, £178,250 in 1908; internal bonded debt, £27,000.

The frontier is gradually being effectively policed under British officers; and efforts looking to the establishment of a financial protectorate under British and American control have been made by the Powers controlling adjacent territories—France and Great Britain. The organization of the customs by British officials was carried on rapidly in 1910. The executive is the president (till January, 1911, Arthur Barclay), aided by a council of six. The parliament (of two houses) is the legislative body. Secretary of state (1910), F. E. R. Johnson. Chief inspector of customs and British financial adviser, William J. Lamont.

**HISTORY.** The report of the United States Liberian Commission sent out in the spring of 1909 to investigate conditions in Liberia was transmitted by the President to Congress March 25. The report declared that Liberia was in danger from the pressure of neighboring Powers and that the aid given by British officials in administering the finances had not had satisfactory results. It furthermore declared that the Liberians had shown their capacity for orderly government and that they deserved the assistance of the United States. The report made the following recommendations: That the United States should aid Liberia in the prompt and just settlement of all boundary disputes with Great Britain and France; that it should consent to aid in the refunding of the Liberian debt, and as a guarantee for the repayment of money advanced should assume control of the Liberian customs; that it should aid in the reform of the internal finances sending American financial experts to Liberia for that purpose, and should supply the assistance of American army officers in organizing and drilling a constabulary and police force; and that it should maintain a research station in Liberia and reconsider the question of establishing a naval coaling station there. Conditions in Liberia did not improve after the return of the American commissioners. The reforms demanded by the French and British governments were not carried out, and the French complained of the barbarities of the Liberian militia in dealing with the natives near the French frontier. Native disturbances early in 1910 led to the dispatch of a United States war vessel, under the treaty of 1862, to the disaffected region, and order was restored. In June, the

United States announced its policy toward Liberia, which consisted of the negotiation of a loan from American bankers, to be applied to the payment of the two existing British loans and to the internal loans and building debt. As assurance that the loan would be repaid, the United States government announced that a financial board, comprising members of the interested countries would be appointed, under the presidency of an American. Professor R. P. Falkner, the head of the American commission was appointed special financial adviser. There was opposition in France to this arrangement as infringing on her treaty rights with Liberia, and negotiations between the interested governments took place the latter part of the year, resulting in a plan for financial reorganization under American auspices through a loan contributed in equal parts by American, British, French, and German bankers.

**LIBRARIES.** See **LIBRARY PROGRESS.**

**LIBRARY ASSOCIATION, AMERICAN.** A society organized in 1876 and incorporated in 1879 to develop the public library in its bearing on American education and by coöperation to increase the efficiency of library administration. The society holds annual meetings. The thirty-second annual meeting was held June 30 to July 6, at Mackinac Island, Michigan. The attendance at the meeting was 532. In connection with this conference the librarians of agricultural libraries held their first meetings as did the special libraries association. In addition to the formal business reports and discussions at the conference, subjects which were given consideration were the following: Technical books, the library and the school, deterioration of paper used in newspapers, the Aberdeen Association, and playgrounds and social welfare. Two symposiums on recent new books and recreation for librarians were held. At the meeting in 1909 it was decided to remove the association headquarters from Boston to Washington Street, Chicago. The new headquarters is the distributing centre for all the American Library Association publications, and serves as a bureau of information concerning library work in the United States. It is the meeting-place of the Executive Board of the Association, the Publishing Board and of the different sections of the A. L. A. Publications of value to librarians are on file for the assistance of library workers and others. The Association has been instrumental in establishing library organizations in 39 States, besides many local library clubs in cities and districts. Affiliated with it are three national organizations for kindred purposes: the National Association of State Libraries, the League of Library Commissions, and the American Association of Law Libraries. The most important activity of the association is a publishing board, which operates under a gift of \$100,000, made in 1902 by Andrew Carnegie. The income from this fund is used in the compilation of indexes, of bibliographies, reference helps and literature for the promotion of library extension and the selection of books. It has published an important bibliography of American history and the A. L. A. Catalogue in 1902. In 1909 work was started on a supplement to this catalogue to cover the years 1904 to 1909 inclusive. The officers for 1910 were as follows: President, James Wyer, Jr.; First Vice-President, Mrs. H. L. Elmendorf; Second Vice-President, W. Dawson Johnston;

Executive Board, C. W. Andrews, Alice S. Tyler, W. C. Lane, Henry E. Legler, Herbert Putnam, Purd B. Wright; Treasurer, Carl B. Roden; Secretary and Executive Officer, Chalmers Hadley. The thirty-third annual meeting of the Association will be held in Southern California sometime between May 1, and June 1, 1911.

**LIBRARY OF CONGRESS.** A National institution open to the public at Washington, D. C., founded in 1800. It occupies a magnificent building, which is probably the most well-equipped library building in the world. It was constructed in 1897 at a cost of over \$6,000,000. There were in the Library at the close of the year 1910 1,793,158 books, 118,165 maps and charts, 517,806 volumes and pieces of music, and 320,251 prints. There were published during the year 90,473 volumes of printed books and pamphlets. Among the most notable gifts received by the Library during the year was a privately printed illustrated catalogue of the collection of pictures and also of the collections of old plates owned by J. Pierpont Morgan. There were received as gifts also the catalogues of the Demotic Papyri and the Coptic Manuscripts of the John Rylands Library. The purchases of the year included the collection of the early editions of old English plates, in many cases the first. An important purchase of music included the Martorell collection. The most important accession of manuscripts was the volumes of Madison Papers, heretofore owned by the Chicago Historical Society, the title to which has now passed to the United States. Almost equal in importance was the acquisition of the Papers of James K. Polk from transfer by the Chicago Historical Society. These consisted of twenty-four volumes of Polk's Diary and a miscellaneous collection of about 450 letters to and from him. Other collections of papers included letters of William Eustis of Massachusetts and the papers of Andrew Stevenson and the diary of Dr. Moses Waddell.

The Library has been engaged for several years in copying manuscript material in the English Archives relative to the American Colonies. The total number of folios now copied is upwards of 85,000. The calendar of the Van Buren papers was completed during the year. Of the journals of the Continental Congress for 1780, three volumes have been printed and issued, and editorial work on the volumes for 1781 is under way. Appropriations for carrying on the work of the Library in 1910 amounted to \$484,947 and the expenditures to \$483,227. The visitors to the Library during the year numbered 768,911 or an average of 2118 daily. The librarian is Herbert Putnam.

**LIBRARY PROGRESS, 1910. CONFERENCES.** The American Library Association held its annual meeting at Mackinac Island from June 30 to July 6, 1910, with an attendance of 532. J. I. Wyer, Jr., director of the New York State Library, was elected to succeed N. D. C. Hodges, librarian of the Cincinnati Public Library. Pasadena, California, was selected as the meeting-place for the conference in 1911. Two international congresses were held in Brussels from August 25 to 31, 1910. About 50 American librarians attended these conferences, some of whom also attended the annual convention of the Library Association of the United Kingdom held at Exeter, September 5 to 9. These three foreign meetings have served to

strengthen the bonds of fellowship and stimulate library work of individual countries.

**LIBRARY ORGANIZATION.** The American Library Association has a membership of 2005. It is governed by an executive board and a council, and its headquarters are now established in Chicago. It has also an active publishing board and five organized sections. Three societies are affiliated with the American Library Association and meet with it. The special libraries association was established in 1909 and held its first organized meeting in connection with the American Library Association at Mackinac. Its membership numbers chiefly librarians of technical and civic institutions, business houses, and industrial companies. The Pacific Northwest Library Association is a separate library association, organized in 1909 and made up of librarians of Oregon, Washington, British Columbia, Montana, Idaho and Utah. It held its second annual meeting at Portland in June, 1910. The Ontario Library Association promotes library interests in Canada and holds annual meetings. The Department of Education of Ontario is doing much to develop Canadian libraries.

In the United States there are thirty-eight State library associations, twenty-five local library clubs, and thirty-four States now have library commissions or bodies serving commission purposes. The library commission is probably the most effective agent for organized library extension. Several of the commissions publish library periodicals, among which should be mentioned *New York Libraries*, *News Notes of California Libraries*, and the *Wisconsin Library Bulletin*. The League of Library Commissions is an organization in which membership from all the commissions is included. It is affiliated with the American Library Association and meets with it. Commission methods and plans are compared and discussed. The organization of new libraries, the distribution of traveling libraries, extension work in rural communities and work with penal and charitable institutions are embraced in the field of commission work.

**LIBRARY TRAINING SCHOOLS.** The professional training section of the American Library Association held its first meeting at Mackinac Island. Its purpose is to standardize and develop the efficiency of the library schools of which there are now eleven. Library courses vary from one to two years and some schools admit only students who hold B. A. degrees. The schools are connected with libraries, universities or State commissions. Several brief summer library courses are given by the library schools or by commissions, chiefly for the purpose of giving systematic instruction to untrained library workers. Many libraries also give professional courses as preliminary equipment for work within their own grades of service. The Chicago and St. Louis public libraries established training classes during the year.

**NEW LIBRARY BUILDINGS AND CARNEGIE GIFTS.** The new building of the New York Public Library will doubtless be completed in 1911. Progress is reported on the new buildings for the St. Louis Public Library, the New York State Library, the Connecticut State Library, and the Springfield (Mass.) City Library. The new public library building of Denver was dedicated in February, 1910. The library gifts from Andrew Carnegie to the United States and

Canada for the year totaled 62 buildings, amounting to \$1,026,500, exclusive of 14 increases to previous gifts, amounting to \$39,200.

**LIBRARY APPOINTMENTS.** Important changes in library personnel during the year 1910 were the resignation of Charles F. Lummis from the librarianship of Los Angeles Public Library and the appointment of Purd B. Wright of St. Joseph, Missouri, to succeed him; also the retirement of Charles R. Dudley from the librarianship of the Denver Public Library, and the appointment of Chalmers Hadley, secretary of the American Library Association to succeed him. Mr. Henry E. Legler completed his first year in the important work or reorganization of the Chicago Public Library, of which he was appointed librarian late in 1909.

**SPECIAL FEATURES.** Progress in library co-ordination is indicated by the development of inter-library loans and the coöperative publication of library lists. Library interests are coming into closer touch with civic progress, and the work with schools and civic institutions has developed rapidly. A budget exhibit was held in October, 1910, in New York City, at which the work of the libraries of Greater New York was represented. Similar budget exhibits have been undertaken in other cities, and a city planning conference in Los Angeles, a children's conference in Cleveland, a playground conference in Rochester, and preparations for the Child Welfare Exhibit in New York City in 1911, have served to stimulate library activities and widen library influence. Work with schools, story-telling, and training school students in the use of the library are important features of library work; also special attention has been given to the agricultural and technical library and to the use of the library by foreigners.

**LIBRARY LITERATURE.** Among publications for the year special mention should be given to *The American Public Library*, by Arthur E. Bostwick (Appleton). Several pamphlets have been added to Mr. Dana's *Modern American Library Economy* series, and numerous useful catalogues and bibliographies have been published, among which two additional volumes to Miss Hasse's monumental *Index of Economic Material in Documents of the States of the United States* are specially noteworthy.

**GENERAL TREND.** The résumé of the year shows that the progress was extensive rather than initiative in character, work developing along established lines without striking innovations or experimentation. The New York Public Library circulates about 7,000,000 books through its branches, and about 1,000,000 through traveling libraries. The Brooklyn Public Library circulates 4,066,024 volumes. The Chicago Public Library shows an increase in circulation of three-fourths of a million within the year. The Library of Congress now ranks as the third largest library in the world.

**LICENSES, SALOON.** See **PROHIBITION**.

**LIDDEL, T. H.** See **LITERATURE, ENGLISH AND AMERICAN, Travel and Description**.

**LIFE INSURANCE.** See **INSURANCE**.

**LIGHT.** See **PHYSICS**.

**LIGHTHOUSES.** In accordance with an act of Congress, approved June 17, the Lighthouse Board of the United States, organized in conformity with the act of Congress, approved August 31, 1852, to supervise the lighthouses and other aids of navigation of the waters of

the United States, was terminated. This board was composed of officers of the navy, and of the corps of engineers of the army, with a civilian member and the Secretary of Commerce and Labor, to which department this work was assigned, as president ex-officio. The object of this reorganization was to secure a more direct, simple and economical method of administration, and the act, which was approved June 17, 1910, became effective July 1, 1910. In pursuance of this provision G. R. Putnam was appointed Commissioner and A. V. Conover Deputy Commissioner, by the president. The Act provided that in the Department of Commerce and Labor there should be a bureau of lighthouses (which should assume the previous duties of the Lighthouse Board, and all of its employes of the lighthouse establishment should be duly transferred to the new organization, excepting the army and navy officers.

There were in 1910 the following aids to navigation under the control of the United States Lighthouse Establishment:

Lighted Aids

**LINDAU, RUDOLF.** A German novelist and diplomat, died in October, 1910. He was born in Gardelegen in 1829. For many years he was engaged in the consular and diplomatic service of Switzerland and Germany. He studied in Montpelier and Paris. From 1859 to 1869 he lived in the Far East and in California. He contributed to several French reviews and newspapers. In 1864, with Charles Rickerby, he founded the *Japan Times* at Yokohama. In 1869 he returned to Germany and acted as general correspondent during the Franco-Prussian War. From 1872 to 1878 he was employed in the German Embassy in Paris. After this he lived chiefly in Berlin. He wrote in French, English and German. His writings are notable for keen observation of men and manners, and include the following: *Un voyage autour du Japon* (1864); *Schiffbruch* (2d ed., 1880); *Gute Gesellschaft* (2d ed., 1883); *Martha* (1892); *Türkische Geschichten* (1891); *Alle*

*Geschichten* (1904). His collected romances and novels were published in Berlin in 1892-3.

**LINDSAY, F.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**LION, THE (cruiser).** See BATTLESHIPS.

**LIQUORS, FERMENTED AND DISTILLED.** These products are classified under four general heads: (1) Wines, including ciders and other fermented fruit juices, and so-called sweet or fortified wines, such as port and sherry, to which brandy has been added to preserve the unfermented sugar; (2) malt liquors, such as beer, ale, porter, etc.; (3) distilled liquors, such as whisky, brandy, gin, etc.; (4) liqueurs or cordials, such as apricot and blackberry cordials, Benedictine, etc.

**WINES.** France and Italy are the two great wine-producing countries of the world. France produced, during the year 1909, 1,197,808,920 gallons, and Italy almost as much. During the past year, 1910, the production of these two countries decreased nearly one billion gallons, France producing only about one-half her usual crop. This decrease in production in France and Italy has actually reduced the world's supply of wine approximately one-third. Such a reduction cannot fail to have a great effect upon the wine markets of the world.

The following table gives the production of wine in the principal countries of the world for the years 1908, 1909, and 1910 (stated in gallons):

Country	1908	1909	1910
France ....	1,331,995,000	1,197,808,920	627,652,608
Italy ....	1,064,800,000	910,756,000	700,000,000
Spain ....	473,000,000	324,894,042	400,000,000
Algeria ....	171,682,000	181,031,818	160,000,000
Austria ....	136,400,000	99,000,000	125,000,000
Hungary ....	121,000,000	42,350,000	110,000,000
Portugal ...	85,800,000	68,200,000	75,000,000
Bulgaria ...	63,800,000	26,400,000	55,000,000
Russia ....	61,600,000	52,800,000	54,000,000
Chile ....	52,800,000	50,600,000	50,000,000
United St. .	39,600,000	33,000,000	40,000,000
Germany ...	50,000,000	41,800,000	38,000,000
Turkey ....	39,600,000	33,000,000	37,000,000
Greece ...	39,600,000	48,400,000	35,000,000
Argentina ..	27,500,000	24,200,000	27,000,000

From this list it will be seen that the United States ranks eleventh, standing just above Germany, whose production has fallen off considerably in the last few years. From an examination of this table it will also be seen that only a few countries show increased production in 1910 over 1909. Among the countries which do show such increase are Austria, Spain, Hungary, Bulgaria, and the United States.

The table submitted below sets forth the quantities of dry wines produced in the State of California during the last six years, in gallons as follows:

1905 .....	19,500,000
1906 .....	24,500,000
1907 .....	26,000,000
1908 .....	22,500,000
1909 .....	23,000,000
1910 .....	27,000,000

The above figures show a marked increase in 1910 over the production of dry wines for the last six years. In fact, this year has the largest production recorded since 1902. No record seems to be available for the production of dry wines in the other wine-producing districts of the United States. The production of fortified sweet wines, however, being under the supervision of the Bureau of Internal Revenue (as each gallon of brandy used is subject to a small tax) can be very exactly given, and the table below states the production of the principal wine-producing States and the total production in the United States for the years 1909 and 1910.

This table shows a marked increase in production in 1910 over the previous year, the increase being about four million gallons, being divided among all the wine-producing States, and Virginia is for the first time noted as an important producer of this class of wine. The principal increase, however, is in California, which is the great wine-producing State of this country.

The Commissioner of Internal Revenue, in his annual report, states that there were manufactured in the United States in the year 1910, 9,319,629 gallons of so-called "Port Wine,"

#### PRODUCTION OF FORTIFIED SWEET WINES IN THE UNITED STATES

while the statistics of the wine production of the Douro district of Portugal, where the true port wines are produced, show a production there of but 6,440,000 gallons, considerably less than the production of this class of wine in the United States.

Considerable legislation has been enacted and a number of rulings regarding wines promulgated during 1910. The French government is limiting the area in which champagne wine can be made to a very small district. Sparkling wines made in another part of France are

not entitled under this ruling to the name "champagne." Two important decisions as to the labeling of wines under the Food and Drugs act have been made during the past year. The first decision, known as Labeling of Ohio and Missouri Wines, permits a product to be labeled "Ohio wine" or "Missouri wine," without further statement, even if a large amount of water and sugar has been added in its preparation, and as no practical restrictions can be placed upon this use of sugar and water, the result of this ruling will undoubtedly be that

the terms "Ohio wine" and "Missouri wine" will become synonymous for a very low grade adulterated wine. The other decision bearing on the labeling of wines permits wines manufactured in the United States similar to sherry and port to be called "sherry" or "port" in combination with the name of the State in which it was produced. These decisions are in striking contrast to the tendency in other wine-producing countries, where measures are being taken to increase the reputation of their products by placing more restrictions upon the use of materials and labels.

The Spanish government has recently issued standards and provided definitions for wines, beers, and distilled spirits, which show an effort to keep up with other wine-producing countries of Europe in protecting the good name of their products. These standards for wines are in general very similar to those of France, and are quoted in brief form as follows:

"Wine shall be understood as the beverage resulting from the alcoholic fermentation, complete or incomplete, of the juice of fresh, ripe grapes."

"In sparkling wines there shall be permitted the variations set forth, and also the manipulations and processes known as the 'champagne method,' as also charging them with pure carbonic acid.

"Nevertheless no wine shall be sold under the name of Sparkling Wine except in the event that its effervescence is the result of a second alcoholic fermentation while bottled up, whether spontaneous or resulting from the champagne method. Wines charged with carbonic acid should be clearly marked on the label, bearing the words 'Champagne de Fantasia' (imitation champagne) or some other classification in the same lettering as the words Sparkling Wine or Champagne, which will not permit confusion as to the nature of the product."

"There shall be understood as fortified wines, those prepared by any of the methods specified, or resulting from the mixing of different wines with each other:

"1. Dry and strengthened with alcohol.

"2. Semi-sweet wines, mild, resulting from a partial careful fermentation or by the addition of alcohol.

"3. Sweet wines resulting from the addition of alcohol to the grapes or must.

"4. Fermented wines to which alcohol has been added.

"In the preparation of these the use of grapes more or less dry is permitted.

"Generally there shall be held as fraudulent all of the manipulations and practices having for their object the changing of the natural condition of the wine to conceal alterations in the same or to deceive as to its substantial qualities or origin.

"There shall be understood as cider the beverage proceeding from the alcoholic fermentation of the juice of fresh apples, or a mixture of apples and pears, extracted with the addition of water, or pure."

**FERMENTED LIQUORS.** The report of the Commissioner of Internal Revenue shows an increase in production of fermented liquors in 1910, 59,544,775 barrels being produced as against 56,364,360 barrels in 1909; but a decrease in the number of breweries was shown, 1568 being operated in 1910, as against 1622 in 1909. This decrease in the number of breweries was largely due to the Prohibition laws, showing that these laws had the effect of changing the place of production without interfering with the aggregate amounts produced and consumed.

In this connection, the Spanish definitions of beer are of exceeding interest, and are as follows:

"There shall be understood as beer the beverage obtained through the alcoholic fermentation of must made from hops, sprouted grain, yeast and water."

"The beverage sold under the name of beer must not be manufactured except from the products mentioned in its definition.

"The beer in whose preparation part of the barley has been substituted by other grains or starch material shall be sold under a special name indicating clearly its manufacture."

This shows that the term "beer" has a fairly definite meaning and that the materials from which it can be made are barley, malt and hops.

**DISTILLED SPIRITS.** The statistics on the total production of distilled spirits in the United States during the year 1910 show a very marked increase over the previous year, the production being 156,237,527 gallons, as against 133,450,755 gallons in the previous year; and the withdrawals for consumption also show a large increase, being 126,384,726 gallons, as against 114,693,578 gallons withdrawn in 1909. That is to say, 11,421,185 more gallons of distilled spirits were consumed in the United States during the year 1910 than in the previous year—this increase in consumption apparently in spite of the State-wide prohibitory laws existing in some of the States and local option laws in other States which have had the effect of greatly reducing the number of distilleries actually in operation, there being but 906 distilleries operated in 1910 as against 1292 distilleries in the previous year. These facts would seem to indicate that the Prohibition laws have very little effect on the total consumption of distilled spirits, but have effected to a very considerable extent the place of production. In addition, the Commissioner of Internal Revenue reports that there has been a very large increase of illicit distilling, especially in those States having State-wide prohibitory laws. Most of this illicit distilling has been in Georgia, Alabama, and North and South Carolina. During 1910 there were seized and destroyed a total of 1911 illicit distilleries, and 1743 in the previous year.

The following table shows the total production of the various classes of distilled spirits in the United States in the last three years, and indicates a great increase in the production during this period:

Year	Rum	High wines	Gin	Whiskey	Alcohol	Coml. Alc.	Misc.
1908.....	1,895,922	50,062	2,756,752	27,708,351	50,935,821	16,849,154	26,793,675
1909.....	1,952,374	221,277	2,483,743	70,152,174	42,563,103	16,078,082	.....
1910.....	1,730,551	206,534	2,985,435	82,463,894	50,703,845	15,841,370	.....

The great increase in production of whisky is probably not a real increase, as a change in the classification under the Internal Revenue Regulations now permits products to be classed as "whisky" which were formerly classed as alcohol or neutral spirits.

Following the decision of President Taft as to the manner of labeling "whisky," a still more lenient ruling was issued by the three Secretaries authorized to issue rules and regulations for the enforcement of the Food and Drugs Act. These regulations entitle any distilled spirit made from grain, diluted to potable strength, to the label "whisky." In addition, the distillers of spirits from molasses have succeeded, through the courts, in practically obtaining the right to the use of the name "whisky" for potable distilled spirits made from molasses, so that at the present time, under the rulings now in force, any spirit distilled from grain or molasses, and diluted to potable strength, is entitled to the name "whisky," thus giving the whisky interest a complete reversal of the methods of labeling prescribed for their products by the previous administration. This, however, has had the effect of greatly increasing the amount of whisky bottled in bond, as the obtaining of this class of product is the only way in which the consumer can be assured he is getting straight whisky. The report of the Commissioner of Internal Revenue shows also that 8,985,759 gallons of distilled spirits were bottled in bond in 1910, as against 6,365,839 gallons bottled in bond in 1909, and 4,794,358 in 1908, the amount of spirits bottled under this act having nearly doubled in two years.

The following table gives the amount of wine and spirits consumed in Great Britain for the past three years:

CONSUMPTION OF WINE AND SPIRITS IN  
GREAT BRITAIN

Liquor	1908	1909	1910
Wines .....	11,351,314	11,455,270	12,723,082
Brandy .....	1,963,413	1,553,024	1,458,935
Rum .....	4,031,954	3,211,937	2,815,232
Foreign spirits ...	686,109	850,165	953,707
British spirits ....	31,413,397	25,459,566	23,429,693
Total Spirits ....	38,094,873	31,074,692	28,657,567

These figures show, what has been noted in previous years, that there has been a steady decrease in the consumption of distilled spirits in Great Britain, and the reduction of nearly 10,000,000 gallons in consumption since 1908, materially decreasing the per capita consumption, which has been steadily growing smaller. These figures, however, indicate a slight increase in the consumption of wine, but also show a very large decrease in the consumption of rum.

The following definitions have been prescribed by the Spanish government in connection with the alcoholic beverages:

"COGNAC: The product resulting from the distilling of natural wines and preserved in special vats to which it owes its color.

"KIRSCH: The exclusive product of the alcoholic fermentation and distilling of cherries.

"GIN: The product of the distilling of the fermented juice of cereals with juniper berries.

"RUM and MOLASSES RUM: Alcoholic products obtained through the fermentation and dis-

tilling of sugar-cane juice or molasses dregs, sirops and wines manufactured from sugar-cane.

"WHISKY: This liquor is obtained from the fermentation of wheat, barley, rye or corn.

"BRANDY: Is the distilled product of good table wines.

"There should be considered as liquors the alcohols intended for food, aromatized by maceration or distilling with different vegetable substances or prepared by the addition to the alcohol of the product of the distilling of said substances together with alcohol or water, or through the combined use of these different proceedings and sweetened or not by means of sugar, glucose, grape sugar or honey and colored or not with inoffensive substances."

"There shall be permitted:

"The use of harmless coloring matter provided that the specific name of the liqueur is marked specifically 'colored.'

"The total or partial addition of aromas, provided that the specific name of the liqueur is qualified as 'artificial.'

"The substitution of saccharose, in whole or in part, with glucose, provided that to the specific name is added that of 'Fantasia' (imitation).

"The words 'colored' and 'artificial' should be printed in the same sized type as those bearing on the labels and tags the name of the liqueur."

The requirement of the Spanish government that liqueurs shall be labeled "imitation" when glucose has been substituted for saccharose (cane sugar) indicates that sugar is recognized the world over as saccharose, and that other products are recognized as substitutes therefor.

**LIQUOR TRAFFIC.** See PROHIBITION and LIQUORS, FERMENTED AND DISTILLED.

**LITERATURE, ENGLISH AND AMERICAN.** The rapid increase in the number of books published on both sides of the Atlantic is shown by the tables on the next page, in which the literary output of 1898, as reported in the INTERNATIONAL YEAR BOOK, is compared with that of 1910, as given in the *Publishers' Weekly* of New York City. In the year 1910 the American book production reached the unprecedented figure of 13,470, for the first time surpassing the English and ranking next to the German. Many of the titles in the two lists are, however, common to both countries. Of the American list for the year, 9209 books were by American authors and 4261 were by English or other foreign authors. It will be seen from the tables that during the period 1898-1910, British book production increased by 50 per cent., and American by more than three times that. Fiction in England has remained almost stationary during that period and probably has reached its height for the present in America also, for the number of new novels this year though greater than last year (1087), is less than in 1908 (1458). Religion, Theology and Philosophy, on the other hand, continue to make rapid gains in both countries. The greatest proportional increase is shown in works relating to the sciences and arts and to domestic and rural affairs, while the increased attention being paid in America to historical and sociological studies is manifest from the large number of new books in these fields. The classification of publications is, to some extent, arbitrary, and has doubtless changed somewhat during the

twelve years, and, unfortunately, different systems of classification are in use in England and America, so no exact comparisons can be drawn. It would be rash to attempt to decide whether there has been a gain in quality as in quantity of the literature produced, but it is probably safe to say that there has been a general improvement of literary craftsmanship and if there appear to be fewer works of distinction than formerly, it is in part because of the close rivalry of numerous competitors in every field.

FICTION. The reports of the public libraries in various cities and the tables of sales published monthly in the *Bookman*, show that the public is quite independent of the dictation of advertisers and reviewers. A novel by a well known author may sell extensively for the first month or two, but if it is inferior to his former works, it speedily drops, while books by comparatively unknown writers often work their way to the front rank with little aid from the publishers or professional criticism. It has been found that it does not pay to force the sale of a novel to the highest limit by heavy advertising as was done a few years ago. Loyalty to an author does not count for much nowadays. Readers are more interested in the books than in their makers, notwithstanding the exaggerated attention given to personalities in literary periodicals. An author's name is of value in so far as it stands for fiction of a certain grade and character. If an author changes his style decidedly he loses his public and has to work up a new one. For the reading public becomes more diversified and each new form of fiction that is introduced remains in favor with a sufficient number so that stories of that type continue to appear year after year. An instance of the independence of the reading public is afforded this year by *The Rosary*, a novel of sentiment and renunciation, with a musical motif, by Florence Barclay, which was published in 1909 and in spite of the fact that it received comparatively little attention from reviewers gradually gained popularity and crept up in the list of "best sellers" until by October it had reached the top, where it remained for the rest of the year. A similar case of unpromoted popularity occurred in 1908 when *The Lady of the Decoration*, an unpretentious novel, by an unknown author, worked its way into public favor. Second in popularity to *The Rosary* this year is a novel of a very different history, *A Modern Chronicle*, by Winston Churchill, which immediately upon its publication far outstripped its competitors. In this new work Mr. Churchill substitutes for his former theme of political ambition its feminine equivalent, social aspiration. Third in the list is *The Wild Olive*, by Basil King, author of *The Inner Shrine*. Next to this in the order of popularity is Mrs. Mary Roberts Rinehart's *When a Man Marries*, which was followed later in the year by *At the Window of the White Cat*, both clever extravaganzas. The list of the best selling fiction for 1910 contains the names of several books of 1909: *John Marvel, Assistant*, by Thomas Nelson Page; *Truxton King*, by George Barr McCutcheon; *The Silver Horde*, by Rex Beach; *Little Sister Snow*, by Frances Little, author of *The Lady of the Decoration*; *Bella Donna*, by Robert Hichens; *It Can Never Happen Again*, by William De Morgan; *The Calling of Dan Mathews*, by Harold Bell Wright. Of the new books besides those mentioned the most popular

were: *Lord Loveland Discovers America*, a story of a fortune-hunter, by Charles Norris Williamson and Mrs. Alice Muriel (Livingston) Williamson; *The Kingdom of Slender Swords*, by Hallie Erminie Rives; *Simon the Jester*, a whimsical tale of a lovable hero in an unusual situation, by William John Locke; *Nathan Burke*, a semi-historical novel by Mary Stanberry Watts; *The Foreigner*, a tale of Saskatchewan, by Ralph Connor; *Passersby*, by Anthony Partridge; *White Magic*, the story of an artist's love affair, by David Graham Phillips; *Lady Merton*, *Colonist*, eulogistic of Canadian pioneer life, by Mary Augusta (Arnold) Ward (Mrs. Humphry Ward); *A Splendid Hazard*, by Harold MacGrath, an adventure story; *Rose in the Ring*, a circus story, by George Barr McCutcheon; *Maz*, another masquerade, by Katherine Cecil Thurston; *The Man Outside*, by Wyndham Martyn; *The Tower of Ivory*, a romance of musical Munich, by Gertrude Franklin Atherton; *The House of Whispering Pines*, a detective story, by Anna Katherine Green; *By Inheritance*, by Octave Thanet; *The Illustrious Prince*, a diplomatic mystery, by Edward Phillips Oppenheim; *The Man Higher Up*, by Henry Russell Miller; *Ailea Paige*, period of the Civil War, by Robert William Chambers; *The Mistress of Shenstone*, by the author of *The Rosary*; *Molly Make-Believe*, a charming little story, by Eleanor Hallowell Abbott. Of the fiction mentioned above as the most popular in America, one-fourth is of English authorship; 18 of the authors are men and 14 women. Arnold Bennett follows up his *Old Wives' Tale* and other stories of the Five Towns with *Clayhanger*, the first of a trilogy of three long novels of the same locality. Mr. Bennett shows consummate skill in interesting the reader in commonplace characters and trivial events described in the minutest detail. William De Morgan's *An Affair of Dishonor*, was a great disappointment to his friends. This story of the days of Charles II., has little of the charm of his modern London novels. *The Creators*, by May Sinclair, is a study of the psychology of genius; *Celt and Saxon*, a posthumous and incomplete novel, was welcomed by all the devotees of George Meredith. Herbert George Wells tells the *History of Mr. Polly* with humorous satire of modern social conditions and sympathy for those who do not fit into them. In *Kest Harrow* "a comedy of resolution," Maurice Henry Hewlett continues the romance of his unconventional characters, Senhouse and Sanchia. Robert Herrick's *A Life for a Life* is the story of an ambitious country boy fighting against the corruption of a great city. *The Doctor's Christmas Eve*, by James Lane Allen, is a sequel to *The Bride of the Mistletoe*. Other noteworthy novels are: *The Ball and the Cross*, adventures interspersed with theological discussions, by Gilbert Keith Chesterton; *The Siege of the Seven Suitsors*, an amusing comedy by Meredith Nicholson; *The Sword Maker*, a romance of the Rhine full of fighting but no fatalities, by Robert Barr; *Magada*, a story of the Spanish conquest of the Canary Islands, by W. M. Ardagh; *Right Stuff* and *A Man's Man*, by Ian Hay Beith; *Mrs. Fitz*, by J. C. Snaith; *The Rest Cure*, by W. B. Maxwell; *Flamsted Quarries*, by Mary E. Waller; *San Celestino* and *Mezzogiorno*, by John Ayscough; *John Winterbourne's Family*, by Alice Brown; *Mr. Ingleside*, by Edward Verrall Lucas; *The Circuit Rider's Wife*, the feminine side of

the Southern itinerancy, by Corra Harris. Among the novels which were popular in England but little known in this country are besides those mentioned the following: *Howard's End*, by E. M. Forster; *A Hind Let Loose*, by C. E. Montague; *Alongshore*, by Stephen Reynolds; *The Shadow of a Titan*, by A. F. Wedgwood; *The Brassbounder*, by David Bone; *Now*, by Charles Marriott; *The Leading Note*, by Rosalind Murray, and *Things That No One Tells*, by C. E. Mayne. Among the volumes of short stories are some of unusual merit: *Rewards and Fairies*, a continuation of the *Puck of Pook's Hill* historical tales, by Rudyard Kipling; *The Finer Grain*, by Henry James; *Tales of Men and Ghosts*, by Edith Wharton; *A Motley*, by John Galsworthy; *Other Main-Travelled Roads*, by Hamlin Garland; *The Guillotine Club*, by Silas Weir Mitchell; *Spread Eagle and Other Stories*, by Gouverneur Morris; *Strictly Business* and *Whirligigs*, by the late Sydney Porter (O. Henry); *Little Aliens* and *New Faces*, by the late Myra Kelly; *Country Neighbors*, by Alice Brown.

**HISTORY.** The most important event of the year, in the field of History, is the completion of the great coöperative history of the world, planned by the late Lord Acton and published by the Cambridge University Press, under the editorship of A. W. Ward, G. W. Prothero and Stanley Leathes. The twelfth volume of this *Cambridge Modern History* deals with *The Latest Age* and is even more varied and disconnected in its contents than the preceding volumes, for it is composed of 26 chapters by almost as many authors, each dealing with recent events in different countries, or historical movements. The entire work is practically a collection of monographs by specialists, arranged chronologically, constituting a reference work of unique value on account of its authoritativeness and comprehensiveness, although not written with the view of attracting the ordinary reader by literary charm. The bibliographies appended to each chapter add greatly to the value of the history. Considering the difficulty of the undertaking and especially the number of the authors in various countries, the completion of the work within eight years after the first volume appeared is a remarkable achievement. Another coöperative history brought to a successful completion during the year is *The Political History of England from the Earliest Times to the Reign of Queen Victoria*, by William Hunt and Reginald Lane Poole. The twelve volumes have appeared within five years. Fourteen scholars have contributed to this history, all but three of them Oxford men. A similar history of England is also appearing, under the editorship of Charles William Chadwick Oman, of which four of the seven volumes have been published. Its latest volume is the earliest chronologically. *England before the Norman Conquest*, by Professor Oman. Peter Hume Brown brings to a conclusion his *History of Scotland* with the third volume, from the revolution of 1689 to the disruption of 1843. *A Century of Empire*, by Sir Herbert Eustace Maxwell, aims to give in three volumes, of which two have appeared, a history of Great Britain during the nineteenth century. The controversy over the reform of the House of Lords has brought out a number of historical and political studies bearing on the subject, among them: *Senates and Upper Chambers*, by Harold W. V.

Temperley; *The House of Lords during the Civil War*, by Charles Harding Firth, Regius Professor of Modern History at Oxford; and *Second Chambers*, by John Arthur Ransome Marriott. Professor Firth also issued two volumes on: *The Last Years of the Protectorate 1656-1658*, a scholarly continuation of the *History of the Commonwealth and Protectorate* left incomplete by the death of Dr. S. R. Gardner in 1902. Francis Warre Cornish in his two volumes on *The English Church in the Nineteenth Century* completes a continuous ecclesiastical history. *The Dawn of Modern England*, by Carlos B. Lumson, gives a history of the Reformation in England from a Roman Catholic standpoint. *Social Life in the Fifteenth Century*, by Annie Abram, though a small volume, contains an original study of the effect of economic conditions. *The Good Old Times*, by Frederick W. Hackwood, was written for the purpose of showing the oppression of the poor by the rich. *Vanishing England*, by P. H. Ditchfield, describes the architectural relics of the past. Here may be mentioned also: *Relics and Memorials of London City*, by James S. Ogilvy and *British Costume during Nineteen Centuries*, by Mrs. Charles Henry Ashdown. Julian Stafford Corbett, in *The Campaign of Trafalgar*, narrates the struggle of 1804-5, between Napoleon and the European coalition.

The growing recognition of the importance of imperial problems is shown by the number of books published every year in England, on the British colonies, historical, political and descriptive. The first volume of a new series on "The British Empire" is *Yesterday and To-day in Canada*, by the Duke of Argyll, the descriptive part of which is based on personal observation. *Canada, the Empire of the North*, by Agnes Christina Laut, is a lively narrative of the history of the Dominion. *The Logs of the Conquest of Canada, 1759-60*, are edited by William Charles Henry Wood. On Australia we have: *The English Colony in New South Wales, 1788 to 1801*, by David Collins; *On the Wool Track*, by C. E. W. Bean; *Australia: The Making of a Nation*, by John Foster Fraser. *The Rise of South Africa*, by George Edward Cory, is an authoritative history of colonization from the earliest times to 1857. The first volume of the four, bringing the narrative down to 1820, has appeared. The Secretary of the Transvaal Delegation, Robert Henry Brand, gives in the *Union of South Africa*, an account of the new constitution and the circumstances of its origin. *South Africa Memories* consists of the diaries and recollections of Lady Sarah Isabella Augusta Wilson, sister of Winston Churchill, lively gossip of the Jameson Raid and the Boer War. Other books on colonial affairs are: *New Zealand in Evolution*, by Gary Hardy Scholefield; *Great and Greater Britain*, by J. Ellis Barker; *The Broad Stone of Empire*, by Sir Charles Bruce; *Sierra Leone*, as it was and as it is, by Thomas Joshua Aldridge.

In ancient history and archaeology the following may be specified: *Stone and Bronze Ages in Italy and Sicily*, a thorough study of prehistoric remains, by T. Eric Peet; *Amurru, the Home of the Northern Semites*, by Albert Tobias Clay, an argument against the Babylonian theory; *Seal Cylinders of Western Asia*, by William Hayes Ward, illustrated by over 1500 drawings from cylinders; *Arts and Crafts of Ancient Egypt*, by W. M. Flinders Petrie, a profusely

illustrated handbook; *The Sea Kings of Crete*, by James Baikie, and *Crete the Forerunner of Greece*, by Charles Henry Hawes and Harriet A. Hawes, both of these books being popular expositions of the results of the recent studies of Minoan civilization; *Greek Athletic Sports and Festivals*, by E. Norman Gardner; *The Roman Republic*, in three volumes, by William Emerton Heitland; *Life in the Roman World of Nero and St. Paul*, by Thomas George Tucker.

On the French Revolution, in addition to the translation by Bernard Miall of M. Aulard's standard work, we have Lord Acton's *Lectures on the French Revolution*, edited by J. N. Figgis and R. V. Lawrence; Prince Peter Kropotkin's *The Great French Revolution*, written from the standpoint of a modern revolutionist; and Alfred Allinson's *The Days of the Directoire* quoting freely from contemporary documents. On other countries than those mentioned we have the following: *Venice in the XIIIth and XIVth Centuries*, by F. C. Hodgson; *The Navy of Venice*, by Alethia Wiel; *A History of Verona*, by A. M. Allen, a scholarly addition to the "States of Italy" series; *A History of Perugia*, by William Heywood; *Rhodian Sea Law*, edited from the manuscripts, by Walter Ashburner; *History of Mediæval Theory in the West*, volume II, by Robert Warrand Carlyle and Alexander James Carlyle—political theory of Roman lawyers from the tenth to the thirteenth century; *Rise of the Mediæval Church and Its Influence on the Civilization of Western Europe* from the first to the thirteenth century, by Alexander Clarence Flick; *The History of Malta during the period of the French and British occupations, 1798-1815*, by William Hardman; *Sailing Ships*, by Edward Keble Chatterton.

In American history few books of importance are to be recorded for the year. John Bach McMaster has issued the seventh volume of his very vivid and original *History of the People of the United States, 1842-1852*; John Bigelow, Jr., has made an exhaustive strategic and tactical study of the *Campaign of Chancellorsville*; Frederic Logan Paxson makes an important contribution to the history of the Far West in *The Last American Frontier*; Charles Elihu Sloooun tells of the struggle to save from the British the country west of the Allegheny Mountains, in his *Ohio Country Between the Years 1783 and 1815*. There are two general histories of the Civil War, George Cary Eggleston's *History of the Confederate War: Its Causes and Conduct*, and John Formby's *The American Civil War*, a concise history of its causes, progress and results, the latter from an English standpoint. A documentary *History of the Society of Jesus in North America*, is being prepared by Thomas Aloysius Hughes, to be completed in six large volumes half of text and half of documents. A new edition of Esquemeling's *Buccaneers of America* has appeared, and at the same time a thorough study of Esquemeling and other sources by C. H. Haring in *The Buccaneers in the West Indies in the 17th Century*. A minute account of *The Diplomatic Relations of the United States and Spain* comes from the pen of Admiral French Ensor Chadwick. Extracts from the diary of Ethan Allen Hitchcock covering the Mexican and Civil Wars are published in *Fifty Years in Camp and Field*, by W. A. Crofut. John Randolph Spear's *Story of the American Merchant Marine* extends from 1607 to the present day. Mention should also be

made of *The Beginnings of the American Revolution*, by Ellen Chase.

**GENERAL BIOGRAPHY.** The immense and increasing popularity of biography, on both sides of the Atlantic, is shown by announcements of the publishers and the reports of the public libraries. The death of any distinguished man, and of many an undistinguished man, is followed by one or more biographies. In most cases these are written with considerable literary skill and show great patience in research, but are apt to be too voluminous and detailed. While the field of contemporary biography is thus being assiduously cultivated, there is no cessation in the production of new lives of men and women of greater or lesser note in the past ages, however often or thoroughly they may have been studied by previous biographers.

In England the most noteworthy event of the year in this field is probably the appearance of William Flavelle Monypenny's authoritative *Life of Benjamin Disraeli, Earl of Beaconsfield*. This covers with great thoroughness the strange career of Disraeli from his birth in 1804 to his entrance into political life in 1837. Lord Rosebery has written a brilliant study of *Lord Chatham, His Early Life and Connections. The Life and Times of the Right Honorable Cecil John Rhodes, 1853-1902*, by his trustee, Sir Lewis Michell, is a thorough and authoritative biography of the great empire-builder. The private life of Cecil Rhodes is the subject of a smaller work by his private secretary, Philip Jordan. *John Bright* is a monograph by R. Barry O'Brien. *The Reminiscences of the Late Goldwin Smith* contains some interesting views of university problems at Oxford and Cornell, and of English and Canadian politics. Among the other biographical works we may mention: a *Life of Reginald Pole*, by Martin Haile, and a *Life of Cardinal Vaughan*, by John George Snead Cox; *Life and Times of Bishop Challoner (1691-1781)*, by Edwin Hubert Burton; *Intimate Society Letters of the Eighteenth Century*, by the Duke of Argyll, consisting chiefly of personal and business correspondence; *A Quaker Post-Bag*, letters to Sir John Rodes of Barlbrough Hall, and to John Gratton of Monyash, 1693-1742, selected and edited by Mrs. Godfrey Locker Lampson, with a preface by Augustine Birrell; *Private Letters of the Marquess of Dalhousie*, Viceroy of India, edited by J. G. A'Baird; *Becket*, by W. H. Hut-ton; two new volumes of Lord Broughton's *Recollections of a Long Life*, edited by his daughter, Lady Dorchester; the third volume of Lady Dorothy Nevill's *Under Five Reigns*; a biographical sketch of Frederic William Maitland, Downing Professor in the Laws of England, by Herbert Albert Laurens Fisher; a *Memoir of Sir John McNeil, and of His Second Wife, Elizabeth Wilson*, edited by their granddaughter, throwing new light on Persian and Crimean affairs; a memoir of *Gathorne Hardy*, first Earl of Cranbrook, edited by Alfred E. Gathorne-Hardy; a *Memoir of Lady John Russell*, edited by Desmond MacCarthy and Agatha Russell; *The Nine Days' Queen*, a careful study of Lady Jane Grey and her times, by Richard Patrick Boyle Davey; *The Last Days of Charles II.*, a medical study, by Raymond Crawford; *The Girlhood of Queen Elizabeth*, a narrative in contemporary letters, edited by Frank Arthur Mumby; *Sir Philip Sidney*, by Percy Addleshaw, who is no hero-worshiper; the *Life and*

*Letters of James Wolfe*, by Beckles Wilson, *The First Great Canadian*, the story of Pierre Le Moyne, Sieur D'Iberville, by Charles B. Reed; *Heroes of Modern India*, sketches of administrators and of missionaries, by Rev. Edward Gilliat.

In American biography chief attention is directed to personages of the Civil War period. The biography of *John Brown*, by Oswald Garrison Villard, is a remarkably full and impartial piece of work. Of the aftermath of the Lincoln centenary may be mentioned sketches by George Haven Putnam, Joseph Hodges Choate and Marion Dexter Learned. Other books of the Civil War period are: the *Life of Charles Sumner*, by Walter G. Shotwell; the *Memoirs of Gustave Koerner*, by T. J. McCormack; *Quantrell and the Border Wars*, by William Elsey Connelley. *The Intimate Life of Alexander Hamilton*, by Allan McLane Hamilton, is based upon family documents never before published; *The Diary of James K. Polk*, during his presidency, 1845-1849, edited by M. M. Quaite; and the Works of James Buchanan are edited by J. B. Moore. Other works are: *Grover Cleveland, a Record of Friendship*, by the late Richard Watson Gilder; *An Old-Fashioned Senator*, Orville H. Platt of Connecticut, by Louis Arthur Coolidge; *An American Citizen*, the life of William Henry Baldwin, Jr., by John Graham Brooks; *The Book of Daniel Drew*, a glimpse of the Fisk-Gould-Tweed régime from the inside, by Bouck White; *Sir Henry Vane, Jr.*, Governor of Massachusetts and friend of Roger Williams and Rhode Island, by Henry Melville King; *Pioneer Priests of North America (1642-1710)*, Volume II, dealing with missionary work among the Hurons, by Rev. Thomas Joseph Campbell; *Daniel Boone and the Wilderness Road*, by Henry Addington Bayley Bruce; *Commodore John Rodgers*, by Charles Oscar Paulin; *Diplomatic Memoirs*, by John Watson Foster, dealing chiefly with Far Eastern questions.

In the educational and scientific field, we have the following: *Life of Daniel Coit Gilman*, first president of the Johns Hopkins University, by Fabian Franklin; *Horace Mann*, educator, patriot, and reformer, a study in leadership by George Allen Hubbell; *The Life of Mary Lyon*, founder of Mount Holyoke College, by Beth Bradford Gilchrist; *Twenty Years at Hull House*, an autobiographical account of settlement work in Chicago, by Jane Addams; *Life and Letters of Josiah Dwight Whitney*, by Edwin Tenney Brewster; *Edison*, his life and inventions, by Frank Lewis Dyer and Thomas Commerford Martin; *Leading American Men of Science*, biographical sketches of Rumford, Audubon, Agassiz, Silliman, etc., by David Starr Jordan, Ira Remson, Simon Newcomb, and others. In the virgin field of Spanish-American biography, we have an impartial estimate of *Simon Bolivar, El Libertador*, by Francis Loraine Petre; and a eulogy of Porfirio Diaz "the master-builder of a great commonwealth," by José Francisco Godoy.

In general European biography we have a volume of sketches of Bismarck, Grotius, Cavour and others, by Andrew Dickson White, entitled, *Seven Great Statesmen in the Warfare of Humanity and Unreason*; a life of *Leopold the Second*, late King of the Belgians, by A. S. Rapoport; *Pope John XXIII.*, by Eustace J. Kitts; *The Medici*, a very comprehensive work, by George Frederick Young; *Lives of the Early Medici as Told in Their Correspondence*, trans-

lated and edited by Mrs. Janet Ross; *The Romance of a Medici Warrior*, semi-fictional biographies of Giovanni delle Bande Nere and his son Cosimo I., by Christopher Hare; *The Real Francis Joseph*, the private life of the Emperor of Austria, by Henri de Weindel; *Saint Teresa of Spain*, by Mrs. Helen Hester Colvill; *Memoirs of the Baroness von Suttner*; *Karl Marx*, his life and work, by John Spargo.

French biography is as copious as usual. Besides the translation of Anatole France's *Life of Joan of Arc*, by Winifred Stephens, we have two minor biographies of the Maid of France, by Mary Rogers Bangs and Grace James. The gossip *Memoirs of the Duchesse de Dino* (afterward Duchesse de Talleyrand et de Sagan) have been concluded with their third volume covering the years 1841-1850. On Napoleon we have: a new and enlarged edition of the standard *Life of Napoleon Bonaparte*, by William Milligan Sloane; *Napoleon in His Own Defense*, by Clement King Shorter, consisting of the "Letters from the Cape," ascribed to Napoleon; *The Exile of St. Helena*, "the last phase in fact and fiction," by Philippe Gonnard; *Napoleon in Caricature*, by A. M. Broadley, describing several thousand Napoleonic cartoons; *Napoleon and the End of the French Revolution*, by C. F. Warwick. Other French biographies of interest are: the *Rise of Louis Napoleon*, by Frederick Arthur Simpson; and *Empress Eugénie, 1870-1910*, by Edward Legge; *The Fascinating Duc de Richelieu*, by Hugh Noel Williams and a new edition of the same author's *Madame du Barry*; lives of *Madame de Maintenon* and of *Marie Amélie*, by C. C. Dyson; *Louis XIV. and Madame de Maintenon*, by Charlotte, Lady Blennerhassett; *Charles de Bourbon, High Constable of France*, by Christopher Hare; *Cagliostro*, "the splendor and misery of a master of magic," by William Rutherford Hayes Trowbridge.

LITERARY BIOGRAPHY. Among the numerous volumes devoted to men of letters, one of the most interesting is the memoir on *William Sharp*, by his wife, Elizabeth A. Sharp, because of the light it throws upon the development of "Fiona Macleod," more of a secondary personality than a pseudonym. The complete *Works of "Fiona Macleod"*, in seven volumes are edited by Mrs. Sharp. *The Life and Letters of Edmund Clarence Stedman* is written by Laura Stedman and George Milbry Gould; Lewis S. Benjamin ("Lewis Melville") produces a second biography of *William Makepeace Thackeray* in two large volumes, and also the *Life and Letters of William Beckford of Fonthill*, author of *Vathek*. William Dean Howells's *My Mark Twain* is a record of friendship lasting for forty-five years. The complete *Correspondence of Jonathan Swift* is being edited by F. Ellington Ball, and the first volume has appeared. The life of *Robert Browning* undertaken by W. Hall Griffin has been completed by Harry Christopher Minchin. Besides the *Japanese Letters of Lafcadio Hearn*, edited by Elizabeth Bisland, we have *Lafcadio Hearn in Japan*, by one of his pupils, Yone Noguchi ("Miss Morning Glory"). Other notable works in this field are: *William Harrison Ainsworth and His Friends*, by S. M. Ellis; *Leigh Hunt's Relations with Byron, Shelley and Keats*, by Barnette Miller; *Shelley, the Man and the Poet*, by Arthur Clifton-Brock; *Robert Herrick*, by Frederick William Moorman; *Dr. Johnson and Mrs. Thrale*, by

Alexander Meyrick Broadley; *Six Essays on Johnson*, by Walter Raleigh; *Samuel Rogers and His Circle*, by Ellis Roberts; *Famous Blue-Stockings*, by Ethel Rolt Wheeler; *Dean Swift*, "the 18th century Don Quixote," by Sophie Shilleto Smith; *Sheridan*, and *Sterne*, by Walter Sydney Sichel; *Sir Walter Scott's Friends*, by Florence McGum; *Oliver Goldsmith*, by Richard Asche King; the *Life of Oliver Goldsmith*, by F. Frankfort Moore; *Ruskin and His Circle*, by Ada Earland; *Letters of John Stuart Mill*, edited by Hugh S. R. Elliot; *Correspondence on Church and Religion of William Ewart Gladstone*, edited by D. C. Lathbury; *With Stevenson in Samoa*, by H. J. Moors; the *Memories of Sixty Years at Eton*, Cambridge and elsewhere, by Oscar Browning; *Mrs. Gaskell*, "haunts, homes and stories," by Mrs. Ellis H. Chadwick; the *Life and Letters of Alexander Macmillan*, by C. L. Graves; *Edmund Garrett*, by Edward Tvas Cook; *John Lothrop Motley and His Family*, further letters edited by his daughter and Herbert St. John Mildmay; the *Journals of Ralph Waldo Emerson*, third and fourth volumes; *Louise Chandler Moulton*, by Lilian Whiting; *Recollections of a Varied Life*, by George Cary Eggleston; *Autobiography of Marion Harland* (Mrs. M. V. Terhune); *Leading American Essayists* (Irving, Emerson, Thoreau, Curtis), by William Morton Payne; *Leading American Novelists* (Brown, Cooper, Simms, Hawthorne, Stowe, Harte), by John Erskine; *Masters of the English Novel*, a study of principles and personalities, by Richard Burton.

In foreign literary biography, the most important item is doubtless Aylmer Maude's extensive and authoritative *Life of Tolstoy*. We have also: *Molière: His Life and Works*, by Brander Matthews; *Francesco Petrarca, Poet and Humorist*, by Maud F. Jerrold; *Balzac*, by Frederick Lawton; *Giovanni Boccaccio*, by Edward Hutton. In the field of artistic and dramatic biography are: *Michael Angelo*, by Gerald Stanley Davies; *George Romney*, by Arthur Bensley Chamberlain; *Gainsborough*, by James Grieg; *Digressions of V.*, illustrated reminiscences, by Elihu Vedder; *The Whistler Book*, a monograph, by Sadakiehi Hartman; *The Reminiscences of Rosa Bonheur*, by Theodore Stanton; *Memoirs and Impressions of Helena Modjeska* (Countess Bozenta Chlapowski); *The Life and Art of Richard Mansfield*, by William Winter; *Intimate Recollections of Joseph Jefferson*, by Eugénie Paul Jefferson.

POETRY AND DRAMA. There are no signs of a revival of interest in modern poetry. Unlike other forms of literature it receives no support from the magazines, which rarely publish any but short poems and these only for the purpose of filling out the page. New volumes of poetry, though usually creditable in technique and sometimes such as would in an earlier age have been widely read, nowadays sell, if at all, in absurdly small editions. We may mention the following titles: *Sable and Purple, with Other Poems*, by William Watson; *The New Inferno*, and *Pietro of Siena*, a drama, by Stephen Phillips; *Drake*, an English epic, and *The Enchanted Island* and other poems, by Alfred Noyes; a final edition of the *Poems of William Winter*; *Dorian Days*, by Wendell Phillips Stafford; *Odes on the Generations of Man*, by Hartley Burr Alexander; *Philosophies*, by Ronald Ross; *Ballads and Poems*, by John Masefield; *Reaping the Whirl-*

wind and other poems by G. F. Bradby; *Wild Fruit*, by Eden Phillpotts; *Many Gods*, and *Song-Surf*, by Cale Young Rice; *The Piper*, by Josephine Preston Peabody, a poetical drama of Hamelin which received the Stratford prize and was first performed in the Shakespeare Memorial Theatre, afterwards at the New Theatre, New York.

Prose plays in book form are more widely read than in former years, and it is becoming the custom in this country, as it has long been in Europe, to publish them shortly before or after their production on the stage. Of the two plays of Maurice Maeterlinck presented at the New Theatre in New York, *The Blue Bird* and *Mary Magdalene*, the former alone proved popular. A prose translation of Edmond Rostand's *Chantecler*, by Gertrude Hall, found many readers. From the younger American dramatists, we have *The Nigger*, by Edward Sheldon; *The Husband and The Forbidden Guest*, by John Corbin; *Theft*, by Jack London. John Galsworthy's *Justice* is a powerful arraignment of the English divorce law and prison system. Here may best be mentioned Walter Prichard Eaton's essays on the American stage, *At the New Theatre and Others*; and *The Study of the Drama*, by Brander Matthews.

ESSAYS AND LITERARY CRITICISM. The production of volumes of essays is facilitated by the custom of reprinting in this form articles that have appeared in newspapers and magazines. They are therefore likely to be attached to the subjects of temporary interest only and to be written in a somewhat hasty style, but on account of their variety, contemporaneity and cleverness, they are often as popular in book form as in periodicals. Excellent examples of this form of writing are the three volumes by Gilbert Keith Chesterton, *What's Wrong with the World?* *Alarms and Discursions*, and *Tremendous Trifles*; and the three volumes by Hilaire Belloc, *On Anything*, *On Everything* and *On Something*. William Dean Howells's recent contributions to the "Easy Chair" of *Harper's Magazine*, appear in book form under the title of *Imaginary Interviews*. *With the Professor*, by Grant Showman, consists of amiable satire on American educational tendencies. *A Silent Isle*, by Arthur Christopher Benson, possesses his usual meditative quality. *Qualities of Men*, an essay in appreciation by Joseph Jastrow, is written from a psychologist's standpoint. *Mad Shepherds and Other Human Studies*, by Lawrence Pearsall Jacks, deals with rustic mysticism. Reproduced from the *British Nation* we have: *A Modern Outlook*, studies of English and American tendencies, by J. A. Hobson; and from the *American Nation*, the seventh volume of the *Shelburne Essays* by Paul Elmer More. *Promenades of an Impressionist*, by James Gibbons Huneker, is in the style of the author's *Iconoclasts*, etc., and *Constrained Attitudes*, by Frank Moore Colby comments on educational, literary and current topics, is in the style of his *Imaginary Obligations*.

On the theory and criticism of literature, some of the important works are: *The Inspiration of Poetry*, by George Edward Woodberry; *Questionings on Criticism and Beauty*, the Romanes Lecture, 1909, by Arthur James Balfour; *The Treatment of Nature in English Poetry*, a new and enlarged edition, by Myra C. Reynolds; *The Science of Poetry and the Philosophy of Language*, by Hudson Maxim, an ambitious

attempt at "the standardization of poetry." In the Shakespeariana of the year there are over sixty titles of which about half are new editions of the plays, complete or partial. Messrs. Methuen have completed the reproduction in facsimile of the four folios of 1623, 1632, 1663, and 1685. A diligent search through some millions of documents by Prof. Charles William Wallace of the University of Nebraska has resulted in the finding of a legal case in which Shakespeare was called as a witness. His deposition concerning the payment of a dowry by Mountjoy with whom he lived is signed and adds a fifth to the Shakespeare signatures extant. (See *Harper's Magazine*, March, 1910.) Among the volumes of Shakespeare criticism may be mentioned: *The Authorship of Timon of Athens*, by E. H. Wright; *Questions of Shakespeare*, by Albert Harris Tolman; *Shakespeare's Roman Plays and Their Background*, by Mungo William MacCallum; and *English Literature during the Lifetime of Shakespeare*, by Felix Emanuel Schelling.

Other works of historical nature besides those mentioned above under *Literary Biography* are: *History of English Prosody*, from the twelfth century to the present day, by George Edward Saintsbury; *A Group of English Essayists of the Early 19th Century*, by Caleb Thomas Winchester; *Literature of the Victorian Era*, by Hugh Walker; *Essays on Modern Novelists*, by William Lyon Phelps; *Longfellow and Other Essays*, by William Peterfield Trent; *Edgar Allan Poe*, a critical study, by Arthur Ransome; *Tennyson as a Student and Poet of Nature*, by Sir Norman Lockyer and Winifred Lockyer; *The Literature of the South*, by Montrose Jonas Moses; *Maurice Hewlett*, being a critical review of his prose and poetry, by Milton Bronner; *The Romance of Bookselling*, by Frank A. Munsey; *The Cambridge History of English Literature*, volumes V and VI, containing the Drama to 1642; *The French Renaissance in England*, by Sidney Lee.

On classical and foreign literature we have: *Lectures on Greek Poetry*, by J. W. MacKail; *Essays on Greek Literature*, by Robert Yelverton Tyrrell; *Homer and the Iliad*, an essay to determine the scope and character of the original poem, by F. Melian Stawell; *Three Philosophical Poets*, Lucretius, Dante, and Goethe, by George Santayana; *Handbook to the Works of Dante*, by Frederick John Snell; *Romanticism and the Romantic School in Germany*, by Robert M. Werner; *Landmarks in Russian Literature*, by Maurice Baring; *The Spirit of Romance*, an attempt to define somewhat of the charm of the pre-Renaissance literature of Latin Europe, by Ezra Pound.

TRAVEL AND DESCRIPTION. In addition to the constant stream of books descriptive of easily accessible places and peoples, books rarely distinguished by any novelty of information or any originality of view, there is each year a special recrudescence of literature dealing with particular regions which have for personal or political reasons been brought into the public eye. In 1910 two such foci of popular interest were the North Pole and Equatorial Africa. The unique geographical event of the year, the discovery of the North Pole by Commander Peary, filled the papers and magazines for months with Arctic material. *The North Pole*, its discovery under the auspices of the Peary Arctic Club, by Robert Edwin Peary, with an

introduction by Theodore Roosevelt, narrates in unpretentious language the history of the great achievement. Among the numerous other books on Arctic exploration may be mentioned: *Hunting with the Eskimos*, by Harry Whitney; *The Great White North*, a compilation from the original narratives of the Polar search, by Helen Saunders (Smith) Wright; *The Toll of the Arctic Seas*, by Deltus M. Edwards. The hunting expedition of ex-President Theodore Roosevelt resulted not only in valuable collections for the Smithsonian Institution, but also in the volume *African Game Trails*, well illustrated with photographs by Kermit Roosevelt and others, combining zoölogical observation with hunting incidents. Other books dealing with African sport and travel are: *In Africa*, by John Tinney McCutcheon, the Chicago cartoonist; *In Wildest Africa*, by Peter MacQueen; *Big Game of Africa*, by Richard Tjader; *Hunting in British East Africa*, by Percy Child Madeira; *Lake Victoria to Khartoum with Rifle and Camera*, by Francis Arthur Dickinson; *Camera Adventures in the African Wilds*, being an account of a four months' expedition in British East Africa, by Arthur Radclyffe Dugmore; *Service and Sport in the Soudan*, by Bimbashi D. Comyn; *In the Torrid Soudan*, by Harold Lincoln Tangne; *Glimpses of East Africa and Zanzibar*, by Ethel Younghusband. Dealing chiefly with the natives of the Congo and elsewhere: *Fighting the Slave Hunters in Central Africa*, by Alfred James Swann; *George Grenfell and the Congo*, by Sir Harry Hamilton Johnston; *A Voice from the Congo*, by Herbert Ward; *Nigerian Studies or the Religious and Political System of the Yoruba*, by R. E. Dennett; *The Yellow and Dark-Skinned People of Africa South of the Zambesi*, by George McCall Theal. On Egypt old and new: *Guide to the Antiquities of Upper Egypt, from Abydos to the Sudan Frontier*, and *Travels in the Upper Egyptian Deserts*, by Arthur Edward Pearse Weigall; *Queer Things About Egypt*, by Douglas Brooke Wheelton Sladen; *Egyptian Birds*, by Charles Whympster. An account of the recent changes in Morocco is given in *The Passing of the Shereefian Empire*, by Ellis Ashmead Bartlett.

The rise of the new nationalism in Persia and the interest taken by Russia and Great Britain in the affairs of that country brought out books of widely varying character. Edward G. Browne, professor of Arabic at Cambridge, espouses the cause of Persian self-government in *The Persian Revolution of 1905-1909*. Dr. Sven-Hedin adds two more large volumes to his Asiatic explorations in *Overland to India*, the narrative of his journey from the Black Sea to Tibet. Besides which we have: *Through Persia from the Gulf to the Caspian*, by Francis Bradley Bradley-Burt; *Persia and Its People*, by Ella C. Sykes; *Persia and Turkey in Revolt*, by David Fraser. On Asiatic Turkey: *Amurath to Amurath*, by Gertrude Lowthian Bell; *By Desert Ways to Baghdad*, by Louisa Jebb; *A Military Consul in Turkey*, by Arthur Fitz-Henry Townshend; *The Land of the Hittites*, an account of the recent explorations and discoveries in Asia Minor, by John Garstang; *Fifty-three Years in Syria*, missionary experiences from 1855 to 1908, by Harry H. Jessup; *The Holy Land*, picturesquely described by Robert Smythe Hichens and illustrated by M. Guérin. There is a marked falling off in the

number of books on Japan, but there are two native works of importance: *Fifty Years of New Japan*, by Shigenobu Okuma; and *The Political Development of Japan, 1867-1909*, by George Etsujiro Ueyehara. On the other hand books on China pour from the press in increased abundance. There is also observable in recent years a marked improvement in their quality. China is no longer viewed as an object of mere curiosity, but efforts are made to understand its internal character and political movements. The mysteries of Court policies during the Boxer period are in part explained in *China under the Empress Dowager: The History of the Life and Times of Tzu Hsi*, by John Otway Percy Bland and E. Backhouse; and by the same authors, *Houseboat Days in China*. Of the numerous other volumes in this field we can only mention: *Changing China*, by Rev. Lord (Rupert) William (Ernest) Gascoyne Cecil and Florence Mary (Bootle-Wilbraham) Lady Cecil; *China and the Far East*, 22 Clark University lectures by different men, edited by George Hubbard Blakeslee; *China, Its Marvel and Mystery*, by T. Hodgson Liddell; *A Scamper Through the Far East*, including a visit to the Manchurian battlefields, by Herbert Henry Austin; *The Russian Road to China*, by Lindon Wallace Bates, Jr.; *Tramps in Dark Mongolia*, by John Hedley; *Gleanings from Fifty Years in China*, by Archibald Little; *China as I Saw It*, by A. S. Roe; *My Life in China and America*, by Yung Wing; *China*, by Mortimer Menpes; *China*, by Lena E. Johnston; *Religion of the Chinese*, by Jan Jakob Maria de Groot; *Islam in China*, by Marshall Broomhall; *Gilds of China*, with an account of the Gild Merchant or Cohong of Canton, by Hosea Ballou Morse.

India has also attracted an unusual amount of attention, on account of its political unrest and besides the books dealing with this phase, there are some ethnological and geographical works of permanent value. The following list is representative of the various kinds: *Castes and Tribes of Southern India*, by Edgar Thurston, superintendent of the Madras Museum, an encyclopædic work in seven volumes; *Sikhism and Bhutan*, twenty-one years on the northeast frontier of India, 1887-1908, by John Claude White; *The Sikh Religion*, its Gurus, sacred writings and authors, in six volumes, by Max Arthur Macauliffe; *Peaks and Glaciers of Nun Kun*, a record of pioneer exploration and mountaineering in Punjab Himalaya, by Mrs. Fanny Bullock Workman and William Hunter Workman; *Twenty Years in the Himalaya*, by Major C. G. Bruce; *Jungle Byways in India*, by E. P. Stebbing; *The Gates of India*, by Sir Thomas Hungerford Holdich; *India and Tibet*, by Sir Francis Younghusband, leader of the British Mission to Lhasa in 1904; *Modern India*, by Sir J. D. Rees; *Indian Unrest*, by Valentine Chirol; *The Awakening of India*, by J. Ramsay MacDonald; and *India*, by J. Keir Hardie. The two volumes last named are critical of the British administration. The volumes by Rees and Chirol are written from the imperialistic standpoint. Here may be conveniently mentioned: *Travel and Sport in Turkestan*, by John Nicholas Price Wood; *On and Off Duty in Anam*, by Gabrielle M. Vassal; *The Shans at Home*, by Mrs. Leslie Milne; *Ancient Ceylon*, the aborigines and early civilization, by H. Parker; *Melanesians of British New Guinea*, by

Charles Gabriel Seligman; *The Maoris of New Zealand*, by James Cowan; *Wanderings Among South Sea Savages and in Borneo and the Philippines*, by H. Wilfred Walker; *The New New Guinea*, by Beatrice Grimshaw; *Melanesians and Polynesians*, by George Brown; *Coral and Atolls*, by F. Wood-Jones; *A Vagabond Journey Around the World*, by Harry Alverson Franck.

Geographical literature on the United States and Canada shows of late a fondness for waterways: *The Mississippi River and Its Wonderful Valley*, by Julius Chambers; *Lake George and Lake Champlain*, by William Maxwell Reid; *American Inland Waterways*, by Herbert Quick; *The Picturesque St. Lawrence*, by Clifton Johnson; and *Highways and Byways of the Rocky Mountains*, by the same author; *The Old North Trail*, life, legends, and religion of the Blackfeet Indians, by Walter McClintock; *My Friend the Indian*, by James McLaughlin, experiences of an old Indian fighter; *Romantic California*, a painter's view, by Ernest Clifford Peixotto; *The New North*, by Agnes Deans Cameron; *The Great Pacific Coast*, by C. Reginald Enock.

Books on countries south of the United States are more numerous than ever: *Terry's Mexico*, a handbook for travelers; *Beyond the Mexican Sierras*, by Dillon Wallace; *Cuba*, by Irene Aloha Wright; *Health, Progress, and Administration in the West Indies and Mosquito or Man?* "The Conquest of the Tropical World," by Sir Rubert William Boyce; *Central America and Its Problems*, a journey from the Rio Grande to Panama, by Frederick Palmer; *Panama and the Canal To-day*, by Forbes Lindsay; *Our Search for a Wilderness*, ornithological trips up the Orinoco and in Guiana, by Mary Blair Beebe and Charles William Beebe; *Following the Conquistadores* up the Orinoco and down the Magdalena, by H. J. Mozans; *The Incas of Peru*, by Sir Clements Markham; *Islands of Titicaca and Koati*, by Adolph Francis Alphonse Bandler, an exhaustive archaeological study; *Argentina Past and Present* by W. H. Koebel; *Argentina*, by William Alfred Hirst; *The Andes and the Amazon*, by C. Reginald Enock; *Brazil*, by N. O. Winter.

Books of travel as distinguished from exploration indicate changes in the trend of tourist currents. The popularity of the Mediterranean cruise has brought out a number of volumes on the islands of the Mediterranean aiming to supplement the guide-book and to supply the sightseer with such historical information and art criticism as he needs to appreciate what he sees. Greater interest than formerly is manifested in Spain, and the revolution in Turkey has called out books of travel as well as ethnological studies. The following list of representative books on European countries will serve to illustrate these characteristics: *The Mediterranean and Its Borderlands*, by Joel Cook; *A Mediterranean Cruise*, by Bruce Millard; *Elba and Elsewhere*, by Don Carlos Seitz; *Romantic Corsica*, by George Renwick; *Diversions in Sicily*, by Henry Festing Jones; *Sicilian Days and Ways*, by Louise Caico; *Susan in Sicily*, by Josephine Tozier; *My Experiences of Cyprus*, by Basil Stewart; *Greek Lands and Letters*, by Francis Greenleaf Allinson and Anne Crosby Emery Allinson; *Italian Fantasies*, by Israel Zangwill, humorous and poetic reflections on the art and life of Italy; *Bologna*, its history, antiquities, and art, by Edith E. Coulson James; *Rome*, by Edward

Hutton; *Pompeii*, by William Munro MacKenzie; *Walks and People in Tuscany*, by Sir Francis Patrick Fletcher Vane; *Siena and Southern Tuscany*, by Edward Hutton; *In and Out of Florence*, a new introduction to a well-known city, by Vernon Lyman Kellogg (Max Vernon); *Spain of the Spanish*, by Mrs. Janie Villiers Wardell; *A Corner in Spain*, by Walter Wood; *Spain from Within*, by Rafael Shaw; *Quiet Days in Spain*, by C. Bogue Luffman; *Rambles in Spain*, by John Driscoll Fitz-Gerald; *Cathedral Cities in Spain*, by W. W. Collins; *Portugal*, its land and people, by W. H. Koebel; *Unexplored Spain*, by Abel Chapman and Walter J. Buck; *The Revolution in Constantinople and Turkey in 1909*, by Sir William Mitchell Ramsay; *The Fall of Abd-ul-Hamid*, by Francis McCulloch; *Bosnia and Herzegovina*, by Maude M. Holbach; *The Servian People*, by Prince Lazarovich-Hrebelianovich; *Hungary*, by Adrian and Marianne Stokes; *Bohemia and the Czechs*, by Will Seymour Monroe; *Finland as It Is*, by Harry De Windt; *In the Rhone Country*, by Rose Kingsley; *Brittany and the Bretons*, by George Wharton Edwards; *Switzerland of the Swiss*, by Franck Webb; *A Wanderer in Paris*, by E. V. Lucas; *The Real France*, by Lawrence Jerrold; *A Scot in France and Switzerland*, by D. T. Holmes; *Rivers and Streams of England*, by Arthur Granville Bradley; *Avon and Shakespeare's Country*, a discreetly historical work by the same author; *The Tower of London*, by Richard Davey; *Cathedral Churches of England*, by Helen Marshall Pratt.

PHILOSOPHY AND RELIGION. Special bibliographies may be found in the articles on PHILOSOPHY, PSYCHOLOGY, EDUCATION, BIBLICAL CRITICISM, etc., but here should be mentioned some works of interest to the general reader. Pragmatism continues to be the storm centre in speculative thought. *The Pluralistic Universe*, by the late William James, introduced to the general reader the French philosopher Henri Louis Bergson, and we have translations of two of his works; *Matter and Memory* and *Time and Free Will* (*Essai sur les données immédiates de la conscience*), with the promise of his *Creative Evolution*. Other works for and against the pragmatic philosophy are: *How We Think* and *The Influence of Darwin on Philosophy and Other Essays on Contemporary Thought*, by John Dewey; a new edition of the *Riddles of the Sphinx*, by F. C. S. Schiller; *The Principles of Pragmatism*, by Henry Heath Bawden; *Pragmatism and Its Critics*, by Addison Webster Moore; *Philosophical Essays*, by Bertrand Russell; *Old Criticism and New Pragmatism*, by John M. O'Sullivan; *Anti-Pragmatism*, by Albert Schinz; *Theology and Human Problems*, by Eugene William Lyman. The following titles are representative of the leading topics of philosophical and religious thought during the year: *Psychology of Religious Experience*, by Edward Scribner Ames; *The Development of Religion*, a study in anthropology and social psychology, by Irving King; *Twice-Born Men*, a clinic in regeneration, by Harold Begbie; *Regeneration*, being an account of the social work of the Salvation Army in Great Britain, by H. Rider Haggard; *Spiritual Unrest*, by Ray Stannard Baker; *The Durable Satisfaction of Life*, by Charles William Eliot; *The Gospel and the Modern Man*, by Shailer Mathews; *The Faith of a Layman*, by William Frederick Osborne; *Personality and the Christian Ideal*, by John

Wright Buckham; *Individualism*, by Warner Fite; *The Church and the World in Idea and History*, by Walter Hobbouse; *Knowledge, Life, and Reality*, by George Trumbull Ladd; *The World a Spiritual System*, by James Henry Snowden; *Idealism as a Practical Creed*, by Henry Jones; *Reason and Belief*, and *The Survival of Man*, by Sir Oliver Joseph Lodge; *Subconscious Phenomena*, by Hugo Münsterberg; T. Ribot, and others; *The Newer Spiritualism*, by Frank Podmore; *Consciousness*, by Henry Rutgers Marshall; *Philosophy of the Enlightenment*, by John Grier Hibben; *Stoic and Epicurean*, by Robert Drew Hicks.

**POLITICAL AND SOCIAL SCIENCE.** The more striking characteristic of the year is the increased attention being given to problems of heredity, eugenics, immigration and race conflicts. Besides a translation from the German by James Lees of Houston Stewart Chamberlain's *Foundations of the Nineteenth Century*, we have among many others: *The Conflict of Color*, by "B. L. Putnam Weale" (Bertram Lenox Simpson), directed against the "yellow peril"; *The Negro in the New World*, by Sir Harry H. Johnston; *The Southern South*, by Albert Bushnell Hart; *The Story of the Negro*, by Booker Taliaferro Washington; *Through Afro-America*, an English reading of the race problem, by William Archer; *Race Distinctions in American Law*, by G. T. Stephenson; *The Indian and His Problem*, by Francis Ellington Leupp; *Our Slavic Fellow Citizens*, by Emily Greene Balch; *The German Element in the United States*, by Albert Bernhardt Faust; *The Jews*, a study of race and environment, by Maurice Fishberg; *The Family and the Nation*, a study in natural inheritance and social responsibility, by William Cecil Dampier Whetham and Catherine Durning Whetham; *Parenthood and Race Culture*, by C. W. Saleeby; *Laws of Heredity*, by George Archdall O'Brien Reid; *Eugenics*, by Charles B. Davenport. The political and economic status of woman is the subject of many volumes: *Equal Suffrage*, an investigation of the workings of woman suffrage in Colorado, by Helen Laura Sumner; *The Wrong and Peril of Woman Suffrage*, by James Monroe Buckley; *What Eight Million Women Want*, by Rita Childe Dorr; *Women in Industry*, by Edith Abbott; *Women and the Trades*, Pittsburg, 1907-1908, by Elizabeth Beardsley Butler; *The Education of Women*, by Marion Talbot; *The Lady*, studies of certain phases of her history, by Emily James (Smith) Putnam; *Wage Earning Women*, by Annie Marion MacLean; *Short History of Progress of Woman's Rights, from the Days of Augustus to the Present Time*, by Eugene A. Hecker.

As in former years, labor questions, socialism, municipal government, and political reform are prominently represented in the books of 1910: *Labor in Europe and America*, by Samuel Gompers; *The Future of Trade Unionism and Capitalism in a Democracy*, by Charles William Eliot; *Men, the Workers*, by Henry Demarest Lloyd; *Latter Day Sinners and Saints*, by Edward Alsworth Ross; *Twentieth Century Socialism*, what it is not, what it is, how it will come, by Edmond Kelly; *The Menace of Socialism*, English in data and tone, by W. Lawler Wilson; *Democracy and the Overman*, by Charles Zueblin; *Men versus The Man*, letters on Socialism, by Robert Rives La Monte and Henry Louis Mencken; *The New Socialism*,

an impartial inquiry, by Jane T. Stoddart; *Socialism and the Social Movement*, by Werner Sombart; *Economic Causes of Great Fortunes*, by Anna Youngman; *The History of the Great American Fortunes*, in three volumes, by Gustavus Myers; *Types from City Streets*, by Hutchins Hapgood; *Housing Reform*, a handbook for practical use in American cities, by Lawrence Veiller; *Great Cities in America*, their problems and their government, and *Municipal Franchises*, by Delos Franklin Wilcox; *Dethronement of the City Boss*, by John Judson Hamilton; *American Problems from the point of view of a psychologist*, by Hugo Münsterberg; *Popular Law Making*, by Frederic Jesup Stimson ("J. S. of Dale"); *American Government and Politics*, by Charles Austin Beard; a new edition of the *American Commonwealth and Hindrances to Good Citizenship*, Yale lectures, by James Bryce; *People's Law*, popular participation in law-making from ancient folk-moot to modern referendum, a study in the evolution of democracy and direct legislation, by Charles Sumner Lobingier; *Privilege and Democracy in America*, by Frederic Clemson Howe, a disciple of Henry George; *Darwinism and Modern Socialism*, by Frederick Webb Headley; *Highways of Progress*, by James J. Hill; *Economics of Railway Transport*, by Sydney Charles Williams; *Government Ownership of Railways* considered as the next step in American progress, by Anthony Van Wagenen; *Conservation of Natural Resources in the United States* by Charles Richard Van Hise; *The Old Order Changeth*, by William Allen White, an optimistic view of democracy in action; *The Spirit of America*, seven of the Hyde lectures given at the University of Paris in 1909, by Henry Van Dyke; *Conditions of Progress in Democratic Government*, by Charles Evans Hughes; *The Junior Republic*, by William Reuben George; *Totemism and Exogamy*, a treatise on certain early forms of superstition and society by James George Fraser; *Punishment and Reformation*, a study of the penitentiary system by Frederick Howard Wines; *The Humane Movement*, a descriptive survey, prepared on the Henry Bergh Foundation for the promotion of humane education in Columbia University, by Roswell Cheney McCrea; *Conquest of Disease through Animal Experimentation*, a calm and convincing study of vivisection, by James Peter Warbasse; *Ancient and Modern Imperialism*, by Evelyn Baring, Earl of Cromer; *The Project of Empire*, a critical study of the economics of imperialism, with special reference to the ideas of Adam Smith, by Joseph Shield Nicholson; *The Hague Peace Conferences* and other international conferences concerning the laws and usages of war by Alexander Pearce Higgins; *The Great Illusion*, an investigation of the economics of war, by Norman Angell. **LOAN AND TRUST COMPANIES.** The growth of banking institutions in the United States during the past ten or twelve years has no parallel in other countries; yet loan and trust companies have experienced by far the most rapid part of this growth. According to the report of the Comptroller of the Currency they numbered 246 in 1898; 683 in 1905; 842 in 1908; 1079 in 1909, and 1091 in 1910. Their aggregate resources in 1908 were \$2,865,600,000; on June 30, 1910, they were \$4,216,850,000, an increase of 48 per cent. in two years. This growth is accounted for by the great scope of the activities of these companies, including the banking operations of commercial and savings banks and the special care of trust estates; and also by the great freedom from restrictions as compared with national banks. The prominence of trust companies in the panic of 1907 led to an increased requirement of reserve against deposits. During the year Senator Aldrich, head of the National Monetary Commission (q. v.), and Secretary of the Treasury, MacVeagh, advocated the extension of the privileges of national banks so as to allow them to compete with trust companies in their special field. The assets of these companies in June, 1910, included: loans and discounts, \$2,256,572,000; bonds and other securities, \$1,000,263,000; cash on hand, \$260,129,000. Their liabilities included: capital, \$367,333,000; surplus, \$432,718,000; individual deposits, \$3,073,122,000. They had 3,572,169 depositors, of whom 2,260,268 had savings accounts. They held 14.2 per cent. of all bank deposits in 1900, and 20.1 per cent. in 1910.

The Eastern States had 505 of these companies, with aggregate resources of \$2,657,262,000; the Middle Western States had 242, with resources of \$877,839,000; and New England 158, with resources of \$532,567,000. Pennsylvania alone had 304, with resources of \$716,469,000; and New York had 85, with \$1,622,000,000 resources. There were 129 in the Southern States; 32 in the Western; and 25 in the Pacific States.

*Bradstreet's* reported only 3 failures of loan and trust companies during the year. This compared with 6 in 1909, 15 in 1908, and 17 in 1907. The total liabilities were only \$276,000, and assets \$172,000, these figures being smaller than in any year since 1893, except 1895, 1900, 1901, and 1902. They contrasted sharply with liabilities of \$4,185,000 in 1909; \$12,547,800 in 1908, and \$118,338,000 in 1907. See **BANKS AND BANKING**.

The foregoing data refer only to those companies doing a banking business and reporting voluntarily to the Comptroller of the Currency. A compilation, *Trust Companies of the United States*, reported 1527 companies on June 30. From this report it appears that the value of estates held in trust and administered by these companies approximates twenty-five billion dollars, a sum indicating that with many of these companies the strictly trust business is vastly more important than their banking business.

**LONDON, DECLARATION OF.** The Declaration signed by the representatives of the leading naval Powers in the conference held in London from December, 1908, to February, 1909, on the subject of rules of prize in naval warfare was the subject of much discussion in 1910. The important convention of The Hague Conference of 1907 providing for an International Prize Court had not been ratified by the Powers on account of the indeterminate basis for the proposed court's decisions, and in 1908 the British government invited the representatives of the nine chief naval Powers to meet in conference at London "in order to arrive at an agreement as to what are the generally recognized rules of international law within the meaning of the convention relative to the establishment of an International Prize Court." The conference resulted in the Declaration of London, which in 1910 was still awaiting ratification. In general it aimed at reform, not by radical changes, but by a greater degree of certainty and uniformity in present practice. Its chief proposal was the precise determination of contraband articles. On this point it followed the traditional English prize law usage of a division of contraband goods into articles absolutely contraband and articles conditionally contraband. To the former class belong arms, equipments, etc., used exclusively for war, and to the latter foodstuffs, clothing, fuel and other materials which may be used either for war or for peaceful purposes. The former class is liable to capture if "shown to be destined to territory belonging to or occupied by the enemy or the armed forces of the enemy." Conditional contraband is liable to capture only when taken on a vessel bound for the enemy's territory, unless the enemy has no seaboard, in which case its ultimate destination determines its status. Thus the doctrine of "continuous voyage" applies to absolute contraband but not to conditional contraband, unless the country is without a seaboard. Articles not susceptible of war use may not be declared contraband. The vessels carrying contraband may be condemned if the goods form more than half of the cargo. Neutral prize vessels or their cargoes are not to be destroyed except for reasons of "exceptional necessity." Neutral vessels under convoy are to be immune from search. As to block-

ade the English rule is to be followed with some slight modifications. To be binding, a blockade "must be maintained by a force sufficient really to prevent access to the enemy's coast line." The doctrine of "continuous voyage" is not to apply to blockade. Knowledge of blockade is to be presumed if the neutral vessel has left port after her government has been notified of the blockade; but the neutral vessel must receive notice if she approaches the blockaded port without knowledge, actual or presumptive. Further provisions of the Declaration concern the unneutral service of neutral vessels, resistance to search, the transfer of the enemy's merchant vessels to a neutral flag, compensation to neutrals for injuries, etc. In certain quarters the rules laid down in the Declaration were severely criticised. The London Chamber of Commerce, for example, protested against ratification of it in its present form (November 14, 1910), urging among other reasons that it radically altered the Law of Nations, that it exposed food supplies in neutral vessels to capture or destruction, that it contained no provision against the conversion of merchant ships into commerce destroyers, that the principle of the destruction of neutral prizes would work injury, that it would impair the nation's strength in time of war, and in general that it was framed without regard to the difference in situation between Great Britain and Continental countries, the former being an island and without neutral ports to fall back upon.

**LOOFTZ, LUDWIG VON.** A German painter, died December, 1910. He was born at Darmstadt in 1845 and was a pupil of Kreling and Raupp at Nuremberg and then of Diez at the Academy of Munich where in 1879 he became professor. He was made director of this institution in 1891, serving in that position until 1899. His paintings showed great technical skill and are of great perfection. They include "A Cardinal Playing the Organ" (1876), "A Picture of Franz Liszt," "Avarice and Love" (1879), in the Vanderbilt collection, New York City, and "Erasmus in his Study." He won a gold medal at the International Exhibition in Munich in 1883 with the "Pieta." For the Cathedral at Freising he painted in 1889 a large altar piece, "The Assumption of the Virgin."

**LOOKER, THOMAS HENRY.** Rear-Admiral, retired, of the United States Navy, died July 21, 1910. He was born in Cincinnati in 1829, and was educated at the United States Naval Academy. He was appointed midshipman in 1846, but resigned in 1852. In the following year he was appointed purser in the United States Navy, serving until 1871, when he became pay director. In 1906 he was retired with the rank of rear-admiral for creditable service during the Civil War. In 1877 he was assistant to the Secretary of the Navy and in 1889-90 was general inspector of the pay corps. In the latter year he was appointed paymaster-general.

**LOUISIANA.** One of the Gulf States of the United States. It has an area of 48,506 square miles, of which 3097 square miles are water. Its capital is Baton Rouge.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,656,399, as compared with 1,381,825 in 1900 and 1,118,588 in 1890. The gain in the decade 1900 to 1910 was 19.9 per cent. The State ranks twenty-fourth in point of population whereas in 1900 it ranked twenty-third. The population of the larger cities and towns will be found in the tables in the article **UNITED STATES CENSUS.**

**MINERAL PRODUCTION.** The most important mineral product of the State is petroleum. There were produced in 1909 3,059,531 barrels, valued at \$2,022,449. This was a great decrease from the production of 1908, which was 5,778,874 barrels valued at \$3,503,419. The production is chiefly from the Jennings and Caddo fields. In 1910 three important gushers were struck in the oil field and there was a considerable increase in the production in the north-western part of the State in which this field is situated, as compared with a decline in the southern part of the State. The output of oil increased notably during the year and amounted to over \$5,000,000. This required the construction of two additional pipe lines to Texas ports. The pipe line of the Standard Oil Company was completed during the year from Oklahoma to the refinery at Baton Rouge, La. The State legislature passed measures during the year, calling for a vote of the people on the establishment of a system of protection against the waste of natural gas in the Caddo field. The resultant vote ratified these measures. In October the Standard Oil Company purchased over 100,000 acres of proved oil territory in the James Bayou region and actively continued development work during the year. Other important acquisitions by lease were made by the Producers' Oil Company. The State is a large producer of sulphur in which it dominates the world's trade. It also produces large quantities of salt. The clay products are important as is also the mineral water.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	2,293,600	58,835,000	\$32,359,000
1909.....	2,228,000	51,198,000	35,327,000
Oats, 1910.....	36,000	774,000	379,000
1909.....	32,000	640,000	397,000
Rice, 1910.....	371,200	12,769,000	8,555,000
1909.....	375,000	12,679,000	10,013,000
Potatoes, 1910..	20,000	1,100,000	990,000
1909.....	16,000	1,200,000	1,092,000
Hay, 1910.....	25,000	44,000a	506,000
1909.....	23,000	34,000	394,000
Tobacco, 1910..	500	275,600b	682,750
1909.....	400	220,000	81,400
Cotton, 1910....		280,000c	
1909.....		253,412	

a Tons. b Pounds. c Bales.

**EDUCATION.** The total enrollment in the elementary schools of the State in 1909 was 174,984, of whom 78,862 were colored. The average attendance in the elementary schools was, 128,022 white pupils, and 54,637 colored. The average monthly salary of white male teachers is \$75.29, white female teachers, \$50.80; of colored male teachers, \$34.25, colored female teachers, \$28.67. The total value of the school property in the State is \$7,805,926. The total disbursements for the fiscal year ending July 1, 1910, were \$4,470,883. The total number of teachers, white and colored male and female, was 6286.

#### POLITICS AND GOVERNMENT

**LEGISLATIVE SESSION.** Louisiana was one of the few States in which the legislature was in session in 1910. Besides the regular session which convened in May, two extra sessions were held. At the regular session the matter of ratifying or rejecting the income tax amendment to the Federal constitution resulted in complications. Governor Sanders in referring the question to the General Assembly on May 16 declared his opposition on the ground that it would permit Congress to tax the income from State bonds and thus practically tax State bonds, a power which it does not now possess. This view was endorsed to some extent by the press of the State which had hitherto supported the amendment. The Speaker of the House, however, favored the passage of the amendment as a Democratic measure. The Senate agreed with the attitude of the governor and sought to dispose of the question by declaring in favor of submitting the proposition to the voters by referendum, the voters to decide and to instruct the next legislature how to vote on the question. This would delay action on the matter for two years and would leave the result largely dependent on which faction won in the Democratic primary. On June 2 the House approved the amendment which had already been rejected by the Senate.

Senator McEnery (q. v.) died in July, and it was necessary for the legislature, then in regular session, to elect his successor. That body chose Governor Jared Young Sanders. Governor Sanders accepted the office, asking for a few weeks in which to finish up his affairs as governor. In the meanwhile the legislature was called in extra session. Following its adjournment the governor withdrew his acceptance of the senatorship on the ground that he could accomplish more in bringing to New Orleans the Panama Exposition as governor than as United States Senator. He appointed as Senator, to fill out the unexpired term of Senator McEnery, Judge T. B. Thornton of Alexandria. The action of Governor Sanders in declining the office to which he had been elected by the legislature and naming another man to fill the vacancy was without precedent, and there was some doubt as to whether the appointment of Judge Thornton would be accepted by the United States Senate. In November it became apparent that a second extraordinary session of the legislature would be necessary to amend an act passed at the regular session authorizing the Sewerage and Water Board of New Orleans to sell bonds for the completion of certain public improvements. When the legislature met in extra session December 6, Judge Thornton was duly elected United States Senator by a large majority, but

only after a contest that emphasized the division in the Democratic party of the State. The legislature of Louisiana is unanimously Democratic. The laws of the State require that all United States Senators shall be nominated by primary, and the opposition to the present administration urged the legislature to submit the names of candidates to the voters. The General Assembly, by a vote of 87 to 53, refused to do this, and ratified the appointment made by Governor Sanders by electing Judge Thornton.

The first extra session of the legislature was called primarily to pass upon a constitutional amendment, later submitted to and ratified by the voters of the State, authorizing a special tax to raise \$6,500,000 for the World's Panama Exposition in New Orleans in 1915.

**PARTY POLITICS.** Dissatisfaction with the methods of the administration of the State and the city of New Orleans resulted in the organization of the Democratic Good Government League, which promises to take a prominent part in the political affairs of the State and city in 1912.

The regular Democratic organization in New Orleans has for the past ten years been in absolute control of all public offices. The organization is dominated by the leaders of the seventeen wards of the city. These seventeen leaders are known locally as the "bosses" and their organization as the "ring." Their emblem is the rooster.

City and State elections are held every four years—the State elections in April, the city elections the following November. To qualify to vote in any of these elections it is necessary to have paid the poll tax the two preceding years—to vote in 1912, one must have paid the poll tax in 1910 and 1911.

At the last State election the vote of New Orleans was about 33,000. There was no opposition to the "ring" in the city election of 1908. The poll taxes paid for 1910 (52,052) indicate that the vote in 1912 will be much larger than in past years.

Identified with the Democratic Good Government League are many of the most prominent men of the State. The league has permanent quarters in New Orleans, and is perfecting a very thorough organization throughout the State. Its policy is to keep out of municipal and parish contests, outside of New Orleans, and to devote all its attention to the election of State officers, members of the legislature and all the officials of New Orleans. The reason given for taking part in the affairs of the city is that the city "ring" practically controls the State machine. In municipal elections, any reform or independent movement can depend upon practically solid support from the Republicans. In New Orleans, every time there has been a serious independent movement or campaign, the "ring" has been defeated.

Congressman Samuel L. Gilmore, representing the Second District of Louisiana (comprising nine wards of the city of New Orleans and four rural parishes or counties) died July 18. H. Garland Dupre of New Orleans was elected to fill the vacancy for the unexpired term and to the regular term beginning March 4, 1911. At the time of his election to Congress, Mr. Dupre was Speaker of the House in the General Assembly and first assistant City Attorney of New Orleans.

**OTHER EVENTS.** A strong propaganda was carried on during the year to bring the Panama Exposition, to be held in 1915, to New Orleans, and in the November election among the measures voted on was the constitutional amendment (mentioned above) permitting the State to raise \$6,500,000 for the proposed exposition in New Orleans. An investigation by the Federal grand jury, carried on in April against alleged frauds in weighing sugar at the Custom House at New Orleans showed that no such frauds had been perpetrated. During the year arrangements were made by the immigration authorities of the State to bring 1000 peasant families from France to settle and cultivate 50,000 acres of land in the southwestern part of the State. This movement had its inception in the activities of a French citizen, Gustav Camoin. He came to Louisiana and signed a preliminary contract for the purchase of the land. He then returned to France, organized two corporations and made a lecture tour of the provinces telling of the salubrity and fruitfulness of the State. The first 100 families of the new immigration will land at New Orleans in February, 1911. Others will follow as fast as the land can be opened up for settlement. On April 22 the city of Lake Charles was practically destroyed by fire, which rendered 3000 people homeless, and destroyed property valued at over \$3,000,000. The fire started in the centre of the city's business district and spread into the residential quarters. Many beautiful and historic homes were destroyed and among the public buildings burned were the new Court House and City Hall. The Catholic church and convent which dates before American occupation of Louisiana was burned.

The most important business development of the year was the movement of Northern and Western farmers to the southern part of central Louisiana. Within the past five years many millions of Northern capital have been invested in the "marsh lands" of Louisiana. Wide areas that were once considered useless, because subject to overflows, have been reclaimed by the modern system of levees that protect them from the annual floods of the Mississippi and other rivers, and by an extensive system of drainage canals have been prepared for cultivation. These lands are now producing remarkable crops of vegetables and farm products of all kinds. During the past autumn and winter there has been a steady movement of Northern and Western farmers to this part of Louisiana, and present indications are that this immigration will add much to the wealth and prosperity of the State.

**STATE OFFICERS.** Governor, J. Y. Sanders; Lieutenant-Governor, P. M. Lambbement; Secretary of State, J. T. Michel; Auditor, Paul Capdeville; Treasurer, O. B. Steele; Attorney-General, Walter Guion; Superintendent of Education, T. H. Harris; Commissioner of Agriculture, Charles Schuler; Commissioner of Insurance, Eugene J. McGuney; Commissioner of Public Lands, Fred J. Grace—all Democrats.

**SUPREME COURT.** Chief Justice, J. A. Breaux; Associate Justices, A. D. Land, F. T. Nichols, Frank A. Monroe, O. O. Provosty; Clerk, Paul E. Mortimer—all Democrats.

**STATE LEGISLATURE, 1911.** Both Houses Democratic: Senate, 41; House, 116.

**LOVERING, WILLIAM C.** An American public official, member of Congress from Massa-

chusetts, died Feb. 4, 1910. He was born in Rhode Island in 1835 and was educated at the Cambridge High School and the Hopkins Classical School. He entered the field of cotton manufacturing and soon became manager of the Whittenton Manufacturing Company of Taunton, Mass. He subsequently became director and manager of many other cotton manufacturing. During the Civil War he served for a time as engineer at Fortress Monroe, but was obliged to resign from the service on account of ill health. In 1874-5 he was a Senator in the Massachusetts legislature and in 1880 he was a delegate to the National Republican Convention. From 1897 to 1903 he was a member of Congress from the 12th Massachusetts district and from 1903 to the time of his death from the 14th district. Mr. Lovering was the oldest member of the Massachusetts delegation in Congress and was serving his seventh consecutive term.

**LOW, ALEXANDER.** A Scotch jurist, died October 14, 1910. He was born in 1845 and was educated at Cambridge University and at Edinburgh University. In 1870 he was admitted as a member of the Faculty of Advocates. In 1889 he was appointed sheriff of Ross, Cromarty and Sutherland, but occupied that position only until 1890, when he was raised to the bench, taking the title of Lord Low. During his service he decided a number of important cases. The most notable of these was that which arose out of the union of the Free and the United Presbyterian churches. Lord Low decided the case in favor of the defendants, but upon appeal to the House of Lords the judgment was reversed.

**LUTHERAN CHURCH.** A religious denomination which includes the largest body of Protestants in the world, and is the mother church of the Protestant faith. It is found in nearly all parts of Europe and in Australia and North and South America in the largest numbers. Churches of the denomination, however, are scattered throughout the world. The denomination is carried on under Congregational, Presbyterian and Episcopal forms and church government is not considered essential. The great organizer of the church in the United States was Heinrich Melchior Muhlenberg, who arrived in 1742 and founded the ministerium of Pennsylvania, the mother Lutheran Synod in the United States, in 1748. The divisions of the denomination in the United States, with statistics in 1910, will be found below. The General Council, which is prevailingly English, but teaches the Gospel in German, Swedish and French, was founded in 1867. The Synodical Conference, prevailingly German, was founded in 1871. The United Synod of the South was founded in 1886. The four general bodies of Lutherans embrace two-thirds of the Lutherans in the United States. The chief independent synods are the United Norwegian Synod, the

Joint Synod of Ohio and the German Iowa Synod.

According to the religious census made by the United States in 1906 and published in 1910, the total number of communicants of the Lutheran faith in the former year was 2,112,494, with 11,194 church edifices and 7841 ministers. Statistics were taken of twenty-four Lutheran bodies. The statistics of the denomination given below are from the church authorities:

**THE GENERAL COUNCIL.** Ministers, 1590; congregations, 2461; communicant members, 479,575; value of church property, \$28,388, graded Bible schools of this section of the 301.00; benevolent offerings, \$519,093.55. The church number 2134, with 28,874 teachers and 260,466 pupils. In addition there are 594 parochial schools, with 26,588 pupils.

**THE GENERAL SYNOD.** Ministers, 1326; congregations, 1807; communicants, 286,325; church property, \$19,809,312; benevolent offerings, \$454,843.40; Sunday schools, 1715, with 28,401 teachers and 259,673 pupils.

**SYNODICAL CONFERENCE.** Ministers, 2713; congregations, 3356; communicants, 766,281; benevolent offerings, \$822,910.32; Sunday schools, 849; teachers, 4406; pupils, 98,370. This branch maintains 2655 parochial schools with 132,927 pupils.

**UNITED SYNOD OF THE SOUTH.** Ministers, 243; congregations, 464; communicants, 48,601; church property, \$2,042,942.00; benevolent offerings, \$72,244.83; Sunday schools, 369; teachers, 3797; pupils, 30,393.

**INDEPENDENT SYNODS.** Ministers, 2696; congregations, 5861; communicants, 624,029; church property, \$15,009,097.00; benevolent offerings, \$734,648.74; Sunday schools, 2363; teachers, 14,112; pupils, 152,670; parochial schools, 1577; pupils, 83,583.

**GRAND TOTAL.** Ministers, 8558; congregations, 13,939; communicants, 2,204,811; property (less Synodical Conference not reported), \$65,249,652.00; benevolence, \$2,603,740.84; Sunday schools, 7428; teachers, 79,590; pupils, 801,584; parochial schools, 4862; pupils, 244,198.

Probably the most significant movement of the year was toward strengthening theological educational work. The Chicago Theological Seminary has erected an entirely new and very complete group of buildings to the number of ten. The Philadelphia Theological Seminary inducted one new professor and created two more new chairs and also started the endowment of its magnificent Krauth Memorial Library. A new theological seminary for the Pacific Coast has been started on the Pacific Coast and still another determined upon by the several synods of Canada to be located in Toronto. All these have been within the General Council which has also perfected its relations with the seminary at Kropp, Germany, for the securing of missionary pastors for German-American mission work. The United Synod of the South has relocated its Seminary and has fine new buildings under construction at Columbia, S. C. This body is also at the same time engaged in establishing a seminary for its foreign work in Japan. Meanwhile a new Seminary has been opened, or rather an old one re-established in Michigan. The Missouri Synod significantly reports the largest attendance in its history at the Theological Seminary of that large German body in St. Louis, Mo.

All three Seminaries are conservative and teach the gospel of Christ in its original sense.

**LUXEMBURG.** An independent neutral grand-duchy in central Europe. Area, 998 square miles; population (1907), 250,911, nearly all Roman Catholics. Capital, Luxemburg (20,682 inhabitants), a dismantled fortress. Iron ore is the chief product. Mineral output (1908), 5,799,280 metric tons, valued at \$696,250 (miners, 5438). Luxemburg is a member of the German Customs Union. Railways (1907), 340 miles; telegraph lines, 680 (1410 miles of wires); telephone lines, 1030 (2990 miles of wires); telegraph offices, 227; post-offices, 116. Revenue (1910), estimated at 18,299,174 francs, including extraordinary (1909, 17,819,619); expenditure, including extraordinary, 18,656,619 francs (1909, 18,561,614); annuities, 493,130. Debt, 12,000,000 francs. Reigning grandduke, Wilhelm, born April 22, 1852; succeeded November 17, 1905; married June 21, 1893, Princess Maria Anna of Braganza (regent since November 18, 1908). Heiress-apparent (Act of July 6, 1907), Princess Marie, born June 14, 1894. A chamber of deputies (45 members) is directly elected by the cantons.

**LYMPH.** See TUBERCULOSIS.

**MCADOO, WILLIAM GIBBS.** See TUNNELS.

**MACAO.** A city on the Chinese island of Macao, at the mouth of the Canton River, constituting, with Coloane and Taipa (small adjacent islands), a Portuguese dependency. Area, 4 square miles; population, 63,991 (12,894 in Coloane and Taipa), of whom 3919 are white. The city has two wards, one Chinese, one non-Chinese, each with its own administrator. Imports (1908), 18,697,415 dollars Mexican (in junks, 5,253,621); exports, 17,755,135 (in junks, 7,050,299). The trade is largely transit, and in the hands of Chinese. Merchant vessels entered, 1895, of 1,005,595 tons; junks, 4655, of 3,999,350 piculs. Military force, at least 488 men. Estimated revenue and expenditure (1909-10) balanced at 639,136 milreis. Governor (1910), Capt. C. A. Marques. An unsettled boundary dispute with China resulted, in the summer of 1910, in fighting between the Chinese and Portuguese. A revolt occurred at the end of November among the soldiers and sailors, and the insurgents seized arms and ammunition and marched upon the government house, demanding increased pay, expulsion of religious orders, suppression of an offensive journal and the redress of other grievances. Some of these demands were granted.

**MACAULIFFE, M. A.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**MACBETH, ROBERT WALTER.** A British artist, died November 2, 1910. He was born in Glasgow in 1848 and was educated in Edinburgh and in Friedrichsdorf, Germany. He studied art at the Royal Scottish Academy schools. In 1871 he removed to London and for a time was on the staff of the *Graphic*. In 1874 he was elected an associate of the Royal Water Color Society and he was an original member of the Painter-Etcher Society.

**McCALLA, BOWMAN HENDRY.** An American rear-admiral, retired, died May 6, 1910. He was born in Camden, N. J., in 1844, and graduated from the United States Naval Academy in 1864. His first assignment after his graduation was on the steam sloop *Susque-*

**hanna** in the Brazil squadron in 1865 after the Civil War was over. From the *Susquehanna* he was transferred to the steam sloop *Brooklyn* in the South Atlantic squadron in 1866, and thence he went to the *Kearsarge* in the Pacific squadron. In 1887 while he was in command of the *Enterprise* in the European squadron he was court-martialled for striking a sailor with his sword. He was sentenced to be dismissed from the navy but before the order of dismissal could be promulgated, and through the intervention of other officers who knew his worth as a stern disciplinarian, the sentence was mitigated to three years' suspension from the service and the loss of numbers. His punishment was further softened and in 1891 an order was signed restoring him to duty, and in 1900 he was restored to his place in the navy list. At the beginning of the war with Spain he was in command of a small protected cruiser, *Marblehead*. He had brought discipline on this vessel to a high degree of perfection, and he directed the landing of the marines at Guantánamo Bay and led the forces of marines which drove back the Spaniards. During the time this position was held by the Americans, McCalla directed all affairs, won the confidence of the Cubans and superintended the landing of the great mass of supplies. McCalla was made a captain in 1898, and after a year's shore duty was attached to the Asiatic station. During the insurrection against the American forces he led a small band of 250 officers and men through the forests of Luzon to the relief of the city of Vigan. Six days later he received the formal surrender of the insurgents in the provinces of Isabella and Cagayan and in the Batan islands. During the Boxer outbreak in China in 1900 McCalla, then in command of the cruiser *Newark*, put himself at the head of 112 officers and men from his ship and joined the forces of relief under the British Admiral Seymour. He was at the battle of Tientsin, receiving a wound in that engagement. He was advanced three numbers in grade for his service during this campaign. He was later put in command of the new ship *Kearsarge* and in 1903 of the San Francisco naval training station. While he was at this post he was advanced to the grade of rear-admiral, and in 1903 he was commandant of the Mare Island Navy Yard in California, where he remained until he was retired in June, 1906.

**McCORMACK, T. J.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MacCRACKEN, HENRY MITCHELL.** An American educator, retired September 28, 1910, as Chancellor of New York University. He was born at Oxford, O., in 1840 and graduated from Miami University in 1857. He studied at the U. P. Theological Seminary, at the Princeton Theological Seminary and at the universities of Tübingen and Berlin. In 1857-61 he was teacher and superintendent of schools in Ohio. He was ordained to the Presbyterian ministry in 1863 and from that year to 1867 was pastor of the Westminster Church, Columbus, O. From 1868 to 1881 he was pastor of the First Church of Toledo. He was professor of philosophy and chancellor of the West-

ern University of Pennsylvania (now the University of Pittsburgh) from 1881 to 1884. In 1884 he became professor of philosophy at New York University. From 1885 to 1891 he was vice-chancellor of the university, and from 1891 was chancellor. Under his administration the university became one of the prominent institutions of learning in the country. Largely through his efforts the site at University Heights was acquired and the great buildings, including the Library and the Hall of Fame, were erected thereon. Among his published writings are: *Tercentenary of Presbyterianism* (1870); *Leaders of the Church Universal* (1879); *Cities and Universities* (1882); *The Scotch-Irish in America* (1884); *Kant and Lotze* (1885); *John Calvin* (1888); *A Metropolitan University* (1892); *Educational Progress in the United States in the Quarter Century ending 1893: The Three Essentials* (1901), and *The Hall of Fame* (1901).

**MacDONALD, J. R.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**MacDONALD, WILLIS GOSS.** An American surgeon, died December 30, 1910. He was born at Cobleskill, N. Y., in 1863, and was educated at the New York State Normal School and at Cornell University. He graduated from the Albany Medical School in 1887, and in 1889-90 studied at the University of Berlin. He was for several years resident surgeon and surgeon at the Albany Hospital, and was lecturer on surgery and adjunct professor of surgery at the Albany Medical School until 1895. In 1896 he became surgeon at the Albany Hospital, and in 1900 became professor of abdominal surgery at the Albany Medical College. He was major and surgeon of the United States Volunteers in 1898, and was in charge of the surgical division of depot hospitals at Fort McPherson, Georgia, during the Spanish-American war. From 1900 to the time of his death he was a member of the New York State Tuberculosis Commission. He was a member of many medical societies and was one of the most eminent surgeons in the United States. He contributed extensively to surgical journals.

**MacDOWELL, E. A.** See MUSIC.

**McENERY, SAMUEL DOUGLAS.** United States Senator from Louisiana, died June 28, 1910. He was born at Monroe, La., in 1827. He was educated at the Spring Hill College, United States Naval Academy and the University of Virginia. He studied law at the latter institution, and in the National Law School, receiving his degree in 1859. He served in the Confederate army during the Civil War, and at its close engaged in the practice of law. He served in the State legislature in the early 70's and in 1876 was the leader of the White League Movement in Northern Louisiana, which overthrew the negro and the Republican government. He was elected lieutenant-governor in 1879, and on the death of Governor Wiltz in 1881 he succeeded to the governorship. He was re-elected in 1884 but was defeated for nomination in the Democratic convention in 1888. Upon his retirement from the office of governor

he was appointed by his successor associate justice of the State Supreme Court. In 1892, when the Democratic party of the State was divided over the question of the renewal of the charter to the Louisiana lottery, Mr. McEnery accepted the nomination for governor of the pro-lottery party. In the election which followed he was defeated. In 1896, as the result of the combination between the Populists and the Republicans, the vote for governor was in dispute, and the combination forces controlled the legislature and had the power to elect a United States Senator. The Democrats urged McEnery to become a candidate and he accepted the nomination, although it was well known that he was a protectionist and that he differed from his party on many political issues. In spite of this he was elected on the understanding that no effort would be made to change his views. His vote in the Senate was almost consistently in favor of protection when questions on the tariff were involved, and this attitude, especially in the revision of 1909, brought him much criticism. The fact was lost sight of that he was well known as a protectionist, and that his vote was only in accordance with his principles. He was re-elected in 1902 and again in 1908 without opposition. Senator McEnery was not often heard in the Senate, but he was a great power in the politics of Louisiana.

**McGILL UNIVERSITY.** An institution of higher learning at Montreal, Canada, founded in 1821. In 1910-11 the number of students was 2012. The student enrollment was divided as follows: In the college of arts, McGill College, 657; students in applied science, 592; students in medicine, 327; students in graduate school, 26; students in Macdonald College, 329. There were no notable changes in the faculty during the year, nor were any considerable benefactions received. A new building for the medical school was occupied at the beginning of 1910. The principal is W. Peterson.

**McGRATH, HAROLD.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**McGRUDER, BENJAMIN DRAKE.** An American jurist, died April 21, 1910. He was born in 1838 and graduated from Yale College in 1856. He was one of the most influential members of the Illinois bar and was at one time justice of the supreme court of the State. He spent nearly his entire life in Chicago.

**MacLAGAN, WILLIAM DALRYMPLE.** An English prelate, Archbishop of York 1891 to 1909, died Sept. 19, 1910. He was born at Edinburgh in 1826 and was educated in the schools of Edinburgh and at Peterhouse, Cambridge, where he graduated in 1856. From 1847 to 1852 he served in the Indian army. He retired and was ordained deacon in 1856 and priest in 1857. In 1869 he was appointed rector of Newington, and in 1875 vicar of Kensington. He was appointed bishop of Lichfield in 1878 and in 1891 made Archbishop of York. Among his published writings is a volume of *Pastoral Letters and Sy-*

*nodal Charges* (1891). He was joint editor of the *Church and the Age*, 2 volumes (1870).

**McLAREN, ALEXANDER.** An English minister, died May 5, 1910. He was born in Glasgow, Scotland, in 1826, and was educated at the Glasgow High School and Glasgow University. From 1846 to 1858 he was minister of Portland Chapel, Southampton. In the latter year he became minister of Union Chapel, Manchester, and he continued in this pastorate until the time of his death. Among his publications were several volumes of sermons, *A Spring Holiday in Italy*, *The Life of David as Reflected in his Psalms*, and contributions on Colossians and the Psalms in the *Expositor's Bible*.

**MacNAUGHTON, MYRA (KELLY).** An American author and educator, died March 30, 1910. She was born in Dublin, Ireland, and came with her parents to the United States at an early age. She was educated at the Horace Mann School, New York, and at Teachers College, Columbia University. She graduated from the latter institution with a diploma as teacher of manual training in 1899. She at once began teaching in the public schools of New York City. Her work brought her in touch with the foreign population on the East Side of New York, and from these surroundings she gathered material from which she began to write sketches. These were eagerly accepted by magazine editors as being remarkable for their originality and freshness. In 1905 she married Allan MacNaughton. Among her published books were *Little Citizens* (1904); *Isle of Dreams* (1907); *Wards of Liberty* (1907); *Golden Season* (1910); *Little Aliens* (1910); *New Faces* (1910).

**McNEIL, Sir JOHN.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MacQUEEN, P.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**MacVEAGH, FRANKLIN.** See UNITED STATES, *Cabinet*.

**McVICKAR, WILLIAM NEILSON.** An American Protestant Episcopal bishop, died June 28, 1910. He was born in New York City in 1843 and graduated from Columbia College in 1865, and from the General Theological Seminary in 1868. In the same year he was ordained, becoming rector of Holy Trinity Church in Harlem, a position which he filled for seven years. In 1875 he received a call from Holy Trinity Church in Philadelphia, of which parish he was rector for twenty-two years, when, in 1897, he was chosen bishop coadjutor of Rhode Island. Upon the death of Bishop Clark in 1893 he became bishop of that diocese. While serving as rector in Philadelphia and New York he attended several general conventions of his church. He had the degree of Doctor of Divinity from several colleges and universities, and the degree of LL. D. from Brown University.

**MADAGASCAR.** An island (one of the largest in the world) off the southeastern coast

of Africa; a French colony. Capital, Antananarivo (Tananarvie).

**AREA, POPULATION, ETC.** Estimated area, 228,000 sq. miles; population (Jan. 1, 1908), 2,706,661 (French, 7606; other Europeans, 2088). Of the Malagasy tribes, the Hova, the dominant tribe, number 847,480; the Betsileo, 408,024; the Betsimisaraka, 288,159. Antananarivo has 72,000 inhabitants; Fianarantsoa, 27,000; Tamatave, the chief eastern port, 7026; Majunga, the port of the northwest coast, 4600. Primary education and the acquisition of the French tongue are compulsory. Schools (1907): 4 infant (5 teachers, 207 pupils), 22 primary (36 and 761); all for Europeans. For natives: 690 primary (1329 teachers, 56,017 pupils), 14 professional (49 and 412), one administrative (5 and 116), 15 normal (64 and 1008). Christianized natives: 450,000 Protestants, 50,000 Catholics.

**PRODUCTION, COMMERCE, ETC.** The principal industries are cattle-raising and agriculture. Under cultivation by Europeans (1906), 339,279 hectares. In the lowlands, rice, manioc, sugar cane, tobacco, hemp, cotton, vanilla, tea, and coffee are successfully grown; rubber and gum-copal are indigenous, and there is a wealth of timber. Livestock (1906): 2,860,384 cattle, 1950 horses, asses, and mules; 264,083 sheep, 63,367 goats, and 479,116 swine. Gold reefs have been found in different parts of the island, and other minerals abound; 1099 prospecting permits are recorded to end of 1904, held by 317 persons (64 British); in 1907, 343 concessions, covering 210,563 hectares, were worked. Sericulture is encouraged; silk and cotton weaving and the manufacture of raphia fabrics are carried on.

The trade for three years is given below in francs:

	1906	1907	1908
Imports .....	36,527,622	25,323,258	29,963,000
Exports .....	28,188,819	27,270,124	23,354,000

Vessels entered (1908), 7248, of 1,430,763 tons (French, 1,289,016); cleared, 7265, of 1,441,793 tons. The railway from Brickaville on the coast to the capital (170 miles) was completed and open for traffic Oct. 1, 1909. A line from Tamatave runs to Ivondra (7 miles), whence a canal connects with Brickaville. Telegraph lines (1909), 3620 miles; telephone lines, about 130. Roads are almost unknown.

**FINANCE AND GOVERNMENT.** The estimated revenue and expenditure balanced (1908) at 32,091,610 francs; French subvention, entirely for military purposes, 15,584,231 in 1909. Debt, Jan. 1, 1907, 101,390,000 francs. Troops (1908), 3723 Europeans, 8254 natives. The local budget provides for the maintenance of police and militia.

A governor-general (1910, M. Picquié) administers the colony, aided by a consultative council. Nineteen provinces are under civil and five territories under military administration. The colony is not represented in the home government, and there is no elective assembly.

Diégo-Suarez, and the islands of Nossi Bé and Ste. Marie are administered by the governor-general of Madagascar.

**MAIL SUBSIDIES.** See SHIPPING SUBSIDIES and UNITED STATES, *Post-Office*.

**MAINE.** One of the North Atlantic Division of the United States. It has an area of 33,400 square miles. Its capital is Augusta.

**POPULATION.** The population of the State in 1910 according to the Thirteenth Census was 742,371 as compared with 694,466 in 1900 and 661,086 in 1890. The increase in the decade 1900 to 1910 was 6.9 per cent. The State ranks thirty-fourth among the States in point of population, whereas in 1900 it ranked thirty-first. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage.	Prod. bus.	Value
Corn, 1910.....	17,000	782,000	\$ 555,000
1909 .....	17,000	646,000	517,000
Spring wheat, 1910	9,000	267,000	272,000
1909 .....	9,000	210,000	253,000
Oats, 1910.....	131,000	5,554,000	2,666,000
1909 .....	124,000	4,588,000	2,661,000
Barley, 1910.....	8,000	248,000	188,000
1909 .....	8,000	228,000	176,000
Buckwheat, 1910	23,000	748,000	509,000
1909 .....	23,000	644,000	451,000
Potatoes, 1910 ...	127,000	27,940,000a	11,735,000
1909.....	130,000	29,250,000	13,748,000
Hay, 1910.....	1,400,000	1,750,000a	22,400,000
1909.....	1,400,000	1,330,000	19,551,000

a Tons.

**MINERAL PRODUCTION.** The State takes high rank in the value and output of its stone products, especially in granite, although there is also a small production of limestone. In the production of granite the State ranks second, being surpassed only by Vermont. The value of the production in 1908, the latest year for which statistics are available, was \$2,027,508. The State ranks high also in the production of slate. It has long been conspicuous among the States in the production and value of its mineral waters. There were produced in 1908 1,182,322 gallons, valued at \$414,300. The State ranks fifth among the States in the quantity and value of lime burned. Other important mineral products are clay products, feldspar, and small quantities of copper, precious stones and gravel.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Maine State Prison at Thomaston, the Maine Insane Hospital, the Eastern Maine Insane Hospital, the Maine Industrial School for Girls at Hallowell, and the State School for Boys at South Portland. In May, 1909, a new State Home for Feeble-minded was opened in Cumberland county. The feeble-minded of the State will be segregated here instead of, as hitherto, being

supported by the State in the localities where they have residence.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the sessions are biennial, and the last was held in 1909. The next session begins January 5, 1911.

**CONVENTIONS AND ELECTIONS.** The State and national elections in Maine are always of national interest, because they are held nearly two months earlier than the November elections, common to most of the States, and are held to be an indication as to the general trend of political conditions. Aside from this, the elections of 1910 were of unusual interest on account of the local issues involving the fact that a United States Senator was to be chosen by the next legislature to succeed Senator Hale, who, on April 19, announced that he would not be a candidate for re-election. Although Maine is not reckoned as one of the insurgent or progressive States, there has long been opposition to Senator Hale on account of his conservative attitude on many public questions, and it was seriously debated whether he would have been elected for another term, even if he had not withdrawn and the State had elected a Republican legislature. Several strong candidates were in the field against him, and it was charged by his political opponents that he saw the hopelessness of accepting another term in the Senate and accordingly withdrew his name.

The local situation was complicated with opposition to the Republican machine of the State and division in the Republican party as to its attitude in regard to the Prohibition law.

The Republican State Convention met on June 29 at Augusta. Governor Fernald was renominated by acclamation. The platform adopted by the convention endorsed the administration of President Taft as wise, progressive and safe, and commended it for continuing the energetic, efficient, wise and necessary policies of President Roosevelt's administration. A plank was included praising the Payne-Aldrich tariff law, although in moderate terms, and favoring the ratification by the United States legislature of an amendment to the Federal Constitution relative to the income tax. The platform declared emphatically in favor of Prohibition and for a vigorous and honest enforcement of the prohibitory laws. It urged also the enactment of such direct primary and other laws as may properly regulate the conduct of all caucuses to secure the honest and free expression of the popular will therein.

The Democratic State convention met on June 15 and nominated Frederick W. Plaisted governor, and adopted a platform which included planks favoring the election of United States Senators by the people, the enactment of a corrupt practices law, the repeal of the so-called Sturgis enforcement law, and the resubmission of the prohibitory liquor law to the people. Mr. Plaisted is the son of Harris M. Plaisted, who was the last Democratic governor elected in the State thirty years ago. The campaign which followed the conventions was a spirited one. Many national figures in the Republican and Democratic parties made speeches in the State. The result of the election on September 12 was

a surprise even to those who had forecasted Democratic success. Mr. Plaisted was elected governor by a majority of about 8000. The Democrats also carried the legislature and therefore will elect a United States Senator to succeed Senator Hale. Two of the Republican candidates for Congress were defeated and two were elected. The defeated candidates were Congressman John P. Swasey of Canton, who was defeated for re-election by Daniel J. McGillicuddy of Lewiston, and Edwin C. Burleigh of Augusta, who was defeated for re-election by Samuel W. Gould of Skowhegan. The successful Republican candidates were Frank E. Guernsey of Dover and Asher C. Hinds of Portland, who for many years has been paliammentarian of the House of Representatives and was probably the most eminent paliammentarian in the country. Mr. Hinds was elected from the district which was formerly represented by Thomas B. Reed.

The election also seated a legislature which will abolish the so-called Sturgis law for the better enforcement of the laws against the illegal sale of intoxicating liquors, and which will probably resubmit to the people the constitutional amendment relative to the prohibitory law.

**STATE OFFICERS.** Governor, Frederick W. Plaisted; Secretary of State, A. I. Brown; Treasurer, P. P. Gilmore; Adjutant-General, Elliot C. Dill; Auditor, Lamont A. Stevens; Attorney-General, Warren C. Philbrook; Superintendent of Education, Payson Smith; Insurance Commissioner, Beecher Putnam; Commissioner of Agriculture, A. W. Gilman; Commissioner of Public Lands, E. E. Ring—all Republicans, except Plaisted and Stevens, Democrats.

**JUDICIARY.** Supreme Judicial Court, Chief Justice, L. A. Emery; Associate Justices, L. C. Cornish, Albert M. Spear, W. P. Whitehouse, G. E. Bird, Albert R. Savage, A. W. King, and Henry C. Peabody—all Republicans except Bird; Clerks, C. F. Sweet, C. W. Jones, L. Barton—all Republicans except Barton.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 9; House, 65; joint ballot, 74; Democrats, Senate, 22; House, 86; joint ballot, 108; Democratic majority, Senate, 13; House, 21; joint ballot, 34.

**MAINE, RAISING OF THE.** For uncovering the wreck of the former U. S. Battleship *Maine* in Havana harbor, and removing any remaining bodies of the crew and disposing of the ship, \$300,000 was appropriated by Congress. To do this work the Army engineers to whom it was entrusted developed a plan to provide a wall of water-tight cofferdams entirely around the wreck, so that the water could be pumped out from the enclosed space and the hull left open to inspection after the mud had been sufficiently removed. It was proposed to employ interlocking sheet steel piling formed into a cylindrical caisson which could be driven through the mud until the hard clay bottom about 70 feet below mean water level was reached. The cofferdam wall surrounding the ship will be filled with clay in order to afford sufficient stability and prevent the cofferdams being overturned after the water has been pumped out from the enclosed space. It was proposed to use centrifugal pumps to remove the water, and also a large portion of the mud. It was estimated by Col. William M. Black, Corps of Engineers, U. S. A., that the unwater-

ing and exposure of the hull would cost \$225,000. Operations were begun toward the end of the year 1910, and were expected to occupy three or four months.

**MAINE, UNIVERSITY OF.** An institution of higher learning at Orono, Maine, founded in 1865. It is under the control of the State. The enrollment in all departments in 1910-11 was 339, distributed as follows: Graduate students, 13; College of Arts and Sciences, including summer term, 182; College of Agriculture, 135; College of Technology, 329; College of Pharmacy, 18; College of Law, 102; Short Winter Courses, 60. The faculty numbered 91. The President, George Emory Fellows, resigned in July, 1910, after having served from 1902. He ceased active connection with the University in September, 1910. Dr. James N. Hart served as acting-president until December 1, when Robert Judson Aley, Ph. D., assumed his duties as President of the University. Among the new appointments to the faculty in the year 1910-11 were the following: Leon Stephen Merrill, M. D., director of extension work in agriculture; John Manvers Briscoe, professor of forestry; Edgar Raine Wingard, director of physical culture and athletics. Gordon Edwin Tower, professor of forestry, resigned at the end of the college year 1909-10. During 1910 a new dormitory was erected on the campus of the university. The income from all sources for the fiscal year ending June 30, 1910, was \$237,109.

**MALARIA.** Dr. L. O. Howard, of the Bureau of Entomology, reported to the Department of Agriculture, on his return from the Italian Campagna, that as the result of the war on mosquitoes in certain parts of Italy, a healthy, cheerful looking race, and fat, rosy children have replaced the miserable peasants, with yellow skins and bodies bent with disease and suffering. The Campagna, which in former times was almost uninhabitable on account of the mosquitoes and malaria, has been drained by the government and turned into farming land, and, it is believed, will eventually support a large number of people. The government also furnishes quinine at a cheap rate to the malarial population of the country, and gives the drug free to those unable to buy it.

A new journal, devoted to work and news bearing on malaria, has been founded by the Italian Antimalaria League. It is called *Malaria e Malattie Affini*, and is published in Rome, via Farini, 62.

**MALAY STATES.** See FEDERATED MALAY STATES; KELANTAN; KEDAH; PERLIS; JOHORE.

**MALINOFF, M.** See BULGARIA.

**MALTA.** An island in the Mediterranean; a British crown colony. Area, 91.6 square miles. The islands of Gozo (24½ square miles) and Comino, with several islets, belong to the colony; total area of colony, 117 square miles. Total population (1909), 215,879; population of Valletta (the capital), 22,768; of Cospicua, 12,148; of Senglea, 8093. There were (1909) 190 primary schools, with 25,782 pupils; 2 secondary, with 307; one lyceum, with 594 students, and one university with 165. Area cultivated (1909), 41,037 acres; number of holdings, 11,000. Area under wheat, barley, and mischiato, 13,465 acres; potatoes, 3409; cummin seed, 1825; cotton, 793; onions, 653. Yield: wheat, 18,518 quarters of 8 bushels each; barley, 8547; mischiato, 4694; potatoes, 199,460 cwts.; cummin

seed, 4216; cotton, 181,191 lbs.; onions, 3820 tons; citrus fruits, 264,000 dozens. Livestock (1909): horses, asses and mules, 9762; cattle, 6570; sheep, 17,485; goats, 18,415; swine, 4184. Imports and exports for year ending March 31, 1910, £1,172,180 and £113,127 respectively. There is a large transit trade. Tonnage of vessels entered and cleared, 7,432,691. Length of railways, 7½ miles; telegraphs, none; telephone, 742 public, 18½ military (open to the public). Revenue (1909-10), £436,200 (customs dues, £243,354); expenditure, £458,013; public debt, £79,115. Military forces, about 8000 officers and men. Malta is the headquarters and the chief coaling station of the Mediterranean fleet, and is strongly fortified. Governor and commander-in-chief (1910), General Sir H. L. M. Rundle.

**MALTA FEVER.** See TROPICAL DISEASES.

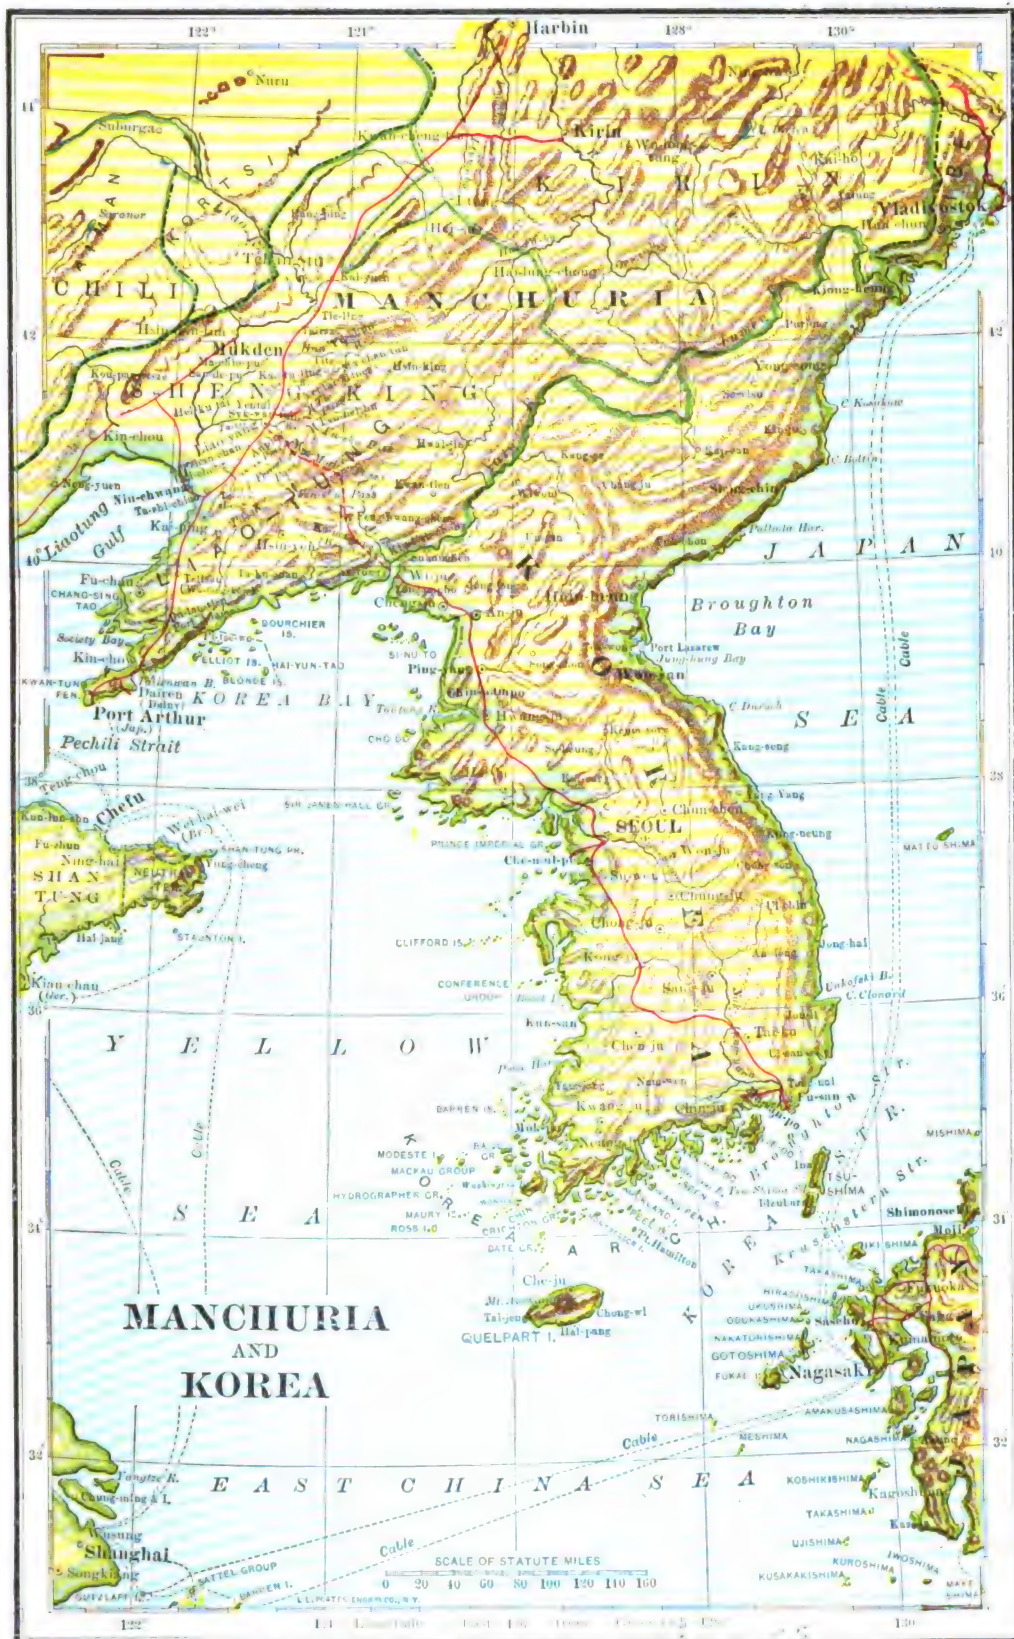

**MAMMALS, FOSSIL.** See GEOLOGY.

**MANCHURIA.** A Chinese dependency, lying east of Mongolia and Chili and between Korea and the Amur River. Capital, Mukden.

Estimated area, 363,610 square miles. Most varying estimates are given for the number of inhabitants, ranging from less than 6,000,000 to 22,000,000. One estimate by provinces is: Feng-tien, or Shenking (56,000 square miles), 10,312,000; Kirin (105,000 square miles), 6,000,000; Helungkiang, or the Amur Province (203,000 square miles), 1,500,000. An official Chinese estimate is 16,000,000. The results of a later official investigation, made public about January 1, 1910, show 803,390 houses in Feng-tien and 736,480 in Kirin, indicating populations of about 4,400,000 and 4,050,000 respectively. On this basis the total population of Manchuria appears to be within 10,000,000. In June, 1910, the number of Japanese settlers, exclusive of about 30,000 in Kwantung (q. v.), was reported at 24,996; also in 1910 a considerable immigration from China proper was reported, occasioned chiefly by a scarcity of agricultural labor. At the end of the year there was an appalling outbreak of bubonic plague extending from Kharbin to Mukden. The principal cities, with approximate population, are: Mukden, over 158,000; Changchun, 80,000; Ying-tse (sometimes called Newchwang, at the mouth of the Liao River), 60,000; Newchwang (30 miles up the Liao), 50,000; Liaoyang, 40,000; Tsitstikhar, 30,000. Northern Manchuria is in the Russian sphere of influence, and Southern in the Japanese.

Reliable figures for production, etc., are not available, but an official Chinese report of 1908 stated that in Feng-tien, the most southerly and the best developed province, there were 4,333,333 acres under cultivation. The principal crops are soy beans, kafir corn, and millet, and others of some importance are wheat, barley, corn, and tobacco. In the last few years, the production of soy beans and bean-cake has increased immensely. A very large part of the Chinese bean export is from Manchuria, whose commerce is included with that of China; note the figures showing the development of the bean export in the article CHINESE EMPIRE, paragraph Commerce. Various minerals occur in Manchuria, particularly coal and iron, which are worked to some extent.

The railways are as follows: (1) Imperial Railways of North China, from Shan-hai-kwan, on the Chili frontier, north to Mukden, with branch to Ying-tse, about 300 miles. (2) Chinese

REVISED, 1919

Copyright, 1906, by David McKel & Co.

1901

Eastern Railway, from Changchun (Kuancheng-tzu), north to Kharbin, with branches (the Siberian railway) east and west to the Russian frontier, 1080 miles, under Russian control. (3) The Taitsikhar light railway connecting Tsitsikhar with the Chinese Eastern, 17 miles. (4) South Manchurian Railway, under Japanese control, Changchun south through Mukden to Dairen (in Kwantung), 439 miles, with branches: (a) Mukden to Antung (on the coast and the Korea frontier), about 190 miles; (b) Choushuitzu to Port Arthur (in Kwantung), 31 miles; (c) Tashihkiao to Ying-tse, 17 miles; (d) Yen Tai to Taikang, 10 miles; (e) Suchiatun to Fushun, 34 miles. Total in Manchuria, over 21,000 miles. A branch line from the South Manchurian at Changchun to Kirin, 75 miles, under construction in 1910, was expected to be opened to traffic in 1911. In 1910 the Japanese were standardizing the gauge and, by pursuing in part a more direct but more difficult route, shortening the mileage of the Mukden-Antung line, which, it was expected, would be completed in the summer of 1911.

As announced in November, 1910, revenue and expenditure by provinces is as follows: Fengtien, 16,180,000 and 15,520,000 taels respectively; Kirin, 8,480,000 and 9,540,000; Helungkiang, 540,000 and 551,000. Manchuria is administered by a viceroy (Hsi Liang in 1910) appointed by the Chinese government.

**MANCHURIAN RAILWAYS.** See CHINA; JAPAN, MANCHURIA AND UNITED STATES, *Foreign Relations*

**MANGANESE.** See ATOMIC WEIGHTS.

**MAN, ISLE OF.** See GREAT BRITAIN.

**MANITOBA.** A province of Canada (since July 15, 1870). Capital, Winnipeg. Area, 73,732 square miles. Population (estimated 1900), 496,111. For details, see CANADA. The government consists of the Lieutenant-Governor, appointed, by the Governor-General of Canada, the Executive Council (responsible ministry), and the unicameral Legislative Assembly (41 members elected for four years). In 1910, Lieutenant-Governor, Sir Daniel Hunter McMillan (appointed May, 1906); Premier, Rodman P. Roblin. The elections were held in midsummer, resulting in a complete victory for the Roblin Ministry, which was returned with greatly increased majorities.

**MANN-ELKINS RAILROAD ACT.** See RAILWAYS.

**MANTEGAZZA, PAOLO.** An Italian physiologist and anthropologist, died August 28, 1910. He was born at Monza, Italy, in 1831, and studied medicine in the universities of Pisa and Milan and received his doctor's degree at Pavia in 1854. Following this he travelled extensively in Europe, India and South America. He practised for some time in Paraguay and in the Argentine Republic. In 1858 he returned to Milan. He was appointed physician at the hospital in that city in the following year and became in 1860 professor in pathology at Pavia. He was made professor of anthropology at the Instituto di Studi Superiori in Florence and there he founded the Museum of Anthropology and Ethnology, the first in Italy, as well as the Italian Anthropological Society, and a review called *Archivio per l'Antropologia e l'Etnologia*. From 1865 to 1876 he was deputy from Monza in the Italian Parliament and in the latter year he was appointed to the Senate. Among his published works are the following: *Elementi d'igiene*

(1875); *Igiene dell'amore* (1877); *Fisiologia del dolore* (1880); *Fisiologia del piacere* (1881); *Fisionomia e mimica* (1883); *Gli amori degli uomini. Saggio di una etnologia dell'amore* (1886); *Le estasi umane* (1887); *Fisiologia della donna* (1893); *Fisiologia dell'amore* (1896); *L'anno 3000* (1897); and *L'amore* (1898). He also published travel sketches and political treatises; *Rio della Plata e Teneriffe* (1877); *Viaggio in Lapponia* (1884); *India* (1884); *Studi sulla etnologia dell'India* (1886); and *Ricordi d'un fantaccino al parlamento italiano* (1896).

**MARSHALL, JAMES WILLIAM.** An American public official, died February 4, 1910. He early became interested in politics and acted as Consul at Leeds, England and as First Assistant Postmaster-General. He was Postmaster-General in President Grant's cabinet for one month in 1874.

**MARSHALL, ROBERT.** An English soldier and playwright, died July 1, 1910. He was born at Edinburgh in 1863 and was educated at St. Andrews College and Edinburgh University. In 1886 he was commissioned a lieutenant of the West Riding Regiment and was made a captain in 1895. He was district-adjutant in Cape Town in 1893-4 and aide to Governor Sir Hely-Hutchinson from 1894 to 1898, when he retired from the army. He wrote a large number of successful plays, the best known of which are perhaps, *A Royal Family*, *The Second in Command*, and *The Duke of Killiecrankie*. His first work as a playwright was a one act sketch, *The Shades of Night*, produced in 1896 by Forbes-Robertson. Among other plays which came from his pen were the following: *His Excellency the Governor* and *The Broad Road* in 1898, *The Noble Lord* (1900), *There's Many a Slip*, *The Unforeseen*, and *The Haunted Major* (1902), *Everybody's Secret* (1904), and *The Lady of Leeds* and *The Alabaster Staircase* (1906).

**MARSHALL ISLANDS.** Two chains of lagoon islands in the Pacific, belonging to Germany, and administered under the German New Guinea government. European population

(1907), 162; other, 15,000. Jaluit is the chief island and the residence of the commissioner. Imports (1908), 1,367,066 marks; exports, 4,013,597 (phosphate, 3,301,140).

**MARTIN, T. C.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MARTIN, W.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**MARTINIQUE.** An island of the Lesser Antilles; a French colony. Area, 381 square miles. Population (1906), 182,024. Capital, Fort-de-France, with 27,015 inhabitants. The primary schools had 13,360 pupils in 1908, 13,797 in 1909. There are secondary and special schools at Fort-de-France. Area planted (1909) to sugar-cane, 19,000 hectares; cacao, 1560; vanilla, 30; coffee, 20. Live animals, 3317. Persons engaged in agriculture, 43,350. Tobacco is cultivated under special regulations. Sugar works, 15; distilleries (rum), 55. There are no mines, and no railways. Total imports (1908), 15,363,285 francs (French, 8,122,386; other, 7,240,899); total exports, 20,785,091 (home produce, 18,582,902; re-exports, 2,202,189). The details are given below in francs:

	Animal prods.	Veg. prods.	Min. prods.	Manu- factures
Imps. Fr. . . . .	1,212,845	2,237,693	463,952	4,207,896
" other . . . . .	575,237	2,664,104	1,376,118	2,625,440
Total . . . . .	1,788,082	4,901,797	1,840,070	6,833,336
Exps. spec. . . . .	95,358	18,470,679	7,953	8,912
Re-exps. . . . .	56,221	278,371	1,375,136	492,461
Total . . . . .	151,579	18,749,050	1,383,089	501,373

There is external cable and internal telephone communication. Post-offices, 53. The local budget balanced (1910) at 9,127,715 francs; French expenditure (budget of 1910), 1,164,493; debt (January 1, 1910), 2,660,000. Vessels entered (1909), 342, of 335,230 tons (in 1908, 368, of 340,589). Military (1910), 17 officers, 409 men. Governor (1910), vacant.

**MARYLAND.** One of the Middle Atlantic Division of the United States. It has an area of 13,327 square miles, of which 3386 square miles are water. Its capital is Annapolis.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,295,346 as compared with 1,188,044 in 1900 and 1,042,390 in 1890. The increase in the decade from 1900 to 1910 was 9 per cent. The State ranks twenty-seventh in point of population whereas in 1900 it ranked twenty-sixth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The chief mineral products in the State are coal and pig iron. The coal production in 1909 was 4,022,181 tons, which was a decrease from the production of 1908, which was 4,377,093 tons. The value of the production of 1909 was \$4,470,656 as compared with a value of the product of 1908 of \$5,116,753. The decreased production of coal in the last two years appears to have been due to the approaching exhaustion of the "Maryland big vein," the portion of the Pittsburg bed that has furnished the larger part of the Maryland output. Increased competition with West Virginia coal has also caused a decline in price of the coal mined in Maryland. During the year there were 17 fatal accidents in the coal mines of the State. The clay products are of considerable value, as are also the mineral

water, slate and stone products. A small quantity of iron ore is also produced.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910 . . . . .	710,000	23,785,000	\$13,795,000
" 1909 . . . . .	700,000	21,980,000	14,237,000
Winter wheat, 1910 . . . . .	794,000	13,816,000	12,711,000
" 1909 . . . . .	770,000	11,168,000	12,282,000

a Tons. b Pounds.

**EDUCATION.** The total school population of the State, ages 5 to 20 years was, at the end of the fiscal year 1910, 350,319. The total number of schools in the State on the same date was 2474. The average enrollment was 189,914 and the average attendance was 145,762. There were in the State 522 schools for colored children with an average enrollment of 35,651 and an average daily attendance of 24,050. The total disbursements for educational purposes, including the balance on hand on July 1, 1910, was \$4,060,341. One of the chief developments in the educational system of the State during 1910 was the distinct improvement in high schools, an extension of the plan to bring closer supervision in the counties through the appointment of grade supervisors, a more extended introduction of home economics and industrial arts and an effort on the part of many county school officials to bring the school and the home into more sympathetic relations and helpful coöperation. The General Assembly of 1910 gave substantial recognition to secondary schools by designating all accredited high schools as First or Second Group, according to the number of years of instruction, the pupils enrolled and assistants employed. A Commission on the proper education of colored children has carried on an investigation in the State since 1908 and this Commission made its report to the Assembly of 1910. Many important recommendations relating to the subject were submitted.

**FINANCE.** The report of the treasurer for the fiscal year ending September 30, 1910, showed a balance in the treasury September 30, 1909, of \$1,328,069. The receipts during the year were \$5,875,598 and the disbursements were \$6,328,557, leaving a cash balance at the end of the fiscal year of \$875,111. The funded debt of the State amounted on September 30, 1910, to \$7,529,926. This was increased during the year to the amount of \$811,000.

**CHARITIES AND CORRECTIONS.** The State institutions which are supported wholly or in part from State funds, with the amounts contributed for their support in 1910, are as follows: Baltimore Eye, Ear and Throat Charity Hospital, \$8000; Baltimore Orphan Asylum, \$2000; Baltimore State Hospital, \$10,000; Baltimore Aged Women and Men's Home, \$3000; Confederate Women's Home, \$1000; Deaf and Dumb Asylum, \$3000; Deaf, Dumb and Blind Asylum, Colored,

\$15,000; Home for Incurables, \$2500; Hospital for Women of Maryland, \$4000; Hospital for Crippled and Deformed Children, \$5000; Industrial School for Colored Girls, \$1250; Maryland School for Boys, \$26,250; Maryland Hospital for the Insane, \$38,225; Maryland General Hospital, \$8000; Maryland Asylum and Training School for Feeble-minded, \$62,000; Maryland Home for Friendless Children, \$350; Maryland Tuberculosis Sanatorium, \$85,000; St. Vincent's Infant Asylum, \$11,250; St. Mary's Orphan Asylum, \$4500; Springfield State Hospital, \$85,000; United Charities Hospital Association of Dorchester county, \$9250; Union Protestant Infirmary, \$10,000.

#### POLITICS AND GOVERNMENT

The State legislature met in January, 1910, and the chief measures passed by the session will be found noted in the section *Legislature* below. There was no election for governor, as the term of Governor Crothers does not expire until January, 1912. On January 18 Isidor Rayner was re-elected to the United States Senate by the legislature.

The chief political interest of the year centred in the passage through the legislature of a bill to disfranchise the negro voters at State and municipal elections. There were in all four bills passed dealing with this subject. The first repealed the existing registration laws, the second enacted a new registration measure providing that none but white men and those colored citizens who own \$500 worth of property should be registered in the future as voters, and the third bill proposed a constitutional amendment designed to restrict registration for all time to the white people of the State and such negroes as own property, in that it prohibits any future legislature from extending the registration privilege to negroes, except those owning \$500 worth of property. The fourth bill extended the terms of the mayor and other municipal officers of Baltimore so that their successors would be chosen in the November State elections, the spring elections being abolished. These disfranchisement measures were the most sweeping yet passed in any State legislature. They were based upon the assumption that, as Maryland had refused to ratify the Fifteenth Amendment, it was not bound by it, or rather that the amendment, as far as Maryland is concerned, is void. This theory was based by the lawyer who drafted it upon the assumption that certain rights cannot be taken from any State by the other States without the consent of the State so affected, just as no State can be deprived by amending the constitution of its equal representation in the Federal Senate. The Maryland Constitution gives the right of suffrage only to white voters, and the disfranchisement bill was passed on the following grounds: Inasmuch as Maryland refused to ratify the Fifteenth Amendment, a law should be enacted which should deny non-tax-paying negroes the right to be registered as voters in State elections. The Maryland constitution gives the right of suffrage only to white voters and after the law had come into operation excluding negroes from registration a constitutional amendment prohibiting the legislature from enacting any law for the registration of negroes except such as owned \$500 worth of property, was proposed by the legislature. This proposed amendment will be submitted to the people at the general election in 1911, but its defeat is certain. It was proposed to secure the

adoption of the amendment at the election by refusing registration to negroes under the other law, but the governor vetoed this registration law. It was intended that this measure should be applied only in State elections, while to avoid Federal interference separate books for registration should be kept for election to Congress and for President at which negroes could vote. This registration bill was vetoed by Governor Crothers, so that the negro voters in the State will have an opportunity to vote on the proposed amendment. The constitutional amendment providing for the disfranchisement of the negro voters in the State will be voted on in the fall of 1911. The bill was strongly opposed by the Republicans in the legislature, but they were obliged to abandon efforts to delay its passage in order to save their own local measures, as the Democrats threatened to kill every bill offered by Republicans if they persisted in filibustering. Governor Crothers would have vetoed the bill proposing the amendment, but the Court of Appeals of the State has decided that he had no power to do so.

On March 2, by a vote of 50 to 48 the House of Delegates killed the State-wide local option bill and this put an end to temperance legislation for the session. The bill was prepared by the Anti-Saloon League.

The action of the governor, acting with the advice of the chief promoter of the disfranchising legislation, in vetoing the registration and city election bills, is regarded as disposing of disfranchising plans for some time to come. The most important legislation enacted at the session of 1910 was the creation of a Public Service Commission for the whole State with large powers, including that to fix rates.

In December an ordinance was passed by the mayor and council of Baltimore providing for segregation of negroes in that city. The measure provided that no white family shall move into a block where the majority of the residents are negroes, and no negro occupy a residence in a block that is inhabited principally by white people. The object of the measure was to segregate the negroes and prevent them from residing in white neighborhoods. Some question arose as to the constitutionality of the measure and it was decided by the city solicitor that it was constitutional. The ordinance therefore went into effect on December 19. Suits will probably be brought to test the law, which may be carried to the highest courts.

For the first time in the history of the State the Republican and Democratic candidates for Congress were chosen in districts where there were contests by the direct primary system. At the elections held on November 8, the Democrats succeeding in electing all candidates for the House of Representatives except one. Of these, two were re-elected.

LEGISLATION. Among the important measures enacted at the legislative session of 1910 were the following: The laws in regard to driving automobiles in the State were revised and the speed limits were fixed at 12 miles an hour in business sections, 18 miles an hour in the suburbs and 25 miles an hour in the country. Laws relating to banks, savings institutions and the duties of the bank commissioner were thoroughly revised. The child labor laws were amended so that the employment of children under 14 years of age between the hours of eight at night and eight in the morning for any pur-

pose is forbidden. An act was passed providing for the protection of children under three years of age and punishing those who have the care or custody of such infants and desert them. A State conservation commission was created, made up of three unpaid members, who are to study the problem of conservation, cooperate with the conservation boards of other States and with the Federal government, and prepare publications on the subject. In addition to the constitutional amendment providing for the disfranchisement of negro voters mentioned above, an amendment was submitted providing for the apportionment of legislative districts and for the government of Baltimore. The unlawful use of trade names or imitations thereof and of stencils for boxes containing garden produce was made criminal. Among the educational measures enacted was one which added Esperanto to the subjects which may be taught in the public schools. The matter is left to the local boards of education. An act was passed forbidding the misbranding and adulteration of foods. The administration is by a commissioner appointed by the State Board of Health. The State Board of Health was reorganized into a department of health with bureaus of communicable diseases, bacteriology, chemistry, sanitary engineering and vital statistics. October 12 was made a legal holiday, to be known as Columbus Day. A law was enacted requiring the public printer to affix the union label to all State printing. An elaborate public utilities measure was passed. Members of the commission are appointed for six years and may be removed for cause. Its jurisdiction embraces railroads, street railroads and other common carriers, gas, water, electric, telephone, telegraph, and all companies engaged in the transportation of property or freight. The chief powers of the commission are: to require safe, adequate, just and reasonable service in accordance with the careful definitions of the act; to order railroads to furnish side-track and switch connections, and additional cars or trains when needed; to prescribe systems of accounting; on complaint or on its own motion and after a hearing to disallow railroad rates and fix a maximum; to order substitution of proper transportation service or regulations for unreasonable or inadequate conditions; to approve local public utility rates as a condition of their validity; to prohibit unjust discriminations, permitting, however, mileage, excursion and commutation tickets, and passes to specified persons; to prohibit false billing and discrimination between carriers. The board has power also to supervise mergers, the issue of securities and the transfer of existing franchises. A long and short haul clause permits no reduced long haul rates except on application in each case specially to the commission. An important primary election law was passed providing for primary elections by direct vote of the people. This statute is applicable to the entire State and to all offices. In some of the smaller counties the primary election chooses representatives to the county convention, and throughout the State it chooses delegates to the State convention for the nomination of governor and other central State officers. Otherwise, the voters at the primary select directly the candidates of their choice. Important legislation was enacted relating to "white slaves" as a result of the agitation carried on during 1909-10.

STATE OFFICERS: Governor, Austin L. Croth-

ers; Secretary of State, N. Winslow Williams; Treasurer, Murray Vandiver; Comptroller, Wm. B. Clagett; Adjutant-General, Henry W. Warfield; Attorney-General, Isaac L. Straus—all Democrats.

JUDICIARY: Court of Appeals: Chief Judge, Andrew H. Boyd; Associate Judges, N. Chas. Burke, William H. Thomas, John R. Pattison, Hammond Urner, John P. Briscoe, S. D. Schmucker, and James A. Pearce; Clerk, Caleb C. Magruder—all Democrats except Schmucker and Urner, Republicans.

STATE LEGISLATURE, 1911. Democrats, Senate, 17; House, 71; joint ballot, 88; Republicans, Senate, 9; House, 30; joint ballot, 39; Independent Democrat, Senate, 1; joint ballot 1; Democratic majority, Senate, 7; House, 41; joint ballot, 48.

MASEFIELD, JOHN. See LITERATURE, ENGLISH AND AMERICAN, *Poetry and Drama*.

MASSACHUSETTS. One of the North Atlantic Division of the United States. It has an area of 8266 square miles. Its capital is Boston.

POPULATION. The population of the State in 1910, according to the Thirteenth Census, was 3,366,416, as compared with 2,805,346 in 1900 and 2,238,947 in 1890. The increase in the decade 1900 to 1910 was 20 per cent. The State ranks sixth among the States in point of population, whereas in 1900 it ranked seventh. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

MINERAL PRODUCTION. Massachusetts is one of the most important States in the production of granite. In this it is surpassed only by Maine and Vermont. The output for 1908, the latest year for which statistics are available, was valued at \$2,027,463. Other valuable stones produced are sandstone, trap rock and marble. The total value of the stone products in 1908 was \$2,255,195. There are also valuable clay products and a large quantity of lime is produced. The State is notable for its production of mineral water. Among other mineral products, which are produced in small quantities, are copper, glasse-sand, pig iron, lime, asbestos, talc and soapstone.

AGRICULTURE. The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	50,000	2,275,000	\$ 1,592,000
1909.....	47,000	1,786,000	1,447,000
Oats, 1910.....	7,000	248,000	124,000
1909.....	7,000	217,000	126,000
Rye, 1910.....	5,000	85,000	80,000
1909.....	4,000	65,000	68,000
Buckwheat, 1900.....	3,000	66,000	56,000
1909.....	3,000	58,000	44,000
Potatoes, 1910.....	35,000	4,375,000	3,062,000
1909.....	34,000	4,250,000	3,358,000
Hay, 1910.....	590,000	755,000a	14,420,000
1909.....	585,000	673,000	12,720,000
Tobacco, 1910.....	4,400	7,612,000b	1,141,800
1909.....	4,400	7,040,000	985,000

a Tons. b Pounds.

EDUCATION. The total school population between the ages of 5 and 15 years on September 1, 1909, was 558,509. The number of illiterate minors over 14 years of age at the same date was 6612. The total enrollment in the public

school of pupils between 7 and 14 was 337,599 and the total enrollment of pupils of all ages was 535,869. The teachers in the schools numbered 15,321, of whom 13,946 were women and 1375 were men. The average monthly salary of male teachers was \$152.96 and of female teachers was \$61.82. There were 270 public high schools in the State, with 59,068 pupils and 2305 teachers. The total expenditure for the support of the public schools was \$16,012,722. The total expenditure for buildings was \$4,122,022.

**FINANCE.** The report of the State treasurer showed a balance on December 1, 1909, of \$5,178,107. The receipts during the year amounted to \$46,288,581 and the disbursements to \$44,777,381, leaving a balance on December 1, 1910, of \$6,689,307. The gross contingent funded debt of the State on December 1, 1910, was \$73,644,245, and the gross direct funded debt was \$40,791,916.

#### POLITICS AND GOVERNMENT

The State legislature met in annual session in 1910 and passed several important measures. These will be found noted in the paragraphs on legislation below. In addition to these measures a so-called district nominations bill was passed. This provides that the question of direct nominations may be submitted to the voters in senatorial and representative districts upon petition of 10 per cent. of the voters of the district. The measure makes no provision for the direct nomination of State officials, or members of political committees. On May 10 the House of Representatives passed a resolution in favor of the election of United States Senators by direct vote of the people. An attempt was made to have this vote reconsidered, but this failed by a vote of 89 to 115. On May 12 the Senate defeated the measure by 11 to 22. In this vote the eight Democratic members were joined by three Republicans. Three other Republican Senators were absent or did not vote.

On May 4, the House of Representatives, by a vote of 126 to 102 refused to pass the income tax resolution. About three-fourths of the Democratic and one-fourth of the Republican members of the House voted for it.

**CONVENTIONS AND ELECTIONS.** The political history of Massachusetts in 1910 was one of the most spirited in many years. It began with the election on January 11 for mayor and other officials of the city of Boston under a new charter. The election followed one of the most interesting campaigns in the history of the city. The candidates were John F. Fitzgerald, a former mayor, James J. Storrow, George A. Hibbard, then mayor of the city, and Nathaniel H. Taylor. The candidates went upon the ballot without political designation. Storrow made his campaign on the alleged unfitness of Fitzgerald to act as mayor as indicated by his performances during his former terms. Mr. Fitzgerald attacked Mr. Storrow as a corporation man and an aristocrat, declaring that he was using his wealth to influence the result. The chief battle was between these two antagonists, both of whom in the past have been Democrats. The other candidates cut but small figure. Out of a total of 95,125 votes cast, Mr. Fitzgerald received a plurality of 1223 over Mr. Storrow. Although it appeared that the "reform" element was

defeated in the election of Mr. Fitzgerald, the new City Council of nine members, which replaced the old double chambered Council of eighty-eight members, is controlled by members who were nominated by the Municipal League, a reform organization. The officials appointed by Mayor Fitzgerald, according to the laws laid down in the new city charter of 1909, must be competent to gain the approval of the State Civil Service Commission as experts, by either training, education or experience, in their respective lines of duty. During the year the Civil Service Commission, following this test, rejected on an average one-third of Mayor Fitzgerald's appointments. The mayor's acts and those of his subordinates are subject at all times to the investigation of a Finance Commission appointed by the governor.

Mr. Fitzgerald was inaugurated as mayor on February 7. The death of Congressman Lovering (q. v.) of the Fourteenth District on February 4 made it necessary to hold an election for his successor. The Republicans nominated William R. Buchanan and the Democrats selected as their Candidate Eugene N. Foss, formerly a Republican, and a wealthy manufacturer. Mr. Foss made a spirited campaign, in which he attacked the Payne-Aldrich tariff bill, favored reciprocity with Canada and took a position closely akin to that of the insurgent Republicans. Although the district is normally very strongly Republican, Mr. Foss was elected by about 5600 majority. This election coming as the first congressional election after the passage of the Payne-Aldrich bill attracted much attention throughout the country and it was hailed by the Democrats as prophetic evidence of the sentiment in their favor which was to give them a Democratic Congress in November.

The Republican State Convention met in Boston on October 6. Governor Eben S. Draper was renominated by acclamation. The platform adopted admitted that the Payne-Aldrich tariff bill had increased duties on many articles, but asserted that these were mostly luxuries. The administration of President Taft was commended as was also his programme for future legislation as proposed in his letter to the Chairman of the Republican Congressional Campaign Committee. Senators Lodge and Crane, particularly the former, were warmly praised. The platform recommended the establishing of a tariff board and declared for the amendment of the tariff one schedule at a time. In addition to the nomination for governor, Louis A. Frothingham of Boston was renominated for lieutenant-governor.

The Democratic State Convention was one of the most turbulent ever held in the State and its results were unique in the State's political history. There were three candidates for the nomination for governor, Congressman Eugene N. Foss, James H. Vahey, and Charles S. Hamlin. The votes of the delegates necessary for a choice were 496. On the first ballot Mr. Foss had 383, Mr. Vahey 302 and Mr. Hamlin 295. The Convention after balloting many times could not decide between the candidates and final decision was left to a committee of four, with authority to name the permanent candidates. This committee was unable to agree on a candidate, as it divided equally between Mr. Foss and Mr. Hamlin. The State Committee thereupon called for a straw

vote by mail by the accredited delegates to the convention to guide this committee in its selection. Mr. Foss, after the deadlock had lasted about a week, on October 15 declared that he would be a candidate for governor whether the committee named him or not. A nomination paper, under the designation "Democratic Progressive," was filed in his behalf. In order to have a regular Democratic candidate while the voting by mail was going on, the State Committee had appointed F. W. Mansfield as a "stop-gap" candidate. As a result of the mail vote, Congressman Foss had a lead of 11 votes over Charles S. Hamlin. Thereupon Mr. Hamlin and the provisional candidate withdrew, and Mr. Foss became the regular Democratic candidate and also retained the place on the ballot as a Democratic Progressive. The campaign following the nominations was spirited, many of the most important national Republican and Democratic leaders making speeches. Mr. Foss made his campaign almost exclusively on the tariff provision and the high cost of living. In the election on November 8, Mr. Foss was elected governor by about 35,000 plurality. He received 14,052 votes as a Democratic Progressive. The Republicans elected the remainder of the State ticket.\* The Democrats gained 51 seats in the legislature, but there still remains a Republican majority of 27. One Socialist was elected to the house, the first in several years. The election of a Senator is in the hands of the legislature of 1911, as Senator Lodge's term expires March 1 in that year. Senator Lodge was a candidate for re-election and he was bitterly opposed by Governor-elect Foss, who in December, 1910, spoke publicly against the Senator and published a number of letters in which he urged reasons against Senator Lodge's re-election.

**OTHER EVENTS.** On January 17 a special commission appointed to inquire into the alleged violation of charter provisions by the New York, New Haven and Hartford Railroad reported to the State Senate. The commission consisted of the Railroad, Bank and Tax Commissioners of the State. The violations alleged were the obtaining of legislation in Connecticut to permit a merger with the Connecticut Consolidated Railway Company in increasing its capital stock from \$27,500,000 to \$121,878,000 without authority from the State of Massachusetts, and in issuing bonds and other evidences of indebtedness in excess of its capital stock. The commission declared that the questions presented to it for consideration were, first, whether the charter should be repealed, and second, what action other than this, if any, should be taken. The committee reported that the company's report showed \$1,000,000,000 of capital stock outstanding, \$234,859,875 of bonds and debentures and \$5,250,000 of loans and notes payable. The committee reported that the situation, as thus indicated, presented to their minds a very convincing argument

against the repeal or forfeiture of the charter.

A commission authorized by the legislature in February was appointed by Governor Draper on March 9, to investigate the high cost of living, which commission later made a detailed report to the legislature. See articles **AGRICULTURE** and **PRICES**.

On October 17 occurred the death of Julia Ward Howe of Boston, a distinguished author and leader in reform movements, known especially as the writer of the "Battle Hymn of the Republic," and on December 3, that of Mary Baker Eddy of Newton, founder of the Christian Science faith. See **HOWE, JULIA WARD**, and **EDDY, MARY BAKER**.

In July, William T. White, Mayor of Lawrence, was found guilty of endeavoring to secure the removal by bribery of the fire chief of that city. With him were indicted an ex-alderman and three others. White was sentenced to three years in the House of Correction and a fine of \$1000. This is the first time in the history of the State that the mayor of a city has been sentenced to be imprisoned.

On August 5, President Taft made the principal address in the dedication of the Pilgrim Monument at Provincetown.

**LEGISLATION.** Among the important measures enacted at the legislative session of 1910 were the following: A measure was enacted making the fraudulent hiring of motor vehicles a penalty. Non-residents of the State are excused from registration of automobiles when their home States extend similar privileges to citizens of Massachusetts. Certain important measures were passed relating to banks and banking. One of these permits the bank commissioner to take possession of the savings bank or trust company whose capital has been impaired or charter violated, or when its business has been conducted in an unsafe or unauthorized manner. Laws were passed providing for the regulation of collection agencies. All persons, firms or corporations other than banks, trust companies and lawyers, who make a business of collecting debts are required, under a heavy penalty, to file a bond of \$5000, with sufficient sureties in favor of the State treasurer, on condition that the principal obligor will turn over the proceeds of all collections in accordance with the contract made with the creditor. This act is intended to check the dishonest practices of some collecting agencies. A special commission of three was appointed to investigate the problem of employment agencies and report to the next legislature. The laws relating to child labor were amended so that children under 18 years of age are forbidden to work in certain dangerous trades. Forging birth certificates is made criminal. Congress was asked by joint resolution to enact national and uniform child labor laws. School physicians are to examine applicants for school certificates. The Federal income tax amendment was defeated by a narrow majority in one House after passing the other. An attempt was made at reform in judicial procedure. It was provided that when in an action of contract a defendant has appeared, the plaintiff may file an affidavit of no defense, the clerk may issue an order on the defendant to show cause, and unless after seven days' notice the defendant consents to default and judgment or sets out the specific facts

\* The Republicans at the election regained the seat that Congressman Foss had captured earlier in the year, by the election of Robert O. Harris, but Congressman Charles G. Washburn of Worcester in the third district, Republican, was defeated by John A. Thayer, Democrat. In the fourth district John J. Mitchell, Democrat, was elected to Congress for the short term of the late Charles Q. Tirrell, but the long term was won by W. H. Wilder, Republican.

relied upon the court shall advance the action for speedy trial. The same statute provides for a speedy trial of appeals in suits for wages for personal labor. Measures were passed providing for the punishment of those giving obscene shows and entertainments tending to corrupt the morals of youth. A measure was enacted providing that prison-made goods shall be sold to public institutions instead of in open market. Several important measures were passed relating to education. Among these was one requiring compulsory instruction in "thrift" in all the schools of the State. A commission was appointed to investigate the subject of an employers' liability law and a law for workmen's compensation. A measure was passed permitting the risk of accident to be voluntarily assumed by the industry. Other provisions were enacted permitting the employer and the employees to establish coöperative retirement annuity and pension systems which do not apply simply to injured employees. An act was passed subjecting married women who have property to the amount of \$200 or more to liability jointly with their husbands for necessary debts incurred for family maintenance up to the amount of \$100. An act was passed forbidding the sale of cocaine except under certain conditions. Authority was given to authorize search warrants for the discovery of concealed supplies, and the confiscation of the drug when found. The sale of morphine or other narcotic drugs, either singly or in composition, is also regulated. A bona fide physician's prescription, except in the case of cough mixtures and similar medicines containing a small proportion of the noxious ingredient, is required. Amendments were made to the milk inspection law. A law was passed requiring tuberculosis exhibits in the public schools. Measures were passed to abate the smoke nuisance in Boston and vicinity, by specifying the number of minutes an hour during which stacks of different sizes and character shall be permitted to pollute the atmosphere. October 12 was made a legal holiday, to be known as Columbus Day. Measures were passed regulating health and accident policies of insurance. A law was passed requiring those who advertised for new workmen during the strikes and lockouts to specify the condition that exists. Among the laws passed relating to the selling of liquor was the so-called bar and bottle act. This forbids the use in the same premises of a license for selling in containers and a license for an open bar. A State art commission of five members was created. Its function is to advise the proper officials on the artistic merit of all bridges, arches, gates, paintings, sculptures, and other art works on which it is proposed to spend the money of the State. A measure was passed permitting the voters of the city of Lynn to select from alternate forms of a new city charter, one of which provides merely for a mayor and eleven councilmen, four of them chosen at large and all without party designation, the other of which authorizes the commission form of government along the lines of that adopted at Des Moines, Iowa, and Galveston, Texas. An act was passed permitting towns and cities to establish retirement systems for their employees under the superintendence of the insurance commissioner. A novel law was that prohibiting the printing in town reports of names of persons aided by

the pauper fund. A joint resolution was passed, asking Congress to establish a "free port" within the limits of Boston Harbor where goods may be brought in free of duty and manufactured for export. A commission was appointed to investigate the question of a tunnel from the North to the South Station in the city of Boston, and another for the general improvement of transportation in and around that city. Important legislation was enacted relating to "white slaves" as a result of agitation carried on during 1909-10.

STATE OFFICERS. Governor, Eugene N. Foss, Democrat; Lieutenant-Governor, Louis A. Frothingham; Secretary of State, William M. Olin; Treasurer, Elmer A. Stevens; Auditor, Henry E. Turner; Adjutant-General, ———; Attorney-General, James M. Swift; Secretary of the Board of Agriculture, J. Lewis Ellsworth; Commissioner of Insurance, Frank C. Hardison; Secretary of the Board of Education, George H. Martin—all Republicans except Foss.

SUPREME JUDICIAL COURT FOR THE COMMONWEALTH. Chief Justice, Marcus P. Knowlton; Justices, James M. Morton, Arthur P. Rugg, Henry Newton Sheldon, John W. Hammond, William C. Loring, and Henry K. Braley; Clerk of the Court, Clarence H. Cooper—all Republicans.

STATE LEGISLATURE, 1911. Republicans, Senate, 26; House, 125; joint ballot, 151; Democrats, Senate, 14; House, 112; joint ballot, 126; Others, House, 3; joint ballot, 3; Republican majority, Senate, 12; House, 10; joint ballot, 22.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. An institution for technical education in Boston, Mass., founded in 1864. The number of students enrolled in the several departments of the institute in 1910-11 was 1479 and the faculty numbered 241. There were no important changes in the faculty during the year. The benefactions received during the year 1909-10 amounted to \$57,249. The productive funds of the institute amounted to \$1,863,712 and the total income to about \$760,000. The library contains about 80,000 volumes. The president is Richard C. MacLaurin.

MATHEWS, SHALEH. See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

MATTHEWS, BRANDER. See LITERATURE, ENGLISH AND AMERICAN, *Biography, Poetry and Drama*.

MATZKE, JOHN ERNST. An American scholar and educator, died September 17, 1910. He was born in Breslau, Germany, in 1862, and graduated from Hope College, Michigan, in 1882, studying afterwards at Johns Hopkins. In 1889-90 he was professor of French at Bowdoin College and in 1890-91, professor of Romanic languages at Indiana University. From 1891 to 1893 he was professor of Romanic languages at Johns Hopkins University, and from 1893 to the time of his death occupied the same chair at Leland Stanford, Jr., University. From 1903 he had been advisory editor of *Modern Philology*. He was the author of various textbooks on French and Spanish, and contributed philological and literary studies to philological publications.

MAUDE, AYLMER. See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MAULSBY, DAVID LEE.** An American educator, died August 18, 1910. He was born in Baltimore, Md., in 1859. He received his early education in the public schools, but when still a youth, engaged in business. In 1879 he entered Tufts Divinity School and studied for two years, but resigned to enter business again. In 1883, when he was twenty-three years of age, he again entered Tufts College. Upon his graduation he became professor of Goddard Seminary at Barre, Vt. He held this position until 1891, when he was called to the chair of English literature and oratory at Tufts College. In 1900-1 he studied at the University of Chicago. He was the author of *Emerson; the Product of the Intervening Years*.

**MAURITANIA.** A civil territory in French West Africa (q. v.). Area, 890,000 square kilometres. Estimated population (1908), 225,105. Revenue in 1908, 1,470,847 francs (government subvention, 900,000 francs; direct taxes, 453,264; fines, 43,459; posts and telegraphs, 9030, etc.); expenditure, 1,426,975. The territory is administered by a commissioner (1910, Lieutenant-Colonel Patey) under the direction of the governor-general of French West Africa.

**MAURITIUS.** An island in the Indian Ocean; a British crown colony. Area, 705 square miles; population (1901), 375,385 (281,191 of Indian, the remainder of French or mixed descent). Capital, Port Louis (52,740 inhabitants). The whole island is practically given over to the growing of sugar for export, and the necessities of life have all to be imported. The chief trade is with India. Imports (1909) Rs. 28,937,065 (Rs. 17,210,947 in 1908), of which Rs. 7,476,451 from Great Britain (1908, Rs. 3,648,507); exports, Rs. 32,393,453 (1908, Rs. 33,464,263), of which Rs. 4,063,524 to Great Britain (1908, Rs. 3,653,900). Export of raw sugar (1908), Rs. 29,636,295. Vessels entered (1908), 203, of 383,798 tons (258,237 tons British); cleared, 207, of 385,251 (259,307 tons British). Railways (1909), 129½ miles; telegraph lines, 341; telephone lines, 55½; post-offices, 63. Revenue and expenditure (year 1908-9) Rs. 8,824,464 and Rs. 9,621,454 respectively. Public debt (1909), £1,305,900; paper circulation, Rs. 4,170,250. Governor and commander-in-chief (1910), Sir Cavendish Boyle. The island is subject to cyclonic disturbances.

Rodrigues, St. Brandon (or Cargados) Islands, the Chagos Islands, and the Trois Frères (or Eagle Islands) are dependencies of Mauritius.

**MAXWELL, W. B.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**MAYNE, C. E.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**MAYO, MARGARET.** See DRAMA.

**MAYOR, JOHN EYTON BICKERSTETH.** An English scholar and educator, died December 1, 1910. He was born in Ceylon in 1825 and was educated at St. John's College, Cambridge. In 1849 he was made a fellow of St. John's College.

From that year until 1853 he was assistant master of Marlborough College. He was ordained deacon in 1855 and priest in 1857. From 1863 to 1867 he was librarian of the University of Cambridge and in 1872 was chosen professor of Latin at Cambridge University, which post he held until the time of his death. From 1884 he was president of the Vegetarian Society. He wrote much and edited many editions of Latin texts. Among his published writings are the following: *Autobiography of Matthew Robinson* (1856); *Spain, Portugal, The Bible* (1895); *The Spanish Reformed Church* (1895). He also contributed many articles to the publications of the Cambridge Antiquarian Society and was an editor of the *Journal of Classical and Sacred Philology* and the *Journal of Philology*.

**MAYOTTE AND THE COMORO ISLANDS.** A group of islands, half way between Madagascar and the coast, belonging to France. Total area, 837 square miles; total population (1906), 96,314. Area of Mayotte, 140 square miles; about one-fourth the total population belongs to this island. Grande Comore, Moheli, Anjouan, and a number of smaller islands constitute the Comoro group. The cultivation of vanilla is increasing, that of sugar-cane declining. There are now but three sugar works and two rum distilleries. Coffee, tea, cacao and plants for the manufacture of perfumes are also grown. Imports and exports (1908), £54,000 and £115,200 respectively. The local budget balanced (1907) at 247,410 francs. French expenditure (budget of 1910), 3000 francs. Debt, January 1, 1907, 883,760 francs. An administrator (1910, M. Astor) is appointed for Mayotte, and for each of the three principal Comoros a resident. In February, 1910, the sultan of Grande Comore resigned to France his sovereign rights.

**MEAD, LARKIN GOLDSMITH.** An American sculptor, died October 15, 1910. He was born in Chesterfield, N. H., in 1835, and was educated in the public schools of Brattleboro, Vt. He began work as a hardware clerk at 15 years of age, but developing an artistic attitude he studied drawing and sculpture for two years under Henry K. Brown. After having produced several noteworthy works, he went to Italy, where he was attached to the United States Consulate at Venice, where his brother-in-law, William Dean Howells, was Consul. During the Civil War he acted for six months as an artist in camp for *Harper's Weekly*. Among his most notable works are the National Lincoln Monument at Springfield, Ill., the Soldiers' Monument at St. Johnsbury, Vt., statues of Ethan Allen at the National Art Gallery in Washington and in the State capitol at Montpelier, Vt. He produced also many ideal works, including "The Returned Soldier," "Sappho" and "The Recording Angel." He contributed also to the decoration of the agricultural building at the Chicago Exposition a pediment 60 feet long representing "The Return of Proserpine from the Realms of Pluto." Among the portrait busts which he made were those of Henry James, William Dean Howells, and John Hay. He executed also a colossal statue of the Mississippi River at the Minneapolis Court House and a colossal marble group, representing Columbus appealing to Isabella, at Sacramento, Cal. Mr. Mead was one of the best known of American sculptors.

**MEADE, ROBERT LEAMY.** An American army officer, died February 11, 1910. He was born in Washington in 1841 and was educated at Mt. St.

Mary's College and the United States Naval Academy. He was appointed acting midshipman in 1856, but resigned in 1858. In 1862 he became second lieutenant of the United States Marine Corps and was successively promoted until he became brigadier-general and retired in 1906. He was brevetted brigadier-general in the battle of Tientsin, China, receiving a congressional campaign medal for bravery. He was fleet marine officer of Admiral Sampson's fleet during the Spanish-American War. During the draft riots in New York City in 1863 he commanded a company of marines. He was captured in the same year and held a prisoner for fifteen months.

**MEAT AND MEAT INSPECTION.** The national inspection of meat in the United States has increased so that during the fiscal year ended June 30, 1910, it was only by strict economy that the work could be carried on within the standing appropriation of \$3,000,000. The inspection was carried on at 919 establishments in 237 cities and towns, or an increase of 43 establishments, as compared with the previous year. The results of inspections made before and at the time of slaughter are summarized in the following table:

**FEDERAL INSPECTION OF ANIMALS FOR THE TWELVE MONTHS ENDING JUNE 30, 1910**

Kind of animal	Ante-mortem inspections.			Post-mortem inspections.			
	Passed.	Suspd.	Total.	Passed for food	Passed for lard and tallow only	Condm'd	Total
Cattle .....	7,956,427	43,120	7,999,547	7,916,601	3,162	42,426	7,982,189
Calves .....	2,293,216	2,584	2,295,800	2,287,568	7	7,524	2,295,099

<b>Total .....</b>	<b>49,238,488</b>	<b>69,184</b>	<b>49,307,672</b>	<b>48,991,135</b>	<b>74,180</b>	<b>113,742</b>	<b>49,179,057</b>

Agriculture certified for export 214,355,742 pounds of beef, 4,680,846 pounds of mutton and 596,325,562 pounds of pork, a total of 810,362,150 pounds and a decrease of 30.7 per cent. from the previous year. The rapid decline in the exports of meats that has taken place during the last few years, due largely to the increased home consumption, continued with all kinds except mutton, of which there was a slight increase, as is shown in the accompanying table:

During the fiscal year ended June 30, 1910, the United States exported 139,430 live cattle valued at \$12,200,154 and 44,517 live sheep valued at \$209,000, a decrease of 68,112 cattle and 156,155 sheep, as compared with the exportations of the previous year. Ten years ago Argentina exported only 25,000 tons of frozen and chilled beef, as against 150,000 tons sent from this country. Five years later her exports of beef passed ours, and in 1909 they amounted

**EXPORTS OF PRINCIPAL MEAT PRODUCTS DURING THE PAST THREE FISCAL YEARS.**

to 210,657 tons while those of the United States had fallen to 55,746 tons. Thus Argentina now occupies the place formerly held by the United States as a purveyor of beef to Europe, being the largest exporter of beef in the world and, next to New Zealand, the largest shipper of mutton. The output of the seven freezing com-

panies in that country for the year 1909 is reported as 2,661,343 carcasses of frozen mutton or lamb, 1,459,217 frozen quarters and 1,051,465 chilled quarters of beef. An additional company in Uruguay exported 104,185 carcasses of mutton or lamb and 87,091 frozen beef during the same period. According to a computation made in

the last pastoral census the price paid for cattle in Argentina has increased by 50 per cent. during the last ten years. Although the United States has more than twice as many head of cattle as Argentina, its cattle are nevertheless fewer in number than its inhabitants, so a large proportion must go for home consumption. Argentina, on the other hand, has more than four times as many cattle within its borders as population.

From an international standpoint the most important recent development in the meat industry of the Argentine Republic is the entrance and growing ascendancy of North American interests, which began operations in that field only ten years ago. Already these interests have attained such a position that they are a decided if not a dominating influence in the progress of the trade and the control of prices. This position held by the North American companies in Argentina apparently puts the meat industry of the two principal producing countries in the same hands. Argentina has been looked upon as a competitor of the United States in the beef industry, and has even been considered by some as a possible source of meat for this country. The present operations of the North American packers in Argentina, however, have nothing to do with the meat supply of this country. Even were it not for the position of the American packers in the Argentina field there would be no likelihood that the United States consumers could secure a meat supply from that quarter at less than prevailing prices and probably not at such low figures, as there is an ample market in Europe. For the year 1909 Great Britain took 98 per cent. of the exports both of beef and mutton, but this represented only 65 per cent. of Great Britain's total imports of beef and 27 per cent. of her total imports of mutton. Should shipments of beef to this country be made from South America they will probably be directed by the same interests that supply the markets here, not in opposition to them. For an account of the high prices of meat in 1910 and the agitation in connection therewith, see **FOOD AND NUTRITION**, paragraph *Cost of Food*.

**MECHANICAL ENGINEERING.** See **AERONAUTICS**, **AUTOMOBILES**, **INTERNAL COMBUSTION ENGINES**, etc.

**MEDICAL EDUCATION.** See **UNIVERSITIES AND COLLEGES**.

**MEDICAL PROGRESS IN 1910.** The problems incident to preventing and controlling infectious diseases among large populations engrossed the attention of many sanitarians throughout the civilized world. (See **HYGIENE**, **MALARIA**, **PLAGUE**, **PELLAGRA**, **RABIES**, **TETANUS**, **TYPHOID FEVER**, **VACCINATION**.) Diseases peculiar to hot climates assumed increasing importance, European countries being engaged in making life safe in their African colonies, and the United States being occupied with a similar task in the Philippines and the Panama Canal zone. (See **BERIBERI**, **INSECTS** AND **THE PROPAGATION OF DISEASE**, **SLEEPING SICKNESS**, and **TROPICAL MEDICINE**.) A great deal of investigation was undertaken into the problems of immunity and the use of serums and vaccines in the cure of infectious diseases (see **SERUM THERAPY**), and in diagnosis by means of the X-ray (see **PHOTOTHERAPY**). Several new drugs were introduced, one of them thought to be a specific for syphilis. (See **ARSENOBENZOL**, **CHINOSOL**, **OXYNTIN**, **THIOL**.) The

search for the cause of cancer and for better means to check the spread of tuberculosis was continued. (See **CANCER**, **TUBERCULOSIS**.) A notable campaign for the "Prevention of Insanity" was begun in New York State. (See **INSANITY**.) Other medical items or statistics will be found under their appropriate heads.

**MEITZEN**, AUGUST. A German statistician, died January, 1910. He was born in Breslau, 1822, and was educated at the universities of Heidelberg and Tübingen. He was a prominent member of the statistical bureau and in 1892 was made honorary professor of the science of statistics and political economy at the University of Berlin. Among his published writings are the following: *Die internationale land- und forstwirtschaftliche Statistik* (1873); *Geschichte, Theorie und Technik der Statistik* (1886); and *Die Mitverantwortlichkeit der Gebildeten für das Wohl der arbeitenden Klassen* (1876).

**MERRITT**, WESLEY. An American soldier, died December 3, 1910. He was born in New York City in 1836 and graduated from the United States Military Academy in 1860. On his graduation he was assigned to the dragoons and in 1861 was promoted to be first lieutenant and to be captain in 1862. He participated in all the battles of the army of the Potomac and received six successive brevet promotions for gallantry. He accompanied General Sheridan on the cavalry raid toward Charlottesville in 1865 and commanded a cavalry division in the Shenandoah campaign and in the Appomattox campaign. He was one of the three commanders in the Federal army appointed to arrange with the Confederate commander for the surrender of the army of Northern Virginia. After the Civil War he participated in several Indian campaigns. From 1882 to 1897 he was superintendent of the United States Military Academy. While he was serving as commanding officer in the Department of the Atlantic in 1898 he was assigned to the command of the first military expedition to the Philippines. He continued there until summoned to the aid of the peace commissioners in session in Paris in December of that year. He returned to the United States and was placed in command of the Department of the East until his retirement in 1900.

**METEOROLOGY.** ACTION-CENTRES OF THE ATMOSPHERE. In 1909, important work was done by Hildebrandsson and others in correlating the meteorological conditions in those regions of the globe underlying what Teisserenc de Bort in 1881 termed "atmospheric action-centres." It has been established that the variation in the intensity and position of these action-centres is the principal factor determining the general character of the seasons even in regions lying far apart. From Japanese observations covering a period of thirty years, Okada, the chief forecaster of the Japanese Weather Bureau, has added to the list of centres interaction of which seems to be well established. In winter a high-pressure area exists over Siberia, accompanied by a pronounced low-pressure area over the North Pacific Ocean, while in summer these conditions are reversed. During the winter any abnormal rise in pressure over the Asiatic continent is invariably attended by abnormally cold weather in Japan and on the neighboring coast of the continent. This is particularly the case after the passage of a cyclonic centre from the continent over the Sea of Japan and its disappearance to the northeast over the Sea of Okhotsk. The cold weather persists so long as the anti-cyclonic conditions on the continent continue. In the early summer the existence of a high-pressure area over the northwestern portion of the Pacific Ocean and the Sea of Okhotsk is accompanied by cool weather in northern Japan, but, with the disappearance of the anti-cyclone towards the east, warm air flows in and the temperature rises accordingly.

McAdie called attention to the importance to American meteorology of a knowledge of the movements of the pressure-areas of the Pacific Ocean. He himself has established two general laws governing the weather on the northern Pacific coast of this continent. When the continental anti-cyclone in winter overlies Oregon, Idaho, Utah, and Nevada, the general drift of the surface air is from the north or northeast; and such a circulation favors fair weather, with little precipitation. But if the low-pressure area of the North Pacific Ocean extends well to the south along the Oregon coast and the continental high overlies Assiniboia and Montana, the general drift of the surface air in California and on the Pacific coast is from the south or southeast; and frequent and heavy rains occur west of the Sierras, with heavy snow in the mountains.

**METEOROLOGICAL PHENOMENA AND HALLEY'S COMET.** Careful preparations were made for the observation of meteorological phenomena during the transit of Halley's comet across the face of the sun and the passage of the earth through the tail of the comet, which events were expected to take place on May 18. A circular letter was sent out by Professor Willis L. Moore, chief of the United States Weather Bureau, to nearly two hundred stations in the United States and the West Indies, asking that, on May 17, 18 especially, and 19, particular observations be taken of the occurrence of auroral displays, meteoric trails, the color of the sun and sky, twilight phenomena, luminous clouds, the zodiacal light, solar and lunar halos, and any other meteorological phenomena which might seem to be worth not-

ing. As stated in the article ASTRONOMY (q. v.), it seems probable that, on account of its pronounced curvature, the tail did not begin to sweep past the earth until May 20, and that at that time the earth was some four million miles south of the plane of the comet's orbit and was therefore not enveloped by the tail. As it was, few, if any, positive results were recorded; and, as most of the phenomena noted have been seen when there was no comet to which they could have been attributed, it seems fair to infer that the comet was not responsible for them. Possibly the most striking observations were those of Professor Max Wolf, of the Königstuhl Observatory, who reported that late in the afternoon of May 19 a bishop's ring was seen round the sun, and that this was followed by a twilight of unexpected intensity and duration; that three twilight purple glows followed one another and that all the peculiar sky phenomena observed after the eruptions of Krakatoa and Pelée appeared again at this time, but were intensified. In the evening a bishop's ring appeared round the moon. Both rings appeared to be more intense than if due solely to atmospheric effects, but no meteors or auroras were seen.

An attempt by M. Claude of Boulogne-sur-Seine, to detect cometary matter among the residual inert gases left from the liquefaction of air resulted in failure.

**SOLAR DISTURBANCES AND TERRESTRIAL TEMPERATURES.** In an effort to bring together harmoniously, as cause and effect, a number of solar and terrestrial phenomena, W. J. Humphreys of the Mount Weather Observatory sought to connect the changes in the number and extent of sunspots, flocculi, prominences and coronal streamers with such terrestrial phenomena as auroral displays, magnetic storms, temperature changes, rainfall, etc. He concluded that an increase in sunspots was accompanied by a decrease in terrestrial temperatures, but that the latter was far greater than could be accounted for by the decreased radiation from the spot-area alone. It was found that the change in the temperature of the earth from spot maximum to spot minimum did not depend necessarily on a change in the solar constant; it was probably connected closely with a change in the absorptive properties of the atmosphere, caused by a variation in the amount of ozone produced by ultra-violet radiation and by auroral discharges.

**PHOTOGRAPHING THE AURORA BOREALIS.** On account of the feeble light of the aurora, as well as its mobility, which necessitates short exposures, the problem of photographing the aurora has hitherto been looked upon as well-nigh impossible of solution. Carl Störmer, by using a cinematograph lens of 25 mm. diameter and 50 mm. focal length, in conjunction with Lumière's extra rapid plates, solved the difficulties peculiar to the problem, and in February and March succeeded in taking about 800 photographs, fully half of which were successful. The length of exposure varied from a fraction of a second to twenty seconds, depending on the brightness and motion of the aurora. By taking a series of simultaneous photographs at two stations 4.3 kilometres apart, data were obtained from which the extent and location of the aurora were derived. The heights determined from four sets of photographs which accompanied his communication to the French

Academy of Sciences were 166, 55, 190 and 120 kilometres respectively.

**Books.** Among the more important works published in 1910 were the following: Moore, *Meteorology, Practical and Applied*, 2d edition; Bjerknes, *Dynamic Meteorology*; Pernter, *Meteorologische Optik*, Bd. IV; Hann, *Handbuch der Klimatologie*, Bd. II, *Klimatographie*, teil i, *Klima der Tropenzone*.

**METHODIST EPISCOPAL CHURCH.** A Protestant religious denomination which had its beginning from the great movement under the leadership of John Wesley which was carried on from the middle of the Eighteenth Century. The first Conference of the church in the United States was held in 1773 and an organization was formed in 1775. The Episcopal College, composed of the bishops of the church, consisted in 1910 of 31 members, 24 general superintendents, and 7 missionary bishops.

According to the United States census of religion made in 1906 and published in 1910, the total number of communicants in the Methodist Episcopal Church in the former year was 2,986,154, with 28,345 church edifices and 17,479 ministers. As compared with statistics for 1890 this shows an increase of 4082 organizations and 745,800 communicants. The value of the church property in 1906 was \$163,357,805, an increase of \$66,634,397 over 1890. The Methodist Episcopal Church ranks first in the number of communicants among the separate Protestant denominations of the United States.

According to the *Methodist Episcopal Year Book*, the total membership of the denomination, including full members and probation members, was in 1910 3,485,983 as compared with 3,444,606 in 1909. The full members numbered 3,166,446. In the Sunday schools of the denomination there were in 1910 3,884,168 officers and teachers, with 35,595 schools. The value of the church property was \$180,821,057, while the churches numbered 30,304. The total receipts for missions from all conferences from October 31, 1909, to November 1, 1910, was \$1,156,794. Missions of the church are carried on through the Board of Foreign Missions. Missionaries are stationed in all parts of the world. In the non-Christian lands the denomination has 781 foreign missionaries, 2928 native preachers, 78,931 full members and 131,430 probationers. In Japan there are 86 Methodist Episcopal foreign missionaries. The Japan Methodist Church was organized in 1907. In Roman Catholic lands there are 180 foreign missionaries and in Greek Church lands five foreign missionaries. In 1910-11 the General Conference of the church observed the quarter centennial of the founding of the church.

Home missions are carried on through the Board of Home Missions and Church Extension. This Board has care of all missionaries and church extension interests in the United States and insular possessions, except in the Philippine Islands, where it is responsible for church extension interests alone.

The educational work of the denomination is in the hands of the Board of Education. The object of the Board is the promotion of the educational work of the church. Provision is made for the aid of deserving students. Under the auspices of the denomination are 45 colleges and universities for white students and 8 for colored students. There are 35 professional

schools for white students and 5 for colored students. In addition, there are five missionary institutes and Bible training schools. In the colleges for white students there were in 1910 13,563 students and in the colleges for colored people, 222. The total value of educational property under the control of the church in 1910 was \$50,214,561. Among other church organizations are the Freedmen's Aid Society, which carries on work among the negroes of the South, the Board of Conference Claimants, the Methodist Brotherhood and the National City Evangelization Union. The women of the church are also organized into a number of organizations. The denomination sustains many benevolent institutions in various parts of the country.

During the year the Methodist Episcopal Church sustained severe losses in the deaths of Bishop Cyrus D. Foss (q. v.), Borden P. Bowne, D.D., Bishop Henry Spellmeyer (q. v.) and Dr. Stephen Van Rennselaer Ford. In 1911 will be held the fourth Ecumenical Council of the Church. This is a combination of all the branches of the Methodist denomination in Great Britain, Ireland and Australia, United States and Canada, and includes the Methodist Church in Japan. The meeting will be held in Toronto, Canada, October 4-17.

**METHODIST EPISCOPAL CHURCH, SOUTH.** A Protestant religious denomination which was founded in 1845 as the result of a separation of a body of the members of the Methodist Episcopal Church, who differed on the question of slavery. The denomination is found largely in the South. In 1910 it numbered 1,817,732 communicants, 6388 traveling preachers and 5015 local preachers. There were in the Sunday schools of the denomination 1,258,467 scholars and 120,861 officers and teachers. At the head of the denomination are seven bishops. The Epworth League had 141,928 members. The denomination carries on missions in Japan, Korea, China and other foreign countries. Under its control are one university, 15 colleges and 106 unclassified schools. The endowment of these amounts to about \$5,000,000. The conferences numbered 47. The publishing house of this denomination is at Nashville, Tenn., where are published the *Methodist Review*, the *Christian Advocate* and a number of other denominational publications.

**METHODIST PROTESTANT CHURCH.** A Protestant religious denomination founded in 1828 by members of the Methodist Episcopal Church who withdrew from that body on account of the refusal of the General Conference in 1824 to admit laymen. The denomination assumed its present name in 1830. In 1910 there were 188,806 communicants, 2390 church edifices and 1362 itinerant preachers. The denomination is found in various parts of the country but is strongest in the South. Efforts have been made in recent years to bring about a union between the Congregational Church, the United Brethren (q. v.) and the Methodist Protestant Church, but these have been in abeyance for several years as a result of the action of the National Council of the Congregational churches in 1907 in voting to defer action. The denomination carries on foreign and domestic missions and maintains publishing houses in Baltimore and Pittsburgh. Among its publications are *The Methodist Protestant*, *The*

*Methodist Recorder*, and several Sunday school and other periodicals.

**METROPOLITAN LIFE INSURANCE SOCIETY.** See **INSURANCE.**

**METROPOLITAN MUSEUM OF ART.** An institution incorporated under the laws of the State of New York in 1870 for the purpose of establishing a museum and library of art and to encourage the application of the sciences and manufactures to practical life. The Museum has its collections in a handsome building in Central Park which is owned by the city and is leased by a corporation. Additions to the building have been under construction for several years. During the year 1910 744,449 persons visited the Museum as compared with 937,833 in 1909. The unusually large attendance in the latter year was the result of special exhibitions held during the Hudson-Fulton celebration. The number of accessions during the year was 10,521 objects of art, of which 7746 were acquired by gift or bequest and 2283 were secured by purchase. Of the new accessions, 59 were paintings and 41 objects of sculpture. Twenty-four of the paintings acquired were by American artists. The loans for the year numbered 6527, including a number of important collections loaned by J. Pierpont Morgan. The Museum received several important bequests during the year (see **GIFTS AND BEQUESTS**). For several years expeditions have been maintained in Egypt and important contributions have been made to the science of archaeology (see **ARCHAEOLOGY**). Sir Caspar Purdon Clark, who resigned as director during the year on account of illness, was succeeded by Mr. Edward Robinson. The expenditure for administration and maintenance of the Museum during 1910 was \$324,587. The city contributed \$200,000 toward the payment of this amount, and \$8002 was received for admissions on pay days at the Museum, the balance being contributed by the trustees.

**MEXICO.** A North American republic. The capital is the City of Mexico.

**AREA AND POPULATION.** The area of the 27 states, three territories, and Federal District is officially stated at 1,987,201 square kilometres (767,258 square miles). The census of 1900 showed a population of 13,607,259, of whom 19 per cent. were white, 38 per cent. Indian, and 43 per cent. mixed. Foreigners numbered 57,588, including 16,278 Spaniards and 15,266 Americans. Roman Catholics, 12,380,245; Protestants, 51,795. The results of the census of October, 1910, are not yet available, though it will probably show a total population of about 16,000,000. Provisional returns for the larger capital cities are: Mexico City, 470,659, against 368,898 in 1900 (entire Federal District, 719,662, against 541,516 in 1900); Guadalajara, 118,794; Puebla, 101,214; San Luis Potosí, 82,946; Monterey, 81,006; Mérida, 61,999; Aguascalientes, 44,800; Morelia, 39,116; Chihuahua, 39,061; Pachuca, 38,620; Oaxaca, 37,469; Guanajuato, 35,147; Saltillo, 35,063; Querétaro, 35,011; Durango, 34,085; Toluca, 31,247. Figures for 1905 (not quite complete) show 461,661 births (186,248 illegitimate), 432,067 deaths, and 55,776 marriages.

**EDUCATION.** Public instruction (which is free, primary being nominally compulsory) is controlled by the state governments within their jurisdictions and by the central government in the Federal District (including the

City of Mexico) and the territories. Subject to the central government also are various secondary or collegiate institutions within the states. Official figures relating to public instruction and published in 1910 for the year 1906 are as follows: Infant schools, 72, pupils, 7491; elementary schools (primary), 8451, pupils, 542,539; elementary schools (superior), 354, pupils, 51,789; secondary and preparatory (including collegiate) schools, 38, pupils, 4581; professional schools, 66, students, 8734. Private, clerical, and association schools in 1906 numbered 2562, of which 214 were infant schools, 2205 elementary (primary), 111 elementary (superior), 16 secondary and preparatory, and 16 professional; their total enrollment, 163,020. In recent years there has been considerable educational progress. At the centennial celebration in September, 1910, several of the professional institutions were reorganized to constitute the National University of Mexico.

**INDUSTRIES.** Mexico is pre-eminently a mining country. The value of the mineral production during the year ended June 30, 1909, is stated as follows, in American money: Silver, \$38,383,896; gold, \$22,351,047; copper, \$10,150,737; lead \$3,185,706; zinc, iron and other metals, \$2,138,988; coal, \$2,191,200; mineral oil, \$1,394,400; total, \$79,795,974. In the last few years gold production has shown a rapid development.

The agricultural yield, in proportion to the capabilities of the country, is small. The annual value of the products of the soil and of cattle marketed is about \$200,000,000, of which the chief items, representing a fair average product, are: Corn, \$50,000,000; cotton, \$17,000,000; henequen, \$16,000,000; wheat, \$13,000,000; sugar and molasses, \$13,000,000; spirits, \$10,000,000; coffee, \$8,000,000; beans, \$6,000,000; and woods, \$5,000,000. Estimates of sugar production: 1899-1900, 75,000 tons; 1907-8, 123,000 tons; 1908-9, 143,000 tons; 1909-10, 160,000 tons. In the latter year, the output of molasses was about 85,000 tons; in 1909, coffee, 81,000,000 pounds; cacao, about 2,000,000 pounds.

The leading manufactures include cotton textiles, tobacco goods, sugar, and spirits. At the end of the fiscal year 1909, there were 146 cotton factories (of which 17 were idle), with 726,278 spindles, 25,327 looms, and 14 print machines. Consumption of raw cotton, 35,434 metric tons; output, 13,887,911 bolts of various fabrics and 1,952,000 kilos of yarn; declared first-hand sales, \$21,598,266. There were 437 tobacco factories, producing in the year 505,437,551 packets of cigarettes, 81,336,415 cigars, and 77,000 kilos of pipe tobacco. There are a number of jute factories, linen and woolen mills, paper mills, iron foundries, soap factories, breweries, packing houses, one silk mill, etc., for which statistics are not available.

**COMMERCE.** For fiscal years ending June 30, the values of imports and exports are stated as follows, in American money:

	1908	1909	1910
Imports .....	\$110,406,216	\$ 77,953,442	\$ 97,039,050
Exports .....	120,884,620	115,088,606	129,508,002

Analysis of the imports shows (values being given in thousands of U. S. dollars):

Imports	1908	1909	1910
<b>Manufactures:</b>			
Iron and steel.....	15,293	10,132	13,764

**COMMUNICATIONS.** In his annual message, September 16, 1910, the President reported that railways under Federal jurisdiction aggregated 19,719 kilometres; under state jurisdiction, 4840; total, 24,559 (15,256 miles), against 24,161 kilometres as stated in the message of September 16, 1909. The Federal government owns or controls about 14,000 kilometres. New lines and extensions are under construction or projected.

For the fiscal year 1910 railway earnings are reported as \$34,596,280 gross, or \$13,794,074 net. Of especial interest is the volume of business now being done by the Tehuantepec Railway, which connects Puerto Mexico, on the Atlantic seaboard, with Salina Cruz, 190 miles distant, on the Pacific. In 1907, the first year of its operation, this line transported merchandise to the value of between \$25,000,000 and \$30,000,000; in the second year, about \$38,000,000; in the fiscal year 1909, about \$51,500,000, of which some \$24,500,000 was eastbound and \$27,000,000 westbound; in 1910, about \$69,000,000, \$28,000,000 eastbound and \$41,000,000 westbound. Of the eastward movement, about \$20,000,000 consisted of sugar shipped from Hawaii chiefly to the New York and Philadelphia refineries. The railway was built on the theory that by getting a start of the Panama Canal, by construction which reduced the unit cost of transportation to a minimum, by the use of mechanical facilities in handling freight at terminals from vessel to car, and by the establishment of regular and ample shipping connections, neither the canal nor the more northerly transcontinental lines could successfully undercut rates between the east and west seaboard.

Federal telegraph lines in 1908, 39,865 miles, with 501 offices; in 1909, 42,750 miles. Post-offices, June 30, 1910, 2843.

**FINANCE.** The monetary unit is the silver dollar, or peso, worth 49.8 cents. Ordinary revenue and expenditure (estimates for 1911) for year ending June 30, in thousands of Mexican dollars:

	1907	1908	1909	1911
Rev.....	114,286	111,772	98,776	107,918
Exp.....	85,077	93,177	92,967	102,294

In 1908-9, the larger sources of revenue were: Import duties, 38.41 per cent.; interior taxes payable throughout the republic, 32.37;

interior taxes payable in the territories and the Federal District, 12.03; public service, 6.36. The larger items of expenditure, with estimates for 1910-11, are: Public debt and finance, 35,472,168 dollars; army and navy 21,117,175; communications, 15,611,770; interior, 15,219,839; public instruction, 6,970,057. On June 30, 1910, the debt stood: External, 304,078,558 dollars; internal, 138,889,108; non-consolidated, 368,679; total, 443,336,345; total charges, 21,171,356. Chartered banks in the republic, June 30, 1909, 32, of which 24 were banks of issue.

**ARMY.** An increase in the military establishment and a reorganization of the army was in progress during 1910 and that it was necessary was shown by the events of the latter part of the year. On a peace basis the army consisted of 3500 officers and 31,000 men recruited by voluntary enlistment for a term of 5 years. The object of the reorganization was to provide a force that on mobilization would give a strength of about 7000 officers and 186,000 men, and in case of need could be increased to 250,000. The national army as organized on a peace footing consisted of 30 battalions and 2 skeleton battalions of infantry, 14 regiments and 4 half-regiments of cavalry, 8 field batteries, 4 mountain batteries, 4 horse batteries, 1 machine gun company, and 1 squadron of quick-firing guns of small calibre. In addition Mexico established works for the manufacture of munitions of war. There is a factory for cartridge manufacture at Tacubaya with new machinery and the national powder manufactory at Chapultepec has been increased. The new automatic rifle was being manufactured at Neuhausen in Switzerland; it is known as the "Porfirio Diaz" and is on the mondragon system. It was the first automatic rifle regularly to be adopted by a National Army.

**NAVY.** The navy includes one unprotected cruiser, of 1220 tons, nine gunboats, and five torpedo boats. Six cruisers are said to be projected.

**GOVERNMENT.** Mexico is a federal republic, in which the chief executive authority rests with a president who is elected by indirect vote for six years and is assisted by a cabinet of eight members. The legislative power is vested in a congress of two houses, the Senate (56 members, elected for four years) and the Chamber of Deputies (one for every 40,000 inhabitants, elected for two years). The President in 1910 was General Porfirio Diaz. He became President first in 1877, his assumption of the chief executive office marking the culmination of successful revolutionary movements. He was succeeded in 1880 by Gen. Manuel González, who in turn was succeeded by Diaz in 1884. Diaz was re-elected in 1888 and subsequently for four-year terms until 1904, when he was elected for the six-year term ending November 30, 1910. In the latter year he was again elected for six years, and on December 1, when an insurrectionary movement was in progress, he was inaugurated for his eighth term. Diaz was born in 1830. The Vice-President in 1910 (re-elected for the term ending November 30, 1916) was Ramón Corral. The states have their own elected governors and legislatures. The territories are administered by governors and the Federal District by three officials, all appointed by the President.

**HISTORY.** President Diaz, now in his 80th

year, was chosen President again on July 26, and Ramón Corral Vice-President. The Opposition candidate, Dr. Madero was in prison at the time of the elections. Mexico began the celebration of the anniversary of her independence on September 1, 1910, with a programme of festivities which lasted through a month. A special envoy was sent from the President of the United States and also a Commission representing that country. The features of the celebration were fête days on September 15, 16 and 19, with an imposing pageant, a sham battle on September 25, under the direction of the Secretary of War, and the dedication of a new million dollar palace at Chihuahua.

After the elections Francisco Madero was released from prison (October 7) under the requirement that he should remain in Mexico, but he fled to Texas in disguise. A revolution was started by Madero and his followers in November and spread to several provinces. On November 18 the revolutionists were attacked at Puebla, where the police attempted to break up a mass-meeting of protest against the election of Diaz. A fight followed in which some 25 persons were killed. On November 19, Madero, who had been in San Antonio, Texas, left that city, and at the same time a number of Mexicans staying in Texas took up arms and crossed the border. The chief scene of revolutionary activity at first was the northern part of the state of Chihuahua, where a majority of the people were hostile to the government. On December 6 the insurgents captured Guerrero, but were driven out by the government three days later. There were conflicting reports of the insurrection. At the close of the year the government was said to have it well in hand, but the reports in the press continued to represent the situation as very serious. Early in November there were a number of student demonstrations against Americans in Mexico City. A lynching at Rock Springs, Texas, of a Mexican for murder was said to be the cause of these uprisings, which took the form of throwing stones at the windows of American business houses and attempts to attack Americans. Frequent reports have been made in recent years, pointing to the great unpopularity of the Americans among certain classes in Mexico, especially the students. See UNITED STATES, *Foreign Relations*.

**MEYDUM, EXCAVATIONS AT.** See *ARCHAEOLOGY*.

**MEYER, GEORGE VON L.** See *UNITED STATES, Navy and Cabinet*

**MICHAELIS, ADOLF.** A German archaeologist, died in August, 1910. He was born in 1835 at Kiel and studied at the university of his native town and in Berlin and Leipzig. After 1862 he was professor of classical philology and archaeology at Griefswald, Tübingen, and Strassburg. In 1874 he became a member of the German Central Archaeological Institute in Rome, the history of which he published in 1879. His best known work is a critical edition of Tacitus's *Dialogues and Orations*. He published many archaeological treatises, including one on *The Parthenon* (1871), and *Ancient Marbles in Great Britain*, translated in 1882. He also prepared the 6th edition of Springer's *Handbuch der Kunstgeschichte* (1901).

**MICHELIN CUP.** See *AERONAUTICS*.

**MICHIGAN.** One of the North Central Divi-

sion of the United States. It has an area of 57,980 square miles. Its capital is Lansing.

**POPULATION.** The population in 1910, according to the Thirteenth Census, was 2,810,173 as compared with 2,420,982 in 1900 and 2,093,890 in 1890. The increase in the decade 1900 to 1910 was 16.1 per cent. The State ranks eighth among the States in point of population, whereas in 1900 it ranked ninth. The population of the larger cities and towns will be found in the tables in the articles UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Michigan is notable for the large quantities of iron and copper produced in its mines. The chief ranges from which these are produced are the Marquette, Menominee, and the Gogebic, the last of which, however, are partly in Wisconsin. The total production from these ranges was 13,219,614 long tons, which was a great increase over the product of 1908, which was 8,839,199 long tons. The Marquette range is the oldest of the Lake Superior ranges. In the production of copper, Michigan ranks third, being surpassed only by Arizona and Montana. The production in 1909 was 227,005,923 pounds, a slight increase over the production of 1908, which was 222,289,584 pounds. The United States Geological Survey estimates a production of about 220,000,000 pounds in 1910. The important developments of the year were those carried on at the lake and neighboring properties. Though these developments by no means realized the expectations held at the beginning of the year they still indicate the possibility that important deposits may be found in this region. The coal production of the State in 1909 was 1,783,692 tons as compared with 1,835,019 in 1908. The output in 1910 was about the same as in 1909, with possibly a slight increase. The mines working under an agreement with the United Mine Workers of America were shut down from April 1 to June 1, but the increased activity both prior to and following the suspension brought the total production up to the normal. At the close of 1910 the coal mining industry of the State was in a more satisfactory condition than was reported in most of the other States. In the production of Portland cement, the State takes an important place. There were produced in 1909 3,212,653 barrels valued at \$2,620,089 as compared with 2,892,576 barrels valued at \$2,556,215 in 1908. Salt is produced in large quantities and the State holds first place in the production of this commodity. The clay products are of great value, and among other minerals produced are graphite, asbestos, stone, and gypsum.

**AGRICULTURE.** The acreage, production, and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod bus.	Value
Corn, 1910.....	2,100,000	68,040,000	\$36,061,000
1909.....	1,976,000	69,950,000	42,670,000
Winter wheat '10	889,000	15,642,000	13,921,000
'09.....	775,000	14,670,000	16,318,000
Oats, 1910.....	1,505,000	51,170,000	17,910,000
1909.....	1,420,000	43,310,000	17,757,000
Barley, 1910.....	67,000	1,742,000	1,010,000
1909.....	67,000	1,655,000	1,010,000
Rye, 1910.....	350,000	5,355,000	13,641,000
1909.....	550,000	5,425,000	3,743,000
Buckwheat, 1910	55,000	842,000	522,000
1909.....	58,000	829,000	547,000
Potatoes, 1910..	335,000	35,175,000	10,904,000
1909.....	348,000	36,540,000	12,789,000
Hay, 1910.....	2,592,000	3,370,000a	45,832,000
1909.....	2,618,000	3,403,000	38,794,000

a Tons

**FINANCE.** The report of the State treasurer for the fiscal year ended July 1, 1910, showed a balance on hand July 1, 1909, of \$1,613,967. The total receipts during the year were \$13,412,149 and the total disbursements \$12,538,233, leaving a balance on hand June 30, 1910, of \$2,487,883. The chief disbursements were for education, the maintenance of State institutions and the expense of the State government.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the following: Michigan School for the Deaf, Flint; Michigan School for the Blind, Lansing; Michigan Employment Institution for the Blind, Saginaw; State Public School, Coldwater; Industrial School for Boys, Lansing; Industrial Home for Girls, Adrian; Michigan Soldiers' Home, Grand Rapids; Michigan Asylum for the Insane, Kalamazoo; Eastern Michigan Asylum, Pontiac; Northern Michigan Asylum, Traverse City; Upper Peninsula Hospital for the Insane, Newberry; Michigan Home for the Feeble-Minded and Epileptic, Lapeer; State Asylum, Ionia; Michigan State Prison, Jackson; State House of Correction and Branch of State Prison in U. P., Marquette; Michigan Reformatory, Ionia; Detroit House of Correction, Detroit; State Sanatorium, Howell.

#### POLITICS AND GOVERNMENT

**ELECTIONS.** At local option elections in April the drys carried 10 additional counties, so that now 40 of the 84 counties in the State are dry. In the general campaign in the fall Chase S. Osborn, Republican, on a distinctly progressive platform, was nominated at the primaries for governor over two other candidates, by 40,000 plurality, and was elected in November by a majority of 43,033. For the first time candidates for United States Senator were nominated at primaries. For the Republican nomination two entered, Senator Julius C. Burrows, stand-patter, who had been three times elected, and Charles E. Townsend, progressive, member of Congress for the Second District. Each signed an agreement to abide by the result of the primary vote. Congressman Townsend was nominated by a majority approximating 45,000. The Republican majority of the new legislature then unanimously elected him on the first ballot.

**OTHER EVENTS.** On June 24 at Monroe, President Taft delivered the main address at the unveiling of an equestrian statue, erected by the State, of General George A. Custer, who was killed with his entire command of the Seventh United States Cavalry at the battle of Little Big Horn, Montana, by Sitting Bull's Sioux, in the summer of 1876. Monroe was the Custer home.

Two State officials were given penitentiary sentences. February 5 former State Treasurer Frank P. Gloziar was given an indeterminate sentence of five to ten years for embezzling State funds; and on May 2 Allan N. Armstrong was given one year and \$5000 fine for, as warden of the Jackson penitentiary, accepting a bribe from a prison contractor.

On May 23 the freight steamer *Frank H. Goodyear* was rammed and sunk on Lake Huron by the steamer *James B. Wood*, and 16 men and one woman, of the *Goodyear*, drowned. On September 9 the *Père Marquette* Railroad Company's car ferry, "No. 18," bound out from Ludington, went down in Lake Michi-

gan by the shifting of cars in a heavy sea, and 28 lives were lost. August 25 a rear-end collision of two Grand Trunk passenger trains occurred at night near Durand, and a sleeper caught fire. The killed and burned to death were 12. February 10 the explosion of a boiler at L. L. Princling and Son's saw mill, near Bay City, killed seven men. On November 12 a Michigan Central fast freight ran down a street car at night, at Kalamazoo, and the lives lost were 12.

Twice during the year the governor ordered detachments of the National Guard for active duty, once to protect railroad property, at Durand, during a strike of Grand Trunk Railway trainmen, and a second time to quarantine the State Home for Feeble-Minded, at Lapeer, where there was a smallpox epidemic.

Loyal E. Knappen, Federal Judge for the Western District of Michigan, was elevated to the next higher court by President Taft in January, and Arthur C. Dennison, of Grand Rapids, was appointed District Judge to succeed him.

**STATE OFFICERS.** Governor, Chase S. Osborn; Lieutenant-Governor, John Q. Ross; Secretary of State, Frederick C. Martindale; Treasurer, Al. E. Sleeper; Auditor, Oramell B. Fuller; Attorney-General, Franz C. Kuhn; Adjutant-General, \_\_\_\_\_; Superintendent of Education, Luther L. Wright; Commissioner of Insurance, M. O. Roland; Commissioner of State Land Office, Huntley Russell—all Republicans.

**JUDICIARY:** Supreme Court: Chief Justice, Russell C. Ostrander; Justices, John E. Bird, Joseph B. Moore, Aaron V. McAlvay, Chas. A. Blair, Frank A. Hooker, Flavius L. Brooke, John W. Stone; Clerk, Charles C. Hopkins—all Republicans.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 29; House 87; joint ballot, 116; Democrats, Senate, 3; House, 13; joint ballot, 16; Republican majority, Senate, 26; House, 74 joint ballot, 100.

**MICHIGAN, UNIVERSITY OF.** An institution of higher learning at Ann Arbor, Mich., founded in 1837. The attendance in 1909-10 in the several departments of the university was 5383. The number of members of the faculty, not including assistants, was 292. The most notable change in the faculty during the year was the election of Dr. Harry B. Hutchins, for fifteen years dean of the department of law, to the presidency of the university to succeed James G. Angell, who retired in 1909. Dr. Angell was elected president emeritus. Professor Henry M. Bates, for several years a professor in the department of law, was elected dean of the law department. Professor Jesse S. Reeves, formerly of Dartmouth College, was appointed to the professorship of political science. During the year the university received as a gift from the late Arthur Hill of Saginaw, for many years a member of the board of regents of the university, \$200,000 for the purpose of building a university auditorium. The income of the university is derived almost entirely from the State and from the fees of students. It amounted in 1909-10 to \$1,024,170.

**MILITARY ACADEMY, UNITED STATES.** See UNITED STATES MILITARY ACADEMY.

**MILITARY AEROPLANES.** See MILITARY PROGRESS.

**MILITARY PROGRESS.** No military operations of importance, except annual manoeuvres, took place during the year; nevertheless the efficiency of the armies of the world increased greatly, and at the close of 1910, the preparations for war were much more extensive than at the beginning. The Spanish war in Morocco came to a close with results satisfactory to the Spaniards, and the tribes around Melilla expressed their allegiance and gave support to King Alfonso. In China the awakening brought the government to a realizing sense of the necessity for military preparations, and several schools, under German and Japanese officers, have been established. Besides, the Chinese availed themselves of the privilege granted by foreign nations to permit students to enter the great military schools of the world. No reliable report was made of the efficient strength of the Chinese army, but it was well known that the fighting strength was of no mean calibre. The Japanese army and the armies of Europe were maintained in the most efficient condition that their respective governments were capable of supporting.

**ITALIAN ARMY.** During 1909 important changes were in contemplation in the Italian service. On July 17, 1910, a general order was promulgated, inaugurating several innovations, the principal of which were: (1) The transformation of thirty-six companies of *bersaglieri* into twelve cyclist battalions. (2) Establishment of new remount depots for the cavalry and artillery. (3) Increase of the artillery by nine field batteries and twenty-four depot batteries. (4) Increase of the engineers by ten companies.

**INFANTRY. United States Army.** The United States army took the lead in the improvement of the pack for infantry soldiers. For over a year a board of officers had been carefully studying the problem, and their conclusions and recommendations were reported to the War Department in the autumn of 1910. The results were highly satisfactory to the service. The revision of the old method of carrying the load of the foot soldier was based on the principles that the ideal load should be as light as possible, a self-evident proposition; that it must contain all the articles essential to the soldier's purpose, health, and comfort; that the distribution of the load on the framework of the body should be such that the centre of gravity of the load and that of the body should coincide; that the weight should be transmitted to the medium of locomotion, the legs, with a minimum of effort and fatigue to the medium of transmission, the body; and that the load should be borne without interference with the vital organs and limbs. The full equipment as designed weighs 39 pounds, 1.53 ounces; the full equipment, less the pack (which consists of carrier, blanket, poncho, shelter tent half and pins), weighs 30 pounds, .33 ounces; the fighting equipment, without the pack, weighs 37 pounds, 13.24 ounces; and the latter with pack, 46 pounds, 14.44 ounces. The entire load is easily removed and may be quickly replaced; it is easy of adjustment to meet the requirements of the individual; it is simple of construction and easy to repair, and is sanitary.

**French and German Armies.** In the French and German armies the marching of the infantry was the marked feature of the year's manoeuvres,

and the improvement in this respect caused much favorable comment from foreign observers.

**Russian Army.** The Russian army has begun to recover from its reverses in the Japanese war, and was largely reorganized in the infantry arm. The Instructions for Infantry Combat issued in 1910 showed a marked advance over those of previous years. They state that infantry forms the principal strength of the army, and is assisted by the artillery in crushing the enemy, and that the infantry bears the brunt of the fight. Detailed directions are given for the advance, the attack, the disposition of troops, and all features of the tactical manœuvring. Like most of the advanced systems of the world, it is taken largely from the German.

**CAVALRY.** Military horsemanship received close attention from all cavalry services of the world. The French School of Equitation at Saumur has maintained a high standard of efficiency, and has been the model for other schools. International horse shows, notably at London and in New York, were attended by representatives detailed from the cavalry of the armies of the world, and the friendly rivalry excited by these contests did much to increase the efficiency of cavalry service everywhere. In France and Germany the remount depots were improving the quality of their horses, and in the United States the cavalry service endeavored to establish proper depots. Although great progress had not been made in the plans for bettering the horse flesh for the United States service, yet the necessity for further development was recognized, and it was expected that tangible results would follow soon. That the endurance of cavalry had not decreased was shown by the length of time spent in the saddle in the French manœuvres of this last autumn—at times as much as seven hours per day.

On account of the multiplicity of duties devolving on cavalry, stated the *Revue Militaire* for November, 1910, the instruction in equitation in the German service has undergone a change. All superfluous work is eliminated, and the instruction greatly simplified. This change was viewed with satisfaction by German officers. In the English service the discussion was still in progress concerning the value of the lance, the sabre, and the rifle. In a letter to the *Pall Mall Gazette* of April 6, 1910, Sir A. Conan Doyle entered the controversy. His conclusions were concurred in by most military men of Great Britain. The argument was advanced that it was useless to train a horseman in shock tactics and to make of him, at the same time, a mounted rifleman.

**FIELD ARTILLERY.** France adopted a very efficient howitzer of 155 millimetres (6.1 inches) calibre, to replace a former type, which was neither heavy enough nor of sufficient mobility. This new weapon slides in a cradle on discharge and is provided with the best of auxiliary devices, such as improved sights, a shield, and a spade for holding the gun in position during firing. On the march the gun is, for convenience, shifted to another position on the carriage. It is capable of firing five shots per minute, at maximum range of 5 kilometres (5470 yards). The projectile weighs 43 kilograms (94.6 pounds), and its explosion makes a hole in the ground 4 metres (13.1 feet) in diameter, and one metre (3.2 feet) deep. The radius of burst, or distance the fragments will be thrown

on bursting, is 80 metres (87.5 yards). Batteries have two of these guns each.

Austria-Hungary has a field howitzer using both shrapnel and high explosive shell, which is able to destroy ordinary field works at a maximum range of 5700 metres (6236 yards). Its mobility is sufficient to enable it to keep up with infantry.

Messrs. Krupp, for the German government, have brought out a siege howitzer weighing only 200 pounds, but capable of firing a shell of 185 pounds. The gun itself has no novel features, but the shell is a curious affair. It is not placed in the gun, but on the muzzle, and is propelled by a rod which projects from the shell and passes down the bore. With a charge of 6 ounces of smokeless powder the 185-pound shell carries 400 yards, with good accuracy. The rod, by a peculiar mechanism, drops out during the flight, leaving the shell, which is filled with high explosive, to complete the trajectory alone. The German service perfected a balloon gun firing a shell with sensitive fuse which ignites on the slight impact with the envelope of the balloon or wing of the aeroplane. Experiments for the purpose of devising a universal shell for field artillery were practically abandoned. It was impossible to get a projectile that would act equally well as shell or shrapnel. In July 1910, the government of the Netherlands changed two batteries of its field artillery by adopting rapid fire guns for them.

**COAST ARTILLERY.** In the contest between armor and projectiles the latter seemed to be in the lead at the close of 1910. At 6000 yards the best gun of the day, with armor piercing projectiles, could penetrate any armor that could be mounted on a ship. Thus there seemed to be no immediate necessity to increase the power of the gun. However, armor piercing was not the only problem confronting artillerists. The greatest damage is done to a ship by a heavy bursting charge, and since the larger the charge the greater the damage, an increase in the size of guns and a corresponding increase in the projectile was being considered. Some fourteen inch guns were constructed, but the practicability of this extreme calibre was much discussed. With electrical and other power for handling the gun and projectiles, the rate of fire has kept at a maximum as the guns increase in size. Both rate of fire and accuracy were greatly improved during the year. The English artillery used a shell-tracing device which proved efficient. A metal cylinder is screwed to the base of the shell, and carries a powerful illuminant. This is fired by the explosion and continues to burn brightly during the flight of the projectile. It is of great value in correcting ranges.

**AEROPLANES.** As a military auxiliary, flying machines of various types came rapidly to the front during the year. Aeroplanes proved their availability beyond doubt, though there were some problems of construction that were still unsolved and that prevented their military use to large extent. These problems, however, were in process of solution, and within a short time all of the armies of the world, it was believed, would be provided with these engines. The investigation of the question of flight progressed satisfactorily, and it was evident that only by scientific methods could this matter be settled to the point of making of this type of machine a valuable military asset.

The designing of aeroplanes was being gen-

NEW INFANTRY FIGHTING EQUIPMENT, UNITED STATES ARMY

342

erally approached from the viewpoints of support, resistance, propulsion, stability and control. Support is mathematically calculated, and as a corollary the question of "reefing" seems to be capable of solution. This will enable the machine to have at all times the same lifting power. Propulsion and resistance are discussed conjointly, and mathematical formulæ express these. Stability and control are also closely related. Devices have been invented to increase stability, but most of the machines still leave the greater part of this problem to the dexterity of the aviator. The gyroscopic principle has been suggested as the final solution. As a result of this instability, the aeroplane as developed at the end of the year hardly was capable of being used as an engine of destruction. Its present use must therefore be limited to the work of communication and reconnaissance. For communication one person suffices, but for reconnaissance two are really necessary, one as aviator, and the other to do the observation work.

The French by the autumn of 1910 had a fleet of 60 aeroplanes, composed principally of Blériot monoplanes, and Farman and Wright biplanes. The specifications for the latest machines of the year provided that they should carry at least 660 pounds, and be able to cover 186 miles at one flight, at a minimum speed of 37 miles an hour. Prizes are to be given by the government in 1911 to the constructors who showed the greatest development. General Roques was appointed in full charge of the aeronautic service and to decide all questions.

**DIRIGIBLE BALLOONS.** Although Germany had developed the military dirigible more extensively than any other nation, yet accident after accident occurred to the German airships, without much corresponding increase in efficiency from experience. Both France and Germany established airship "ports," and, so long as their vessels were free from accidents, their radius of action was great, and the "ports" have afforded harbors for refuge and for repairs. The French government ordered eleven new dirigibles of different dimensions, whose delivery was to take place at various times during the year 1911. The speeds were to vary from 30 to 32½ miles per hour. They were to be equipped with wireless telegraphy, but, for safety, the specifications required that no metal of any kind should come within 6½ feet of the gas bag. For reconnaissance work the dirigible had thus far proven superior to the aeroplane, due to the fact that it was able to fly at slow speed, did not require the constant attention of the pilot, and if necessary could carry a number of persons, who might devote themselves to various duties connected with reconnaissance.

**LIGHTING AIRSHIP ROUTES.** Lighthouses for airships by 1910 seemed to have become a necessity. Germany, to provide the security demanded by her air fleet service, initiated a corresponding lighthouse service. During the manoeuvres of 1909 it was found that airships had considerable trouble in finding their landing places. Foggy weather made it particularly dangerous. Towers equipped with searchlights were utilized as landmarks and proved efficient except in very thick weather. To overcome this difficulty a system of captive rubber balloons of different colors, lighted internally by electricity, was devised. These could be seen at long distances. Certain signalling devices were used also in conjunction with them.

**MOTOR TRANSPORTATION.** Experiments were conducted in October, in Canada, which proved beyond doubt that motor transportation applied to military purposes is extremely valuable, and that the recent advances in motor vehicle construction have placed these vehicles in condition to be available for the roughest kind of military uses. The tests showed that, in all kinds of weather, on every kind of road, the loads carried exceeded by far anything that could be handled by animal power. In Germany the application of motors to military use progressed steadily, as was also the case in France. These efficient military nations have been in the forefront in the application of motor power, and their continued increase of the use of self-propelled vehicles confirms the experiments carried on in Canada.

**MANŒUVRES.** The great manoeuvres of the year took place in the autumn in France and in Germany. The Japanese army also had extensive manoeuvres, but these were not open to the observations of foreign officers as were those of France and Germany. All of these exercises took the usual severe form, and the principal features commented on by foreign observers at both the French and German manoeuvre fields were the marching abilities of the infantry and the new developments in the service of information and communication. It was officially announced that the organizations to participate in the German manoeuvres for 1911 would be the Guard Corps, the Second Corps (Stettin), and the Ninth Corps (Altona). For these manoeuvres the battalions of foot troops were to be raised to 700 men, by the calling of reserves. See articles on foreign countries, paragraphs on Army.

**MILITIA.** As the result of acts of Congress passed in 1908 the militia of the various States is divided into two classes, the Organized Militia, known as the National Guard of the State, Territory, or District of Columbia, or by some similar designation, and the remainder, known as the Reserve Militia. The Organized Militia is composed of the regular enlisted organized and active militia in the several States and Territories and the District of Columbia. Since January 1, 1910, the organization, armament and discipline of the Organized Militia in the several States, Territories, and the District of Columbia have been the same as those prescribed for the regular army of the United States, subject to certain conditions.

The strength of the organized militia in October, 1910, was 110,505 men and 9155 officers as compared with 109,951 men and 8975 officers in 1909. The strength of the organized militia in the States, Territories and District of Columbia will be found in the table at the top of the next page.

**NATIONAL RESERVE.** Plans have been under consideration for several years to bring into actual practical operation the plan of an efficient national reserve to act in coöperation with the regular army and the organized militia in time of emergency. Among the suggestions made by the Division of Militia Affairs in its annual report for 1910 is the following: The regular army of the United States might be considered as divided into two branches, an active branch kept constantly mobilized and filled to the limit now authorized by law and the national reserve, to consist of a body of citizen soldiery supple-

a No organized militia (mustered out May 20, 1906)

menting the active army, and constituting in time of peace a body that would receive trained soldiers, both commissioned and enlisted from the active regular army and one side and from the organized militia on the other. It would serve as a body to receive all who had had military training in the regular army and organized militia, but who, while wishing to give up actual training would desire to make themselves available for military service in time of national danger. It is believed that such a body would attract to the organized militia a personnel that is not now influenced to enter its ranks and that would tend to increase the military spirit throughout the whole United States. It is suggested that this force consist of 100,000 men to be added in time of war to the regular army of 100,000 men and the organized militia of 200,000.

**FIELD ARMY.** In 1910 the first definite step toward combining the organized militia with the regular army in a tactical way in time of peace, for mobilization for field service operations in time of war, was taken. General orders were issued on February 28, 1910, giving the details of the proposed organization. By this order seventeen divisions were organized, with all the elements which should go to constitute a military division, including infantry, field artillery, cavalry, engineers, signal troops, sanitary troops,

and supply service. The first division includes the organized militia bodies from Maine, New Hampshire, Vermont, and New York, together with certain portions from the regular army of the United States; the second division includes the organized militia of New York State, with certain United States troops; the third division includes the organized militia of New York, Massachusetts, Connecticut, and Rhode Island; the fourth division includes the organized militia of New Jersey and Eastern Pennsylvania; the fifth division includes the organized militia of Pennsylvania; the sixth division, which has a separate regiment of infantry, includes the organized militia of Pennsylvania, West Virginia, Maryland, Delaware, and the District of Columbia; the seventh division includes the organized militia of Virginia and North and South Carolina; the eighth division includes the organized militia of Georgia, Florida, and Alabama; the ninth division includes the organized militia of Mississippi, Louisiana, and Texas; the tenth division includes the organized militia of Kentucky, Tennessee, and Arkansas; the eleventh division includes the organized militia of Ohio; the twelfth division includes the organized militia of Indiana, Michigan, and Wisconsin; the thirteenth division includes the organized militia of Illinois; the fourteenth division includes the organized militia of Iowa, Minnesota, North Dakota, and South Dakota; the fifteenth division includes the organized militia of Missouri, Nebraska, Kansas, and Oklahoma; the sixteenth division includes the organized militia of Montana, Wyoming, Idaho, Colorado, and Utah; the seventeenth division includes the organized militia of Washington, California, New Mexico, and Arizona. In all these divisions are included bodies of the regular United States army in its various branches.

**MILLS, DARIUS OGDEN.** An American financier and philanthropist, died January 3, 1910. He was born at North Salem, N. Y., in 1825 and derived his education from academies at that place and at Ossining. When he was fifteen years of age family necessities required that he leave school and begin work. He became clerk in a country store, spending six years in this position, after which he went for a short time to New York and afterwards to Buffalo, where he became cashier of the Merchants' Bank of Erie county. He later acquired an interest in that institution. Stories of the gold finds in California were the chief topic of conversation at this time, and two of Mr. Mills's brothers went to the gold fields. He himself soon followed and opened a general store and Eastern exchange at Sacramento. This was immediately successful and in the first year he is said to have made \$40,000. His business was carried on by regular methods and not by speculation. His purchases were made in New York and carried around the Horn in a sailing ship and immense profits were made on the money invested. Mr. Mills next founded the Gold Bank of D. O. Mills & Co., of Sacra-

mento, which is the oldest banking house in California and remained under his control during the rest of his life. He made a trip abroad and returned in time to take up the development of the famous Comstock lode in Nevada. He acquired most of the lands in that neighborhood, great tracts of valuable timber lands, and the only railroad running to them, and bought further large interests in the principal quick-silver mines of the State. His wealth increased rapidly and in 1864 he assisted in the organization of the Bank of California in San Francisco, which became a successful institution under his management as president. Under his successor, however, it failed in a sensational crash. Mr. Mills succeeded in re-establishing the bank and served several years as its president without pay. In 1880 he removed his business headquarters to New York City, where he bought land in Broad Street where the Mills Building now stands and erected that building. He erected a similar building in San Francisco. Mr. Mills took great interest in philanthropic objects. His most notable performance in this direction was the erection of three Mills hotels in New York City, designed for the benefit of poor but self-respecting men. Good accommodations at cheap rates are provided in these hotels, and they proved to be not only self-sustaining but excellent financial investments. Mr. Mills was at one time regent and treasurer of the University of California, where he endowed a chair of philosophy. He also acted as trustee of the Lick estate and Observatory, and sent an expedition to Chile to make observations of stars not visible in the Northern Hemisphere. He was trustee of many prominent institutions in New York City, including the Metropolitan Museum of Art, the American Museum of Natural History and the American Geographical Society. He was also president of the New York Botanical Gardens. His financial interests included directorships in the Erie, New York Central and other railroads, of the Bank of New York, the Morgan Trust Company, and others. Estimates of his fortune at the time of his death vary from \$60,000,000 to \$100,000,000.

**MINCHIN, H. C.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MINERALOGY.** This article is devoted especially to a review of the progress of mineralogical science during 1910, with mention of any interesting discoveries of minerals which are not sufficiently important to be treated under separate heads. The usual activity in investigation has been manifest during the year, and several new mineral species have been described for the first time.

The manufacture of precious stones by synthetic processes is a recent development to which attention has been called in previous volumes of the YEAR BOOK. It would now appear that sapphires, which are physically and chemically identical with the natural stones, can be made on a commercial scale. The crystals are obtained by fusion of alumina in the oxygen-hydrogen furnace, in a manner similar to that followed with synthetic rubies. The desired tint of blue is secured by the addition of iron and titanite oxide in small amount. The successful duplication of these rare gems will

doubtless disturb the mining industry and trade based on the natural product.

The existence of a monoclinic dimorphous form of albite, isomorphous with orthoclase, has generally been assumed by mineralogists, although the species was not known to occur in anything like a pure state. A feldspar from Kragerø, Norway, recently described by Barbier and Prost, gave on analysis as little as one per cent. of potash and showed a cleavage close to a right angle. The optical properties differed from those of albite, so that its identity with monoclinic soda orthoclase seems established. The mineral was given the name *barbierite*.

The mineral *podolite*, described in 1907 as an independent species, was identified by W. T. Schaller with the species *dahlite* which was determined by Brögger and Bäckström in 1888. The identity was established by chemical analysis. The name *dahlite* should therefore be retained and *podolite* removed from the list of minerals. Schaller also found that *stolznerite* and *antlerite* were similar and not independent species. *Antlerite* has priority of name, but the true composition is that found for *stolznerite*, which has one molecule of copper sulphate to two of copper hydrate.

**NEW MINERALS.** A list of the minerals described for the first time in 1910 follows: *Anophorite* is an alkaline amphibole from the igneous rocks of Katzenbuckel, Baden. *Bityite* is a hydrated silicate of calcium and aluminium, occurring in hexagonal plates of yellowish-white color. The type locality is Mt. Bity, Madagascar, where the mineral is found in pegmatite veins. *Brugnatellite*, a hydrate and carbonate of ferric iron and magnesium, is from Val Malenco, Italy. It forms lamellar aggregates of micaceous aspect, pearly lustre and flesh-red color. *Hallerite* belongs to the mica family, near *paragonite* in composition, and occurs in pegmatite at Mesvrea, Autunois. *Joaquinite*, a titano-silicate of calcium and iron, forms small honey-yellow crystals of orthorhombic habit. *Moscovite* belongs to the group of new mercury minerals from Terlingua, Texas. It is found in yellow octahedra of adamantine lustre that are doubly refracting at ordinary temperatures but become isotropic when heated. It resembles *kleinite* in chemical composition. *Mingucite* is a hydrated iron silicate, intermediate between *stilonmelane* and *lepidomelane*, occurring in greenish masses made up of small plates. The plates are opaque except when very thin and are optically negative. It is found in a mine in the Segré region, France. *Plancheite* is a hydrous copper silicate from Mindouli, French Congo; it forms masses of blue color. *Samsonite*, a sulph-antimonite of silver and manganese, is a monoclinic mineral from the Andreasberg silver mines, Saxony. *Risörite* is a niobate of yttrium, cerium and other rare elements, found in pegmatite at Risör, Norway. *Rosasite* is a mixed carbonate of copper and zinc, forming fibrous masses of green or blue color. It comes from the zinc mines of Sardinia. *Stellerite* belongs to the zeolite group of minerals, being a hydrated silicate of lime and alumina, allied to *heulandite* and *stilbite*. It is found in the Commander Islands in Behring Sea. *Turanite* and *alaite* are two new vanadium minerals from the foothills of the Akai mountains. The former contains copper as well as vanadium. *Vashegyite*, a basic aluminium phosphate, comes from the iron mines at Vashegy, Hungary, where it occurs in

dense white masses that resemble meerschaum. *Wiltshireite*, supposedly a sulph-arsenite of lead, is a monoclinic prismatic mineral from the Bin-nenthal, Switzerland. It has a tin-white color.

**MINERAL PRODUCTION.** The tables on pages 465 and 466, prepared by the United State Geological Survey, give the quantity and value of the mineral product of the United States in the years 1908-9. A more detailed discussion of the production and value of the individual products will be found under their different heads in alphabetical order as GOLD, SILVER, COPPER, COAL, PETROLEUM, etc. As will be seen from this table the value of the mineral product of 1909 was considerably greater than in 1908. In tables 2 and 3 is given the production of mineral and chemical substances and metals in the United States in 1909-10, according to statistics gathered by the *Engineering and Mining Journal*. See also paragraphs in articles on countries and on States of the United States.

**MINERALS.** See MINERALOGY.

**MINES,** UNITED STATES BUREAU OF. See UNITED STATES.

**MINGUETITE.** See MINERALOGY.

**MINIMUM TARIFF.** See TARIFF.

**MINIMUM WAGE BOARDS.** See LABOR LEGISLATION, Great Britain.

**MINING.** See paragraphs on the subject in articles on countries and on States of the United States.

**MINING CONGRESS, AMERICAN.** See COAL.

**MINNESOTA.** One of the North Central Division of the United States. It has an area of 84,682 square miles. Its capital is St. Paul.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,075,708 as compared with 1,751,394 in 1900 and 1,310,283 in 1890. The increase in the population in the decade 1900 to 1910 was 18.5 per cent. The State ranks nineteenth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The chief mineral product of the State is iron ore, and in this it ranks first in point of production and value. The chief source of production is the Mesabi range, from which were produced in 1909 28,176,281 long tons. From the other important range, the Vermilion, were produced 1,108,215 long tons, making a total production of 29,284,496 tons as compared with a production of 18,098,894 tons in 1908. The Mesabi range since its opening in 1892 has shown a steady increase in production. This has resulted from the continued activity of the iron deposits and from the extension of the operation of the ore fields beyond the Mississippi River. The State produces no coal, but the clay products are of considerable value, and other important mineral products are sand and mineral water.

**FINANCE.** The report of the State treasurer for the fiscal year ending July 31, 1910, showed a balance in the treasury on August 1, 1909, of \$2,733,250. The receipts from all sources for the fiscal year were \$14,810,944, making a total of \$17,584,194. The disbursements for the same period were \$13,322,963, leaving a balance in the treasury July 31, 1910, of \$4,261,231. The chief receipts were from railroad companies, State treasurers and from State institutions.

The chief disbursements were for education, for the support of State institutions and for the State government.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910...	1,724,000	56,375,000	\$ 25,369,000
1909...	1,690,000	58,812,000	28,818,000

1909...	927,000	1,622,000	9,732,000

a Tons.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under the control of the State, with the appropriations for their support in 1910, were as follows: First State Asylum at Anoka, \$113,502; Second State Asylum at Hastings, \$118,379; the Fergus Falls State Hospital, \$309,576; the Rochester State Hospital, \$222,482; the St. Peter's State Hospital, \$234,887; School for the Blind, \$37,616; School for the Deaf, \$148,703; School for the Feeble-minded, \$403,991; State Public School, \$84,319; State Training School, \$82,170; State Reformatory, \$128,315; State Prison, \$42,295; State Sanatorium for Consumptives, \$106,500; Hospital for Crippled and Deformed Children, \$22,000; Industrial School for Girls, \$125,000. The total expenditures in 1909-10 for the maintenance of these institutions was \$1,447,253. At most of these institutions buildings were constructed or improvements made during the year.

## POLITICS AND GOVERNMENT

There was no session of the legislature in Minnesota in 1910, as the sessions are biennial and the next begins January 1, 1911.

**CONVENTIONS AND ELECTIONS.** The political situation in Minnesota in 1910 was much the same as in other northwestern and western States. The chief point of interest lay in the relative strength of the progressive and regular wings of the Republican party. Minnesota is normally a Republican State, although for three successive terms a Democratic governor has been elected. This was largely, however, on account of the powerful personality of John A. Johnson, who carried the State by large majorities, while Republican candidates on tickets opposed to him were elected. The present governor, Adolph O. Eberhart, is a Republican.

The Republican State Convention was held at St. Paul on June 21. The delegates were sharply divided between progressives and regulars, and there was a contest between them as to the constitution of the platform which the convention would endorse. The regular wing proposed to endorse the Taft Administration, touching lightly upon the Payne tariff bill, and advocating a tariff commission and railroad legislation, confining the rest of the platform to State topics. The insurgents demanded a plank repudiating

(a) Production from ore originating in the United States. (b) The statistics for 1909 are the final and those for 1910 are the preliminary statistics reported by the director of the Mint. (c) Production of refined lead from ore and scrap originating in the United States; antimonial lead is included. (d) Total production of smelters, except those treating dross and junk exclusively, includes spelter derived from imported ore. (e) Estimated. (f) Imports for first 11 months of each year. This nickel is smelted in the United States for the production of metal, oxide and salts.

the Payne tariff law as a violation of the pledges of the Republican national platform, and also a plank expressing adherence to all of the poli-

cies promulgated by Theodore Roosevelt, mildly praising Mr. Taft for his efforts to advance legislation, but refraining from endorsing any of his direct administrative acts. The platform finally adopted was a compromise. It endorsed President Taft's efforts to secure legislation for the benefit of the whole people, ignored reference to the Payne tariff law, applauded the Roosevelt conservation policies and commended the railroad legislation. The rest of the platform was taken up with a consideration of State issues. A contest developed in the convention through the efforts of the county optionists to secure a plank committing the party to county option. This was defeated by a decisive majority, but the party was pledged to accord the measure a full and fair hearing. The convention also endorsed the course of the Minnesota delegates in Congress. Senator Clapp was endorsed for re-election. The convention renominated Mr. Eberhart for governor by acclamation. Samuel Y. Gordon was nominated for lieutenant-governor.

The Democratic State Convention met at Minneapolis July 28. The only prominent candidate for the nomination for governor was John Lind, one of the most prominent figures in the Democratic politics of the State, who had previously been governor. Mr. Lind said at first that he was not a candidate and under no circumstances would accept the nomination. In spite of this, however, he was nominated. No other name was mentioned as a candidate. An effort was made to incorporate a county option plank in the platform, but this was defeated and no reference to the subject or any form of temperance legislation was made, all such being included in the general referendum plank. The platform denounced President Taft for his approval of the Payne tariff law, declared that Congress was subservient to the spe-

long tons; value at mines, \$66,328,415. 1904: 27,644,330 long tons; value at mines, \$43,186,741. 1905: 42,526,133 long tons; value at mines, \$75,165,804. 1906: 47,749,728 long tons; value at mines, \$100,597,106. 1907: 51,720,619 long tons, value at mines, \$131,996,147. 1908: 35,983,336 long tons; value at mines, \$81,845,904. 1909: 51,294,271 long tons; value at mines, \$110,290,596. Statistics for iron ore and value of pig iron are collected by the Survey; statistics for pig iron output are furnished by the American Iron and Steel Association.

b By "spot" value is meant value at the point of production.  
c Long tons are tons of 2,240 avoirdupois pounds; short tons are tons of 2,000 avoirdupois pounds.  
d Average price per troy ounce in 1906 was 67 cents; in 1907 it was 66 cents; in 1908, 53 cents in 1909, 52 cents.  
e Prior to 1905, coining value, \$20.6718 per troy ounce; in 1905, coining value, \$20.671834; since 1905, coining value, \$20.671834625323.

f The product from domestic ores only.  
g Of 75 avoirdupois pounds.  
h Includes antimony smelted from imported ores, and in 1908 antimony contained in hard lead.  
i Includes nickel in copper-nickel alloy, and in exported ore and matte.  
j In 1908, no production. In 1909 about 17 short tons of stream tin from Alaska were shipped to England.  
k Including brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania. Coke, 1902: 25,401,730 short tons; value at ovens, \$63,339,167. 1903: 25,274,281 short tons; value at ovens, \$66,498,664. 1904: 23,661,106 short tons; value at ovens, \$46,144,941. 1905: 32,231,129 short tons; value at ovens, \$72,476,196. 1906: 36,401,217 short tons; value at ovens, \$91,608,034. 1907: 40,779,564 short tons; value at ovens, \$111,539,126. 1908: 26,033,518 short tons; value at ovens, \$62,483,983. 1909: 39,315,065 short tons; value at ovens, \$89,965,483.  
m Of 42 gallons.

n Value of clay mined and sold as unmanufactured clay. 1900: \$1,840,377. 1901: 2,576,932. 1902: \$2,061,072. 1903: 2,594,042. 1904: \$2,320,162. 1905: \$2,768,006. 1906: \$3,245,256. 1907: \$3,448,548. 1908: \$2,599,986. 1909: \$3,500,000.

o Of 380 pounds net.  
p Includes limestone for iron flux, but not grindstones.  
q Included under feldspar and quartz.  
r Of 280 pounds net. Value is for net product exclusive of cost of packages.  
s Includes metallic paint, mortar colors, ochre, amber, sienna, shale, ground slate, sublimed blue lead, sublimed white lead, and zinc-lead.

v Includes nitrate of soda, carbonate of soda, sulphate of soda, and alum clays used by paper manufacturers and bismuth, cadmium, columbite, lithium, nickel and cobalt, selenium, and vanadium, valued together in 1909 at \$273,645.

# TOTAL VALUE OF MINERAL PRODUCTS

	1908	1909
Metals .....	\$ 549,923,116	\$ 754,427,290
Non-metals .....	1,044,875,733	1,132,197,897
Unspecified .....	250,000	300,000
Total .....	1,595,048,849	1,885,925,187

cial interests and extravagant, and denounced the dismissal of Mr. Pinchot as a national shame and the retention of Mr. Ballinger as a scandal. A plank was offered criticising Mr. Roosevelt for his activity in party politics, but this was eliminated after a general discussion in the Committee on Resolutions. M. C. Tift was nominated for lieutenant-governor. Mr. Lind, although he was nominated as the unanimous choice of the convention, held to his declaration that he would not be a candidate and early in September he sent in his resignation as head of the ticket. The State Central Committee met on September 15, and nominated in his place James Gray, former mayor of Minneapolis and an editorial writer on the *Minneapolis Journal*. Mr. Gray accepted the nomination.

Primaries for the nomination of members of Congress were held on September 20. The most notable result was the success of the progressive Republican candidates. In the St. Paul, Minneapolis and Duluth districts, however, regular representatives were elected by ample pluralities. The most notable result in point of national interest was the defeat in the Winona district of James A. Tawney, one of the Republican leaders in the House and chairman of the Committee on Appropriations. Mr. Tawney is one of the most influential members of Congress, but his attitude on the tariff bill as a strong supporter of the conservative element was displeasing to a majority of his constituents. His successful opponent was Sidney Anderson. In the election on November 8, the entire Republican ticket was elected. Governor Eberhart's plurality over Mr. Gray was about 60,000. The legislature remains Republican, ensuring the re-election of Senator Clapp. The division of the congressional representatives remains unchanged.

**OTHER EVENTS.** A curious condition arose in the section of the State extending from the Canadian border southward to Minneapolis, including that city and Duluth, over a decision made by the Secretary of the Interior that liquor should not be sold on account of treaties made years ago with Chippewa Indians. Under these treaties the government reserved the right to suppress liquor traffic on ceded lands which passed into the possession of white settlers. As the land was settled it was found necessary to place checks on the sale of liquor to Indians. The State also assisted in the work by passing laws prohibiting the sale of liquor to them even though they had qualified as citizens. In spite of these precautions, liquor continued to be sold to them and they were a source of annoyance to the white people dwelling in the small towns as the result of squandering the funds which they received annually from the government in the purchase of liquor. Conditions reached such a point in 1908-9 that the government threatened to invoke the provisions relating to the introduction of liquor, pointing out that as the term "Indian country" had been construed it took in a large area, embracing many hundreds of towns and cities. Many saloons were closed. During the summer of 1910 an investigation was carried on by government agents and as a result of their report the Commissioner of Indian Affairs issued an order directing the closing of saloons in some sections of the Indian country and allowing them to run in others. This action created considerable excitement

throughout the State. The Federal government was criticised for attempting to enforce a Prohibition measure, and on the other hand it was commended by those who were in favor of Prohibition. Representatives of the towns where saloons were closed protested, asserting that it was unfair and unjust to prescribe what was equivalent to Prohibition in some towns and permit the sale of liquor in others. Protest was made to Secretary Ballinger, who is the immediate superior of the Commissioner of Indian Affairs. After listening to these protests Secretary Ballinger wrote a letter to the Commissioner of Indian Affairs, ordering the rigid enforcement of the law, but giving at the same time unofficial assurances permitting liquor to be introduced and sold in the "Indian country" if the local officials saw to it that the traffic did not touch the Indians.

On July 23 Frederick N. Dickson, master in chancery in the lumber rate suit, begun in the fall of 1908 against the Interstate Commerce Commission by the Great Northern, Northern Pacific, Union Pacific and the Chicago, Burlington and Quincy railroads, served his preliminary findings on the attorneys of both sides. In these findings the railroads won a substantial victory. The lumber rate schedule established by the Interstate Commerce Commission from the coast to all points west of the Pembina line, which is substantially made up of the western boundaries of Minnesota, Iowa and Missouri, is sustained, but the rates from the coast to points east of that line are declared to be unreasonably low as established by the Interstate Commerce Commission. The railroads contended for a rate of 50 cents a hundredweight on lumber shipments from Portland, Ore., to St. Paul, and for 60 cents from Portland to Chicago. The Interstate Commerce Commission allowed 45 cents from Portland to St. Paul, 55 cents from Portland to Chicago. Mr. Dickson upheld the contentions of the railroads and recommended an injunction nullifying the order of the Interstate Commerce Commission on these rates and on other lumber rates from the coast to points east of the Pembina line.

On May 28 Minneapolis was visited by a disastrous fire which caused a loss of nearly \$1,000,000. For a time the great flour milling district was threatened. Several large manufacturing establishments were burned. The State also suffered in October from forest fires which caused property losses aggregating many millions and loss of probably fifty lives.

**STATE OFFICERS:** Governor, Adolph O. Eberhart, Rep.; Lieutenant-Governor, S. Y. Gordon; Secretary of State, Julius A. Schmahl; Auditor, S. G. Iverson; Treasurer, Walter J. Smith, Rep.; Attorney-General, George T. Simpson, Rep.; Adjutant-General, Fred B. Wood, Dem.; Superintendent of Education, C. G. Schultz, Rep.; Commissioner of Insurance, J. A. Hartigan, Dem.

**JUDICIARY.** Supreme Court: Chief Justice, Charles M. Start, Rep.; Associate Justices, Calvin L. Brown, Rep.; Edward A. Jaggard, Rep.; P. E. Brown, Rep.; David Simpson, Rep.; Clerk, I. A. Caswell, Rep.

**STATE LEGISLATURE, 1911.** Senate: Republicans, 42; Democrats, 19; Independent, 2; Republican majority, 21. House: Republicans, 89; Democrats, 26; Independent, 5; Republican majority, 58. Joint Ballot: Republicans, 131; Democrats, 45; Independent, 7; Republican majority, 79.

**MINNESOTA, UNIVERSITY OF.** An institution of higher learning at Minneapolis, Minn., founded in 1869. The number of students enrolled in the several departments of the university in 1910-11 was 5669. The faculty numbered 373. Professor Hardin Craig, of Princeton University, was appointed to a chair in the English department of the university. Among the benefactions received during the year was one of \$60,000 from Mr. Thomas H. Shevlin of Minneapolis. This fund is distributed in four fellowships of \$10,000 and \$20,000 for the enlargement of Shevlin Hall, the woman's building of the university. The amount of productive funds of the university in 1909-10 was \$1,425,000, and the income was \$750,000, most of which was furnished by the State. The President is Cyrus Northrup, LL. D.

**MINOR PLANETS.** See ASTRONOMY.

**MISSIONS, PROTESTANT FOREIGN.** Missionary work was carried on during 1910 in various foreign countries with unabated vigor. Statistics of missions carried on by the various denominations will be found under the respective headings.

**LAYMEN'S MISSIONARY MOVEMENT.** This movement, which has reached astonishing proportions, was the result of a meeting held in New York City on November 15, 1906, by a number of laymen who were celebrating the one hundredth anniversary of the "haystack prayer-meeting," out of which grew the American Board of Commissioners for Foreign Missions. A series of resolutions were passed at this meeting calling into existence a committee of twenty-five or more representative laymen to consult with the secretaries of the various foreign missionary boards, with reference, first, to the conduct of a campaign of education among laymen to interest them more largely in missions; second, to the devising of a comprehensive plan for the evangelization of the world in this generation; third, to endeavor to send a commission of fifty or more laymen to visit the mission fields and report their findings to the church at home. These proposals were laid before the Annual Conference of Foreign Mission Boards of the United States and Canada at Philadelphia on June 9, 1907, and they received the hearty endorsement of this Conference. In 1907 a commission of six laymen from the United States and Canada visited a number of the larger cities of the United Kingdom, presenting the plans and methods of the movement. Committees were appointed to extend the work. An active campaign was carried on in Canada in 1908-9 and in 1909-10 a similar national missionary campaign was conducted through the United States. This included conventions at seventy-

five of the leading cities, culminating in the National Missionary Congress at Chicago, May 3 to 6, 1910. The laymen's missionary movement has no organization apart from a series of committees. A general committee of over 100 laymen meets semi-annually and gives general direction to the movement. The chief executive officer is the general secretary, J. Campbell White.

**WORLD'S MISSIONARY CONFERENCE.** The most important event in the history of missions during the year was the World's Missionary Conference, held at Edinburgh, Scotland, June 14-24, 1910. This was the second conference of this nature that has been held, the first having been the Ecumenical Missionary Conference, held in New York, in 1900. Arrangements for the Conference were in the hands of the British Executive Committee, of which Lord Balfour of Burleigh was the chairman. Delegates attended from nearly all the countries of the world including representatives of nearly every type of Protestant faith. The Conference selected as its president Lord Balfour, but the actual leader was Dr. J. R. Mott, who is the organizer of the Students' Volunteer Missionary Union. The delegates numbered 1200 and in addition there were thousands who attended the meetings. The Conference sat daily for about two weeks and each day considered the report of one of the eight commissions which had been gathering information for nearly two years. These reports dealt, first, with carrying the Gospel to all the non-Christian world; second, the church in the mission field; third, education in relation to the Christianization of national life; fourth, the missionary message in relation to non-Christian religions; fifth, the preparation of missionaries; sixth, the home basis of missions; seventh, missions and government, and eighth, coöperation and the promotion of unity. Among the speakers at the Conference were the Archbishop of Canterbury, the bishops of Birmingham and Southwark, Rev. Lord William Cecil and Mr. William J. Bryan. The proceedings throughout were remarkable for the high spiritual level attained. At the close of the Conference a continuation committee was appointed. This is charged with the duty of arranging for future conferences.

**STATISTICS OF MISSIONS.** The table below, taken from the Almanac of Missions of the American Board of Commissioners for Foreign Missions, gives the number of missionaries from the United States, Canada, Great Britain and Ireland and Continental Europe, now engaged in the mission fields, together with other statistics:

Countries*	Stations and Outstations	Men and Women	Native Laborers	Communications	Added 1910	Under Instruction	Income
United States .....	12,508	6,452	30,750	776,198	69,680	371,091	\$10,317,749
Canada .....	461	509	1,041	15,684	1,197	21,214	526,952
Great Britain and Ireland .....	15,329	6,774	38,330	589,786	28,124	670,248	8,338,476
Continental Europe .....	6,612	3,089	13,171	380,293	15,485	240,461	3,241,593
Totals .....	34,910	16,824	83,292	1,761,961	114,486	1,303,014	\$22,424,770

**MISSISSIPPI.** One of the South Central Division of the United States. Its area is 4665 square miles. Its capital is Jackson.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was

1,797,114, as compared with 1,561,270 in 1900, and 1,289,600 in 1890. The increase in the decade from 1900 to 1910 was 15.8 per cent. The State ranks twenty-first in point of population whereas in 1900 it ranked twentieth. The

population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The State is not important as a producer of minerals. The most important are clay products, which in 1908 were produced to the value of \$828,737. There were produced also considerable quantities of mineral water, coal products, sand and gravel and sand-lime brick.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	3,232,000	66,256,000	\$41,741,000
1909.....	2,810,000	40,745,000	33,003,000
Winter wheat, '10	5,000	70,000	81,000
'09	1,000	11,000	13,000
Oats, 1910.....	175,000	3,360,000	1,848,000
1909.....	150,000	2,400,000	1,632,000
Rice, 1910.....	2,800	84,000	59,000
1909.....			
Potatoes, 1910..	9,000	765,000	719,000
1909.....	9,000	783,000	744,000
Hay, 1910.....	100,000	142,000a	1,732,000
1909.....	83,000	122,000	1,403,000
Tobacco, 1910..	100	55,000b	11,000
1909.....	100	50,000	13,000
Cotton, 1910....		1,160,000c	
1909.....		1,083,000	

a Tons. b Pounds. c Bales.

**EDUCATION.** The total number of children of school age in the State in 1908 was 712,044. Of these 301,548 were white and 410,089 were colored. The total enrollment was 459,981. Of these 221,392 were white and 239,639 were colored. There were 3883 licensed white teachers in the State and 3253 colored teachers. The average monthly salary of white teachers was \$58.84, and of colored teachers, \$29.57. The total disbursements for educational purposes in 1907-8 amounted to \$872,040. The legislature of 1910 passed several important measures relating to education. An act was passed to establish a Mississippi normal college. The measure also provided for the establishment of county agricultural high schools. Other measures provide for the transportation of pupils where schools are consolidated and for methods of raising money for schools by taxation.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions supported by the State, with their populations in 1910, are as follows: Confederate Soldiers' Home at Beauvoir, 102; Deaf and Dumb Institution at Jackson, 107; Blind Institution at Jackson, 50; State Insane Hospital at Jackson, 1385; East Mississippi Insane Hospital at Meridian, 654; State Charity Hospital at Vicksburg, State Charity Hospital at Natchez, and the Mattie Hersee Hospital at Meridian. The legislature of 1910 authorized the establishment of a State charity hospital at Jackson, a site for which has been selected and preparations for building made. The State prison contains 1800 convicts, all of whom live and work on plantations owned by the State. There is no reformatory, juvenile or otherwise, and boys of tender years are associated with men old in crime. A movement is on foot to remedy this evil, and it is almost a certainty that the legislature of 1912 will do so.

#### POLITICS AND GOVERNMENT

The legislature was in session in 1910 and passed many important measures. These will

be found noted in the section *Legislation* below. On February 22, the legislature, after a deadlock lasting seven weeks, elected LeRoy T. Percy United States Senator to fill the vacancy caused by the death of the late Senator McLaurin, who died in 1909. Shortly after Senator Percy had taken his seat in the Senate, charges were made that bribery had been employed in securing his election in the legislature, where his chief opponent was former Governor Vardaman. Theodore G. Bilbo, a State Senator, alleged that at the time of the election of Senator Percy he had accepted a sum of money from L. C. Dulaney for changing his vote from Governor Vardaman to Mr. Percy. Dulaney was indicted by the grand jury. As soon as these charges were made public, Senator Percy demanded an investigation. He denied that unlawful means had been employed in securing his election. After an investigation he was entirely exonerated from these charges. On trial Dulaney was acquitted by the jury as soon as it retired. A statement unanimously signed was issued to the effect that the verdict was based on disbelief in Bilbo's story.

Mississippi was one of the few States in which elections for State officers were not held in 1910. The November elections were limited to candidates for Congress. The State is never in doubt politically, and the Democratic nominees were elected. Three of the candidates were for re-election and in three districts new candidates offered themselves and were elected. Certain amendments to the State constitution were voted on and adopted. One provides for the election of judges and chancellors instead of their appointment as at present.

**LEGISLATION.** Among the important measures enacted at the legislative session of 1910 were the following: An act was passed which declares that contributory negligence shall in no case bar recovery for injuries or death, but that such negligence may be submitted to a jury in mitigation of damages. The legislature passed several important measures relating to education. A normal college and county agricultural high schools were created. The four higher institutions of learning in the State were consolidated under one board of seven trustees appointed by the governor. Provision was made for the transportation of pupils when several schools are consolidated into one. The Federal income tax amendment was passed. Important changes were made in the composition of the judiciary of the State. Two supreme court commissioners, seven circuit judges, three chancellors, and a prosecuting attorney for each county were added. An act was passed forbidding the misbranding or adulteration of foods. A law was passed looking toward the reduction of tuberculosis. This includes a requirement that practising physicians, under penalty of a fine of \$1050, shall report all cases of the disease to the State Board of Health in order that it may send the patient proper instructions for regaining his health and preventing contagion. The birthday of Robert E. Lee was made a public holiday. The chancery courts of the State were given jurisdiction, concurrent with the law courts to entertain suits to restrain violations of the liquor law.

**STATE OFFICERS.** Governor, E. F. Noel; Lieutenant-Governor, Luther Manship; Secretary of State, J. W. Power; Treasurer, George R. Edwards; Auditor, E. J. Smith; Superin-

tendent of Education, J. N. Powers; Attorney-General, S. S. Hudson; Adjutant-General, Arthur Fridge; Land Commissioner, J. L. Gillespie; Commissioner of Agriculture, H. E. Blakeslee; Commissioner of Insurance, T. M. Henry—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Robert B. Mayes; Associate Justices, Sydney Smith and William D. Anderson; Commissioners, Albert H. Whitfield and Frank A. McLain; Clerk, George C. Myers—all Democrats.

The State legislature is wholly Democratic.

**MISSISSIPPI RIVER.** See **WATERWAYS**, INTERNAL.

**MISSOURI.** One of the South Central States of the United States. It has an area of 69,430 square miles. Its capital is Jefferson City.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 3,293,335 as compared with 3,106,665 in 1900 and 2,679,185 in 1890. The increase in population in the decade 1900 to 1910 was 6 per cent. The State ranks seventh among the States in point of population, whereas in 1900 it ranked fifth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Missouri is the most important State in the production of lead and zinc. There were produced in 1909 142,650 tons of primary lead, as compared with a production of 122,451 tons in 1908. Of spelter there were produced 140,676 tons as compared with 123,655 tons in 1908. The coal production in 1909 was 3,096,785 short tons as compared with 3,317,315 short tons in 1908. The coal production showed a decrease in recent years due largely to the increased production and consumption of petroleum and natural gas in the mid-continent fields. The State has also important products of clay. It is also an important producer of Portland cement. In 1909 there were produced 3,412,160 barrels, valued at 2,808,916 as compared with 2,929,504, valued at \$2,551,236 in 1908. Among other mineral products are building stone, lime rock, gravel, petroleum, silver and barytes.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910...	8,300,000	273,900,000	\$120,516,000
1909...	8,100,000	213,840,000	126,166,000
Win. wheat '10	1,821,000	25,130,000	21,863,000
'09	1,943,000	28,562,000	29,969,000
Oats, 1910...	780,000	26,208,000	8,387,000
1909...	690,000	18,630,000	8,011,000
Barley, 1910...	2,000	54,000	32,000
1909...	2,000	50,000	34,000
Rye, 1910...	14,000	210,000	158,000
1909...	15,000	225,000	184,000
Buckw., 1910...	2,000	33,000	29,000
1909...	2,000	42,000	37,000
Flaxseed, 1910	20,000	168,000	353,000
1909	25,000	202,000	232,000
Potatoes, 1910	92,000	7,912,000	5,380,000
1909	88,000	7,480,000	5,012,000
Hay, 1910...	2,700,000	3,510,000a	32,292,000
1909...	2,755,000	3,719,000	30,868,000
Tobacco, 1910	7,500	7,875,000b	945,000
1909	5,000	4,425,000	575,250
Cotton, 1910		43,000c	
1909		45,141	

a Tons. b Pounds. c Bales.

**EDUCATION.** The total school population of the State at the end of the fiscal year 1910 was 1,003,434. The total enrollment was 707,031,

and the average daily attendance was 490,374. The total expenditures for educational purposes in the State in the fiscal year was 13,905,188.

**CHARITIES AND CORRECTIONS.** The State institutions in the eleemosynary and penal classification in Missouri are: Four insane hospitals located at Fulton, St. Joseph, Nevada, and Farmington (the last named being built on the cottage plan); a colony for the feeble-minded and epileptic at Marshall; a sanatorium for incipient tuberculosis at Mt. Vernon; two schools for the blind and the deaf, located at St. Louis and Fulton, respectively; homes for the veterans of the Federal and Confederate armies, located at St. James and Higginsville, respectively; a training school for incorrigible boys at Boonville; an industrial home for girls at Chillicothe; and the State penitentiary at Jefferson City. The State penitentiary, with an enrollment of nearly 2300 convicts, is the largest prison in the United States. There is a movement at present to establish a reformatory, reducing the penitentiary population. There are almshouses in 97 counties out of 115, and jails in all but 2 counties. Many new county institutions have been constructed within recent years. All the State institutions are under local boards of management appointed by the governor. The State and county institutions enumerated are under the supervision of the State Board of Charities and Corrections, which is bi-partisan and is appointed by the governor. This board has been in existence since 1897, and has fathered much important legislation in this field. Juvenile courts have been organized in 6 counties, beginning with the first law in 1903. There is no central organization for placing dependent and neglected children, although there is a large private society organized for this purpose under State law. The educational work in this field is carried on through the State Board and the State Conference of Charities and Correction, the latter having held 11 annual sessions. There is a State organization for the relief and control of tuberculosis and a recently organized society for the prevention of blindness. Charity organization work has received proper development only in the cities of St. Louis and Kansas City, although there is an organized effort to promote proper organization of charity in the smaller cities. Technical education for social work is given mainly through the St. Louis School of Social Economy, founded by the State university, and through the department of sociology of the State university, especially in its extension division.

#### POLITICS AND GOVERNMENT

There was no session of the legislature in Missouri in 1910, as the sessions are biennial, and the last was held in 1909. The next session begins January 4, 1911.

**ELECTIONS.** There was no election for governor in the State in 1910, as Governor Hadley's term does not expire until January, 1913. Municipal elections were held during the year and there was voting at primaries on August 1st for congressional nominations and nominations for minor State officers. At an election held on February 3 the no-license element carried every city and township in Jasper county in which a vote on local option was held. As a result of this vote, Joplin is the only "wet" city in the mining district of the State. Munic-

ipal elections were held on April 5. The Republicans were successful in Kansas City and wrested the control from the Democrats. The Democrats, however, were successful in St. Joseph, and retained their hold on the government of the city. Local option did not figure directly in the elections, as the question of prohibition was to be submitted to the voters in the November elections.

On August 2, primary elections for the nomination of candidates for Congress, and State judicial and county offices, were held throughout the State by both parties. The division of the Republican party into progressives and regulars was not so pronounced in Missouri as in other States. The primary was notable for the number of offices for which there was no contest. Nearly half the congressmen were nominated without opposition and the only contest for the State ticket was for the Democratic nomination for railroad commissioner. Most of the Republican and Democratic congressmen were renominated, among them Champ Clark from the Ninth District. Mr. Clark was leader of the Democratic minority in the 61st Congress and was the most prominent candidate to succeed Speaker Cannon as Speaker of the House.

Although the Democratic and Republican parties held State conventions, they were hardly more than formal, as the nominations had previously been made in the primaries. In the Republican convention the platform approved local option for counties and for wards and districts in cities. It endorsed equally the administrations of President Taft and President Roosevelt, and favored reduction of the tariff and a tariff commission.

The term of Senator Warner expires in 1911, and as he was not a candidate for re-election, several aspirants for the place appeared during the year. Among the most conspicuous of these was David R. Francis from St. Louis, a former governor, who, on August 21, announced himself as a candidate. Governor Hadley was also mentioned as a possible candidate, but he declared that he would continue in the governorship. In the primaries Mr. Francis was defeated for the nomination of James A. Reed.

The elections of November 8 resulted in a partial victory for both sides. The entire Republican State ticket was elected, including justices of the Supreme Court, State superintendent of schools and railroad and warehouse commissioner. The Democrats carried 13 of the 16 congressional districts. The statewide prohibition amendment submitted to the voters for ratification was defeated.

A controversy arose during the year between Governor Hadley and Senator Stone as to the validity of the latter's election to the United States Senate in 1909. The governor in a speech made during the senatorial primary election charged fraud in the election of Senator Stone. Upon being challenged by the latter to furnish a bill of particulars he stated on February 8 that there had been gross frauds in the voting in certain wards in the city of St. Louis by which Mr. Folk, former governor and opponent of Senator Stone, was deprived of a great number of votes sufficient to prevent his nomination. He demanded that Senator Stone submit to a recount and promised that in such an event he would call an extra session of the legislature, and would resign and pay all re-

count expenses if the recount failed to show votes dishonestly counted for Senator Stone in St. Louis. Senator Stone declared that the ballots had been burned and it was therefore impossible to count them. Governor Hadley denied this, and asserted that the ballots had not been burned and were available for recounting. No action was taken in the matter during the year.

**OTHER EVENTS.** The Attorney-General of the State on January 22 filed information against nine large packing house companies, alleging that they were operating in violation of the Anti-Trust laws of the State, and asking that an examiner be appointed by the Supreme Court to take testimony. Only one of the companies named is a Missouri corporation, the St. Louis Dressed Beef and Provision Company. The others were among the largest packing houses in the country, and included Armour & Co., Swift & Co., and the Hammond Packing Company. During an inquiry made by the Attorney-General of the State in April, the secretary of the St. Louis Dressed Beef Company, which was generally believed to be an independent concern, testified that the company was in reality owned by the National Packing Company, which was a holding corporation controlled by the Armour, Swift and Morris interests. The vice-president of the company admitted that in buying cattle, persons representing its interests pretended to bid against each other in order that there might seem to be competition. The Attorney-General proceeded against the National Packing Company and its subsidiary corporations in an attempt to oust it from the State.

**STATE OFFICERS:** Governor, Herbert S. Hadley; Lieutenant-Governor, J. F. Gmelich; Secretary of State, Cornelius Roach; Auditor, J. P. Gordon; Treasurer, James Cowgill; Attorney-General, Elliott W. Major; Superintendent Public Schools, Wm. P. Evans; Adjutant-General, F. M. Rumbold; Commissioner of Insurance, Frank Blake—all Democrats except Hadley, Gmelich, Rumbold, Blake and Evans.

**SUPREME COURT:** Chief Justice, Gavon D. Burgess; Associate Justices: Henry Lamm, Walter W. Graves, Leroy B. Valliant, A. M. Woodson, John Kennish, John C. Brown; Clerk, J. D. Allen—all Democrats except Lamm, Kennish and Brown.

**STATE LEGISLATURE, 1911.** The State legislature is wholly Democratic.

**MISSOURI, UNIVERSITY OF.** An institution of higher learning at Columbia, Mo., founded in 1839. The number of students enrolled in the several departments of the university in 1909-10 was 2903. The faculty was composed of 65 professors, 34 assistant professors, 64 instructors, and 44 assistants. At the end of the college year 1910, three members of the faculty retired upon the Carnegie Foundation. Professor A. O. Lovejoy, of the Department of Philosophy, resigned to accept a chair in the Graduate School at Johns Hopkins University. He was succeeded by Professor Arthur K. Rogers, of Butler College, Indiana. Dr. E. B. Veblen, formerly of Chicago University and Leland Stanford University, was appointed lecturer in economics. Professor T. A. Street, of the School of Law, resigned to enter government service in the Philippine Islands. Professor C. Stuart Gager, of the Department of Botany, resigned to accept the directorship of the Botanical Gardens of Greater New York.

Professor Clark W. Hetherington, of the Department of Athletics, was succeeded by Professor C. L. Brewer, of the Michigan Agricultural College. The noteworthy benefactions during the year included one of \$500,000 from Charles R. Gregory. The productive funds of the university amounted in 1909-10 to \$1,238,000 and the income to \$63,111. The President is Albert R. Hill, LL.D.

**MONACO.** A Mediterranean principality 3 miles long by  $1\frac{1}{2}$  broad. Population, 19,121; yearly average of visitors, 1,250,000. The town of Monaco has 2410 inhabitants; La Condamine, 6218; Monte Carlo, 3794. Value of trade not stated. Coal and wine are imported; olive oil, oranges, citrons, and perfumes exported. The revenue is mainly derived from the gaming tables. Annual grant for the concession, £70,000. There is an army of 126 men. Reigning prince, Albert, born Nov. 13, 1848. Heir-apparent, Prince Louis, born July 12, 1870. The Monegasques have succeeded, after three years of agitation, in obtaining a constitution from their prince. It provides for a national council of twenty-one members, to be elected every four years; the body will convene in May and October. The constitution was drawn up by three French juriconsults, and was ready for promulgation at the end of 1910.

**MONTANA.** One of the Mountain Division of the United States. Its area is 146,572 square miles. Its capital is Helena.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 376,053 as compared with 243,329 in 1900 and 142,924 in 1890. The increase in the decade 1900 to 1910 was 54.5 per cent. The State ranks fortieth among the States in point of population, whereas in 1900 it ranked forty-third. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTIONS.** Montana is one of the three most important States in the production of copper. In 1909 it was the first State in point of production. There were produced in that year 314,858,291 pounds, as compared with 252,503,651 pounds in 1908. In 1910 the State was obliged to yield first place in the pro-

duction of copper to Arizona. The copper mines of the State in the latter year produced approximately 286,000,000 pounds. The State ranks first in the production of silver. There was mined, in 1910, silver to the amount of 11,519,059 fine ounces, as compared with 12,034,500 fine ounces in 1909. The figures for 1910 are according to the preliminary estimates of the Director of the Mint. The value of the gold produced in 1910, according to the same authority, was \$3,465,364, as compared with a value for the product of 1909 of \$3,750,100. The production of silver in 1910 was affected by the decreased yield of copper, the ores of which usually produce over nine-tenths of the State's silver output. The gold output derived from copper ores also decreased. The placer mining industry was in about the same condition in 1910 as in 1909, the production in each year aggregating about 26,000 fine ounces of gold. In 1909 Montana produced 1376 tons of lead, as compared with 2320 tons in 1908. The output of lead in 1910 increased very little over that of former years, aggregating approximately 3,600,000 pounds. The zinc produced in 1909 aggregated 12,000,000 pounds, which was derived largely from concentrate and ores shipped. The output in 1910, according to the estimates of the United States Geological Survey, greatly exceeded that quantity, as the mining of zinc attracted more attention in 1910 than in any previous year. The coal production of the State in 1909 surpassed all previous records, amounting to 2,553,940 short tons, as compared with 1,920,190 short tons in 1908. The coal mining industry has shown a steady increase in recent years. Other mineral products of the State include clay products, lime, precious stones and tungsten.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	8,000	134,000	\$175,000
1909.....	5,000	175,000	170,000
Winter wheat, 1910.....	285,000	6,270,000	5,392,000
1909.....	185,000	6,012,000	5,230,000
Spring wheat, 1910.....	195,000	4,290,000	3,689,000
1909.....	165,000	4,752,000	4,134,000
Oats, 1910.....	350,000	13,300,000	6,118,000
1909.....	300,000	15,390,000	6,464,000
Barley, 1910.....	52,000	1,456,000	903,000
1909.....	50,000	1,900,000	1,197,000
Rye, 1910.....	4,000	80,000	54,000
1909.....	2,000	58,000	44,000
Flaxseed, 1910.....	60,000	420,000	1,008,000
1909.....	10,000	120,000	192,000
Potatoes, 1910.....	25,000	3,000,000	2,550,000
1909.....	25,000	4,500,000	2,295,000
Hay, 1910.....	600,000	840,000	10,500,000
1909.....	556,000	995,000	9,950,000

a Tons.

**FINANCE.** The report of the treasurer for the fiscal year ending November 30, 1910, showed total receipts of \$3,284,764. The total disbursements were \$3,213,091. There was a balance in the Treasury on December 1, 1908, of \$564,116. The balance on November 30, 1910, was therefore of \$568,134. The permanent school fund of the State amounted to \$1,504,542. The chief expenditures were for education, support of State institutions and the support of executive offices.

**CHARITIES AND CORRECTIONS.** The State charitable and correctional institutions with the sums disbursed for their support in 1910 were as follows: Soldiers' Home, \$7058; Deaf

and Dumb Asylum, \$517,408; State Reform School, \$10,092.

**POLITICS AND GOVERNMENT.** There was no meeting of the State legislature in 1910, as the sessions are biennial, and the last was held in 1909. The next session begins January 2, 1911.

**CONVENTIONS AND ELECTIONS.** There was no election for governor in the State in 1910, as the term of Governor Norris does not expire until January, 1913. The elections were for Congressmen, for clerk of the Supreme Court, for Railroad Commissioner and for minor State offices. The elections of November were important and interesting, however, because the legislature of 1911 will elect a Senator to succeed Senator Carter, whose term expires in that year. The Republican State Convention met in Missoula on September 15, and renominated for congressman Charles N. Pray. The convention was one of the largest and most enthusiastic in the history of the State. Concessions were made to the progressive element of the party in the making of the platform so as to suit both the progressive and regular wings. The platform commended the Roosevelt policies and was outspoken in the endorsement of the Taft administration. It also praised Senators Carter and Dixon, and Congressman Pray for their achievements in Congress.

The Democratic State Convention met at Livingston on September 8, and nominated Charles H. Hartman for Congress. The elections on November 8 resulted in victory for Mr. Pray and the other Republican candidates on the State ticket. The vote for members of the legislature was so close that it was not certain for several days whether Senator Carter would be renominated or would be succeeded by a Democrat. The official canvass, however, showed that the legislature on joint ballot stood: Democrats, 54; Republicans, 48. The leading candidates for the seat at the end of the year were T. J. Walsh, a lawyer, and W. J. Conrad, a banker and mining man.

**OTHER EVENTS.** The western part of the State was visited during the summer and fall of 1910 by disastrous forest fires, which caused a vast loss in property and many lives. The eastern or agricultural part of the State received thousands of new settlers, principally from the Middle West. Work on the various irrigation projects begun by the United States government was continued, and the fertility of the virgin soil in the arid regions was abundantly proved when water was applied. The completion of the Chicago, Milwaukee and St. Paul Railroad through the State aided much in the immigration movement. Many new hamlets sprang up along this line and also along the line of the Great Northern Railroad on the northern section. The Flathead Indian Reservation, the lands of which were drawn under the lottery system in August, 1909, was thrown open. Only about one-half of the actual lottery winners claimed homesteads, but their places were filled by those who drew numbers farther down the list, so that all the tillable land was taken up.

The year 1910 saw a trifle less than the usual activity in the mining regions, the copper output being restricted to meet the exigencies of the market. The curtailment, however, was not sufficient seriously to affect business.

**STATE OFFICERS.** Governor, Edwin L. Norris, Democrat; Lieutenant-Governor, William R. Allen; Republican; Secretary of State, A. N. Yoder, Republican; Treasurer, Elmer E. Esselstyn, Republican; Auditor, H. R. Cunningham, Republican; Attorney-General, A. J. Galen, Republican; Adjutant-General, Philip Greenan, Democrat; Superintendent of Education, W. E. Harmon, Republican; Commissioner of Agriculture, J. H. Hall.

**SUPREME COURT.** Chief Justice, Theodore Brantley, Republican; Justices, Henry C. Smith, Republican; William L. Holloway, Republican; Clerk, John T. Athey, Republican.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 16; House, 32; joint ballot, 48; Democrats, Senate, 12; House, 42; joint ballot, 54; Republican majority, Senate, 4; Democratic majority, House, 10; Democratic majority, joint ballot, 6.

**MONTCLAIR, N. J.** See MUNICIPAL GOVERNMENT, *City Planning*.

**MONTENEGRO.** A hereditary constitutional monarchy; one of the Balkan States. Area, 3486 square miles; population, about 225,000 (Mussulmans, 13,000; Roman Catholics, 14,000; remainder, Eastern Church). Capital, Cetinje (5000 civil, 600 military population). Education, free and compulsory. Much of the country is mountainous and heavily forested. On the cultivable areas are grown corn, oats, potatoes, barley, buckwheat, and tobacco (a monopoly conceded to an Italian syndicate). Stock-raising is carried on; there are (estimate) 60,000 cattle, 500,000 sheep, 3000 horses, 8000 swine. Coarse woollens are the only manufacture. Imports (1907), estimated at £261,000; exports, £56,000. There is a railway from Antivari to Lake Scutari (11 miles). Telegraph lines, 528 miles; offices, 23; post-offices, 21. The estimated revenue and expenditure balanced (1909) at £121,123; in 1910, at £142,600. Public debt (1909), £70,000; 1910, £250,000 (a new loan was issued in 1910).

From the eighteenth year until he becomes sixty-two years of age every Montenegrin is liable for military service, but this is in a militia rather than a standing army. Two years is spent in the recruits' class, where for four or six months instruction is given in battalions of infantry and artillery and engineer organizations maintained for this purpose. Then 33 years is spent in the active army, where occasional military instruction and training is given and finally 10 years is passed in the reserve. On a war basis the forces consist of four divisions, three of three brigades and one of two brigades, making a total of 57 battalions, and one artillery brigade with 12 batteries. Four nucleus battalions or permanent troops are maintained at Cetinje, Podgoritz, Niksiitch, and Kolashine. When organized on a war basis the total strength was estimated at between 50,000 and 60,000.

Reigning King, Nicholas, born October 7 (September 25), 1841; proclaimed prince August 14 (26), 1860; married, October 27 (November 8), 1860, to Milena, daughter of Voivode Peter Vucotich (senator and vice-president of the council). On August 15 (29), 1910, by a vote of the Skupshtina, he was proclaimed King. Heir-apparent, Prince Danilo Alexander, born June 17 (29), 1871. The members of the Skupshtina (the legislative body), 74 in number, are elected

by universal suffrage. Prime Minister, Minister of Justice and of Foreign Affairs, Dr. Tomanovich.

The King was proclaimed on (or about) the fiftieth anniversary of his accession as prince upon the death of his uncle, Danilo I (1851-1860), who was the first ruler of Montenegro to abandon the title of Vladika (prince-bishop) and to substitute that of Gospodar (prince). Danilo I also threw off all allegiance to Turkey. In 1878 the independence of Montenegro was formally recognized in the treaty of Berlin; and in 1909 the limitations which that treaty had placed upon her complete sovereignty were removed, except that disallowing the erection of fortifications at Antivari or along the Boyana. Antivari was opened as a free port October 23, 1909.

**HISTORY.** August 28 was the fiftieth anniversary of Prince Nicholas's accession to the throne, and on that day Montenegro was formally raised to the rank of a kingdom. Great crowds assembled in the city on August 26 and there were many distinguished foreign visitors, including the King and Queen of Italy, the latter being a Montenegrin princess. At 6.30 A. M. the Skupstina held a secret session and voted a request to the Prince to assume the royal title. The document setting forth this decision was presented to the Prince and signed by him. Thereupon the Crown Prince addressed the people from the balcony of the palace, declaring that Montenegro had become a kingdom and its prince a King. The government of Prince Nicholas had been, down to 1905, almost patriarchal. On October 31, 1905, he announced to his people that henceforth Montenegro should be under a free constitution on a democratic basis. This change, however, did not seriously impair the Prince's power, which rested strongly upon tradition and upon the affection of the people. A more recent achievement of Prince Nicholas for the benefit of the country was the repeal of the provisions in the treaty of Berlin which placed the maritime and sanitary police on the Montenegrin coast under Austrian administration and closed to the warships of all nations the port of Antivari. The Cabinet resigned in September for personal reasons, and the King reconstructed it, but the Premier and the Minister of Public Worship retained office.

**MONTREAL EUCHARISTIC CONGRESS.** See ROMAN CATHOLIC CHURCH.

**MONTSERRAT.** An island of the British West Indies; one of the presidencies of the Leeward Islands (q. v.). Area, 32½ square miles. Population, 12,215. Births (1908), 356 (181 illegitimate); marriages, 57. Primary schools, 12, with 3250 pupils; government grant, £637. Cultivated area, 5328 acres. Cotton export (1908), 391,068 pounds. Imports (1908), £40,132 (from Great Britain, £16,220; British colonies, £8616; other countries, £3359; internal trade, £11,937). Exports, £45,304 (to Great Britain, £36,880; British colonies, £3025; other countries, £629; internal trade, £3870). Tonnage entered and cleared, 384,472. Post-offices, 13. Revenue and expenditure for the year 1908-9, £10,950 and £9296 respectively. Debt, March 31, 1909, £11,100. Commissioner (1910), Lieutenant-Colonel Davidson-Houston.

**MONTT, PEDRO.** President of Chile, died August 16, 1910. He was born in 1846, the son

of Don Manuel Montt, president in 1851-61. He was educated for the profession of law, and began his career as statesman as a member of the lower house of the Chilean Congress in 1868. He was a Liberal leader of the lower house until his election to the upper chamber. He later became a Councilor of State and Minister to the United States. During his service in this office he became familiar with American institutions. As a leader of the Liberal party and as president of the Republic he was an open champion of a sound financial system and was always opposed to a tendency toward a pernicious paper currency which prevailed in his country. For years his favorite policy had been abandonment of the paper currency and a resumption of gold payments. Although he was not able to persuade the Chilean Congress of the soundness of his financial views, he did much toward improving the financial condition of his country. He also succeeded in curbing prodigal expenditures and his influence was always for peaceful and honorable settlement of difficulties between Chile and other nations. He worked for the development of the railway systems of his country. He studied the educational systems of the United States, England, and Germany, the public service in England and irrigation in Italy. The severity of the fight for sound money at the session of Congress in 1910 undermined his health, and at the time of his death he was traveling to improve his condition. He sailed from New York City on the same steamer which was to have carried Mayor Gaynor, and he had just been speaking to that official when the latter was shot. The shock of this incident is supposed to have weakened his physical condition.

**MONYPENNY, W. F.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**MOODY, WILLIAM HENRY.** An American jurist, retired on November 20, 1910, from the Supreme Court of the United States. He was born at Newburyport, Mass., in 1853, and graduated from Harvard College in 1876. He studied law in the office of Richard H. Dana, and was admitted to the bar in 1878. He began the practice of law at Haverhill, Mass., and from 1888 to 1890 was city solicitor. He was district-attorney for the Eastern District of Massachusetts from 1890 to 1895. In the latter year he was elected to the 54th Congress for the unexpired term of General William Cogswell. He was re-elected to the 55th, 56th and 57th Congresses from 1897 to 1903, but resigned in 1902 to become Secretary of the Navy. He filled this position until 1904, when he became Attorney-General of the United States, serving until 1906. In the latter year he was appointed Associate Justice of the Supreme Court of the United States. On account of illness he was unable to perform his duties for the greater part of 1909-10 and was obliged to retire. Justice Moody was considered one of the most eminent lawyers in the United States. He had also great influence in political matters in Massachusetts.

**MOODY, WILLIAM VAUGHN.** An American poet and playwright, died October 17, 1910. He was born in Spencer, Indiana, in 1869, and graduated from Harvard University in 1893. In 1894-5 he was assistant in English at Harvard and Radcliffe College. From 1895 to 1901 he was instructor in English and rhetoric, and from 1901 to 1907 was assistant professor of

rhetoric at the University of Chicago. Many of his poems are of high merit and he was considered perhaps the most promising of the younger school of American poets. In 1907 his play, *The Great Divide*, was the theatrical sensation of the year. In 1909 another play, *The Faith Healer*, was produced, which, although it was well received, did not repeat the great success which he achieved in the former play. The best of his poems were probably his "Ode in Time of Hesitation" and his verses on "A Soldier Fallen in the Philippines." He was the author of the following volumes: *A Masque of Judgment*, a lyrical drama (1900); *Poems* (1901); *Fire Bringer* (1904); *History of English Literature* (1907); *The Great Divide* (1907); and *The Faith Healer* (1909). He also edited the Cambridge edition of Milton and other English classics.

**MORAL EDUCATION.** See EDUCATION IN THE UNITED STATES.

**MORAL PHILOSOPHY.** See PHILOSOPHY.

**MORAVIANS**, called also THE UNITED BRETHREN (UNITAS FRATRUM) and the MORAVIAN CHURCH. An evangelical denomination which had its beginning in Bohemia and Moravia in 1457, among the followers of John Huss. It was first established in America in 1735 in Georgia, where a colony of Moravians had settled for the purpose of starting a mission for the conversion of the Indians; but five years afterward they removed to Pennsylvania, where they built the towns of Bethlehem and Nazareth. The Moravians of North America had, at the beginning of 1910, 18,352 communicants, of whom the American Moravian Church, North, included 14,226 and the American Moravian Church, South, 4126. There were 122 churches and 144 ministers. In the Northern Province there were 40 missionary societies with a membership of 3984. In the Sunday schools of the denomination there were at the beginning of 1910, 14,478 scholars and 1528 officers and teachers. Funds are maintained for retired ministers and widows of ministers. The church sustains missions in Africa, Alaska, Asia, Australia, Labrador, Nicaragua, South America, West Indies and Bohemia. A Home for Lepers is supported at Jerusalem. Among the educational institutions under the auspices of the Moravians are the Moravian College and Theological Seminary, the Moravian Parochial School for boys and girls, and the Moravian Seminary for girls, all at Bethlehem, Pa.; Linden Hall Seminary for Girls at Lititz; Nazareth Hall for Boys at Nazareth, Pa., and an Academy for Girls at Salem, N. C. The English official organ of the church is *The Moravian*, and the German official organ is *Der Brueder Botschafter*. The last Provincial Synod of the American Moravian Church, North, was held at Lititz, Pa., in September, 1908. The next Synod of this branch will be held in 1913. The General Synod of the Church throughout the world was held at Herrnhut, Saxony, Germany, in 1909. The next General Synod will convene in 1914.

**MORAWETZ, VICTOR.** See CENTRAL BANK.

**MOREAS, JEAN.** A French poet, died April, 1910. He was born in Athens in 1856, his real name being Papadiamantopoulos. He settled in

Paris in 1877 and in 1882 began to publish verses in some of the newer reviews. His first volume, *Les syrtis* (1884), parodied by Beauclair under the title *Les déliquescentes*, "par Adoré Floupette poète décadent" brought on his school the title "decadent." He was one of the most prominent of the new school of Symbolists to which Verlaine belonged, but in his later work he became more conservative and his poetry was fashioned on the classic rules. From his thorough knowledge of early French diction and metre he was called the "Grammarian Poet." In 1886 he published *Les Cantilènes*. Among his other works are *Le pèlerin passionné* (1891); *Eriphile* (1894); and *Stances* (1899 and 1901). Possibly the best examples of his work are to be found in the last mentioned volume.

**MORGAN, MORRIS HICKEY.** An American philologist, died March 16, 1910. He was born at Providence, R. I., in 1859, and graduated from Harvard College in 1881. In 1888 he became a tutor at Harvard and in 1891 was made assistant professor of Latin and Greek. He became professor of classical philology at the University in 1899, a position which he occupied until the time of his death. His published works include: *Dictionary to Xenophon's Anabasis*; translation of Xenophon's *The Art of Horsemanship*; *Bibliography of Persius*; *Phormio of Terence*; *Eight Orations of Lysias*; *Minor Works of Tacitus*, and the *Language of Vitruvius*.

**MORLEY, Lord.** See GREAT BRITAIN.

**MOROCCO.** An independent Mohammedan empire on the northwestern coast of Africa; the largest of the Barbary States. Estimated area, 234,000 square miles; population, variously estimated at from 4,500,000 to 8,000,000—Berbers, Tuaregs, Bedouin and Mued Arabs, Jews, and negroes. The sultan and his subjects belong to the Malekite sect of the Sunnite Mohammedans. There are three capitals: Fez (120,000 inhabitants); Morocco (50,000), the southern capital; and Mequinez (56,000). Tangier (35,000) is the residence of the foreign representatives, and a leading port.

**INDUSTRIES AND COMMERCE.** The "tell" or fertile regions of the mountains and coast cover about one-fourth of the total area; the steppes, one-twelfth; the Sahara, two-thirds. Agriculture is neglected and the mineral resources, though abundant, are undeveloped. Cereals, beans, peas, esparto, hemp, and fruits are among the crops grown. Slippers and carpets are manufactured. The total trade is given for two years, with Great Britain for 1908:

	1907	1908	Gt. Brit. '08
Imports .....	£2,692,325	£3,050,814	£1,270,013
Exports .....	1,947,226	2,484,670	763,993

Principal imports (1908): cottons, £1,048,474; sugar, £701,428; tea, £221,216; iron and hardware, £121,288. Principal exports: barley, £631,851; cattle, £285,000; eggs, £222,846; goat-skins, £178,217; almonds, £101,103; olive oil, £100,952; slippers, £46,539. Vessels entered (1908), 3048, of 1,894,620 tons. No railways exist; there are telegraphic submarine cables, and four wireless stations. There is a daily courier service between the principal towns. The postal service is controlled by the British, French, German, and Spanish governments.

**ARMY.** The army can hardly be called permanent for it consists of forces contributed to the Sultan by the various tribes and amounting

to between 25,000 and 30,000 men of all arms. The mounted force and the field artillery armed with European guns are the most important branches of the army as the "Tabors" or organized quotas furnished by the various tribes are for the most part infantry, and these are 40 in number, being organized in four divisions. There were 6 companies of engineers, a transport squadron of 2 companies, and a medical corps. The battalions comprise four companies each, the regiments of cavalry 4 squadrons and the regiments of artillery 4 batteries.

The effective strength in 1910 was as follows: Infantry, 17,080; cavalry, 4560; artillery, 1340, making a total of 22,980 and 2385 officers. There are also 2000 "rurales." The war budget in 1910-11 was 20,942,175.08 pesetas as compared with 17,377,654.87 in 1907-8. The increased annual expenditures went for the improvement of the fortresses and material.

**GOVERNMENT, ETC.** In government, civil and religious, Morocco is an absolute despotism. The Sultan's spiritual authority is not limited, as in other Mohammedan countries, by the expounders of the Koran. He has six ministers, whom he consults or commands, as he sees fit. Mulai-Abdel-Hafid, the reigning sovereign (1910), who dethroned his brother in 1907, was recognized by the Powers January 5, 1909. The state bank provided for by the Algeiras Act (1906) is now in operation. Under the loan agreement with Morocco, the French comptrollers have begun (1910) collecting 90 per cent. of the customs, leaving only 10 per cent. to the Sultan. Amount of French loan, £2,480,000. Annual customs revenue (estimated), £440,000. Total Moroccan debt, £8,200,000 (French and German loans, £3,040,000; war expenditure, indemnities, etc., £2,960,000; other loans, etc., £2,200,000). The Moorish police force, under French and Spanish instructors and officers, as provided for by the Algeiras Act, is in process of establishment.

### HISTORY

**THE FRENCH POLICY.** Early in 1910 there were signs of a more vigorous policy on the part of the French government in exacting compensation for injuries to Europeans. Moorish officials were arrested at Casablanca and Figig for maltreatment of French citizens. The other European powers also pressed their demands for redress of grievances and there seemed to be a concerted plan to bring pressure to bear upon Mulai-Hafid to make him respect European rights. Meanwhile the Moroccan ambassadors who had spent several months in Paris during 1909 for the negotiation of a loan, had signed in December of that year a formal acceptance of the conditions imposed by the French government. This action was taken only as the result of a definite demand of the French Foreign Minister, M. Pichon, who declared that France could no longer delay. The dilatory methods of the Moors were again illustrated by the delay in delivering the agreement to the Sultan for ratification in the first place, and then by the Sultan's delay in signing the instrument, which had already been accepted by his representative, El Mokri. M. Pichon finally sent an ultimatum to Fez charging the French Consul to inform the Sultan that if the instrument were not signed within 48 hours the French mission would immediately leave the capital and France would take the necessary measures to enforce her rights.

Thereupon the Sultan agreed to accept all the conditions of the loan. Besides this question, however, there remained the Sultan's violation of the agreement as to the French military commission. Instead of placing in their hands, as stipulated, the instruction of the Sherifian troops, the Sultan had called in Turkish officers for that purpose. The French government sent the Sultan an ultimatum on this point and demanded besides the appointment of an Algerian frontier commission, which the Sultan had hitherto refused. When the latter began to discuss the terms, the French envoy informed him that no discussion would be permitted and demanded a categorical answer. The Sultan then accepted the demands. There was general approval of the French ultimatum. The Sultan agreed to pay all the European creditors.

**MINING CLAIMS.** During 1910 a certain portion of the German press was active on behalf of Messrs. Mannesmann Brothers, a firm of German financiers who claimed certain mining rights in Morocco. It was alleged that in October, 1908, Mulai-Hafid, before he was recognized as sovereign by the Powers, had granted to Mannesmann Brothers as many as 600 mining claims in different parts of Morocco, valued at about \$50,000,000 for which they paid about \$75,000. This violated the agreement of August, 1908, whereby the diplomatic representatives of the Powers were forbidden to recognize any concessions made under laws not prepared under the direction of the Powers. The press carried on an agitation for the recognition of Mannesmann Brothers' rights and urged the government to denounce the resolution of 1908, but the Chancellor took the ground that this would be nothing short of a violation of the treaty and refused to consider it. Later negotiations were set on foot between the Powers for the reference of the various claims in Moroccan mining lands to a court of arbitration.

**OTHER EVENTS.** A French punitive expedition against the Zair tribesmen resulted in the severe punishment of that tribe. There were reports of internal disturbance in April. The Sultan's brother was proclaimed Sultan and the Sultan rallied his loyal tribesmen and recalled the army of Fez with a view of proceeding against him. In May the tribesmen repeatedly attacked the government troops and there was especially sharp fighting between the latter and the Hyaina tribe, which inflicted heavy losses on the Sultan's troops and took many prisoners. Raisuli, who for many years had figured before the public as a marauder, received high honors under the new Moroccan government, being appointed governor of Alcazar and the vicinity. Since Mulai-Hafid's accession there have been frequent reports of his cruelties to prisoners and in June, 1910, the foreign consuls brought complaints on this subject. The Sultan, through his finance minister, sent an official denial, but there was apparently convincing evidence of extreme cruelties inflicted upon Haj Ben Aissa, formerly governor of Fez, and his wife and children. The brother of the Sultan, Mulai-Kebir, who had revolted and asserted a claim to the throne, finally submitted in September, returning to Fez, where his estate was to be returned to him.

**MOSSO, ANGELO.** An Italian physiologist, died December, 1910. He was born at Turin in 1846 and studied medicine in that city and in Florence, Leipzig and Paris. In 1879 he was appointed professor of physiology at Turin University. He invented various instruments to measure the pulse and experimented and wrote upon the variation in the volume of the pulse during sleep, mental activity or emotion. He visited the United States in 1900-1901, and embodied the results of his observations in *Demorazia nella religione e nella scienza* (1901). Among his works are *Die Temperatur des Gehirns* (1894), and *Der Mensch auf den Hochalpen* (1898).

**MOUREMTSEFF, SERGIUS ANDREEVITCH.** A Russian scholar and statesman, died October 17, 1910. He was born in Moscow in 1850. On the conclusion of his studies at the Moscow University, he was appointed professor of Roman Law at that institution, but was some years later deprived of his chair by government order in consequence of the decided Liberal views which he professed. His activity in the cause of reform spread over a period of nearly thirty years, and the prominent part which he played as a writer and speaker in the constitutional movement of 1904-5 led to his election to the first Duma at the head of the poll. He was returned as a member of the Constitutional Democratic party for his native town and was subsequently elected to the presidency of the new body, which was opened on May 10, 1906. His tenure of office was brought to a close two months later on the dissolution of the Duma.

**MUNBY, ARTHUR JOSEPH.** An English poet, died January, 1910. He was born in Yorkshire in 1828 and was educated at Trinity College, Cambridge, and after graduation was called to the bar. In 1865 he published *Verses, New and Old*. These contained "Doris," an exquisite pastoral. *Dorothy*, published in 1880, a country story in elegiac verse, was very popular in England and the United States. In 1891 appeared *Vulgar Verses*, written in dialect, and in 1893, *A Poem of Degrees*. In addition to these he published *Ann Morgan's Love, Poems, Chiefly Lyric and Elegiac*, and in 1909, *Relicta*. He was one of the competitors for the prize offered in 1859 by the Crystal Palace Company for a poem on the Burns centenary and his contribution was considered one of the best presented.

**MUNGER, THEODORE THORNTON.** An American Congregational clergyman and writer, died January 11, 1910. He was born at Bainbridge, N. Y., in 1830, and graduated from Yale College in 1851 and from the Yale Theological

Seminary in 1855. From 1856 to 1860 he was pastor of Congregational churches in Dorchester, Mass., and from 1862 to 1885 he occupied pastorates in Haverhill, Mass., Lawrence, Mass., San José, Cal., North Adams, Mass., and New Haven, Conn. In the latter city he was pastor of the United Church from 1875 to 1885, and after the latter date was pastor emeritus. He was well known as a writer of religious essays. Among his published works are the following: *On the Threshold; The Freedom of Faith; Lamps and Paths; The Appeal to Life; Horace Bushnell, Preacher and Theologian; Character through Inspiration*, and *Essays for the Day*. He also contributed numerous literary and theological essays to reviews and magazines.

**MUNICIPAL CIVIL SERVICE.** See CIVIL SERVICE.

**MUNICIPAL GOVERNMENT.** A broader conception of what cities should be and a closer attention to the multiplicity of elements which comprise true city greatness were marked features of the year. On every hand, chambers of commerce, boards of trade, merchants' and manufacturers' associations, have rivaled the purely civic organizations in working for the physical improvement as well as the moral and æsthetic uplift of the city and its inhabitants. No single manifestation of efforts for physical and æsthetic improvement has been more marked than the one which may be described under the general head of city planning. In purely administrative matters, including the frame of city government, charter reform has swept over the whole country, centering largely in the Commission Plan, which was adopted by some fifty cities in 1910. Part and parcel of the commission plan, but by no means confined to the cities which have adopted that plan, is the great movement for more democratic control of city government, to which practical effect has been given through Direct Primary and various other Election Reforms, the Initiative, the Referendum, and the Recall. Aside from physical improvements through the broad domain of city planning, much activity continues to be shown in such public works or services as Garbage and Refuse Disposal, Pavements and Roads, Sewerage, Sewage Purification, Water Purification and Water-Works. Sanitation and Public Hygiene or Public Health generally are receiving more and more attention, both through the public works and services just mentioned and through the many specific activities of State and local boards of health, as well as the numerous but scattered and uncoordinated efforts of various branches of the general government. Separate articles on most of the subjects mentioned in the foregoing introduction to the present article will be found in their proper alphabetical position, and various specific references will also be found at the close of this article. The remainder of the space under our present head, Municipal Government, will be devoted more particularly to City Planning, Increased Efficiency in city government, Bureaus of Municipal Research, State Supervision, Home Rule, Democratic or Popular Control, Charter Reform and the Commission Plan.

**CITY PLANNING.** An examination of a collection of city maps will show that collectively they consist of graphical representations of streets, avenues, boulevards, public places, parks, playgrounds, water areas and water fronts, bridges, street and steam railways, railway ter-

minals, residences, and various buildings devoted to manufacture and commerce. With comparatively few exceptions the various elements of city maps are not systematically planned in relation to each other and to the needs of the people whom they serve. The æsthetic element, in particular, is poorly worked out or quite neglected. Marked exceptions are the city maps of Washington, in this country, Paris, a large number of German cities and a few of the recently-built Garden Cities of England. Germany, alone, of all the great countries of the world, has evolved a worthy art and science of city planning. The orderly arrangement of the grounds and buildings of the Columbian Exposition at Chicago, in 1893, begot in the minds of a considerable number of Americans a conception of what city planning might be. Successive expositions deepened and spread the conception. Civic organizations and private individuals in many parts of the country turned their attention to city planning, and within a few years a small American school of city planners has arisen. In May, 1910, there was held at Rochester, N. Y., the second Conference on City Planning and Congestion of Population. Numerous papers on each subject were read and it was decided to continue the conferences, but hereafter to devote them to city planning alone. A notable feature of the Rochester conference was an address by Frederick Law Olmstead, Jr. After outlining the principles of city planning the speaker explained his omission of reference to the æsthetics of the subject by saying, in substance, that beauty in successful city design comes through fitting form to function. As an illustration, he cited the fast sailing ships of a half century ago, which any one would recognize as beautiful, although in developing their lines utility had been chiefly considered. Besides the Rochester conference in this country, a notable Town Planning Conference was held at London, in October, 1910. This was under the auspices of the Royal Institute of British Architects, but America and other countries were represented. Altogether, reports on improving the general plans of a score or two of American cities must have been made within the past five years, including an elaborate series of water-color studies for replanning Chicago. Perhaps the most notable progress thus far made in executing any of these city plans is at Cleveland, O., where a civic centre is being built to include city, county and Federal buildings grouped around an open space. The unfortunate fact about most of the city-planning work thus far attempted in the United States is that it is unofficial; that is, instead of being done by or for the municipality it is undertaken by a civic or a commercial association or a combination of many of these. Under such conditions it may be easy enough to secure an ideal plan, but very hard to accomplish anything concrete. As one instance out of many, a voluntary Art Commission spent much time and money to secure a town improvement plan and report for Montclair, N. J., and was at great pains to secure the draft of a Town Plan and Art Commission enabling act from the State legislature, applicable to any town in the State when adopted by referendum vote. At an election in 1910 the voters of Montclair overwhelmingly defeated the adoption of the act. As an offset to this discouraging event, an adjoining and smaller community (Glen Ridge, N. J.), is carrying out a borough plan report made by the

expert city planner who prepared the Montclair plan. A quarterly journal known as the *Town Planning Review* was established in 1910 by the Department of Civic Design, School of Architecture, University of Liverpool (England). An American quarterly called *Landscape Architecture* (Harrisburg, Pa.), was also established in 1910 by the American Society of Landscape Architects, and promises to devote considerable space to city planning. Although published prior to 1910, mention may be made of three notable books on city planning: Trigg's *Town Planning* (London, 1909); Unwin's *Town Planning in Practice* (London, 1909); and Robinson's *Modern Civic Art* (New York, 2d ed., 1904). A brief outline of the British Town Planning and Housing Act, under which notable reforms are being carried out in England, was given in the *INTERNATIONAL YEAR BOOK* for 1909, p. 324.

**INCREASED EFFICIENCY.** Municipal efficiency includes not only a reasonable approach to an ideal of excellence in the various classes of service performed, but also the minimum outlay of labor and expense consistent with attaining that ideal. Efficiency cannot be measured without establishing standards and then comparing results with the standards. All this demands the best possible administrative system, including staff organization, financial accounts and physical statistics. To perfect methods of administrative organization is one of the objects of charter reform, particularly reform directed towards holding city officials strictly accountable for deeds and results. Such accountability should of course be to the people whom public officials serve, but owing to the multiplicity and complexity of municipal affairs the average citizen has neither the time nor the ability to secure, sift and weigh the many data bearing on municipal efficiency. The task is all the more difficult because until recently there has been very little attempt on the part of city officials to provide either themselves or the public with trustworthy financial and physical statistics, comparable year with year, department with department and city with city. A growing recognition of this lack of data on which to base judgment of municipal efficiency, and of the need of some competent, expert agency to check up the work of city officials and departments and report the results to the public in a form readily grasped by the average citizen, has led many private agencies to undertake the work. Some of these have been committees of civic organizations, commercial or industrial organizations, like the Bureau of Inspection of the Merchants' Association of San Francisco, which performs the unusual service of inspecting municipal contract work. The more common and notable way of checking up and reporting on municipal efficiency is through Bureaus of Municipal Research, four of which were organized in 1910, making at least nine now in existence. These bureaus are supported by private subscription, are in charge of boards of directors, and employ municipal experts to carry on their varied and numerous lines of investigation. The location and order of incorporation of these bureaus, as reported by the first of them in point of time and extent of labors, are as follows: New York City, 1906; Philadelphia, 1908; Cincinnati and Memphis (Tenn.), 1909; Fort Wayne (Ind.), Westchester (N. Y.), Hoboken (N. J.), and Chicago, 1910. At Hoboken the name is "R. L. Stevens Fund for Municipal Research," and at

Chicago, "Bureau of Public Efficiency," but in all the other cities the name used is Bureau of Municipal Research. Official public bureaus, for the same or much the same general purpose, were established at Baltimore, in 1909; Boston, Atlanta (Ga.), Milwaukee, and St. Paul in 1910. The Boston bureau is called the Finance Commission, and though created under an amendment to the city charter the members are appointed by the governor of the State. The Atlanta bureau ("Board of Municipal Research and Statistics") consists of three members of the city council, three citizens and the city auditor. Its duties are "to collect statistics of various municipal corporations throughout the United States and foreign countries, and to advise the mayor and general council as to the statistics of such cities, and of the progress made by other cities in the conduct of municipal affairs that will be of benefit to the city of Atlanta." The "Milwaukee Bureau of Economy and Efficiency," with Prof. John R. Commons and Prof. Benj. M. Rastall, both of the University of Wisconsin, as directors, has undertaken a task something like that of the *Pittsburg Survey* of a few years ago, but one embracing investigations of strictly municipal as well as industrial matters. It is taking up municipal accounting methods and business procedure; hospitals, housing, sanitation, and industrial hygiene; poor relief, legal aid for the poor, unemployment, cost of living, the boy question, and the condition of working women, girls and children.

**STATE SUPERVISION.** Besides the Boston Finance Commission, which illustrates State supervision chiefly in its origin and the fact that it is charged with reporting recommendations for State legislation, other examples of State supervision of either municipal activities or of the services rendered by franchise corporations are the constantly increasing number of public-service commissions. New commissions of this kind were established by the States of Maryland and New Jersey in 1910, but with supervision over municipal and State-wide services rendered by private corporations only. Two other lines of increasing State supervision are (1) municipal accounting and (2) various sanitary works controlled by State boards of health. State audit of municipal accounts has been conducted for a few years past in Ohio, was started in 1910 in New York, and was authorized, in case of petition, by the Massachusetts legislature of the same year. Extensive State control over city and town water-works and sewerage systems, particularly as to purification, is now exercised by Massachusetts, New York, New Jersey, Pennsylvania and Ohio, chiefly through State boards or departments of health. In 1910, the Pennsylvania Department of Health ordered Pittsburg to prepare and submit plans for sewage purification works, as it had already instructed Philadelphia and various other cities of that State.

**HOME RULE.** While central control of certain branches of city administration is extending so also is municipal home rule. In fact, contrary to popular misconception a certain kind of State municipal control and municipal home rule are in harmony with each other, rather than in antagonism. That is to say, so long as States continue to exercise any power over cities it will include policies of State-wide interest. The general principles involved in these policies once having been established by the several legisla-

tures, legislative interference is greatly diminished if special administrative boards are entrusted with the duty of seeing that the municipalities follow those principles, instead of the legislature itself attempting administrative duties. To return to the extension of municipal home rule: Subject to constitutional limitations, the cities of a number of States, particularly in the West, now enjoy the privilege of framing their own charters, virtually in entire independence of the legislature.

**DEMOCRATIC OR POPULAR CONTROL.** Another notable change in municipal government is the power being gained, or regained, by the voting citizens to choose their own officials, to replace them by others before their terms of office expire, to veto the legislation passed by the city council and to take the enactment of legislation into their own hands. These privileges come through the direct primary and various election reforms, the recall of officers to stand against other possible candidates for their places, the referendum and the initiative.

**CHARTER REFORMS.** The Boston charter amendments of 1909 went into full effect in 1910. They introduced the "short ballot," or the substitution of a few for many elective officers, gave the mayor great executive power, made the city council a small (nine members) but dignified and unrivaled legislative body, and provided for the State-created Finance Commission, already mentioned. Acting under a provision of the charter amendments of 1909, various independent departments in charge of engineering and public works were consolidated, near the close of 1910, into a single-headed department, with deputies in charge of various divisions, the latter so arranged as to make one deputy responsible for underground and another for overhead street construction, and still another for bridges. This change has been described as a substitution of the geographical for the functional plan of organization, but its real significance is centralized responsibility and harmonious operation, first through having a single head, and second through placing each deputy in charge of those public works which overlap in space or function and whose operation under independent instead of unified management would be liable to continuous working at cross-purposes.

New charter legislation for New York City, which has been made the subject of reports by two special and one legislative commission during the past three years, was again passed over without definite action by the legislature of 1910. Baltimore, St. Louis, and a number of large cities, besides numerous smaller ones, are still in the throes of charter reform, while almost every week one or more of our cities adopts the so-called commission plan.

**THE COMMISSION PLAN.** Starting at Galveston, Tex., in 1901, with the central idea of having all the affairs of that flood-wrecked city administered by a single body of five men, combining both legislative and executive functions, less than ten years has seen the commission plan adopted by at least ninety cities, while at the close of 1910 it was in various stages of promotion or adoption by perhaps an even greater number. The plan itself has also grown, so that now it may be said to include as essential features not only the small combined legislative and executive body, each member of which has a city department, but also election at large instead of by wards, direct nominations, elimina-

tion of the party system, civil service, the utmost publicity in all public affairs, the recall, the initiative, and the referendum. In addition, provision is generally made for strict control over the granting of franchises to corporations. As to the small legislative body, it should be noted that it generally comprises all or nearly all the elective officers of the city, except the members of a (usually small) board of education. This is therefore the extreme American type of the "short ballot," being surpassed only by the British system, in which each elector in a given district votes for a single representative on the town or city council and for no other municipal officer.

So far as known, only three cities under the commission plan have more than five commissioners: Fort Worth, Tex. (6); Lewiston, Ida. (7); High Point, N. C. (9). Some 45 cities have five members; 4 have four each; and 21 have three. Of the cities having commissions of three 13 are Kansas cities of the third class and three are Iowa cities of from 3000 to 25,000 inhabitants. Of 73 cities for which information is available the commissioners in 23 are required to give all their time to the city; in 12, part time; and in 38 this point is not covered by the charters. The statistics given have been taken from a paper entitled "A Comparison of the Forms of Commission Government to Date," by Mr. Ernest S. Bradford, of Washington, D. C., read before the National Municipal League. The paper contains the following list of commission cities, corrected to November 1, 1910:

## LIST OF COMMISSION CITIES \*

City	Population† 1910 Census	Date of Beginning Operation	Organized under General Law or Special Charter
<b>Texas:</b>			
Galveston	36,981	1901	Charter
Houston	78,800	1905	Charter

Total—90 cities, not including Buffalo and Mt. Vernon, (N. Y.), which have voted favorably, but are not yet authorized to install the plan; nor Washington, D. C., and Chelsea (Mass.), which have peculiar types. Cities appearing in some previously published lists, but which upon further examination are found to have only a partial form of commission government, are Beaumont (Texas), Riverside (Calif.), Boise (Idaho), St. Joseph (Mo.), Taunton (Mass.), and several cities in Tennessee.

\* Indicates a city not yet operating under the commission plan, though having voted to do so.

† The population figures, so far as possible, have been added to the original table.

It will be seen that the list includes only two cities which had a population of 100,000 or over by the U. S. Census of 1910, ten having 50,000 or more, and 26 of 25,000 or over. Late in 1910 it was reported that Spokane, Wash., with a population of 104,402 in 1910, had voted for the plan.

As to the success of the commission plan it will be unwise to express more than general opinions until it has longer trial. Galveston adopted it in 1901, Houston in 1905, five other Texas cities in 1907, and the other 82 cities in the list not until within the last three years, while 39 of the 82 cities did not adopt the plan

until 1910. The plan must be tried in some of our larger cities, even larger than the largest of those in the list, before a final conclusion as to its success can be reached. That the plan meets with popular approval is certain. That under it many cities have effected notable reforms in brief periods is undoubted. But how long the popularity and the reforms will last remains to be seen. Nor have we reliable statistics for measuring the results achieved, where statistics, if available would serve that purpose; for while perhaps some of the cities may have established reliable accounting and statistical methods since the commission plan was adopted, few had such before, so comparative figures, either contrasting periods in the same city or one city against another, are unavailable. For a discussion of the commission plan, confined chiefly to Des Moines, Ia., see Hamilton's *The Dethronement of the City Boss* (New York, 1910); Robbins's *Selected Articles on the Commission Plan of City Government* (Minneapolis, 1909), and *The Commission Plan of City Government*, a bulletin issued by the University of Wisconsin in 1910. For further information on municipal government see articles on GARBAGE AND REFUSE DISPOSAL; MUNICIPAL OWNERSHIP; PAVEMENTS AND ROADS; SANITATION; SEWERAGE; SEWAGE PURIFICATION; SMOKE PREVENTION; STREET CLEANING; TAXATION; WATER PURIFICATION; and WATERWORKS; also see articles on the various States and countries.

**MUNICIPAL LEAGUE, NATIONAL.** An organization formed in 1894 for the purpose of effecting improvements in municipal government. The Buffalo meeting of the League, November 14, 15, 16, 17, 1910, was the most largely attended and generally the most effective ever held. Among the important municipal questions considered were: Conservation in Municipalities; Patriotism in Municipal Affairs (which was the topic of the presidential address); Municipal Health and Sanitation; Municipal Reference Libraries; the League's Franchise Policy; the Present Status of Nomination Reform; City Finances, Budgets and Statistics; Corrupt Practices in Municipalities; How to Overtake the Grafters by Municipal Accounting; the Unearned Increment; Operation of Woman Suffrage and its Local Effect; the Education of Foreigners in American Cities; the Liquor Problem; Civil Service Reform in Cities and School Extension. Following the Cincinnati meeting in 1909 a special committee on the latter subject was appointed, with Edward J. Ward, then of Rochester, now of the University Extension Division of the University of Wisconsin, as chairman. During 1910 this committee was busily at work gathering information concerning the wider utilization of school plants. It presented its data in the form of a report, with papers by leading educators and social workers. This report, which excited very active discussion, will be published in a separate volume.

The dominant note of the meeting was the discussion of the "New Municipal Idea" and its various manifestations.

Hon. William Dudley Foulke, of Richmond, Ind., was elected president of the League to succeed Hon. Charles J. Bonaparte. The Vice-Presidents elected were Dr. A. Lawrence Lowell, President of Harvard University, H. D. W. English, President Civic Commission, Pittsburg; Charles Richardson, Philadelphia; Thomas N. Strong, Portland, Oregon; George McAneny, President of

the Borough of Manhattan, N. Y.; Alderman Charles E. Merriam, Chicago; Camillus G. Kidder, New York. The Secretary, Clinton Rogers Woodruff, Philadelphia, and the treasurer, George Burnham, Jr., Philadelphia, were re-elected. Dr. Albert Bushnell Hart, of Harvard, was subsequently made chairman of the executive committee.

On December 31, 1910, there were 2186 members enrolled in the League. There were 219 affiliated organizations, with an enrolled membership of 186,728.

The William H. Baldwin prize for the best essay on "City Government by Commission" for the year 1910 was awarded to Oswald Ryan, Harvard, with honorable mention of Roger F. Hooper of Harvard and E. Clyde Robbins of the State University of Iowa. The subject for 1911 is "The Administration of the Police Department in Some City in the United States with a Population of over 200,000."

**MUNICIPAL OWNERSHIP.** The status of municipal ownership in the United States at the close of 1910, broadly speaking, was that a large percentage of the water-works, including nearly all the larger ones, were owned by the cities which they supplied, while next in order came electric lighting plants, with municipal ownership quite common, but far less general than in the case of water-works, and but rarely extending to the large cities. Few gas-works and practically no street railways are owned by American cities, although such ownership is notable in Great Britain. An extension of the municipal ownership of docks and water terminals was urged by Gen. W. H. Bixby, Chief Engineer, U. S. Army, in an address delivered before the Rivers and Harbors Congress at Washington in December, 1910.

At San Francisco, in January, 1910, the city declared against a bond issue of \$35,000,000 for the purchase of the works of the Spring Valley Water Co., by a majority of 1234, but declared 32,876 to 1607 in favor of a \$45,000,000 bond issue to introduce a supply from the Tuolumne River. Later on, San Francisco voted a relatively small bond issue for a short length of municipal street railway. An injunction against this bond issue was sought from the State Supreme Court, but was denied. In May 1910, Denver, Colo., voted against a 20-year extension of the franchise of the Denver Union Water Co., and for the creation of a Public Utility Commission to deal with the water question. This commission was required to determine the value of the property of the private water company and also the cost of a new plant. The commission was authorized to offer the company \$7,000,000 for its property. Provision was made for an election on September 6, to vote on an \$8,000,000 bond issue for buying and improving the plant of the company, or for building new works. The company refused the offer for its plant. Subsequently the commission estimated the value of the private plant as \$6,400,000 and the cost of an independent plant, to be built by the city, at \$7,318,500. The company sought an injunction against the election and bond issue. The court permitted the election, but virtually enjoined the bond issue, on the real or implied ground that the city was bound to buy out the company at an appraised valuation of \$14,400,000, fixed by a commission of engineers in 1909. This decision came just before the election, but, nevertheless 7032 votes

were cast for the bond issue and only 2334 against it (out of a total registration of 38,495). The court decision went up to the United States Circuit Court of Appeals. At Omaha, Neb., the municipal purchase of the plant of the local water company was made mandatory by the State legislature seven years or so ago. The city contested the appraisal, on the ground that its representative did not agree with the other arbitrators in fixing the price. This and other points have been before the courts for some years, but appear to have been decided in favor of the company during 1910. Certain large municipal ownership questions were involved in the proposed extensions to the rapid transit subway system of New York City, still unsettled at the close of the year (see NEW YORK). These questions involved the terms on which new routes or else extensions of the existing system would be built and operated, with ultimate municipal ownership of the subway in any event.

**MUNRO, DAVID ALEXANDER.** An American editor, died March 9, 1910. He was born in Maryburgh, Scotland, in 1845. He graduated from the University of Edinburgh and shortly afterward came to New York, where he was engaged in the literary department of Harper and Brothers. From 1887 to 1889 he edited *Garden and Forest*, and from 1889 to 1896 was general manager of the *North American Review*. He edited this publication from 1896 to 1899, when he became assistant editor, and held that position until the time of his death. He contributed articles to many papers and periodicals and supervised the collation and transmission of American contributions to the last edition of Liddell and Scott's *Greek Lexicon*, and arranged the *Comparative Greek-English New Testament* for Harper and Brothers. He collaborated with Dr. Schaff in the preparation of his *Companion to the Study of the Greek New Testament*.

**MUNRO, JOHN CUMMINGS.** An American surgeon, died December, 1910. He was born in Lexington, Mass., in 1858 and graduated from Harvard College in 1881 and from the Medical College of that institution in 1885. He began to practice in Boston in 1886 and continued in active practice until his death. He was connected in 1905 with the Harvard Medical School as demonstrator and instructor in surgery, and lecturer. From 1903 until the time of his death he was surgeon-in-chief at the Carney Hospital. He was a member of many medical societies. He was a contributor to Keen's *System of Surgery*.

**MUNSEY, FRANK A.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**MURPHY, CHARLES.** See CANADA, *Government*.

**MURPHY, CHARLES F.** See NEW YORK.

**MURRAY, ROSALIND.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**MUSEUM, UNITED STATES NATIONAL.** See UNITED STATES NATIONAL MUSEUM.

**MUSIC.** In all branches of the art of music the first decade of the present century has been a period of intense activity. "Originality at any

cost" seems to have been the watchword of all the younger composers; so much so, that not only established forms, but even fundamental physical laws and art canons are utterly disregarded. In Germany the leaders of the new tendencies are Strauss and Reger; in Italy, Puccini; in France, D'Indy, Debussy, Dukas, Ravel; in Russia, Rachmaninoff and Scriabine. In England Elgar is hailed by many as a new prophet. The American MacDowell has become universally recognized after his death; yet no one has been able to point to anything in this master's works that might characterize him as specifically "American." Among the more important composers that died during the decade are: Verdi, Grieg, Rimski-Korsakoff, Arensky, Balakireff, Reyer, Reinecke, and Martucci.

In England and America the appreciation of good music has made great strides, as is attested by the establishment of permanent symphony orchestras and chamber-music organizations in many of the less important cities. Even a casual glance over the programmes of the so-called "popular" concerts reveals an ever growing demand for the more serious works. Curiosity for the very newest works seems also to have stimulated interest for the older composers, and historical concerts have come into vogue. While in the field of absolute music the retrospect is exceedingly gratifying, it is less so in the field of opera. No one will deny that here also taste and real understanding have made steady progress; but for the promoters of opera the period has been one of stress and storm. The question of singers' salaries originally was of purely local interest to New York, and more especially to the Metropolitan Opera House. With the appearance, in 1906, of Oscar Hammerstein and his Manhattan Opera House, the matter assumed a new aspect. Not only did the excessive salaries soar still higher, but in its eagerness to cripple the rival each institution engaged a larger number of artists than was actually needed. France and Italy soon were seriously affected by the exodus of their best artists to America. In 1908 the more influential of the Italian managers, who also control the operatic situation in South America, entered into a combination against the New York institutions. Their efforts proved futile. Artistically most brilliant the season of 1909-10 at the Metropolitan and Manhattan Opera Houses proved financially crippling to both. Mr. Hammerstein gave up the battle, and sold for two million dollars all his interests and contracts to the rival house. From an artistic standpoint, the four seasons of intense competition have been productive of much good. The ensemble has been raised to a high level of excellence; new and adequate scenery and costumes have been provided; chorus and orchestra have been strengthened both in quantity and quality; the monotony of repertoire has entirely disappeared. In this last respect reform has perhaps been a little too radical. More than one new opera has been presented for no other apparent reason than that it was a novelty. The Metropolitan Company even promised to give some operas in English, and held out hopes for native composers of seeing their works performed in their own country. The very first effect of the cessation of rivalry was a reduction in the number of announced novelties from eight to four.

Even before Mr. Hammerstein had withdrawn, the dissension between the two directors of the

Metropolitan, which had been smoothed over temporarily, had broken out anew. Fortunately Chicago had become desirous of having its own opera company, and Mr. Dippel was transferred to the Chicago company. Thus at the end of the year 1910 there were in the United States three permanent institutions of the first rank devoting their energies to the production of grand opera, in New York, Boston, and Chicago. Instead of working against one another, all three companies have entered into an agreement for the mutual exchange of artists.

#### THE UNITED STATES

**ARTISTS.** Two of Europe's foremost composers (Puccini and Humperdinck) visited the United States in 1910. Both were invited to superintend the rehearsals of their new operas at the Metropolitan Opera House, but neither made any public appearance in an artistic capacity. Mme. Liza Lehmann, who had become famous here through her song cycle, "In a Persian Garden," scored a most emphatic success everywhere with the rendition of her two song cycles, "In a Persian Garden" and "Nonsense Songs." She had the assistance of a quartet of which Mme. Jomelli was the soprano. After an absence of several years Busoni was heard again in recital and with orchestra. Everywhere he made the deepest impression. One critic very appropriately characterized his playing as possessing "the mentality of Bülow, the technic of Liszt, the fire of Rubinstein." Josef Hofmann was satisfied with interpreting the works of the great masters, instead of playing his own works. As an interpreter he need not fear comparison; he amply fulfils the early promise he gave as an infant phenomenon. Xaver Scharwenka delighted his old admirers. While his playing has always been musicianly, it has become more smooth and finished technically. A new comer was the French pianist Adolphe Borchard, who must be classed among the very foremost of the younger artists. He possesses the qualities that characterize the school of the Paris Conservatory (beautiful, singing tone and marvelously clear technic) combined with highly individual, poetic conception. Arthur Friedheim, who has not been heard for many years, proved that he is still the peerless Liszt specialist. Mmes. Szumowska and Bloomfield-Zeissler showed that they are still in fullest command of their remarkable powers. Among the violinists Kathleen Parlow, a young Canadian girl, created a real furor. Her wonderful performance of the difficult Tchaikowski concerto was proof of the possession of all the qualities that make an artist of the first order. While all agree that she is the greatest woman violinist ever heard in New York, there are those who acclaim her the greatest violinist of her sex. A much heralded violinist, Alexander Sebal, made the mistake of playing at his first concert all the twenty-four caprices of Paganini. He exhibited a stupendous technic, but had no opportunity of showing any real musical qualities; for the musical value of those works is extremely insignificant. When Jaroslav Kocian was first heard here, it was generally believed that his leaning was toward technical exploitation of sensational effects. He now returns as a mature and serious artist with an unusually large and sympathetic tone. Macmillen's beautiful playing with the Philharmonic Orchestra convinced those who heard him that he now must be

ranked with the masters of his instrument. Of Kreisler and Elman it need only be recorded that every time they played they drew crowded houses. For some reason or other the past year again was conspicuous for a dearth of cellists.

Only one new artist was heard, Boris Hambourg, a brother of the great pianist. There is a peculiar charm about his playing, a wonderful atmosphere. His tone is not large, but very clear and mellow.

**SONG RECITALS.** In the song recital the offerings of the past year were exceptionally rich and varied. It suffices to mention the names of Dr. Wüllner and Mmes. Schumann-Heink, Sembrich, and Koenen. In Reinhold von Warlich the public made the acquaintance of an artist of rare qualities. The young man possesses a baritone voice of exceptional beauty, which he handles with consummate skill. His interpretations revealed temperament and feeling, and demonstrated his versatility in evoking the most widely varying moods. The name of Alexander Heinemann has long been familiar to music-lovers, and his appearance here amply justified the glowing reports that had preceded him. His rich, sonorous bass voice he handles with a lightness and flexibility that would call forth admiration if exhibited in a soprano. Mme. Kirkby Lunn, long admired on the operatic stage, proved herself equally great in recital, as did also her famous colleague Signor Bonci. One of her recitals Mme. Sembrich devoted entirely to the rendition of folksongs of various nations. The experiment proved a most emphatic success. David Bispham also departed from tradition when he sang a programme of foreign composers in English. Besides appearing in opera Mmes. Nordica and Tetrazzini made extensive concert tours of the country.

**ORCHESTRAL CONCERTS.** The first year of the newly reorganized Philharmonic Society of New York resulted in a deficit of \$90,000. Evidently the promoters had primarily made their plans with a view toward the artistic success. If such was the case their object has been achieved, for everywhere the playing of the orchestra under Mr. Mahler called forth unqualified admiration. In order to place the organization upon a sound business basis a well known impresario was engaged to look after the financial affairs. The first step was a reduction of the subscription price to all the different cycles of concerts.

An important change was made in the personnel of the Boston Symphony Orchestra. Its famous concert-master, Willy Hess, resigned to fill the position of the late Karl Halir at Berlin. Mr. Hess's successor, Anton Wittek of Berlin, introduced himself with the Beethoven concerto, and at once made a deep impression.

The excellent Pittsburgh Symphony Orchestra was disbanded owing to the lack of a sufficient guarantee fund. Immediately the Pittsburgh Orchestra Association was formed by a number of music-loving citizens with the object of organizing a new orchestra for the season of 1911-12. In the meantime most of the members of the original Symphony orchestra were engaged, and a temporary organization under the conductorship of Carl Bernthaler, known as the Pittsburgh Festival Orchestra, was formed to play a series of thirty concerts until a new permanent orchestra could be established. By the end of the year the guarantee fund was still considerably short of the amount necessary.

Consequently the chief promoters, upon whom the deficit of the former orchestra had fallen, withdrew, and the city was left without an orchestra of its own, entirely dependent upon concerts given by visiting organizations.

Reports from Chicago indicate that the orchestra situation there also leaves very much to be desired. The Theodore Thomas Orchestra (Frederick Stock) has been severely criticised for slovenly performances, and the charge is made that among its instrumentalists there are too many inferior players. The management evidently acted upon the suggestions made, for reports of the latest concerts record very marked improvement. The newly reorganized Cincinnati Symphony Orchestra, under Leopold Stokovsky, reports a most satisfactory year, as well as almost all other symphony societies. The Seattle Orchestra, under Henry Hadley, has increased the number of performers and doubled the number of concerts. Among several newly established orchestral associations the most important is the one at Altoona consisting of sixty players under B. L. de Roe, a former member of the New York Symphony Orchestra.

The Imperial Russian Court Balalaika Orchestra under its leader W. W. Andreeff gave some concerts of Russian folk music. The orchestra consisted of thirty performers who played only on their native instruments, the balalaika and domra.

In novelties for orchestra the year was an exceptionally poor one. Only one new work of real importance was heard, Scharwenka's fourth concerto for piano and orchestra in F minor. It was played by the composer himself at the Philharmonic Society's concert of November 27, under the direction of Gustav Mahler. The work is in no way revolutionary, but cast in the classical form. The themes are beautiful and developed in masterly style. In real musical value the work comes near the composer's first concerto in B flat minor, which still remains Scharwenka's greatest work. Carl Pohlig with his Philadelphia Symphony Orchestra introduced a new symphony by Fritz Volbach in B minor, which proved pleasing music. Frederick Stock with the Theodore Thomas Orchestra of Chicago played his own symphony in C minor, a work that impresses more by its masterly treatment than by genuine inspiration. A comedy overture, "Puck," by Gustav Strube was brought out by the Boston Symphony Orchestra under Max Fiedler.

**FESTIVALS.** The fifty-third annual Worcester Music Festival took place under the direction of Arthur Mees and Gustav Strube. The principal work produced was Berlioz' *La Damnation de Faust*. Granville Bantock's *Omar Khayyam* made a favorable impression. At the Cincinnati Biennial Festival the chief works performed were Handel's *Judas Maccabæus*, Beethoven's *Missa Solemnis*, Berlioz's *Les Troyens à Carthage*. The festival was under the direction of Frank van der Stucken.

From an artistic standpoint the most important festival was the second annual California Bach Festival at Berkeley, under Frederick Wille. The work performed was The Passion according to St. Matthew. The production was in all respects a model one. Mr. Wille was the founder and director of the Bethlehem Bach Festivals of former years, which soon became musical events of national fame. The California Festivals have taken the place of and form the

continuation of the Bethlehem events. The Maine Music Festival occurred at Portland and Bangor under William Chapman, and was open to the same objections that have been raised in former years: the programmes are too mixed. One of the concerts was devoted entirely to excerpts from operas. For the first time in its history Denver arranged a music festival. Strictly speaking, it was not a festival, but a series of symphony concerts with excellent programmes. The Minneapolis Symphony Orchestra under Emil Oberhoffer was assisted by such artists as Busoni, Wüllner, and Czerwonky.

**OPERA.** At the Metropolitan Opera House 175 performances were given from a repertoire of 44 operas by 24 composers. According to nationality these were divided as follows: Italian, eighteen works by nine composers; German, sixteen works by six composers (but Gluck's *Orfeo* and Flotow's *Stradella* in Italian; and Gluck's *Armide* in French); French, seven works by six composers; Russian, Bohemian, and American, each one work by one composer (but both Russian and Bohemian works in German). Wagner, represented by nine works, led with thirty-three performances. Next in order came Puccini, four of whose works achieved twenty-three performances. Third ranked Verdi, six of whose works were given twenty-two times. Puccini's *La Bohème*, Mascagni's *Cavalleria*, and Leoncavallo's *Pagliacci* each had ten representations; Wagner's *Tannhäuser*, nine; Wagner's *Walküre*, Verdi's *Aida* and *Trovatore*, Puccini's *Madame Butterfly*, seven; Gluck's *Orfeo*, Gounod's *Faust*, Ponchielli's *Gioconda*, six. Among the year's quasi-novelties were the revivals of two operas that had not been heard in many years. Flotow's *Stradella* failed to arouse interest. Weber's *Freischütz* was put on at the very end of the season, and it was apparent that there had been no time for sufficient preparation.

In respect to the number of novelties produced the past year eclipses all records; not less than seven works had their first representation in America. Franchetti's *Germania* (January 22), under Toscanini with Caruso and Destinn in the principal rôles, had a splendid performance, but aroused only passing interest. The music lacks real inspiration. Several passages of the text offer fine opportunities, but the composer fails to rise to the situation. Bruneau's *L'Attaque du Moulin* (February 8), under Tango with Noria, Delna, and de Segurrola, was excellently rendered, but proved a failure. The text is decidedly better than the music, which is lacking in vitality and power of characterization. For the production of Tchaikowski's *Pique Dame* (March 5) Gustav Mahler was specially engaged. In the cast were Destinn, Meitschik, Gluck, Slezak, and Forsell. The performance was superb, and the music made a profound impression. To one who is familiar with Tchaikowski's orchestral works the score of this opera presents no new effects. The music follows the dramatic situation faithfully throughout. The themes are characteristic and expressive, the orchestral colors lavish and glowing. Yet in spite of its wonderful music *Pique Dame* is not likely to become a favorite with the general public. The subject is too gloomy, and it is impossible to feel sympathy for the hero. While Converse's *The Pipe of Desire* (March 18) proved practically a failure it nevertheless achieved a double distinction. It is the first work by an American composer ever

४४०

performed, and the first opera ever sung in English on the stage of the Metropolitan Opera House during the regular season of grand opera. Mr. Hertz conducted, and all the rôles were filled by the American singers of the company. The fundamental defect of the opera is the absurd text. The music lacks individuality; it is the Wagner idiom pure and simple. The next novelty, which was given on the opening night of the season (November 14), was one whose première took place in the year 1777. Gluck's *Armide*. The performance under Toscanini with Fremstad and Caruso was a model one even in the minutest details. If the work had been given as one in a historical cycle showing the development of opera, one could understand the time and expense required for such a production. Whatever may have been the reason for producing a work so entirely remote from modern sympathies, the management deserves great credit, and has earned the gratitude of a few serious students of musical history for offering them an opportunity of witnessing a model representation of a work that will always remain a landmark in the history of opera.

Puccini's *Girl of the Golden West* was produced on December 10 for the first time on any stage, under the direction of Toscanini with Destinn and Caruso. The composer, who had personally supervised the rehearsals, was present. The event derived a special significance from the fact that for the first time the initial performance of an opera by a famous European composer took place in America. Furthermore, the première was scheduled for a special night outside of the regular subscription, and the prices of admission were doubled. The second performance one week later occurred under the identical conditions. To all appearances the work was a most emphatic success. The composer and all concerned in the production received tremendous ovations. The cold fact is that the *Girl of the Golden West* is musically the least inspired of Puccini's operas; and for the simple reason that the text is not only not fitted, but not even fit, for musical setting. A realistic or "veristic" lynching scene has no place in a serious work of art.

A work of very different calibre, and one that gave unalloyed delight, is Humperdinck's *Königskinder*, which was brought out in the presence of the composer under Hertz with Farrar and Jadlowker on December 28. The American première was also the first performance on any stage. As in *Hänsel and Gretel* the composer has again drawn his inspiration at the inexhaustible spring of the German folksong. The simple charm and ethereal beauty of the music not only carried the work to instantaneous and emphatic success, but also gave it the assurance of a long operatic life, at least in the repertoire of German theatres. In connection with *Königskinder* one fact seems worth recording: The work had been promised for the preceding season as one of a number that were to be sung in English. After Mr. Hammerstein's retirement it was announced that the opera would be sung in the original German.

A new departure, and one that proved successful beyond all expectations, was the engagement of the famous Russian dancers Pavlova and Mordkine, who appeared in a number of ballets. The policy of expansion, which had been prompted by a spirit of rivalry, and which had also proved disastrous, was abandoned. The

special performances at the New Theatre were discontinued; orchestra, chorus, and the number of principals were greatly reduced, so as to meet the actual needs of the institution. The dual directorship with divided responsibility came to an end, and Signor Gatti-Gasazza was placed in sole and absolute control. Among the principal artists that appeared during the year were: Mmes. Nordica, Melba, Destinn, Gadski, Fremstad, Movena, Weidt, Gluck, Alda, Farrar, Rappold, Pasquale, Fornia, Novia, Homer, Delna, Flahaut, Wickham; Messrs. Caruso, Slezak, Jörn, Burrian, Constantino, Jadlowker, McCormack, Renaud, Forsell, Amato, Scotti, Pini-Corsi, Didur, Gianoli, Blass, Goritz, Hinkley, Whitehill, Hinshaw. The conductors were: Toscanini, Hertz, Podesti, Tango, Pasternack, and Mahler (as guest).

The Manhattan Opera House closed its doors on its fourth and last season on March 26. From January to March 73 performances were given from a repertoire of 23 operas by 14 composers. According to nationality these were distributed as follows: French, 12 works by 8 composers; Italian, 9 works by 5 composers; German, 2 works by 1 composer (both in French). As in the preceding year Massenet led with 13 performances and 4 works; Strauss came next with 11 performances of 2 works; Verdi ranked third with 10 performances of 4 works. Two novelties were produced. Massenet's *Griselidis* (January 19), under de la Fuente with Mary Garden and Dalmores, had only a lukewarm reception, although it was splendidly given. The music is purely declamatory. Massenet's inspiration for melodic invention seems to have forsaken him. On the other hand Strauss's *Elektra* (February 1), under de la Fuente with Mazarin, Gerville-Réache, and Huberdeau, achieved a sensational success. The unqualified admirers of Strauss regard *Elektra* not only as the greatest work of this composer, but as the greatest in all operatic literature. More moderate critics see in *Elektra* a further step toward license, cacophony, accumulation of brutal effects, and a breaking away from all that has hitherto been regarded as beautiful in music.

A quasi-novelty was Delibes's *Lakmé* (March 21), which had not been heard for fourteen years. As already stated elsewhere, Mr. Hammerstein sold his interests to the Metropolitan Company. Early in the year he had already given up his Philadelphia Opera.

The Boston Opera Company gave 94 performances from a repertoire of 29 works by 19 composers. Practically the season consisted only of French and Italian opera. The German performances were given on the exchange plan by the Metropolitan company of New York. Puccini dominated with 22 performances of 3 works. Three novelties (i. e. not only for Boston, but for America) were presented. Debussy's *L'Enfant Prodigue* (November 16) made a decided impression. The music is strongly individual, beautiful, and extremely refined. Many passages foreshadow the composer of *Pelléas et Mélisande*. Less success attended the première of Laparra's *Habanera* (December 14). The music is too monotonously sombre. A rather strange experiment was the production of only the closing scene of Rachmaninoff's *Miser Knight* (March 9) in a double bill. It was sung in the original Russian by Baklanoff who created the rôle in Moscow. The rather harsh and gloomy music at first repelled the audience, but gained

on successive hearings. For the French operas a special conductor was engaged, André Caplet, a young man of temperament and authority.

The Chicago Opera Company was launched on its career on November 3 with a superb performance of *Aida* under the direction of Campanini. Up to the end of the year 53 performances were given from a repertoire of 18 operas by 12 composers. Verdi and Puccini, each represented by four works, led with ten performances each. The operas given most frequently were Verdi's *Aida* and Charpentier's *Louise*, each four times. Germany was represented only by Strauss, whose *Salome* aroused such opposition that it was withdrawn after two performances. Shortly after its premiere in New York Puccini's *Girl of the Golden West* was also given in Chicago (December 27). Puccini's publisher, Tito Ricordi, had personally superintended the rehearsals and employed the same means of advance advertising as had been employed in New York. The demonstrations at the Chicago house rivaled those of New York. Otherwise the repertoire presented was the same as that of the Manhattan Opera House. In fact, Mr. Hammerstein's former artists form the nucleus and mainstay of the Chicago Opera. Foremost among these stands the dominating personality of Campanini, invested with almost autocratic power. His assistant is Signor Parelli. Among the singers are: Mmes. Garden, Osborn-Hanna, Zeppilli, de Cisneros, Bressler-Gianoli; Messrs. Zerola, McCormack, Dalmores, Dufranne, Huberdeau, Sammarco, Venturini, Daddi.

Owing to the generosity of Frank S. Meighen Montreal now has its permanent opera company, which began its career on October 31 with Puccini's *Tosca*. M. Jeannotte is the general manager, Signor Jacchia the musical director. The institution has also entered into an arrangement for the exchange of artists with the Boston and New York companies.

#### EUROPEAN COUNTRIES

**GERMANY.** An event that caused considerable excitement in musical circles, especially in those of Berlin, was the premiere at the Royal Opera of *Poia*, a work by the American composer Arthur Nevin (April 23). The American colony had turned out in full force to give their countryman an ovation. But the press had already prepared beforehand an equally strong opposition and won over a considerable portion of the public. The true cause of this opposition had nothing to do with Mr. Nevin's music, but was purely revenge directed against the management for what the critics regarded for several years past as unjust discrimination against native talent in favor of American singers. To the shame of the Berlin critics be it recorded that none of them wrote an impartial review. By command of the Emperor several repetitions were given, and it then became apparent that the work achieved a moderate success proportionate to its real merit. Otherwise the season of the Royal Opera was uneventful owing to the fact that the historic building erected by Frederick the Great was closed for several months because of repairs. It was reopened in December with a splendid performance of *Die Meistersinger*. At the Komische Opera a young Pole, Ignaz Waghalter, leaped into fame at one bound. The two-hundredth performance of D'Albert's *Tiefland* was to be made a festival occasion. At the last moment the only conductor

who knew the score became ill. Without hesitation Waghalter, who was in the audience, offered his services. He conducted without the score, and achieved such a success that he was at once engaged as principal conductor. During the year most of the novelties were entrusted to him, and he has securely established his reputation as a conductor of the first rank. Among the novelties he brought out was Künneke's *Robins Ende*, a work showing strong melodic invention. The first year of Dr. Alfieri's newly established Volksoper was most gratifying, both artistically and financially. The most emphatic success was scored with the performances of Enna's *Cleopatra*, which had not been heard before in Germany, although it was written ten years ago. The second season of grand opera given by Gura in Berlin must be regarded as a failure. The repertoire consisted almost exclusively of Wagner's works, but the performances were generally mediocre and the prices too high.

The Morwitz Opera, devoted to the production of lighter works, passed out of existence, but its place was at once filled by the Gottschied Opera. The important event at the Leipzig Opera was the local premiere of *Elektra*, which was received rather with surprise than enthusiasm. The season closed with a Verdi cycle during which seven works were given. A novelty that had a cordial reception was *Der Talisman* by an English woman composer Adela Maddison. At Dresden Baron von Kaskel's *Der Gefangene der Zarin* achieved a great success. A very interesting and most unusual experiment was tried at the little city of Zoppot in western Prussia. Wagner's *Tannhäuser* was given in the open air in a wild forest. All reports agree that the choral portions, and especially the Pilgrims' Chorus, were overwhelming. A committee has been formed to arrange for the production of other works suitable for such surroundings.

Of orchestral concerts there was no dearth in any part of the empire. In Berlin Beethoven's ninth symphony was played in that city five times by five different organizations within one week! The Berlin Philharmonic Society under Nikisch established a record for the production of novelties. In Munich the Konzertverein under Ferdinand Löwe gave three cycles devoted to Beethoven, Brahms and Bruckner, during which all the symphonies of those masters were played. At the customary New Year's Day concert of the Gewandhaus in Leipzig Zimbalist appeared as the soloist. This in itself would not need to be specially recorded. But when one considers that for forty consecutive years Joachim was the soloist on this particular occasion, one can see that an unusual honor has been bestowed upon the young violinist. The Russian Balalaika Orchestra under W. Andreeff repeated its triumphs of the preceding year. In Otto Taubmann, the critic of the *Berliner Börsen Courier*, Germany was surprised to discover one of its greatest living composers. Taubmann is now over fifty years old. In 1896 he completed a large choral work, *Eine deutsche Messe*, which he offered to several large societies, and which was always politely returned. Last year the Philharmonische Chor of Berlin under Siegfried Ochs gave a masterly rendition of the score. In the opinion of experts Taubmann's *Messe* is to be ranked with Brahms's Requiem. In Berlin Jan Schoonderbeck gave two interesting concerts to show the development of Dutch music from the year 1225 to the present day. The

programmes were of inordinate length, not less than fifty-two compositions being presented.

In honor of the centenary of Schumann's birth innumerable Schumann festivals were arranged. Of these the most important one was the one held at Schumann's native town of Zwickau, where a newly established Schumann Museum was dedicated. The festival derived a special distinction from the presence and participation of Schumann's famous sister-in-law, Marie Wieck, who in spite of her seventy-five years played with a remarkably clear technic and with the fire of youth. The annual festival of the Allgemeine Deutsche Musikerverein took place at Zurich. The musical offerings were better than they have been for many years. Max Reger's One Hundredth Psalm for soli, chorus, organ and orchestra overshadowed everything else. In June a Strauss festival which lasted an entire week was given at Munich. At the opera house *Feuersnot*, *Salome* and *Elektra* were presented, and the Vienna Philharmonic Orchestra played all of the composer's large orchestral works. The conductors were Strauss, Schuch and Motll. Besides, Munich had a very elaborate Schumann festival and its regular Wagner and Mozart festivals. During the exposition a special festival of modern French music took place, in which Saint-Saëns, Dukas, Fauré and Widor participated. The festival season of Munich was brought to a close with a special performance of Berlioz's *Benuvenuto Cellini* in honor of the French visitors. Another event that practically assumed the proportions of a festival was the première at Munich of Mahler's Eighth Symphony (September 12). The work is of gigantic dimensions, in two parts, and requires an hour and three-quarters for its performance. It is, in fact, no symphony at all, but purely choral work. The first part is a setting of the old hymn, *Veni, Creator Spiritus*, the second of the closing scene of the second part of Goethe's *Faust*. In the production one thousand performers were engaged: seven soloists, a mixed chorus of 500 voices, a children's chorus of 350 voices, an orchestra of 170 players, piano and organ. This enormous apparatus Mr. Mahler directed with marvelous skill, so that it is safe to assert that the tremendous ovation which followed was meant as a tribute to the supreme conductor rather than to the composer. The music reveals no new traits, but emphasizes the usual fault of all of Mahler's works. He often has beautiful themes, but lacks the power of sustaining them through a longer work.

AUSTRIA. Throughout the land the eightieth birthday of the venerable Karl Goldmark was made the occasion for special concerts. In Vienna the Tonkünstler Verein under Nedbal played a complete Goldmark programme, while at the Hofoper the *Queen of Sheba* was given. Strauss and Rachmaninoff celebrated triumphs in concerts with their own works. The Dutch baritone Jan Meschaert won unusual success in three recitals devoted to the songs of Schubert, Brahms, Wolf and Strauss. The French pianiste Mme. Riss-Arbeau played all of Chopin's works in eight recitals. Wanda Landowska aroused great interest with her recitals of the music by composers of the 16th, 17th and 18th centuries. All these works she performed upon the cembalo, on which she showed herself as proficient as she already had shown herself on the piano. A sensation was produced by Erich Korngold, a four-

teen-year old composer, whose pantomime *Der Schneemann* was produced at the Royal Opera. According to reports Lilli Lehmann's voice is coming back in its youthful vigor. During the year she appeared as Norma, Leonore and Isolde, and we are assured that she acted and sang with the freshness and intensity of twenty years ago. At the Royal Opera matters were in bad shape. Ever since Weingartner assumed the directorship in 1908 there has been ever growing dissatisfaction; not with his artistic ideals, but his general policy. The deficit of the past year amounted to over two million crowns, the largest in the history of the institution. With the new year Weingartner will be succeeded by Hans Gregor, director of the Komische Opera in Berlin. Owing to a heavy deficit the Volksoper was obliged to close its doors in the fall.

ENGLAND. It certainly cannot be said that England is indifferent to its native composers. The year's record shows novelties by English composers on the programmes of all the important festival associations. The second Brighton Festival under Josef Sainton was very successful in spite of serious difficulties. Saint-Saëns's *Samson and Delilah* and Verdi's *Requiem* were splendidly given. Perhaps the principal attraction was Sinding's new symphony in E minor, which was conducted by the composer, who on this occasion visited England for the first time. The music is described as very beautiful and typical of the master's individual style. At the sixth Cardiff Triennial Festival the principal works were Mendelssohn's *Elijah*, Brahms's *German Requiem* and Dvořák's *Stabat Mater*. There were also four works in larger forms by English composers, but they made no impression. The Three Choirs Festival at Gloucester upheld old traditions by performing Handel's *Messiah*, Mendelssohn's *Elijah* and *Hymn of Praise*. However novelties of native composers were also heard. The Lincoln Triennial Festival was made the occasion of a worthy Schumann celebration. The event of the Leeds Triennial Festival was the appearance of Rachmaninoff, who conducted a new symphony, and also played his second concerto for piano and orchestra. The season of Mr. Wood's Promenade Concerts comprised sixty-one concerts. Fewer symphonies were played than in former years, but all of Beethoven's were given in chronological order. Out of eighteen novelties eleven were by English composers. Fritz Kreisler introduced Elgar's latest work, a violin concerto, but could arouse no enthusiasm. The work is well written; only it lacks inspiration. A concerto for piano and orchestra by Josef Holbrook, played by Harold Bauer with the London Symphony Orchestra, made a decided impression. It is beautiful, individual and also grateful to the performer. Theodore Stier founded a new organization, the Bechstein Hall Orchestra, whose energies are devoted to the cultivation of older orchestral works of the 17th and 18th centuries. The undertaking met with hearty support.

In the regular season of grand opera at Covent Garden Wagner's works, which had been entirely omitted the year before, were again restored to their regular place. Before the end of the season Richter suffered a nervous breakdown, and Alfred Hertz finished the season. But the chief interest was centered upon the undertaking of Thomas Beecham, who gave three distinct seasons of opera. The first consisted of twenty-two performances during February and March. The

principals were of the first rank, the orchestra of one hundred players of unusual excellence, the repertoire unique and remarkably varied. On the opening night Strauss's *Elektra* was given under Mr. Beecham. This was also the first performance of the work in England. Later performances were conducted by the composer. As everywhere else the opera divided musical opinion. The other novelties of this brief season were Delius's *Romeo and Juliet in the Village* and Ethel Smythe's *The Wreckers*, both in English. There was also a revival of Sullivan's *Ivanhoe*. The second season was given in May and June, and was devoted to opera comique in English. The novelties were Stanford's *Shamus O'Brien*, which scored a decided success, and Strauss's *Feuersnot*, which pleased more than *Elektra*. The third season began in October. The first novelty was D'Albert's *Tiefand*, a work that on this occasion again demonstrated its power to please. Leroux's *Le Chimineau* also proved a successful venture. The third novelty was again a sensation. It was Strauss's *Salome* (December 8). Considerable difficulty was encountered in overcoming the objections of the censor. At last it was agreed to omit the kissing of the head. Also the name of Jochanaan was stricken from the rôle, and Ein Prophet substituted. Curiosity was a large factor in drawing a crowded house at the première. At later performances the interest declined considerably. All in all Mr. Beecham in his first opera venture has established a record that is not likely to be equaled anywhere. The Moody-Manners Company gave the usual season of grand opera in English. As a novelty Debussy's *L'Enfant prodigue* was given and received with marked favor.

**FRANCE.** The past year developed a perfect rage for historical cycles. The impetus seems to have been given by Bach's works, with which the general public is only now becoming acquainted. In fact, the first important event of the year was the first performance at Paris of Bach's *Easter Cantata* under Messager. The Société Musicale gave eight historical concerts, at each of which an entire musical epoch was represented. Two concerts devoted, one to the older, the other to modern British composers, illustrated by explanatory lectures by M. Calvocoressi, were given by the British Concert Society. Albert Carré gave a series of Saturday matinées showing the development of music beginning with the Trouvères songs of the 12th and 13th centuries. The Concerts Colonne (founded 1873) celebrated their one thousandth concert with a programme devoted to Beethoven. Pierné conducted the Ninth Symphony, and Kreisler played the violin concerto. At the last Colonne concert Gustav Mahler conducted his Second Symphony. His art and personality carried the audience by storm. The Sunday concerts throughout the year were dominated by Wagner. Fashion has succeeded in banishing the master from the opera, but the public demands his music. A new society, La Société Musicale Indépendante, with Fauré as president, was founded for the purpose of producing works by unknown young composers of talent. Dukas and Ravel are also actively interested. The first concert occurred April 20.

The operatic event of the year was the appearance at the Grand Opéra of the entire company of the Metropolitan Opera House of New York. It was admitted that such excellence in

all the principals and such perfection in the ensemble were a revelation to Paris. Perhaps the greatest impression was produced by Toscanini's conducting without a score. Originally fifteen performances had been announced, but on demand two more were added. Although the high New York prices were doubled, the house was completely sold out for every performance. While the artistic success was overwhelming, but expected, the financial success surpassed the most sanguine hopes, for a clear profit of \$20,000 was realized. In the fall, during the regular season, Mary Garden and Nordica appeared with emphatic success in special performances of *Salome* and *Tristan und Isolde*, respectively. At the Opéra Comique Rousseau's *Leone* was only moderately successful; while Ganne's *Hans le joueur de flûte* and Pierné's *On ne badine pas avec l'amour* proved good drawing cards. Bloch's *Macbeth* seems to mark the furthest step in the direction of cacophony and brutal realism. The general impression was summed up in the words of one critic: "This is musical barbarism." The director Carré also gave a historical cycle conducted by Hasselmann. Grétry's *Richard, Cœur de Lion*, Pergolese's *La Serva Padrona* and Méhul's *Josef en Egypte* were given so far, and met with extraordinary success. Massenet's new opera *Don Quichotte* at its première at Monte Carlo was received with considerable enthusiasm.

One event of special interest which occurred at St. Petersburg must be recorded. While the rest of the musical world celebrated the Chopin centenary a year in advance, Russia observed the correct date, as established by recent researches. On February 22 a special concert was given, at which Josef Hofmann played both Chopin concertos. Liapunoff had specially composed a symphonic poem on themes from Chopin's *Berceuse* and the folk-tune which Chopin used in his A-minor mazourka. Balakireff contributed a suite written upon themes from Chopin's works.

**NABUCO, JOAQUIM.** Brazilian Ambassador to the United States, died January 17, 1910. He was born in Recife, Brazil, in 1849. He was a son of the late Senator Nabuco, chief of the Liberal party in Brazil during the period of Dom Pedro's second reign. He studied at the University of Brazil and received a degree from the faculty of law in 1871. In 1876 he was appointed attaché to the Brazilian Legation in Washington. On the death of his father in 1878 he was elected to Parliament and for years devoted himself to the cause of the abolition of slavery. He visited several foreign countries and went to Rome in 1888 to obtain the support of the Pope in the abolition of slavery. He was closely identified with the imperial dynasty and in 1889 when the republic was proclaimed he kept apart from the general movement which led the old monarchical parties to accept the new régime. During this period he wrote several books one of which is a constitutional history of the reign of Dom Pedro II. Losing

hope in the restoration of the monarchy in Brazil he reconciled himself to the new order and in 1899 accepted an invitation from the republican government to take charge of the settlement of the boundary question between Brazil and Great Britain. In 1901 he was appointed Brazilian Minister to England. On the settlement of the boundary question he was selected in 1905 as Ambassador to the United States and held that position until the time of his death. He was president of the 3d international conference at Rio de Janeiro, and in 1906 was a member of The Hague permanent court of arbitration, of the Brazilian Academy of Letters and several other societies. He was perhaps the most prominent among the Latin-American diplomats and was highly esteemed by President Taft.

**NATAL.** A province (since May 31, 1910) of the Union of South Africa (q. v.); formerly a British colony. Provincial capital, Pietermaritzburg.

**AREA, POPULATION, ETC.** Total area, estimated at 35,371 square miles. Total population (1904), 1,108,754 (whites, 97,109); estimated December 31, 1908, 1,206,386 (whites, exclusive of military, 91,443). Pietermaritzburg had (estimate December 31, 1908) 31,230 inhabitants; Durban (Port Natal), 60,244. European pupils in government and inspected schools (1908), 12,437; schools for natives, 168, with 14,056 pupils; schools for East Indians, 26, with 2411 pupils.

**PRODUCTION.** Of the total area of Natal, 2,436,886 acres have been reserved for native occupation; about 6,200,000 have been acquired by Europeans, 112,000 by natives, and 13,500 by Indians; 170,000 have been reserved for townships; 1,950,000 are in process of alienation; and 1,127,614 remain unalienated. Area under cultivation by Europeans, 390,209 acres; by natives, 460,000; by Indians, 35,000; total, 885,209. Area (European) under staple crops in 1908: 139,414 acres under corn, yield 132,854,100 lbs.; sugar-cane, 14,627 acres, 71,664,000 lbs.; kaffir corn, 6486 acres, 5,356,403 lbs.; tea, 5502 acres, 3,278,464 lbs. Potatoes, beans, tobacco, and cotton are grown. There are under orchards, 35,912 acres. Stock-raising is carried on in the highlands. Livestock (1908): 32,177 horses, 220,413 cattle, 765,377 sheep, 68,427 goats, 25,677 swine. The African coast fever has killed off great numbers of cattle in recent years. There are great forests of valuable timber. There are extensive coal fields, yielding (1908) 1,669,774 tons valued at £737,170. Of this output 553,157 tons were exported, 710,777 bunkered, 254,166 consumed by the railways. Other minerals are asbestos, copper, fireclay, gold, graphite, gypsum, iron, manganese, etc. Phosphate deposits have been found.

**COMMERCE, FINANCE, ETC.** Commercial and financial totals are given for three years below, trade for calendar years and financial statistics for fiscal years ending June 30:

	1906	1907	1908
Imports . . . . .	£ 9,705,256	£ 8,704,222	£ 7,903,412
Exports . . . . .	10,408,707	10,049,132	9,622,474
Revenue . . . . .	3,665,089	3,471,932	3,510,350
Expenditure . . . . .	3,673,972	3,681,914	3,689,752
Debt . . . . .	19,484,143	20,760,992	21,135,534

Leading imports (1908): haberdashery, etc., £605,012; machinery, £569,284; clothing, £331,831; cottons, £323,873; cereals, £320,720; hardware, etc., £286,781; liquors, £168,523. Exports: Bar gold from overland, £1,002,407; coal (bunker and cargo), £714,670; wool, £659,480; hides and skins, £145,897; barks, £133,509; angora hair, etc., £47,375.

Length of railways open (1908), 976 miles, all government owned. Telegraph lines, 1976 miles; wires, 6909; telephone lines, 186; wires, 2146; telegraph offices, 212; post-offices, 387. Vessels entered, 972, of 2,507,186 tons; cleared, 971, of 2,510,898.

**GOVERNMENT.** The province is administered by an administrator (1910, C. T. Smythe), aided by a provincial council, elected for three years. There is an executive committee of four members.

**ZULULAND** (10,461 square miles) and the **NORTHERN DISTRICTS** territory (6931 square miles) are annexed to Natal.

The Prime Minister, Mr. Moor, opened his political campaign by announcing squarely a non-party, non-racial policy as to the Union. The Union ought to protect every industry that was established in South Africa. Its ideals should be a coöperation for making South Africa a white man's country. See **SOUTH AFRICAN UNION**.

**NATIONAL ACADEMY OF DESIGN.**

See **DESIGN, NATIONAL ACADEMY OF**.

See **SCIENCES, NATIONAL ACADEMY OF**.

**NATIONAL BANKS.** On September 1, 1910, there were in the United States 7173 national banks with aggregate resources of \$9,826,181,000. Among these resources were: loans and discounts, \$5,467,160,000; United States bonds to secure circulation and United States deposits, \$726,550,000; other bonds and securities, \$879,000,000; banking property, \$213,769,000; due from other banks and reserve agents, \$1,214,916,000; gold and gold certificates, \$442,974,000; other cash items, \$193,558,000. Among the liabilities were: capital stock, \$1,002,735,000; surplus, \$648,268,000; undivided profits, \$225,769,000; circulation outstanding, \$674,821,000; individual deposits, \$5,145,658,000; due to other banks, \$1,906,044,000. About ninety-two per cent. of the United States bonds represented deposits to secure circulation. Among other bonds were included State, county and municipal bonds, \$187,474,600; railroad bonds, \$289,634,000; and other public-service corporation bonds \$161,061,000. The loans, which represented about fifty-five per cent. of the total assets, were divided as follows: on demand, secured by one- or two-name paper, 9.6 per cent.; on demand, secured by stocks and bonds, 17.2 per cent.; on time, secured by two or more name paper, 33.7 per cent.; on time, secured by single name paper only, 19.5 per cent.; on time secured by stocks, bonds, or mortgages, 20.0 per cent. Almost one-fifth of all the loans were made by New York City banks, and 26.16 per cent. by the banks of New York, Chicago, and St. Louis. National banks received an average of 7.33 per cent. on time loans and 7 per cent. on demand loans. They paid an average of 2.35 per cent. interest on deposits subject to check; and 3.56 per cent. on savings deposits. The total of such interest for the year was \$53,175,000.

Since the panic of 1907 when New York City banks were found to be about \$25,000,000 short of the required legal reserve against deposits, especial interest was attached to the reserve of national banks. The reserve law was changed on May 30, 1908. In determining the deposits against which reserve must be held there is first ascertained the net balance due to other banks; to this is added dividends unpaid, individual deposits, and deposits of the United States disbursing officers. From this total are deducted the following: checks on other banks in the same place, exchanges for the clearing house, bills of other national banks, and the amount due from the treasurer of the United States. Central city banks must have on hand twenty-five per cent. of the remainder in legal money; banks in other reserve cities must have at least  $12\frac{1}{2}$  per cent. on hand and not more than  $12\frac{1}{2}$  per cent. with central reserve banks; banks elsewhere must have a fifteen per cent. reserve, of which at least two-fifths must be cash on hand. In any case the redemption fund deposited with the treasurer of the United States, amounting to five per cent. of the outstanding circulation, is credited as a part of the reserve. Taking national banks as a whole the lawful money reserve against the more than five billions of deposits was between 21.21 per cent. and 21.61 per cent. during the year. Of this 13.4 per cent. was cash in bank, 7.04 per cent. funds held by reserve agents, and the small remainder equalled the redemption fund. All grades of banks held more than the legal reserve at the time of all six calls for returns by the comptroller, except that central reserve city (New York, Chicago and St. Louis) banks were slightly below during the early months. One of the newer policies of the comptroller is to prevent such violations of the national banking law.

The Comptroller of the Currency, Lawrence O. Murray, continued his policy of introducing a stricter examination of national banks. During the summer, schools of instruction for bank inspectors and examiners were held. The comptroller continued to urge the examiners to a more faithful performance of their duties. He stated that while most of them succeeded in having irregularities in banking practices quickly corrected, some did so very slowly or not at all. On September 7, he ordered the transfer of twenty bank examiners, or one-fifth of the total number, to new fields. This transfer had been preceded by only a few days by an unexpected call for statements from national banks. The reason given for this unexpected call was that heretofore statements have been asked for so regularly that bank officials could prepare for them. These policies indicated the intention of the Comptroller to bring about a much closer responsibility of the banks to the Treasury Department.

In his annual report Secretary of the Treasury MacVeagh recommended a law permitting national banks to establish branches in foreign countries. The object of this is to facilitate the international exchanges of American merchants and to increase American commercial independence. He also pointed out that national banks do not compete equally with State banks and trust companies on account of the legal limitations of their loaning power and functions. He could see no reason why national banks should

not be authorized to develop savings-bank activities and the special work now controlled by trust companies. He pointed out that these latter compete with national banks, but suffer from no competition by national banks.

For the fiscal year ended June 30, 1910, there were 9 national bank failures, with liabilities of \$9,111,000 and assets of \$8,170,000. The liabilities were nearly three times those of the fiscal year 1909 but only 21 per cent. of those of 1908. The comptroller stated in his annual report that failures "have been almost wholly due to incompetent or reckless management and persistent violations of the banking law." He said, "It is the present comptroller's earnest purpose to get out of the national banking system every bank which is managed in such a careless, reckless, speculative or incompetent manner as to endanger the safety of its depositors." See BANKS AND BANKING.

**NATIONAL MONETARY COMMISSION.** This commission of nine Senators and nine Representatives, under the chairmanship of Senator Aldrich of Rhode Island, was authorized by the Aldrich-Vreeland Emergency Currency Act of 1908. It engaged a great corps of experts to carry on special investigations into the banking and currency history of all advanced countries. Besides the publication of these reports, which constitute a most valuable library on banking and currency, the commission did very little to advance the cause of monetary reform during the year. For statement by Senator Aldrich see article on CENTRAL BANK. This dilatoriness was the cause of some criticism both of the policy and the sincerity of the commission.

The following is a partial list of the publications of the commission, the authors including American and foreign experts: Interviews on the banking and currency systems of England, France, Germany, Switzerland, and Italy (541 pp.); Statistics of Great Britain, Germany, and France, 1867-1908 (354 pp.); The credit of nations and the trade balance of the United States (213 pp.); Fiscal systems of England, France, Germany, and the United States (86 pp.); Notes on the postal savings-bank systems of the leading countries (123 pp.); The discount system of Europe (46 pp.); Bank acceptances (20 pp.); Statistics of the United States (280 pp.); Special report from the banks of the United States (90 pp.); Laws of

the United States concerning money, banking, and loans, 1778-1909 (812 pp.); Digest of state banking laws (746 pp.); The first and second banks of the United States (311 pp.); State banking before the Civil War (338 pp.); State banks and trust companies since the passage of the National Bank Act (260 pp.); Bank loans and stock exchange speculation (in preparation); The origin of the national banking system (213 pp.); History of crises under the national banking system (484 pp.); The use of credit instruments in payments in the United States (229 pp.); The Independent Treasury System of the United States and its relations to the banks of the country (399 pp.); Seasonal variations in the demands for currency and capital (600 pp.); Clearing house methods and practices (335 pp.); Suggested changes in administrative features of the national banking laws (374 pp.); History of the national bank currency (20 pp.); The history of banking in Canada. (310 pp.); The Canadian banking system (191 pp.); Interviews on the banking and currency systems of Canada (209 pp.); The English banking system (294 pp.); History of banking in England (in preparation); Evolution of credit and banks in France (267 pp.); The Bank of France in its relation to national and international credit (181 pp.); The French banking system (in preparation); The history and methods of the Paris Bourse (275 pp.); The Reichsbank, 1875-1900 (362 pp.); German Imperial banking laws (330 pp.); The great German banks and their concentration in connection with the economic development of Germany (about 620 pp.); Miscellaneous articles on German banking (478 pp.); The German Bank Inquiry of 1908 (Vol. I, 1162 pp.; Vol. II, about 1000 pp.); Renewal of Reichsbank Charter (268 pp.); The Swiss banking law (269 pp.); Italian banks of issue (about 350 pp.); The Swedish banking system (248 pp.); The National Bank of Belgium (238 pp.); The banking system of Mexico (284 pp.); Banking of Russia, Austria-Hungary, Holland, and Japan (about 200 pp.); Financial Diagrams (24 diagrams in color). These publications may be obtained from the Government Printing Office. See **CENTRAL BANK**; **FINANCIAL REVIEW**; and **BANKS AND BANKING**.

**NATIONAL RESOURCES.** See **CONSERVATION**.

**NATURAL HISTORY, AMERICAN MUSEUM OF.** An institution established in New York City in 1869 for the purpose of maintaining a museum and library of natural history and of advancing the knowledge of kindred subjects. Admission to the museum is free as pay days were abolished in 1907. During 1910 important work in installing new collections and in making alterations to the museum were carried on. The chief work was the equipment and preparation for exhibition of the new west wing of the museum and the rearrangement and transfer of exhibits and collections in the department of anthropology connected therewith. Preliminary plans were prepared for the new western entrance hall of the museum facing 79th Street. Six new sections are under consideration by the trustees. These are needed for the proper distribution of the different collections.

The income from the Jesup bequest made in

1909 enabled the museum to carry on more active and successful expeditions in the field in 1910 than in any previous year in its existence. Exploratory work was carried on in ten of the different States of the Union and in Canada, East Africa, Belgian Congo, Celebes, Japan, Korea, Philippine Islands, Nicaragua and other countries. The most notable expeditions were those for the benefit of the Department of Zoölogy, especially the expedition to the Belgian Colony of the Congo and that to British East Africa. Important work was also done in the collection of whales off the coast of Japan. The anthropological work in the southwestern as well as in the northwestern part of the United States is yielding notable results. The most important accessions of the year were obtained from the museum expeditions to the cretaceous dinosaur beds of Montana and of Alberta, Canada. Specimens of skeletons of the duck-billed dinosaur and of the four-toed horse, representing a somewhat later stage in the ancestry of the horse than has been known hitherto, were obtained, and a large series of skulls, jaws, etc., of lower Eocene mammals, many of them new to science. Of special interest was the discovery of a considerable part of a dinosaur skeleton off Fort Lee at the very gates of the city of New York. This specimen was found in the red shale which underlies the trap rock of the Palisades of the Hudson. There were many important accessions in the department of anthropology. Among these were the Lenders collection of costumes and decorated objects from the various Indian tribes of Central and South America, presented by Mr. J. P. Morgan.

The membership of the museum at the close of 1910 was 2457. The expenditures during the year amounted to \$314,879. The State appropriated for the expenses of the museum \$180,000. The permanent endowment amounts to \$2,338,350. The President is Henry F. Osborn.

**NAVAL ACADEMY, UNITED STATES.** See **UNITED STATES NAVAL ACADEMY**.

**NAVAL CONFERENCE, INTERNATIONAL.** See **LONDON, DECLARATION OF**.

**NAVAL PROGRESS. ENGLAND AND GERMANY.** The year's naval progress was intimately connected with the rivalry in armaments between England and Germany. Though England was still uneasy, she was no longer in a panic. The Liberals remaining in office as the result of the December (1910) elections, there seemed to be no prospect of a "panic" naval budget. One evidence of better feeling was the official announcement of the withdrawal of the special division and flotillas mobilized at Chatham as a special precaution when Admiral of the Fleet Lord Fisher was First Sea Lord. Apparently England made a great mistake in building the *Dreadnought* in 1906. Had she continued to build the standard battleship carrying 4 12" guns, and an intermediate battery of 12 to 14 6" guns, she could much more easily have maintained the Two Power standard. But her own boast that the *Dreadnought* made all previous battleships obsolete gave Germany an opportunity she has made good use of. Pre-Dreadnoughts must be counted, of course, in a comparison of strength, as a second line of defense, but every new Dreadnought and super-Dreadnought, with their great tonnage, high speed, and heavy armaments and armor, make previous ships more and more unfit to lie in the line of battle. And England is

at a disadvantage because she is not sure that she knows just what Germany is doing. Critics, therefore, do not agree on the relative positions of the two nations during the coming few years. Mr. Blatchford, in letters to the *Daily Mail* of November 23, 24, 25, claimed that the British danger is greater to-day because Germany is relatively stronger; and that British readiness to avert or meet the peril is relatively smaller. He assumed that in 1913 Great Britain will have 25 Dreadnoughts to Germany's 21. His opponents reply that when the 25 British ships are completed in March, 1913, Germany will have only 13, and will not have 17 until the end of 1913, by which time Great Britain can have four more if necessary. It must be remembered that, by the end of 1913, Austria may have two Dreadnoughts in commission. According to the *Esercito Italiano*, the first of the four Italian Dreadnoughts, the *Dante Alighieri*, will be completed in October, 1911; the second, the *Conte di Cavour*, will be launched in August, 1911, within twelve months after being laid down; all four will be completed by January, 1913. In 1914, Germany will have 21 Dreadnoughts; and Great Britain 27, including the Australian and New Zealand vessels, and, in addition, any ships laid down in 1911-12. There is need for a large margin because, by 1914 or thereabouts, Austria and Italy may have eight Dreadnoughts.

**AUSTRALIA.** The old Naval Loan Act, by which the home government received £200,000 a year toward the maintenance of an Australian squadron, was repealed in August. The initial cost of the new Australian unit is over 3½ millions, with £750,000 a year for maintenance. Several vessels of the new unit had at the close of 1910 already been delivered. The two destroyers *Yarra* and *Parramatta* were in Australian waters; and the *Warrego* had arrived in sections to be rebuilt. The flagship *Australia* (Indefatigable class, 19,200 tons displacement; 8 12" guns in four turrets in echelon, 20 4" guns; speed 26 knots) was building at John Brown's Yard, and bids had been asked for the two second class cruisers *Melbourne* and *Sydney* of the *Bristol* class (4820 tons, 27 knots, 2 6" and 10 4.7" guns). By the middle of 1912, Australia will have in service 1 battle cruiser, three protected cruisers, three destroyers.

**NEW ZEALAND.** A battle cruiser was laid down for New Zealand at Fairfield Yard, Glasgow, June 20th. Three destroyers had been planned, but were not yet ordered at the close of the year.

**CANADA.** Ten warships have been authorized; and the *Niobe* and *Rainbow* transferred from the British Navy, for use as training ships; the former in the Gulf of St. Lawrence with headquarters at Halifax, and the latter on the Pacific Coast for the protection of the fishermen. Six destroyers for the Atlantic were to be commenced in 1911, or as soon as the necessary Canadian plant is equipped. The four cruisers authorized will be divided between the Atlantic and the Pacific coasts. It will be well along in 1914 before the first of her new vessels can be ready. A year is to be allowed for the establishment of shipyards in Canada toward the cost of which a subsidy will be given; the first ships are to be ready within three years, and all ten to be delivered within six years.

**BATTLESHIP PROPULSION.** The turbine is universally used; the French, however, have constant trouble with turbine blades getting broken or detached, thereby causing considerable damage. *Le Yacht* states that the destroyer *Chasseur* made "a regular salad" of her turbines. The new American battleship, to be built by the Newport News Company, will have reciprocating engines, instead of turbines, as originally intended. The reason given is that the increased cost of working, as shown in the comparative cruising of the scouts, was confirmed by the performances of the *Delaware* and *North Carolina* on the trip of the Atlantic Fleet to European waters in November. The question of motive power for battleships has become most interesting. There has been much talk of motor engines. The American press asserted that Lord Fisher stated in November, when asked if it was true that he favored the use of oil instead of coal as fuel, replied: "You have been misinformed about that. I have no desire to boom any oil company. The coming thing in navigation, in my opinion, is the motor engine. The country that first takes hold of the principle of internal combustion will sweep the world commercially. It is cheaper to produce, saves an immense amount of space, and requires 85 per cent. less men to work it." There are experts who claim that a motor driven battleship is at present impossible. In 1910 Messrs. Blohm & Voss were building a 9000 ton cargo liner for the Hamburg-American Co., with twin screws, driven by oil engines. The installation will consist of two Diesel engines, each of about 1500 brake horse power, the propeller speed being about 150 revolutions a minute, with a full vessel speed of 12 knots. The fuel will be petroleum residue, the cheapest variety of oil fuel obtainable. Experts are awaiting her performance with great interest. As to the use of oil engines for warship propulsion, it must be borne in mind that warships must be able to operate in any part of the world; and that they must be able to secure a supply of fuel at all ports; and this is not possible with the present supply and distribution of oil fuel. The adoption of gas production promises clear decks, clean ships, no smoke, more space for crews, greater weight to devote to offense and defense; and that there will be no boilers.

**THE AEROPLANE IN NAVAL WARFARE.** In October, 1909, the Wright biplane circled the Statue of Liberty, New York Harbor, and Grant's Tomb, passing battleships of many nations anchored in the Hudson River. Since then the English Channel has been crossed several times, and great heights have been reached and maintained, although the aeroplane is still in the experimental stage. An efficient motor is the prime necessity, to permit the machine to remain in the air for many hours. It is admitted that the aeroplane will be of great value as a lookout, and in scouting. On November 14th, E. B. Ely, aviator, in his Curtiss biplane was started from a temporary launching platform on the deck of the U. S. Scout *Birmingham*, anchored in Hampton Roads, Va. The platform was inclined at an angle of about five degrees. He rose to 100 feet, and flew about five miles to Willoughby Spit, where he landed safely. In warfare, even if the aviator, starting from the deck of a vessel, cannot reach his platform on his return,

and lands in the sea, he can readily be picked up. In early December the Royal Aero Club placed two aeroplanes at the disposal of the British Admiralty for the use of naval officers at Sheerness and Chatham. They also placed their flying ground at the disposal of Naval Officers; and several certified "airmen" promised to assist in giving instruction. Great Britain's first aerial Dreadnought has been built at Barrow-in-Furness. This dirigible is the largest aerial craft built so far; and is able to stay in the air away from its home base for days. It is of the Zeppelin rigid type, a number of balloons being placed in separate compartments in a metallic shell. England is making Barrow the headquarters of her aerial fleet, £55,000 having been allowed the Navy for air craft. Experiments have been made to test the destructive power of explosives dropped on the decks of ships. The report of those conducted aboard the U. S. monitor *Tallahassee* was not made public, but the London *Outlook* stated that no net could be constructed that would withstand the impact of a torpedo dropped from a height of 400 to 500 feet. During this test it is said that the falling shells crashed through a steel wire net having a defensive resistance equal to that of a steel plate  $\frac{1}{4}$  inch thick. At Mineola, Long Island, on August 5th, C. B. Harman fired six oranges, representing bombs, from two improvised guns, one on each side of the aviator's seat, at the deck of a battleship outlined on the field below, from a height of over 100 feet. All shots were hits. Glenn Curtiss also dropped bombs on the deck of a dummy battleship floating on the lake at Hammonds Point, N. Y. At Squantum, in September, Grahame-White excelled all competitors at bomb throwing, hitting the dummy battleship deck nearly every time. The latest trials, at heights of 1800 feet and over, showed that accuracy could not be counted on. With the aeroplane still in the experimental stage, vertical fire guns have already been built to repel them. The "airmen" proclaim the doom of the battleship; but the battleship has so far survived two dooms—from the torpedo, and the submarine. A new gun invented by Major Unge was tried at the Marma proving grounds near Upsala, Sweden, in October. It is intended to discharge "air torpedoes"; but it is primarily designed as an armament for dirigibles. Ten torpedoes were fired, resembling somewhat the Krupp projectile, but fitted with smoke tracers. For use on the ground, with an elevation of 24 degrees, a range of 3600 yards is claimed; while an elevation of 40 degrees gives over 4900 yards. As the armament of a dirigible, the gun hangs by two cables from 16 to 33 feet below the car. The breech cable has an electric connection for firing the gun; the elevation is regulated by the muzzle cable, and, for loading the gun, the latter cable brings it toward the vertical so that the torpedo can be inserted through a hole in the bottom of the car. The gun weighs only 70.5 pounds; and the carriage for land use only 72.7 pounds.

"It is yet too early in any way to forecast what will be the development of aerial warfare, but it is certain that it will be a most important factor in the battles of the future. Aerial battles will be fought in three dimensional space, and will call for a new set of mili-

tary principles, and for an all-round resource on the part of the commander far in excess of any yet seen." From articles in the *Tag* and the *Militär Wochenblatt*, it is thought in Germany, as elsewhere, that the aeroplane will yet find a way to destroy the dirigible by means of light shell dropped from above. The aeroplane may yet carry some kind of machine gun, or bomb thrower.

**TORPEDOES AND MINES.** All navies are not only improving their destroyers, submarines, torpedoes, and mines, but are also using them in practice much more than formerly. England has built no more destroyers like the *Swift* (1907), of 1825 tons; those ordered in 1910 displaced from 770 to 780 tons; speed 29 knots; 2 4" guns and 2 to 4 12 pounders; 2 torpedo tubes; oil capacity, 130 tons. It is known that six others will use internal combustion engines.

The development of the submarine is receiving universal attention. France is building four experimental submersibles of different types, varying in tonnage from 355 tons on the surface and 450 tons submerged to 577 tons on the surface and 810 tons submerged; and varying in length from 14 m. to 64 m. They will make 15 knots on the surface and ten knots submerged; will use internal combustion engines; and have seven tubes. They are all designed by Labeut. The salvage of submarines is a problem still far from solution. The United States Navy has adopted a diving jacket to permit escape from a disabled submarine; and each submarine carries permanent exterior chain slings forward and aft, to enable the mother ship to lift it from the bottom. The French now drill at passing chain slings around the body of a sunken submarine.

**POWDER.** In the United States, very little progress has been made in preventing erosion, which is caused by large charges fired with a high temperature of explosion. In guns of the same calibre, but with lower velocities, lower pressures and smaller charges, the erosion is much less. At present, the question is whether to reduce the power of the gun, use a heavier weight to do the same work, or wear out the gun. The 50 calibre gun for the *Arkansas* and *Wyoming* erode very rapidly with full charges. At the end of 100 rounds the latest guns would have to be relined. The points aimed at in the manufacture of powder are, first, to insure its chemical stability for as long a period as possible; and, second, to secure a degree of uniformity which will insure the "ballistic stability" of the powder—that is, permanence of velocities and pressures during long periods and under varying conditions of temperature, moisture, etc. The new "stabilizer," introduced last year to insure chemical stability, continues to be satisfactory, and must be regarded as a permanent constituent.

**PROJECTILES.** The new American long point projectile will penetrate armor at about 20 per cent. greater range than the old type. The extreme range for commencing an action will perhaps be 10,000 yards, at which this projectile has an approximate penetration of 15" of hard faced armor with normal impact. See **BATTLESHIPS**; also separate articles on countries.

**NAVIES, FOREIGN.** See under different countries, and tables on pages 494, 495, and 496

TABLE I. WARSHIP TONNAGE OF THE PRINCIPAL NAVAL POWERS, DEC. 1, 1910

\* Battleships having a main battery of all big guns. (11 inches or more in caliber.)

\*\* Battleships, first class, are those of (about) 10,000 or more tons displacement.

† Includes smaller battleships and monitors.

†† Armored cruisers having guns of largest caliber in main battery and capable of taking their place in line of battle with the battleships. They have an increase of speed at the expense of carrying fewer guns in main battery and a decrease in armor protection. Are also called battleship cruisers.

††† All unarmored war ships of more than 1,000 tons are, in this table, classed according to displacement as cruisers. Scouts are considered as cruisers in which battery and protection have been sacrificed to secure extreme speed. The word "protected" has been omitted because all cruisers except the smallest and oldest now have protective decks.

‡ Colonial vessels included.

§ Building under agreement with Navy Department before authorization by Delegations.

N. B.—The following vessels are not including in the tables:

Those over twenty years old, unless they have been reconstructed and rearmed since 1900.

Those not actually begun, although authorized.

Transports, colliers, repair ships, torpedo depot ships, converted merchant vessels, or yachts.

Vessels of less than 1,000 tons, except torpedo craft.

Torpedo craft of less than 50 tons.

**NAVY, UNITED STATES.** See UNITED STATES NAVY.

**NAZIMOVA, ALLA.** See DRAMA.

**NEBRASKA.** One of the North Central Division of the United States. It has an area of 77,530 square miles. Its capital is Lincoln.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,192,214 as compared with 1,066,300 in 1900 and 1,062,656 in 1890. The increase in the decade 1900 to 1910 was 11.8. The State ranks twenty-ninth among the States in point of population, whereas in 1900 it ranked twenty-seventh. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** There are deposits of several minerals of importance in the State, but the mineral resources are in process of development. One fairly good coal mine is operated and others are projected. There are deposits of silica, and sand and gravel exist in large quantities. There is also a considerable amount of good building stone.

**AGRICULTURE.** The acreage, production and value of the principal crops in 1909-10 are shown in the table at top of next column.

	Acreage	Prod. bu.	Value
Corn, 1910.....	8,000,000	206,400,000	\$74,304,000
1909.....	7,825,000	194,060,000	97,030,000
W. wheat, 1910	2,100,000	34,650,000	27,720,000
1909.....	2,350,000	45,690,000	40,575,000
Spring wheat, '10	350,000	4,865,000	3,892,000
'09.....	290,000	4,060,000	3,613,000
Oats, 1910.....	2,650,000	74,200,000	20,776,000
1909.....	2,473,000	61,825,000	21,639,000
Barley, 1910.....	135,000	2,498,000	1,124,000
1909.....	120,000	2,640,000	1,135,000
Rye, 1910.....	75,000	1,200,000	720,000
1909.....	80,000	1,320,000	803,000
B'wheat, 1910.....	1,000	20,000	18,000
Flaxseed, 1910.....	10,000	80,000	180,000
1909.....	16,000	136,000	166,000
Potatoes, 1910.....	110,000	6,800,000	5,544,000
1909.....	105,000	8,190,000	4,914,000
Hay 1910.....	1,500,000	1,500,000a	13,350,000
1909.....	1,550,000	2,325,000	13,957,000

aTons.

**EDUCATION.** The total number of children of school age in the State in 1909 was 373,067, and the total enrollment was 280,252. The average daily attendance was 191,076. The average monthly salary of teachers was \$53.71. There were in 1910-11 543 graded schools, 4422 teachers, 107 normal training high schools, 130 four-year high schools, and 49 three-year high schools. The present educational policy of the State has a strong tendency toward the building up of the rural schools and also towards intensifying the study of the common branches and those phases of education which have to do with the home life of the pupil. Industrial education has received special attention. The high schools maintain courses in agriculture, and are rapidly providing courses in domestic science and manual training. One phase of education in the State which is worthy of special note is the training of teachers for the rural schools by the normal training courses.

## POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the meetings are biennial and the last was held in 1909. The next session of the legislature meets January 1, 1911.

**CONVENTIONS AND ELECTIONS.** Municipal elections were held throughout the State with the exception of Omaha and Lincoln, on April 5. Their chief interest centered in the prohibition question and the result of the election was a generally unchanged condition. Prohibition towns in general continued "dry" and the li-

(a) Battleships having a main battery of all big guns (11 inches or more in caliber).

(b) Battleships, 1st class, are those of (about) 10,000 tons or more displacement.

(c) Armored cruisers having guns of largest caliber in main battery and capable of taking their place in line of battle with the battleships. They have an increase of speed at the expense of carrying fewer guns in main battery, and a decrease in armor protection; also called battleship cruisers.

(d) Includes all unarmored cruising vessels above 1,000 tons displacement.

(e) Includes smaller battleships and monitors. No more vessels of this class are being proposed or built by the great powers.

TABLE IV. VESSELS BUILDING OR AUTHORIZED

	Battleships Dreadnought type	Armored cruisers Invincible type	Armored cruisers	Cruisers	Destroyers	Torpedo boats	Sub- marines
England (f) .....	10	0	0	13 (h)	44 (h)	0	17
Germany (g) .....	9	0	0	0	14	0	12 (i)
United States .....	9	0	0	0	14	0	16
France .....	2	5	1	0	20	2	28
Japan (h) .....	2	1	0	5	3	0	4
Russia .....	4	1	0	0	3	0	2
Italy .....	4	0	0	3	10	50	12
Austria .....	2 (i)	1	0	0	0	0	6

(f) England has no continuing shipbuilding policy, but usually lays down each year 5 armored ships with a proportional number of smaller vessels.

(g) Germany has a continuing shipbuilding policy, authorized by the Reichstag, and extending to the year 1917. For 1911 there are authorized 3 battleships, 1 armored cruiser, 2 cruisers, 12 destroyers. Eventual strength to consist of 38 battleships, 20 armored cruisers, 38 cruisers, 144 destroyers.

(h) One more battleship, 2 more armored cruisers, 1 more cruiser, and several destroyers and submarines authorized to be laid down and completed by 1916.

(i) \$3,750,000 authorized for experiments and further construction.

(j) Includes vessels authorized by colonies.

(k) Building under agreement with Navy Department before authorization by Delegations.

NOTE—The following vessels are not included in the tables:

Those over twenty years old unless they have been reconstructed and rearmcd since 1900.

Transports, colliers, repair ships, converted merchant vessels, or any other auxiliaries.

Vessels of less than 1,000 tons, except torpedo craft. Torpedo craft of less than 50 tons.

In making comparisons of naval strength, and particularly of naval increase, the fact should be taken into consideration that the *rapidly* of construction varies materially in different countries.

In England and Germany battleships and armored cruisers are completed in two to three years; in the United States and Japan in about three years; and in France, Italy, and Russia not less than four years are required.

Table IV includes vessels authorized but not yet laid down, as well as those actually under construction.

\* The Admiral of the Navy.

(a) Includes 3,120 men of Coast Guard.

(b) Includes pharmacists and apothecaries.

(c) Includes adjutants, maitres, and premier maitres of all branches.

(d) The United States has now temporarily, as extra numbers, due to promotion for war service, 8 flag officers, 11 captains, 6 commanders, 9 lieutenant-commanders, and 4 lieutenants.

(e) Includes 20 pharmaceutical officers.

cense towns continued license. Beatrice, Kearney and several of the larger towns, which were no license in 1909, voted for license. The Prohibitionists gained a small number of towns which have never voted on the prohibition question. On April 11, after the most aggressive fight ever known in the city, Lincoln voted "dry" by 365 votes. The "dry" victory was due in a large measure to the women of the city.

The chief question at issue in the Republican party of Nebraska, as in other western States, was the contest for the control between the progressive and regular wings. The Republican State Convention met at Lincoln on July 26. In spite of the strength of the insurgents throughout the State, George W. Norris, one of the most active progressive congressmen, was defeated by Senator Norris Brown, a regular. Norris lost by a vote of 551 to 288. The convention passed a resolution by a vote of 526 to 276 indorsing county option. It also declared for direct legislation. Although the naming of Senator Brown as permanent chairman was regarded as a victory for the regulars, Congressman Norris succeeded in having the convention pass a resolution indorsing his course

in congress. The convention indorsed President Taft's administration and referred in terms of high praise to Mr. Roosevelt.

The chief interest in local Democratic politics centered in the prohibition question. William J. Bryan was a strong advocate of county option prohibition, and previous to the State convention he made a strong effort to have a plank for county option included in the Democratic platform. His efforts, however, resulted in little success. Mr. Bryan was practically isolated in its support in the State convention which met at Grand Island on July 26. He made a strong fight for the adoption of the plank, however, which he presented as a minority report of the committee on resolutions and which he defended in a speech lasting two hours. The final vote on the measure stood 647 against Mr. Bryan and 195 in his favor. To add to his discomfiture, Congressman G. M. Hitchcock, whom twelve years ago Mr. Bryan prevented from being appointed United States Senator, introduced a resolution providing that no planks for the platform should be presented or argued before the convention except those indorsed by a majority or minority report of the committee on resolutions. The purpose of this resolution

was to prevent Mr. Bryan as an individual from presenting or arguing his county option plank. The resolution was adopted after an amendment by Mr. Bryan had been voted down. The convention was strongly against any measure advocated by the former leader and an attempt was apparent to eliminate his power from State politics. Every man whom he advocated for nomination was defeated. The great contest between Mr. Bryan and his opponents came in the evening of the day of the convention when the resolutions and platform were presented to the convention after Mr. Bryan and his county option plank had been turned down in the committee. In Mr. Bryan's speech of two hours, he pleaded with his old friends not to repudiate him, but at the same time offered to relinquish his leadership of the party rather than be forced to support a platform in which county option was not a plank. After the conclusion of his speech he was obliged to listen to one of the most bitter personal attacks ever heard in a Nebraska convention. Delegate after delegate arose and accused him and his measure and defended their own course in voting against it. The action of the convention was generally taken to mean that Mr. Bryan's power as political leader of the State had come to an end, at least for the time being.

Primary elections were held for the nominations for Senator and Congressmen on August 16. The Republican insurgents received a serious setback when Senator Burkett the regular candidate for re-election received a large majority of votes over C. O. Whedon the insurgent candidate. Representative Norris, who led the attack in Congress against Speaker Cannon in 1909-10, was renominated in his district without opposition, but in all other congressional districts of the State the regular candidates were nominated. In these primaries the vote was against county option in both parties. In the Democratic primaries, James C. Dahlman was nominated for governor, defeating Governor Shallenberger, who favored local option. For the senatorial nomination G. M. Hitchcock defeated Richard L. Metcalfe, editor of Mr. Bryan's newspaper, *The Commoner*, by a vote of 3 to 1. The Republicans nominated for governor Chester H. Aldrich. In the campaign which followed these elections, Mr. Bryan refused to support the Democratic nominee for governor because of his party's stand on the liquor question. He spoke during the campaign in favor of the other Democratic candidates. In the elections which followed these conventions, Mr. Roosevelt and Senator Cummins of Iowa made speeches in the State in the interest of Senator Burkett. In spite of these efforts, however, he was defeated by Mr. Hitchcock by about 25,000 votes. On the other hand, Mr. Aldrich, Republican candidate for governor, was elected by about 12,000 votes. The legislature remains Democratic and the congressional representatives are divided between the two parties in about the same ratio as before. The entire Republican State ticket was elected. Two of the three Republican congressmen elected, Norris and Sloan, are listed insurgents.

**OTHER EVENTS.** On April 4 the Supreme Court declared unconstitutional the law requiring railroads to build switches to grain elevators.

**STATE OFFICERS:** Governor, Chester H. Aldrich, Republican; Lieutenant-Governor, M. R.

Hopewell; Secretary of State, Addison Wait; Treasurer, W. A. George; Auditor, Silas A. Barton; Attorney-General, Grant G. Martin; Superintendent of Education, J. C. Crabtree; Secretary of Agriculture, S. R. Mellor; Commissioner of Public Lands, E. C. Cowels—all Republicans.

**SUPREME COURT** Chief Justice, Manoah B. Reese; Justices, Charles B. Letton, Jesse L. Root, Jacob Fawcett, William B. Rose, John B. Barnes, and Samuel H. Sedgwick; Clerk, H. C. Lindsay—all Republicans.

**STATE LEGISLATURE, 1911.** State, Republicans 14; Democrats 19; Democratic majority 5. House, Republicans 46; Democrats 54; Democratic majority 8. Joint Ballot, Republicans 60; Democrats 73; Democratic majority 13.

**NEBRASKA, UNIVERSITY OF.** An institution of higher learning at Lincoln, Neb., founded in 1869. The attendance in 1909-10 was 3992, of whom 2236 were men and 1756 were women. The enrollment was divided as follows: Graduate college, 154; college of arts and sciences, 1089; teachers' college, 332; college of engineering, 435; college of agriculture, 696; college of law, 192; college of medicine, 197; school of fine arts, 68; university school of music, 654; summer session, 399; school of superintendence, 67; university extension, 219. The faculty numbered 263. Among additions to the various faculties for the year 1910-11 were included the names of Philo Melvyn Buck, Jr., of the St. Louis public schools, as associate professor of rhetoric; Professor Herbert Brownell, to have charge of the teachers' college training school; Joseph Alexis, as instructor of Swedish, G. Herbert Coons, adjunct professor of agricultural botany, and George Crocker, public instructor in the school of agriculture. There are about 90,000 volumes in the library. The university is supported by the State. The Chancellor is Samuel Avery.

**NECROLOGY.** In the following list are included the names of noteworthy persons who died during 1910. The persons to whose names asterisks are prefixed are given separate biographies in alphabetical order in the body of the work. Most of the names of persons who are not given separate biographies have added to them the dates of birth and death, but in some cases it was not possible to obtain these.

\* Achenbach, Andreas. German landscape painter.

\* Acton, John Adams. English sculptor.

\* Agassiz, Alexander. American scientist.

\* Agnew, Sir William. English publisher.

Albano, Elías Fernández. Acting President of Chile. Died September 6.

Albaugh, John W. American actor and theatrical manager. Died April 7; born, 1867.

\* Alençon, Ferdinand Philippe Marie, Duc d', French nobleman.

\* Alexander, Boyd. English explorer and naturalist.

\* Alexander, Eben. American educator and diplomat.

\* Alexander, Samuel. American surgeon.

\* Alexis, Nord, Former president of Haiti.

\* Amador, Martín. Colombian public official.

\* Ames, James Barr. American lawyer and educator.

\* Amory, Robert. American physician.

- \* Andrews, Wesley R. American politician.  
Andrus, Elias Van A. American army officer.  
Died April 3; born, 1840.
- \* Archer-Hind, Richard Dacre. English classical scholar.
- \* Awdrey, William. Bishop of the Anglican Church.
- Azad-el-Mulk. Regent of Persia. Died September 22; born 1838.
- Baker, Page N. American editor. Died May 28; born 1840.
- \* Balakireff, Mili Alexeyevich. Russian composer.

Piffard, Henry Granger. American physician. Died; born,

Pilcher, William H. An American organist and composer. Died September 14.

\* Pitman, Benn. An inventor and author of works on phonography.

Planck, Gottlieb. A German jurist and educator. Died May; born, 1825.

Platt, James, Jr. An American philologist. Died; born,

\* Platt, Thomas Collier. An American public official.

Pope, Ralph Barlow. An American historian and educator. Died August 8; born, 1878.

\* Porter, Charles Talbot. An American mechanical engineer.

\* Porter, William Sidney. An American author.

\* Prior, Melton. An English artist and war correspondent.

\* Pritchett, Carr Waller. An American clergyman.

Putnam, Arthur A. An American jurist. Died October 21; born, 1830.

\* Quincy, Josiah Phillips. An American lawyer and publicist.

\* Raabe, Wilhelm. A German novelist and writer.

Railton, Herbert. An English artist. Died March 14; born, 1857.

Ranken, David A. An American philanthropist. Died August 18; born, 1862.

\* Rassam, Hormuzd. Syrian archæologist.

Reed, F. Dana. An American editor. Died October 22; born, 1848.

Reed, John Calvin. An American lawyer. Died January 12; born, 1837.

\* Reed, John J. An American naval officer.

\* Reich, Emil. An Austrian author and historian.

\* Reinecke, Karl. A German composer.

Renard, Jules. A French dramatist. Died May 21; born, 1864.

\* Rhoades, Lewis Addison. An American scholar and educator.

\* Richards, William Rogers. An American Presbyterian clergyman.

\* Riddle, George. An American Shakespearian reader.

\* Rising, Willard Bradley. An American chemist.

Rittweger, Franz. German author and journalist. Died January; born, 1829.

Robe, Charles F. An American military officer. Died July 2; born, 1841.

Robertson, Beverly Holcombe. A veteran of the Confederate army. Died November 12; born, 1827.

Robie, Jean. A Belgian academician. Died December; born, 1821.

\* Robinson, Sir Clifton. An English engineer.

\* Robinson, Franklin Clement. An American chemist and educator.

Robinson, William A. An American Congregational clergyman. Died October 19; born, 1840.

\* Rod, Louis-Edouard. French writer.

\* Roelker, Charles Rafael. An officer of the United States Navy.

Roger, Edmund Dawson. An English spiritualist and author.

\* Rolfe, William James. An American Shakespearian scholar.

\* Rolls, Charles Stewart. An English aviator and scientist.

Rossiter, Edward Van Wyck. An American capitalist and railway official. Died December 11; born, 1844.

Rovetta, Gerolamo. An Italian journalist and dramatist. Died May; born, 1850.

\* Rucker, Daniel Henry. An American army officer.

Saak, Louis. A German musical conductor. Died November; born, 1823.

\* St. John, Sir Spencer. An English diplomat.

\* Sambourne, Edward Linley. An English cartoonist.

\* Sanford, Samuel Simons. An American musician and educator.

Sanson, Justin Chrysostome. A French sculptor. Died November; born, 1833.

Sargent, James. An American inventor. Died January 12; born, 1825.

\* Satolli, Francesco di Paolo. A Roman Catholic prelate.

Sauerland, Volbert Heinrich. A German historian. Died June; born, 1839.

Savage, Anna Josephine. An American suffragist. Died July 7; born, 1843.

Schaeffer, Jacob. An American billiard expert. Died March 8; born, 1856.

\* Schiaparelli, Giovanni Virginio. An Italian astronomer.

\* Schilling, Johannes. A German sculptor.

Schlager, Antonia. An Austrian singer. Died August; born, 1859.

Schmidt, Cooper D. An American mathematician and educator. Died December; born, 1859.

Schoeffel, Agnes (Booth). An American actress. Died January; born, 1848.

\* Schürer, Emil. A German Lutheran theologian.

\* Scofield, Walter Keeler. An American naval officer.

\* Scott, Harvey W. An American newspaper editor.

\* Scott, William Earl Dodge. An American ornithologist.

- \* Scribner, Gilbert Hilton. An American lawyer and scientist.
- Secombe, William S. An American sea captain. Died February 10; born, 1849.
- \* Seligman, William. An American financier.
- Selmer, Jean. A Norwegian composer. Died August; born, 1844.
- \* Seward, George Frederick. An American financier.
- Seymour, George. A public official and financier of Jamaica. Died October 16; born, 1825.
- Sharp, Alexander. An American naval officer. Died February 11; born, 1855.
- \* Sharpe, Richard Bowdler. An English zoölogist.
- \* Shaw, Charles Hugh. An American botanist.
- Shelley, George Ernest. An English ornithologist. Died December.
- Shaughnessy, Michael. An American mine owner and public official. Died January 9; born, 1847.
- Shinn, George Wolfe. An American Protestant Episcopal clergyman and editor. Died December; born, 1839.
- \* Shoemaker, John Dietch. An American physician and educator.
- Silliman, Horace B. An American philanthropist. Died May; born, 1826.
- \* Simmons, Joseph Edwards. An American banker.
- Sinkler, Wharton. American physician.
- \* Skarbina, Franz. A German painter.
- \* Smith, Charles Sprague. American philanthropist and educator.
- \* Smith, Edgar Mead. An American publicist.
- \* Smith, Goldwin. An Anglo-American publicist.
- Smith, Jared. Brigadier-General, retired, United States army. Died December 18; born, 1840.
- Smith, John Wesley. Bishop of the American Methodist Episcopal Zion Church. Died, October 14.
- Smith, Lyman C. An American typewriter manufacturer. Died November 5; born, 1850.
- Snyder, William H. An American artist. Died November 4; born, 1830.
- \* Sone, Arasuke, Viscount. A Japanese statesman.
- \* Spellmeyer, Henry. A bishop of the Methodist Episcopal Church.
- Spence, Catherine Helen. An English journalist and author. Died April; born, 1836.
- \* Spencer, John Poyntz, Earl. An English nobleman.
- Spencer, Leonard G. An American zoölogist. Died April 16; born, 1838.
- \* Sprague, Augustus Brown Reed. An American soldier, public official and banker.
- Standing, William Henry. An American Protestant Episcopal clergyman and missionary. Died September; born, 1878.
- \* Stanley, W. E. An American public official.
- \* Stebbins, Roswell Otis. An American dentist and explorer.
- \* Steele, Robert Wilbur. An American jurist.
- \* Steeven, William Arnold. An American philologist and Biblical scholar.
- \* Stevens, John Austin. An American author.
- \* Stevenson, Paul Eve. An American writer.
- Stolberg-Wernigerode. President of the German Reichstag. Died February 19; born, 1840.
- \* Stone, Charles Francis. An American jurist.
- Stone, William A. An American educator. Died November 7; born, 1817.
- Studley, John B. An American actor. Died August 7, born, 1830.
- Sully, Daniel. An American actor and playwright. Died June 25; born, 1855.
- \* Sumner, William Graham. An American political economist.
- \* Swan, John Macallan. An English artist and sculptor.
- Swift, D. Wheeler. An American inventor. Died June 14; born, 1840.
- Talleyrand, Duc de, Comte de la Vaulx. French nobleman. Died February; born, 1832.
- \* Tayler, Robert Walker. An American jurist.
- \* Taylor, Horace A. An American politician and public official.
- \* Teck, Francis Joseph Leopold Frederick, Prince of.
- \* Terrell, Edwin Holland. An American lawyer and diplomatist.
- \* Thomas, Cyrus. An American anthropologist.
- \* Thomas, Joseph. An American inventor.
- \* Tirrell, Charles Quincy. American public official.
- \* Tobler, Adolf. Swiss philologist.
- \* Todd, Sir Charles. Australian astronomer.
- \* Tolstoy, Lyoff (Leo) Nikolayevitch, Count. Russian novelist.
- Tompkinson, James. English public official and member of Parliament. Died April 10; born, 1840.
- \* Treat, Charles Henry. An American public official.
- \* Tree, Lambert. American jurist and public official.
- \* Tremain, Henry Edwin. American soldier and author.
- Trowbridge, Francis Emory. Writer on finance. Died September 14; born, 1845.
- \* Truax, Charles Henry. An American jurist.
- \* Turley, Thomas Battle. American public official.
- \* Turnachon, Félix. French journalist, caricaturist and aviator.
- Twombly, Hamilton McKay. American financier. Died January 11; born, 1849.
- Ulke, Henry. American portrait painter. Died February 17; born, 1821.
- Usiglio, Emilio. Italian composer. Died, August.
- \* Van Cleave, James Wallace. American manufacturer.
- Vandal, Louis Jules Albert, Count. French historian and academician. Died August 31.
- \* Very, Edward W. American naval officer.
- \* Vezin, Hermann. American actor.
- \* Viardot-Garcia, Pauline. French singer.
- \* Victor, Orville James. American writer.
- Virgin, Edward Warren. American Methodist Episcopal clergyman, editor and writer. Died September 18; born, 1836.
- \* Vogüé, Marie Eugène Melchoir, Vicomte de. French litterateur and academician.
- Volhard, Jakob. German chemist. Died January; born, 1834.
- \* Von Leyden, Ernst. German pathologist.
- \* Vorse, Albert White. American author.
- \* Vose, George Leonard. American educator and engineer.
- Vuagnat, François. Swiss animal painter. Died November.
- Wachter, Frank C. Former member of Congress from Maryland. Died July 1; born, 1861.

\* Waddell, Louise (Forsslund). American writer.

\* Wake, Charles Staniland. English anthropologist.

Walker, Edwin. American lawyer. Died September 3; born, 1832.

Walsh, Marie (Young). American playwright and novelist. Died May 8.

\* Walsh, Michael. A Roman Catholic educator and editor.

\* Walsh, Thomas F. American mine owner and financier.

\* Walter, Arthur Fraser. English newspaper proprietor.

\* Ward, John Quincy Adams. American sculptor.

\* Warner, Adoniram Judson. American soldier and public official.

\* Warner, Beverly Ellison. American Protestant Episcopal clergyman.

\* Webster, Sidney. American lawyer and publicist.

\* Weir, Levi Candee. Former President of Adams Express Company.

Werts, George Theodore. American lawyer, former Democratic Governor of New Jersey. Died January 14; born, 1846.

Wheeler, Frederick Merian. American engineer and inventor. Died September 16; born, 1848.

\* White, Anna. American Shaker.

\* Whitman, Charles Otis. American zoologist.

\* Whitney, James Lyman. American librarian.

\* Whitney, Myron W. American singer.

Whittemore, John H. American manufacturer. Died May 8; born, 1837.

\* Whittredge, Worthington. American artist.

Wiggin, Frederick Holme. American surgeon. Died October; born, 1853.

\* Will, August. American artist.

\* Willard, De Forest. American surgeon and philanthropist.

\* Williams, Sir Edward Leader. English engineer.

\* Williams, George Henry. American lawyer.

Williams, Juan. Italian admiral, known as "Father of the Italian Navy." Died June 25.

Wilson, Francis H. American public official, former member of Congress from New York. Died September 26; born, 1843.

\* Wingfield, Sir Edward. English public official.

\* Wolff, Julius. German poet and novelist.

\* Wolverton, Simon P. American public official.

Wood, Oliver Ellsworth. American soldier, brigadier-general, retired. Died December 4; born, 1844.

Woodbury, John Page. American bibliophile and art collector. Died June 18; born, 1827.

Woodman, Charles H. American writer. Died December; born, 1847.

Woodworth, James T. American financier. Died April 10; born, 1840.

\* Wright, Edmund. English mathematician.

\* Wright, Edward Perceval. Irish botanist. Died March; born, 1834.

\* Wulker, Richard Paul. German philologist.

\* Wurtz, Henry. American chemist.

Wyatt, Julia. American actress. Died December 1.

\* Wyman, Isaac O. American philanthropist.

Yon, Edmond Charles. French artist. Died March; born, 1862.

Zabriskie, Jeremiah Lott. American Dutch Reformed clergyman. Died April 2; born, 1834.

Zacharie, Frank C. American lawyer and former United States Senator from Louisiana. Died January 6; born, 1839.

\* Ziegler, Clara. German actress.

**NEGRO EDUCATION.** See **EDUCATION IN THE UNITED STATES.**

**NELIDOFF, ALEXANDER J.** Russian Ambassador to France, died September 17, 1910. He was born in 1846 and was educated at the University of St. Petersburg. When only nineteen years of age he entered the diplomatic service. His first work of importance was as attaché of the Russian Foreign Office in St. Petersburg. He was placed in charge of a diplomatic mission to the Orient and his name appears as a signer of the treaty of San Stefano. For sixteen years subsequent to 1881 he was Russian Ambassador at Constantinople. In 1827 he was transferred to the Russian Embassy at Rome and remained there until he was assigned to Paris in 1903. He was a noted collector of Greek and Byzantine gold work and was one of the greatest connoisseurs of his day of that form of art.

**NELSON, ALEXANDER LOCKHART.** American mathematician and educator, died August 31, 1910. He was born in Augusta county, Va., in 1827, and graduated from Washington College (now Washington and Lee University) in 1849. In 1853-4 he was acting professor of mathematics at the University of Virginia. From 1854 to 1906 he was professor of mathematics in Washington and Lee University. In the latter year he was made professor emeritus. He wrote the chapter on Surfaces of the Second Order in Nichols's *Analytic Geometry* (1893).

**NEODYMIUM.** See **ATOMIC WEIGHTS.**

**NEON.** See **ATOMIC WEIGHTS.**

**NESTORIAN MONUMENT.** See **EXPLORATION, Asia.**

**NETHERLANDS, THE (or HOLLAND, KINGDOM OF).** A constitutional monarchy of western Europe. Capital, The Hague.

**AREA AND POPULATION.** Total area, 12,648 square miles; population (1899), 5,104,137; in 1909, 5,853,037. Marriages (1909), 41,686; births, 170,766; deaths, 80,283; emigrants, 2939. The Hague is the capital, with (December 31, 1908) 259,012 inhabitants; Amsterdam and Rotterdam, the commercial centres, had 565,589, and 411,635 respectively; Utrecht, 116,783; Groningen, 75,370; Haarlem, 70,348.

**EDUCATION.** The educational system is peculiar, in that the state encourages and subsidizes private elementary instruction rather than public; supplying the latter, however, in districts in which private instruction is lacking, through local taxation. Primary instruction is obligatory, and, in public schools, free. Schools in 1907-8: infant, 160 public (28,032 pupils) and 1025 private (97,819); primary, 3274 public (17,750 teachers, 563,187 pupils) and 1885 private (9773 and 316,088); schools for adult working people (not free), 302 (2364 and 31,375); middle-class schools, 89 (1437 and 14,071); universities, 4 (public), with 300 instructors and 3475 students (506 females). There are besides numerous special schools, and a private university with 180 students. Three-fifths of the population are members of the several Reformed churches; the remainder are Roman Catholics, with (1899) 103,988 Jews, of whom Amsterdam

has about 70,000. Religious liberty prevails.

**AGRICULTURE.** The land is for the most part low and flat, intersected by a network of water-courses. Intensive agriculture is carried on, the productive area being estimated (1908) at 2,401,194 hectares (arable land, 862,780 hectares; pastures, 1,204,433; gardens and orchards, 74,575; forest, 259,446). Area under staple crops is given below (w.=winter; s.=spring) for three years, in acres:

	1908	1909	1910
Rye (w.) .....	475,869	548,224	535,553
Rye (s.) .....	6,264	5,221	10,230
Wheat (w.) .....	126,813	110,141	115,086
Wheat (s.) .....	12,229	16,543	16,845
Barley (w.) .....	57,921	50,750	50,832
Barley (s.) .....	16,650	19,457	18,886
Oats .....	345,518	349,744	345,066
Potatoes .....	395,087	398,478	394,902
Sugar beets .....	118,000	138,060	135,378
Buckwheat .....	40,982	38,373	32,739

No returns for yield are available.

Since 1870 the cultivation and export of bulbs has been a growing industry, and in recent years has reached enormous proportions. An average annual production of 176,000,000 pounds of cheese is reported of which two-thirds is exported.

**OTHER INDUSTRIES.** The state coal mines yielded (1908) 908,201 metric tons, valued at 6,071,000 guilders. Distilleries in 1908, 529; sugar refineries, 11; beet-sugar refineries 27; salt works, 35; breweries, 449; vinegar manufactories, 74. Vessels engaged in all fisheries (1908), 5356; persons, 20,502; oyster catch, 2,131,257 kilos; value of North Sea herring fisheries, 8,159,050 guilders. Diamond-cutting is carried on at Amsterdam.

**COMMERCE.** The special trade for three years is given in guilders below:

	1907	1908	1909
Imports ..	2,671,698,498	2,823,740,015	3,137,400,000
Exports ..	2,212,141,046	2,181,056,860	2,454,700,000

The trade for 1908 and 1909 is detailed below in thousands of guilders (C. & B.=coin and bullion):

	Imports		Exports	
	1908	1909	1908	1909
Foodstuffs ....	657,300	776,700	649,800	754,100

The Netherlands is a free-trade country, a few duties only being levied and these of a fiscal character. Vessels entered (1908), 13,801, of 13,034,988 tons (Dutch, 3991, of 3,513,450); cleared, 13,821, of 12,939,762 (Dutch, 4052, of 3,502,122).

**COMMUNICATIONS.** Railroads open to traffic, January 1, 1910, 3111 kilometres. State telegraph lines, 7359 kilometres; wires, 35,562; telephone wires, 197,096; telegraph offices, 1350; post-offices, 1482. Length of canals, 1907 miles; of roads, 2943. It is estimated that something like 90 per cent. of the freight traffic is by the canals and the river Rhine.

**FINANCE.** The unit of value is the guilder (or florin), valued at 40.2 cents. Financial statistics for three years are given in guilders (1909 and 1910 estimates):

	1908	1909	1910
Revenue .....	183,044,390	184,728,351	188,326,473
Expenditure ...	194,037,353	209,576,140	207,187,206

Estimates for 1911 are given as follows, in thousands of guilders:

	1000 gl.		1000 gl.
Revenue		Expenditure	
Direct taxes ....	45,695	Debt .....	37,117
Excise .....	58,230	Interior .....	36,363

Misc. ....	19,770	Navy .....	20,214
Total .....	194,237	Col. Office .....	3,064
		Misc. ....	50
		Total .....	213,756

The debt stood, 1911, as follows: capital, 1,116,652,350 guilders; interest, 32,147,544; amortization, 4,969,500.

The Bank of the Netherlands, a private institution, is the sole bank of issue. It stood, March 31, 1909, as follows: capital, 20,000,000 guilders; reserve, 5,500,000; notes in circulation, 273,578,470; total exchanges, 680,060,202; stock of gold (July), 121,420,000, of silver, 42,270,000. The state postal savings bank had (end of 1908) 1,401,670 depositors, and 151,638,000 guilders deposits.

**ARMY.** The active army of Holland is maintained by voluntary enlistment and conscription and is really a militia organization for home defense. The effective army varies considerably in the course of the year with the system of suc-

cessive annual levies. The budget for 1911 indicated that on July 1, 1910, the effective army was as follows: The active army, 2021 officers, 21,964 men; the reserve, 671 officers, 99,951 men; the reserve cadres 671 officers, 1164 men; the Landwehr 414 officers, 49,591 men, making a total of 3106 officers and 172,670 men. The strength of the gendarmerie was 7957 men and 372 foot soldiers.

The budget of war for 1911 amounted to 29,939,150 florins (62,872,215 francs) for the metropolitan army, an increase of 1,282,161 florins over the similar credits voted in 1910. This increased appropriation contemplated additional salaries for officers and men, pensions and other expenditures. It was proposed to reorganize the horse artillery so that with rapid fire guns there would be six gun batteries in place of four, the regiments being divided into 2 groups of three 6-gun batteries. There will be 4 field artillery regiments divided into 3 groups of 4 3-gun batteries. It was proposed to create two new mounted divisions of 8 machine guns each. Each of the 4 divisions will also have a section of machine guns.

A royal decree of October 11 and an official order of November 8 fixed the annual contingent for 1911 at 17,500 men, of which 12,300 were required for complete service and 5200 for 4 months' duty. Among those first mentioned, 400 were to be assigned to the navy. There were 55,096 enrolled as liable for military service.

**GOVERNMENT.** The executive power rests exclusively in the sovereign acting through a responsible ministry. The legislative body is the States-General, consisting of an upper or first chamber of 50 members, and a second chamber of 100 directly elected deputies. The reigning sovereign (1910), Queen Wilhelmina, was born August 31, 1880; succeeded her father, November 23, 1890; was enthroned September 6, 1898; married, February 7, 1901, Prince Henry of Mecklenburg-Schwerin. Heiress-apparent, Princess Juliana, born April 30, 1909. The Ministry (1910), constituted February 12, 1908, is as follows: Minister of the Interior, Dr. Th. Heemskerk; Foreign Affairs, Jhr. Dr. R. de Maere van Swinderen; Finance, Dr. M. J. C. M. Kolkman; Justice, Dr. A. P. L. Nelissen; War, Major-General W. Cool; Marine, Vice-Admiral J. Wentholt; Waterways, Dr. L. H. W. Regout; Agriculture, Industry, and Commerce, A. S. Talma; Colonies, J. H. de Waal Malefijt.

**HISTORY.** The Royal Commission for the revision of the constitution, promised by the government in September, 1909, was created in March, 1910. In the same month the lower house voted unanimously for a Royal Commission to investigate the state of the national defenses. There was some criticism of the foreign policy of the government, on the ground that the government ought to have inserted provisions in the North Sea Convention to insure the national safety. The Foreign Minister replied on July 8, condemning the criticism as an attempt to stir up distrust of the German policy. Allegations against Dr. Kuyper, the former Premier, implying corrupt motives in granting decorations, were investigated at his instance by a Court of Honor, which reported that there was no evidence of such corruption. The States-General was opened on September 21 with a speech from the throne in which the legislative programme foreshadowed increased expenditure in several departments, and meas-

ures for customs tariff revision and a general income tax. Other features were, workmen's insurance against illness and old age, revision of copyright laws, changes in the administration of the Dutch East Indies and an education bill.

**NETHERSOLE, OLGA.** See **DRAMA.**

**NEUTRAL PRIZES.** See **LONDON, DECLARATION OF.**

**NEVADA.** One of the Western Division of the United States. Its area is 110,590 square miles. Its capital is Carson City.

**POPULATION.** The population in 1910, according to the Thirteenth Census, was 81,875. The increase in the decade 1900 to 1910 was 93.4 per cent. The State ranks fiftieth in point of population among the States, whereas in 1900 it ranked fifty-first. The population of the larger cities and towns will be found in the tables of the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most important mineral products of the State are gold and silver. In 1910 the value of the gold production was estimated by the Director of the Mint at \$17,941,643, as compared with a value of \$16,386,200 in 1909. The silver produced in 1910 was 9,346,256 fine ounces, as compared with 10,119,200 fine ounces in 1909. There were produced in 1909 53,849,281 pounds of copper, a remarkable increase over the product of 1908, which was 13,241,372 pounds. Reports for 1910 indicate a substantial increase in the output of copper in that year. The production of lead in 1909 amounted to 4698 tons, as compared with 3796 tons in 1908. There were also produced 825 tons of spelter as compared with 328 tons in 1908. Other metals produced in some quantities are precious stones and salt.

**AGRICULTURE.** The acreage, production and value of the principal crops are given in the following table:

	Acreage	Prod. bu.	Value
Spring wheat, 1910...	40,000	1,160,000	\$1,284,000
1909 ..	36,000	1,033,000	1,074,000
Oats, 1910.....	7,000	313,000	197,000
1909 .....	7,500	280,000	165,000
Barley, 1910.....	9,000	360,000	252,000
1909 .....	8,000	304,000	228,000
Potatoes, 1910 .....	15,000	2,130,000	1,257,000
1909 .....	3,000	54,000	459,000
Hay, 1910.....	231,000	785,000 <sup>a</sup>	8,478,000
1909 .....	210,000	194,000	5,187,000

<sup>a</sup> Tons.

**FINANCE.** The report of the State treasurer showed a balance in the treasury January 1, 1910, of \$560,785. The receipts for the fiscal year ending December 31, 1910, amounted to \$1,103,575 and the total disbursements to \$1,008,829, leaving a balance in the treasury December 31, 1910, of \$655,531. The chief expenditures were for education, for the maintenance of State institutions and for executive expenses.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under the control of the State and their expenses in 1910 were as follows: State Prison, \$69,719; State Orphans' Home, \$15,000; Hospital for Mental Diseases, \$9026. A new State prison was in course of construction during the year and there was expended on this \$30,376. The State spent for the support of the indigent insane, \$4583.

## POLITICS AND GOVERNMENT

There was no session of the legislature in 1910. The Republicans nominated for governor, Tasker L. Oddie, while the Democrats nominated Denver S. Dickinson. In the elections on November 8, Mr. Oddie was elected by a vote of 10,411, as against 8796 cast for Mr. Dickinson. The entire Republican ticket was elected. In the vote for United States Senator George D. Nixon, Republican, received 9765 votes, while Key Pittman, Democrat, received 8632. For Congressman-at-Large E. E. Roberts, Republican, received 11,068, against 7682 for Charles S. Sprague, Democrat. As a result of the election the Democrats have a majority of two in the State Senate, while the Republicans have a majority of five in the House, leaving a Republican majority of three on joint ballot.

**STATE OFFICERS.** Governor, T. L. Oddie; Lieutenant-Governor, G. C. Ross; Secretary of State, George Brodigan; Treasurer, William McMillan; Comptroller, Jacob Eggers; Superintendent of Public Instruction, J. E. Bray; Attorney-General, C. H. Baker—all Democrats, except Oddie, Eggers and McMillan, Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Frank H. Norcross, Republican; Justices, George F. Talbot, Democrat; James Sweeney, Democrat; Clerk, Joe Josephs, Democrat.

**STATE LEGISLATURE, 1911.** Senate, Democrats 11; Republicans 9; Democratic majority 2. House, Democrats 22; Republicans 27; Republican majority 5. Joint Ballot, Democrats 33; Republicans 36; Republican majority 3.

**NEVILL, Lady DOROTHY.** See **LITERATURE, ENGLISH AND AMERICAN, Biography.**

**NEW BRUNSWICK.** A maritime province of Canada (since July 1, 1867). Area, 27,985 square miles. Population (1901), 351,120. Capital, Fredericton. For details, see **CANADA.** The executive authority rests in a lieutenant-governor, appointed by the Governor-General of Canada and acting through the Executive Council (responsible ministry). The unicameral Legislative Assembly consists of 46 members elected for four years. In 1910, Lieutenant-Governor Lemuel John Tweedie (appointed March 2, 1907); Premier, J. Douglas Hazen. A serious disaster occurred early in July in Campbellton, a town of 5000 people, which was virtually destroyed by fire, with a loss of eight lives.

**NEW CALEDONIA.** An island in Melanesia, constituting, with its dependencies, a French colony. It contains a penal settlement, to which no convicts have been sent since 1896. Area, 7650 square miles; population (1906), 53,346 (22,177 whites, 3336 colored immigrants, 27,833 natives). Penal population, 7034 (6741 men, 293 women). Capital, Nouméa, with (1901) 6968 inhabitants (4010 free). Schools: 40 primary, with 2042 pupils; native, 28, with 1815. The college at Nouméa has 70 students. More than half the area is wild and mountainous; 1600 square miles are under pasture, 1600 cultivable land, 500 exploited forest. The land is divided into the state domain, the penal settlement, and the native reserve. Coffee, corn, tobacco, sugar, grapes, manioc, and pineapples are grown; wheat, rubber, and cotton are being introduced. There are about 75,000 cattle and 2000 sheep.

Mining concessions (1908), 124, with 2200 workmen, mostly Japanese. Mineral export (1908): nickel ore, 120,026 metric tons; cobalt ore, 3347; chrome ore, 46,480; copper ore, 10; iron ore, 65; other, 1333. Imports and exports (1908), 9,307,000 and 10,111,000 francs respectively.

At the port of Nouméa (1908), 129 vessels, of 196,582 tons entered, and 140, of 217,358, cleared. Railway, 10 miles open; telegraph, 580; telephone, 115; post-offices, 39. The revenue and expenditure (1907) balanced at 3,974,000 francs; debt, January 1, 1907, 7,560,000 francs. Expenditure of France on the colony (1910), 3,287,984 francs (1,574,700 for the penal settlement). Military force, 436 Europeans. The colony is administered by a governor (1910, J. Richard).

**Dependencies:** The Isle of Pines (area, 58 square miles, population about 600); the Wallis Archipelago (40 square miles; about 4500 inhabitants); the Loyalty Islands (800 square miles); the Huon Islands, almost barren; Futuna and Alofi (about 1500 inhabitants).

**NEWFOUNDLAND.** An island off the northeast coast of North America; the oldest of the British colonies. Capital, St. John's.

**AREA, POPULATION, ETC.** Area, 42,734 square miles; population (1901), 217,037; estimated at end of 1908, 233,012; at end of 1909, 234,588. A portion of Labrador (120,000 square miles) is dependent on Newfoundland, with a population (1901) of 3634; estimated, 1908, 4035; 1909, 4026. St. John's had (1901) 31,501 inhabitants; Harbour Grace, 5184; Carbonear, 3703. Birth-rate (1907), 29.5; death-rate, 17.6 per 1000. Immigrants (1908), 9993; emigrants, 10,247. Total attendance at schools of all kinds, 43,811; total expenditure on education, including government grants, fees, etc., \$281,655.

**INDUSTRIES.** Of the total Newfoundland population (1901), 62,674 were located on or near the coasts and engaged in the fisheries—seal, cod, and herring. There were under cultivation 85,533 acres, sown chiefly to root crops, hay, barley, and oats, and engaging 2475 farmers. The livestock numbered 8851 horses, 32,767 cattle, 78,052 sheep, 34,679 swine. Mining engaged 1576 persons. The mineral deposits are of great value, but are not extensively exploited. Copper, coal, iron and silver and lead ore abound. Sawmills have been established in the timber tracts, and pulp and paper mills are in process of erection. The pulp and paper mills at Grand Falls, on the Exploits River, is one of the largest and best equipped in the world; it represents a capital of \$6,000,000, and supplies the paper for Lord Northcliffe's publications. The new railways are opening up the country in every direction.

**COMMERCE AND COMMUNICATIONS.** The trade for three fiscal years ended June 30 is given below:

	1906-7	1907-8	1908-9
Imports ....	\$10,426,040	\$11,516,111	\$11,402,337
Exports ....	12,101,161	11,815,769	10,848,913

The principal articles of the trade for 1908-9 are as follows: Imports: flour, \$1,776,038; textiles, \$1,437,938; provisions, \$1,270,967; coal,

\$605,997; kerosene and other oils, \$435,793; machinery, \$351,078; molasses, \$322,966; hardware, \$256,342; leather, \$226,680; animals, \$178,099. Exports: fish, \$7,962,263 (cod, \$7,398,536); iron, \$968,132; cod, seal, and whale oil, \$786,300; sealskins, \$433,620; copper, \$220,895; furs, undressed, \$45,292. The United States furnished imports valued at \$4,232,680, and received exports valued at \$848,176; Canada, \$3,937,009 and \$1,542,090; Great Britain, \$2,493,670 and \$1,426,229; Portugal, \$21,731 and \$1,590,184; Brazil, \$390 and \$1,719,082. Tonnage entered and cleared (1908-9), 1,858,165 (British, 1,042,890).

Government railway lines, 638 miles. The transinsular line runs to Port-aux-Basques, with branches to principal towns and settlements. Additional extensions are under construction, the cost to approximate \$4,000,000. A fleet of eight first-class steamers connects the island with the mainland. Telegraph lines, 3088 miles; telephone, 350.

**FINANCE AND GOVERNMENT.** The following table shows the revenue and expenditure for three fiscal years (1908-9 budget):

	1906-7	1907-8	1908-9
Revenue .....	\$2,837,142	\$2,829,019	\$2,947,869
Expenditure .	2,711,788	2,785,835	2,947,869

The debt stood, June 30, 1909, at \$23,056,573. The Newfoundland Savings Bank had (1908) 7381 depositors and \$2,631,450 deposits; three of the banks at St. John's also conduct savings departments.

The colony is administered by a governor (1910, Sir Ralph Chamneys Williams), aided by a responsible executive council of nine and a legislative council of not more than twenty members, appointed for life. The House of Assembly has 36 members, popularly elected. Premier (1910), Sir Edward P. Morris.

The three-hundredth anniversary of the settlement of the country by John Guy was celebrated during the latter part of August and an industrial exhibition was held at Harbour Grace. By the end of October it became known that the Labrador fishing catch was a complete failure and that the whole cod-fishery upon which Newfoundland mainly depends was likely to show a shortage of nearly 20 per cent. Other industries of the country, however, were prosperous.

**NEW GUINEA.** The largest island of the East Indies. It is divided into British, Dutch, and German dependencies. See DUTCH EAST INDIES; GERMAN NEW GUINEA; PAPUA, and EXPLORATION, paragraph on *Australasia*.

**NEW HAMPSHIRE.** One of the North Atlantic Division of the United States. It has an area of 9341 square miles. Its capital is Manchester.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 430,572, as compared with 411,588 in 1900 and 376,530 in 1890. The increase in the decade from 1900 to 1910 was 4.6 per cent. The State ranks thirty-ninth in point of population, whereas in 1900 it ranked thirty-seventh. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most important mineral product of the State is granite, of which

there was produced in 1908, the latest year for which statistics are available, an amount valued at \$867,028. The clay products in the same year were valued at \$371,640. Other mineral products of some value are coal products, mineral waters, mica, pottery, precious stones and whetstones.

**AGRICULTURE.** The acreage, product and value of the leading crops are given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	31,000	1,426,000	\$ 984,000
1909.....	30,000	1,053,000	800,000
Oats, 1910.....	14,000	599,000	305,000
1909.....	14,000	441,000	282,000
Barley, 1910.....	2,000	52,000	40,000
1909.....	2,000	50,000	40,000
Buckwheat, 1910.....	2,000	62,000	38,000
1909.....	2,000	44,000	33,000
Potatoes, 1910.....	21,000	3,150,000	1,638,000
1909.....	21,000	2,730,000	1,747,000
Hay, 1910.....	640,000	768,000a	12,134,000
1909.....	640,000	621,000	11,116,000
Tobacco, 1910.....	100	172,000b	25,800
1909.....	100	170,000	25,000

a Tons. b Pounds.

**CHARITIES AND CORRECTIONS.** The institutions under State and county control in the State, with their population in 1910, are as follows: New Hampshire Industrial School, 211; New Hampshire School for Feeble-Minded Children, 172; New Hampshire Soldiers' Home, 90, and the New Hampshire State Sanatorium. In addition, the State sends to institutions in other States certain of its deaf, dumb and blind for education. These institutions are the American School for the Deaf at Hartford, Conn., the Maine School for the Deaf at Portland, Maine, the Clarke School for the Deaf at Northampton, Mass., the Perkins Institution and Massachusetts School for the Blind at Boston, the Connecticut Institution and Industrial School for the Blind at Hartford, Conn., and the New England Industrial School. There were in various institutions of the State on August 31, 1910, 1199 children in orphans' homes and asylums. There were in the county jails of the State in 1910 699 prisoners. The expenses of these jails during the fiscal year amounted to \$34,386.

#### POLITICS AND GOVERNMENT.

There was no meeting of the State legislature in 1910, as the sessions are biennial and the last was held in 1909. The next session begins in January, 1911.

**CONVENTIONS AND ELECTIONS.** Elections were held in 1910 under the new primary election law passed in 1909. The chief contest in the State was for the Republican nominations for governor and for a member of Congress in the First District. For a number of years the progressive wing of the New Hampshire Republicans has been fighting against control of the party by railroad corporations and other allied interests. Prominent in this wing of the party has been Winston Churchill, the novelist. While the progressives had not been successful heretofore in the elections, they had succeeded in securing the passage of a primary election law, which was designed to give the voters a fair chance as against the machine politicians. The candidate of the progressive wing of the party for the nomination was State Senator Robert P. Bass, while the candidate of the Republicans was Colonel Bertram Ellis. In the primaries the reform wing won a substantial

victory and Senator Bass was nominated for the governorship. The Democrats renominated Clarence E. Carr. Sherman E. Burroughs, progressive, hotly contested the renomination of Congressman Cyrus A. Sulloway, but lost. The Republican Convention, which met at Concord on September 27, was one of the most harmonious in the history of the State. It was made up of the nominees for State and legislative offices and as many other delegates as there are members of the legislative house. The platform adopted endorsed the Taft administration, declared for the creation of an interstate commerce and customs court, demanded tariff reform in conformity with the national platform of 1908, favored the national forest reserve bill, and Canadian reciprocity in tariff relations, demanded effective conservation of national resources and favored the establishment of a parcels post. It called for a permanent State tax commission to replace the present board of equalization and for the appointment of a public utilities commission to replace the present board of railroad commissioners; also for an employers' liability and a workmen's compensation act. Measures for the prohibition of campaign contributions by corporations were recommended, as well as a strengthening of the corrupt practices act, to do away with the buying of votes. It favored the constitutional amendment authorizing a Federal income tax. In the elections on November 8 the Republicans carried the State by a plurality of 7171 votes for Mr. Bass for governor, re-electing both Republican Congressmen, a Republican executive council, and a legislature Republican in both branches, but with a greatly reduced party majority.

**STATE OFFICERS.** Governor, Robert P. Bass; Secretary of State, Edward N. Pearson; Treasurer, Solon A. Carter; Auditor, William B. Fellows; Adjutant-General, Harry B. Cilley; Attorney-General, Edwin G. Eastman; Superintendent of Education, Henry O. Morrison; Commissioner of Agriculture, Nahum I. Bachelder; Commissioner of Insurance, George H. Adams—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Frank N. Parsons, Republican; Associate Justices, Robert J. Peaslee, Democrat; Reuben E. Walker, Republican; John E. Young, Republican; George H. Bingham, Democrat; Clerk, A. J. Shurtleff, Republican.

**STATE LEGISLATURE, 1911.** Senate, Republicans 20; Democrats 4; Republican majority 16. House, Republicans 272; Democrats 117; Republican majority 155. Joint Ballot, Republicans 292; Democrats 121; Republican majority 171.

**NEW HEBRIDES.** A group of Melanesian islands, jointly administered by France and Great Britain. Area, 5106 square miles; population, 70,000. Corn, coffee, vanilla, and coconuts are produced. Sulphur is abundant in some places. There are French and English courts, with a judge foreign to both nations; and the French and English high commissioners for the Pacific govern the islands through resident commissioners. French resident commissioner (1910), M. Noufflard; English, M. King. The joint court was opened in November. Missionaries in the New Hebrides reported violations of the Anglo-French convention by French exploiters of labor, who, they said, had sold liquor and cartridges to the natives, and kidnapped their wives and carried away their children.

The accusation of the missionaries was greatly resented by the French residents. They accused the missionaries in turn of trying to prevent the recruiting of labor. The adjustment of these conflicting interests and mutual charges presented great difficulty to the joint court.

**NEW JERSEY.** One of the Middle Atlantic Division of the United States. It has an area of 8224 square miles. Its capital is Trenton.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,537,167, as compared with 1,883,669 in 1900 and 1,444,933 in 1890. The increase in the decade from 1900 to 1910 was 34.7 per cent. The State ranks eleventh in point of population, whereas in 1900 it ranked sixteenth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The clay products are the most important of the mineral resources of New Jersey. In 1908, the latest year for which statistics are available, these amounted in value to \$12,313,696. Of these products, brick and tile constituted a considerable portion. In the value of the brick, tile and pottery manufactured, the State ranks third, being surpassed only by Ohio and Pennsylvania. In the manufacture of Portland cement New Jersey takes fifth place. The production in 1909 was 4,046,322 barrels, valued at \$2,813,162, as compared with a production in 1908 of 3,208,446 barrels valued at \$2,416,009. The State is very important in the production of pig iron. This in 1908 amounted to 225,372 long tons, valued at \$3,370,000. A large quantity of zinc was produced in 1909. This amounted to 16,035 tons of spelter, as compared with 6926 tons in 1908. Among other mineral products are sand and gravel, lime and glass-sand.

**AGRICULTURE.** The acreage, production and value of principal crops are given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	290,000	10,440,000	\$ 6,264,000
1909.....	290,000	9,483,000	6,733,000
Winter wheat, 1910.....	111,000	2,053,000	2,012,000
1909.....	110,000	1,969,000	2,146,000
Oats, 1910.....	60,000	2,226,000	979,000
1909.....	60,000	1,530,000	765,000
Rye, 1910.....	85,000	1,530,000	1,178,000
1909.....	79,000	1,888,000	1,018,000
Buckwheat, 1910.....	13,000	280,000	193,000
1909.....	13,000	283,000	209,000
Potatoes, 1910.....	95,000	9,975,000	6,484,000
1909.....	80,000	7,200,000	5,904,000
Hay, 1910.....	437,000	656,000a	11,939,000
1909.....	437,000	546,000	9,009,000

a Tons.

**EDUCATION.** The total enrollment in the public schools of the State in the year 1910 was 429,797. The average daily attendance was 373,544. The total number of teachers employed was 12,087, of whom 10,604 were females and 1483 were males. The average salary per year paid to all teachers was \$715.46. The number of buildings used for schools in the State was 2084 and the total value of the school property was \$36,438,047. The total amount expended for school purposes during the year was \$18,262,275. Of this amount there was expended for teachers' salaries, \$8,647,804; for new buildings and additions, \$4,810,270; for text-books, apparatus and supplies, \$745,707; for manual

training, \$309,959, and for transportation of pupils, \$145,736.

**FINANCE.** The report of the treasurer for the fiscal year ending November 30, 1910, showed a balance in the treasury on November 1, 1909, of \$3,680,882. The total receipts for the year were \$8,534,969 and the total disbursements were \$7,670,663, leaving a balance in the treasury on October 31, 1910, of \$4,545,188. The chief receipts were from the collateral inheritance tax, State tax on railroad corporations, tax from miscellaneous corporations and from banks and insurance companies. The chief disbursements were for education, for the support of State institutions, and for the support of the State government.

**CHARITIES AND CORRECTIONS.** The institutions under State control, with the amounts disbursed for their support in 1910, were as follows: Home for Feeble-Minded Children, \$7787; Home for Disabled Soldiers, \$86,995; Manual Training and Industrial School for Colored Youth, \$25,137; New Jersey School for the Deaf, \$46,767; New Jersey Reformatory, \$174,975; Sanatorium for Tuberculous Diseases, \$88,487; State Home for Boys, \$88,447; State Home for Girls, \$68,021; State Hospital at Trenton, \$333,625; State Hospital at Morris Plains, \$533,413; State Prison maintenance, \$124,995; Village for Epileptics, \$170,342. There was also disbursed for the support of the blind and feeble-minded, \$131,274.

#### POLITICS AND GOVERNMENT

**THE LEGISLATURE.** The State legislature sat in 1910 and the most important laws passed will be found noted in the paragraph *Legislation* below. The opening of the legislature was marked by an attempt of the Democratic minority to have a rule passed compelling committees to report any bill by request of fifteen or twenty members of the House. In 1908 the "New Idea" Republicans, aided by the Democrats, succeeded in having a rule adopted relieving the committee of further consideration of bills upon demand of fifteen members and in 1909 there was a similar rule enforceable by twenty members. In 1910 the Democrats had nineteen members in the House, and after failing to have the fifteen rule adopted, they endeavored to put through the twenty rule. The House, however, refused this, and adopted the rules of 1907, making committees amenable to the majority rule.

Among the recommendations made by Governor Fort in his annual message were the establishment of a public utilities commission, extension of the direct primary system, restrictive excise regulations, the formation of different departments for corporations, motor vehicles and collateral inheritance tax, the construction of a system of State highways, extension of the scheme of inland waterways, continuation of the commission to revalue railroad property and an appropriation toward the Palisade Park project. In advocating the extension of the direct primary system the governor declared that for the first time in its history the State would have the opportunity to send to the United States Senate the man for whom the people may declare their preference. The governor was not able to secure the passage of all these measures through the legislature. His attempt to secure legislation providing for the continuation of the commission to revalue railroad property was defeated by the action of

the House in passing a measure that the work shall be completed under the direction of the State Board of Assessors, one of the commissioners to act as expert in charge. On February 7 the governor transmitted to the legislature the proposed income tax amendment to the Constitution with the recommendation that it be approved. The legislature failed to vote on the amendment.

**CONVENTIONS AND ELECTIONS.** Next to the election of governor, the chief interest in the election of 1910 centred in the election of a United States Senator to succeed John Kean, whose term expired in 1911. There were several candidates for the nomination in both the Republican and Democratic parties. Among those who sought the Republican nomination were Senator Kean for re-election, David Baird former sheriff of Camden County, Franklin Murphy of Newark, formerly governor of the State, Representative Charles N. Fowler of Elizabeth, and E. C. Stokes, a former governor. The candidates on the Democratic side were former Senator James Smith, Jr., James E. Martine and Frank M. McDermit. By provisions of the act passed by the legislature of 1910, senatorial candidates may submit their claims to popular vote at direct primaries. Mr. Murphy suggested that Senator Kean, Mr. Baird, and other Republican candidates take advantage of these provisions. They refused, however, to do so. The nominations for Senator were made in accordance with the law by petition, each of which required the signatures of 1000 legal voters of the State. At the primaries held in September, Mr. Stokes received the Republican nomination, while the larger part of the Democratic votes were cast for Mr. Martine, his only opponent in the party primaries being Mr. McDermit.

The Democratic convention for the nomination of State officers was held on September 14. The most prominent candidates for the governorship were Woodrow Wilson, President of Princeton University; and Frank S. Katzenbach, Jr., former mayor of Trenton. Dr. Wilson's candidacy resulted from a demand on the part of the Democrats of the State for the strongest possible candidate, as the indications for Democratic success were sufficient to give them sanguine hope for electing their candidate. He had the support of the Democratic organizations of which former Senator James Smith, who was the chief Democratic power of the State, was the acknowledged leader. Mr. Wilson was nominated on the first ballot which stood: Wilson, 795; Katzenbach, 276. The platform adopted by the convention included a plank criticising the Payne-Aldrich tariff bill in severe terms. It favored the enactment of an employers' liability act which will satisfy the just demands of labor and secure safety and efficient sanitation in all manufacturing processes and employments.

The Republican State convention was held at Trenton on September 20. The only prominent candidate before the convention was Vivian M. Lewis of Paterson, N. J., State Commissioner of Banking and Insurance. The platform heartily approved the administration of President Taft. It commended the protective tariff and endorsed the action of the President and Congress in providing an expert and permanent tariff board to investigate tariff schedules. The policy of conservation announced by the President was approved and it was affirmed that the same safe-

guards should surround primary elections as had been shown to be effective in preventing repeating and frauds at general elections.

The State has never seen a more aggressive and interesting campaign than that which followed the nominating conventions. The nomination of Dr. Wilson at once attracted the attention of the country, and he gave his campaign a character which caused it to be one of the chief subjects of interest throughout the United States. He traveled about the State making addresses, which were received with great enthusiasm. The fear that these addresses would be too academic to impress the average voters proved to be unfounded. They discussed political conditions with the greatest clarity and with an evident practical knowledge of conditions. An interesting incident of the campaign resulted from the action of a well known Progressive Republican leader, George L. Record, in propounding to Dr. Wilson nineteen questions for answer. These questions were answered fully and without hesitation. He assailed the Republican administration and policies, but in terms which included no personal abuse or bitterness.

Mr. Lewis too made an aggressive campaign, speaking in all parts of the State. It was apparent, however, from the beginning of the campaign that the tendency was strongly toward the election of Dr. Wilson. This was the result, not only of his strong personality and high capabilities, but was due also to the Democratic trend felt throughout the country. Dr. Wilson was elected by a plurality of 49,056. He received 233,682 votes against 184,626 cast for Mr. Lewis. The Democrats elected a majority of the members of the State legislature, thus insuring the election of a Democrat to succeed Senator Kean. Following the election, the question of the action of the legislature in electing a United States Senator became the leading matter for political discussion. James E. Martine of Plainfield, as noted above, received a majority of the Democratic votes at the primary. James Smith, Jr., a former United States Senator and an aggressive candidate for the Senate refused to be bound by the action of the voters at the primary. On December 8 Dr. Wilson issued a statement favoring the candidacy of James E. Martine to succeed Senator Kean in the United States Senate. The governor-elect based his support of Mr. Martine on the ground that it was the will of the people as expressed in their vote that he should be elected. Former Senator James Smith, Jr., a candidate for the Senate declared that the governor's attitude was neither fair nor honorable and was an unwarrantable attempt to coerce the legislature. Mr. Wilson in his statement said "I offered, if elected, to be political spokesman and adviser to the people. I even asked the voters who did not care to make their choice of governor upon that understanding, not to vote for me . . . and I cannot escape the responsibility involved. . . . I know that the people of New Jersey do not desire Mr. James Smith, Jr., to be sent again to the Senate. If he should be he will not go as their representative. . . . At the recent primaries 48,000 Democratic voters, a majority of the whole number who voted at the primaries, declared their preference for Mr. Martine. For me that vote is conclusive."

**OTHER EVENTS.** In July the public utilities law in the State became effective. The three

members of the old State Railway Board became the new Public Utilities Commission with jurisdiction over every public service corporation in the State, including telegraph and telephone companies, pipe lines and water companies. In general, the powers of the Commission are similar to those exercised by the New York Public Service Commission, though much modified. The threatened action of the railroads passing through New Jersey to increase their rates, especially the rate for commutation to New York City, raised great opposition throughout the State and demand was made on Governor Fort to call a special session of the legislature to consider the question. The governor refused to do this on the ground that while the railroads may have acted hastily in adopting new schedules, such action was within their legal rights if it could be shown that the proposed increase was reasonable and just. This he said presented a judicial question which could be settled according to the facts. The Interstate Commerce Commission on June 23 requested the railroads in the State to postpone the proposed advance in commutation rates, and to this request the companies acceded. Later the new rates were put into effect. The question as to whether these rates shall be maintained was before the Interstate Commerce Commission at the end of the year.

**LEGISLATION.** Among the important measures passed by the legislative session of 1910 were the following: The act relating to private banks was amended. A bond of \$20,000, with sufficient sureties, is now required. Child labor laws were so amended that no minor under 16 years of age is allowed to work more than 55 hours a week or more than ten hours a day. No minor under 15 years of age is permitted to work between six at night and six in the morning, and after July 4, 1911, no minor under 16 years of age will be permitted to work during these hours. Sheriffs were authorized to appoint jail matrons, and a State reformatory for women over 17 years of age was established. A commission was appointed to investigate the subject of an employers' liability law, and a law for workmen's compensation. A commission was also appointed to report on the allied subject of old age pensions. The marriage law was revised so as to require a license from the town where the woman resides, if a resident, otherwise from the place of the man's residence, before the performance of the ceremony. A law was passed permitting any married woman who holds real estate in the State, and whose husband has been a fugitive from justice for three years or more, to petition the court for power to sell such real estate as if unmarried, and if such power is granted she may convey all her title thereto. The legislature passed a sweeping law directed toward the reduction of tuberculosis. It declares tuberculosis an infectious disease, requires physicians' reports, disinfection of premises, care of the diseased, and a distribution of circulars and information. The violation of the law is a misdemeanor. Three other measures were passed along the same line. The first appropriates \$10,000 for the study of the prevention and treatment of tuberculosis under the direction of the State Board of Health by publication, State exhibits, and special inspectors. The other acts authorized counties to establish tuberculosis hospitals subject to inspection by the State Board of Charities and

the State Board of Health, and required that the location of such hospitals must be approved by the State Board of Health only after due notice to the public and a hearing of remonstrants. October 12 was made a legal holiday, to be known as Columbus Day. An elaborate public utilities bill was passed. This provides that the board of railroad commissioners shall henceforth be called the Public Utilities Commission. Subject to their jurisdiction are railroads, street railroads, canals, subways, pipe lines, traction, gas, electric, water, express, sewer, telephone and telegraph companies, and other companies operating for general use within the State a franchise obtained from the State or municipality. The commission is to supervise all these utilities and to exercise its powers to secure obedience to the laws, to require safe and adequate service, to prescribe methods of book-keeping, with an eye to securing simplicity and uniformity, to approve leases, mergers, the issue of securities, and the grant of local franchises, and in all cases such approval is a prerequisite to the validity of the action taken. The commission is to enforce its orders by proper process. Appeal from the decisions of the board lies to the courts and appeals to the board lie from municipal ordinances and regulations. The act forbids free transportation and other favors to municipal officers, except when on duty and in uniform. A law was passed requiring railroads to furnish free transportation within the State to specified officials, including members of the legislature or congressmen. Railroads are obliged to furnish these individuals with an unlimited pass for all purposes. Measures were enacted providing for a complete physical valuation of all the railroads of the State and the valuation of their franchises. Measures were passed providing for regulations upon the sale of fireworks and explosives, amounting in some cases to a complete prohibition. The legislature passed over twenty bills relating to the government of municipalities. Several of these concerned the waterways. Among them is one creating a department of wharves, docks, and ferries in cities of the first class. Towns and counties may open inlets and may keep open public highways within their limits. A law was passed authorizing the condemnation of property for public markets. Towns are permitted to create a town plan and art commission of seven members, to whom all questions of public improvement shall be submitted and whose decisions shall be final unless changed by a two-thirds vote of the town council. This commission may also improve the street plan, assessing the benefits as betterments, regardless of remonstrances of property owners when the public interest requires a change and it is approved by a majority of the council. Important legislation was enacted relating to white slaves, as a result of the agitation carried on during 1909-10.

**STATE OFFICERS.** Governor, Woodrow Wilson; Secretary of State, S. D. Dickinson; Treasurer, Daniel S. Voorhees; Auditor, William E. Drake; Comptroller, Henry J. West; Attorney-General, Edmund Wilson; Adjutant-General, Wilbur F. Sadler, Jr.; Superintendent of Education, C. J. Baxter; Commissioner of Insurance, Vivian M. Lewis—all Republicans except Woodrow Wilson.

**SUPREME COURT.** Chief Justice, W. S. Gummere, Rep.; Justices, Charles W. Parker, Rep.;

I. W. Trenchard, Rep., Alfred Reed, Dem., C. G. Garrison, Dem., James J. Bergen, Dem., Willard F. Voorhees, Rep., James F. Minturn, Dem., F. J. Swayze, Rep.; Clerk, William Riker, Jr., Rep.

**STATE LEGISLATURE.** 1911 Senate, Republicans 12; Democrats 9; Republican majority 3. Assembly, Republicans 18; Democrats 42; Democratic majority 24. Joint ballot, Republicans 30; Democrats 51; Democratic majority 21.

**NEW MEXICO.** A Territory in the southwestern part of the United States. It has an area of 122,634 square miles. Its capital is Santa Fé.

**POPULATION.** The population of the Territory in 1910, according to the Thirteenth Census, was 327,301 as compared with 195,310 in 1900 and 160,282 in 1890. The increase in the decade from 1900 to 1910 was 67.5 per cent. The Territory ranks forty-fourth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most valuable of the mineral products in the State is coal, of which there were produced, in 1909, 2,805,747 short tons, having a spot value of \$3,619,347, as compared with 2,467,937 short tons valued at \$3,368,753 in 1908. The production of copper in 1909 was 5,031,136 pounds as compared with 4,991,351 pounds in 1908. Reports of the United States Geological Survey indicate an increased production in 1910. The amount of gold produced in 1910 was valued at \$397,974 as compared with a value for the production of 1909 of \$252,800. The output of silver was estimated at 683,111 fine ounces as compared with 324,200 fine ounces in 1909. The other mineral products of the State are comparatively unimportant. They include clay products, precious stones, mineral water, and gravel.

**AGRICULTURE.** The acreage, production, and value of leading crops are given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	70,000	1,610,000	1,449,000
1909.....	68,000	2,128,000	1,915,000
Spring wheat 1910.....	43,000	860,000	860,000
1909.....	41,000	1,004,000	1,175,000
Oats, 1910.....	30,000	822,000	510,000
1909.....	24,000	960,000	334,000
Barley, 1910.....	1,000	25,000	20,000
1909.....	1,000	40,000	40,000
Potatoes, 1910.....	2,000	94,000	98,000
1909.....	1,000	85,000	88,000
Hay, 1910.....	194,000	407,000a	4,680,000
1909.....	185,000	481,000	5,339,000

a Tons.

**POLITICS AND GOVERNMENT.** The passage of a bill providing for the statehood of New Mexico was the most important political event in the history of the Territory in 1910. This made it necessary to hold a convention to construct a constitution for the new State. Elections were held on September 6 for the choice of delegates. These resulted in the election of 71 Republican and 29 Democratic delegates to the Convention. The majority of the delegates elected were opposed to the initiative and referendum. The Convention met at Santa Fé October 4 and continued its deliberations until November 21, and formulated a constitution that was submitted to a popular vote on Janu-

ary 21, 1911. The constitution, as formulated, followed the older models, especially the Constitution of the United States, as distinguished from the newer models, the Oregon and Oklahoma constitutions. However, a modified referendum was included and an elective corporation commission was provided, while the initiative, recall, direct primaries and Prohibition were not included. Because of the fact that the constitution adopted the language of the Federal Organic Act and of treaties, in defining the eastern boundary as the 103d degree of longitude, the Texas representatives in Congress protested, as a survey of the 103d meridian had proved erroneous, throwing the line three miles west of the true meridian. This erroneous survey had been tacitly permitted to stand although the error had been frequently pointed out. But President Taft and Texas took the view that property rights had been established under this erroneous survey and that it therefore should be adopted by New Mexico despite the fact that by treaty with Texas in 1850 the boundary had been established on the true 103d meridian. On December 21, President Taft sent a message to Congress embodying this view and recommending the passage of a joint resolution authorizing the President and the State of Texas to mark the boundary line between that State and New Mexico. This resolution was adopted.

**STATE OFFICERS.** Governor, William J. Mills, Rep.; Secretary of Territory, Nathan Jaffa, Rep.; Treasurer, Miguel A. Otero, Rep.; Auditor, W. G. Sargent, Rep.; Adjutant-General, A. S. Brookes, Rep.; Attorney-General, Frank W. Clancy, Rep.; Superintendent of Education, J. E. Clark, Rep.; Commissioner of Insurance, Jacobo Chavez, Rep.; Commissioner of Agriculture, Robert P. Ervien.

**SUPREME COURT.** Chief Justice, W. H. Pope; Associate Justices, John R. McFie, Ira A. Abbott, E. R. Wright, C. J. Roberts, M. C. Mechem, and F. W. Parker; Clerk, José D. Sena—all Republicans.

**LEGISLATURE.** By special provision of Congress there was no election for a State legislature in 1910; the legislature of 1909 was composed of nine Republicans and three Democrats in the Senate, and twenty Republicans and four Democrats in the House.

**NEW NATIONALISM.** This title was applied to certain propositions contained in a speech made by Mr. Roosevelt on August 31, 1910, at the dedication of the John Brown Park, Osawatomie, Kansas. Mr. Roosevelt said: "The essence of any struggle for healthy liberty has always been and must always be to take from some one man or class of men, the right to enjoy power, wealth, position, or immunity which has not been earned by service to his or their fellows." The thing chiefly to be settled, he said, was equality of opportunity, which "means that our governments, National and State, must be freed from the sinister influence or control of special interests. Exactly as special interests of cotton and slavery threatened our political integrity before the Civil War, so now the great special business interests too often control and corrupt men and methods of government for their own profit. We must drive the special interests out of politics. . . . The true conservative is he who insists that property shall be the servant and not the master of the commonwealth."

To bring this condition to pass Mr. Roosevelt put forward a platform, which contained the following planks:

- (1) Complete and effective publicity of corporate affairs.
- (2) Prohibition of the use of corporate funds for political purposes.
- (3) Government supervision of the capitalization of all corporations doing an interstate business.
- (4) Franchises given only for a limited time and with compensation to the public.
- (5) The same supervision over combinations that control the necessities of life, such as meat, oil, and coal, as over public service corporations.
- (6) Directors of corporations to be held personally responsible if corporations break the law.
- (7) Combinations in industry are necessary, but they should be controlled in the interest of the public welfare.
- (8) An expert tariff commission.
- (9) A graduated income tax on big fortunes, with a graduated inheritance tax.
- (10) A scientific revision of our financial system so as to prevent those recurring panics from which other countries are free.
- (11) A sufficient army and navy to insure international respect.
- (12) Conservation of natural resources.
- (13) Extension of the work of the Department of Agriculture and agricultural colleges to cover not merely the production of crops but all the interests of agricultural life.
- (14) Regulation of the terms and conditions of labor as well as of the use of wealth in the public interests.
- (15) Suppression of mob violence.
- (16) National and State efficiency.
- (17) The direct primary, associated with a corrupt practices act, with the recall.

In the elaboration of these propositions, Mr. Roosevelt made the following comments:

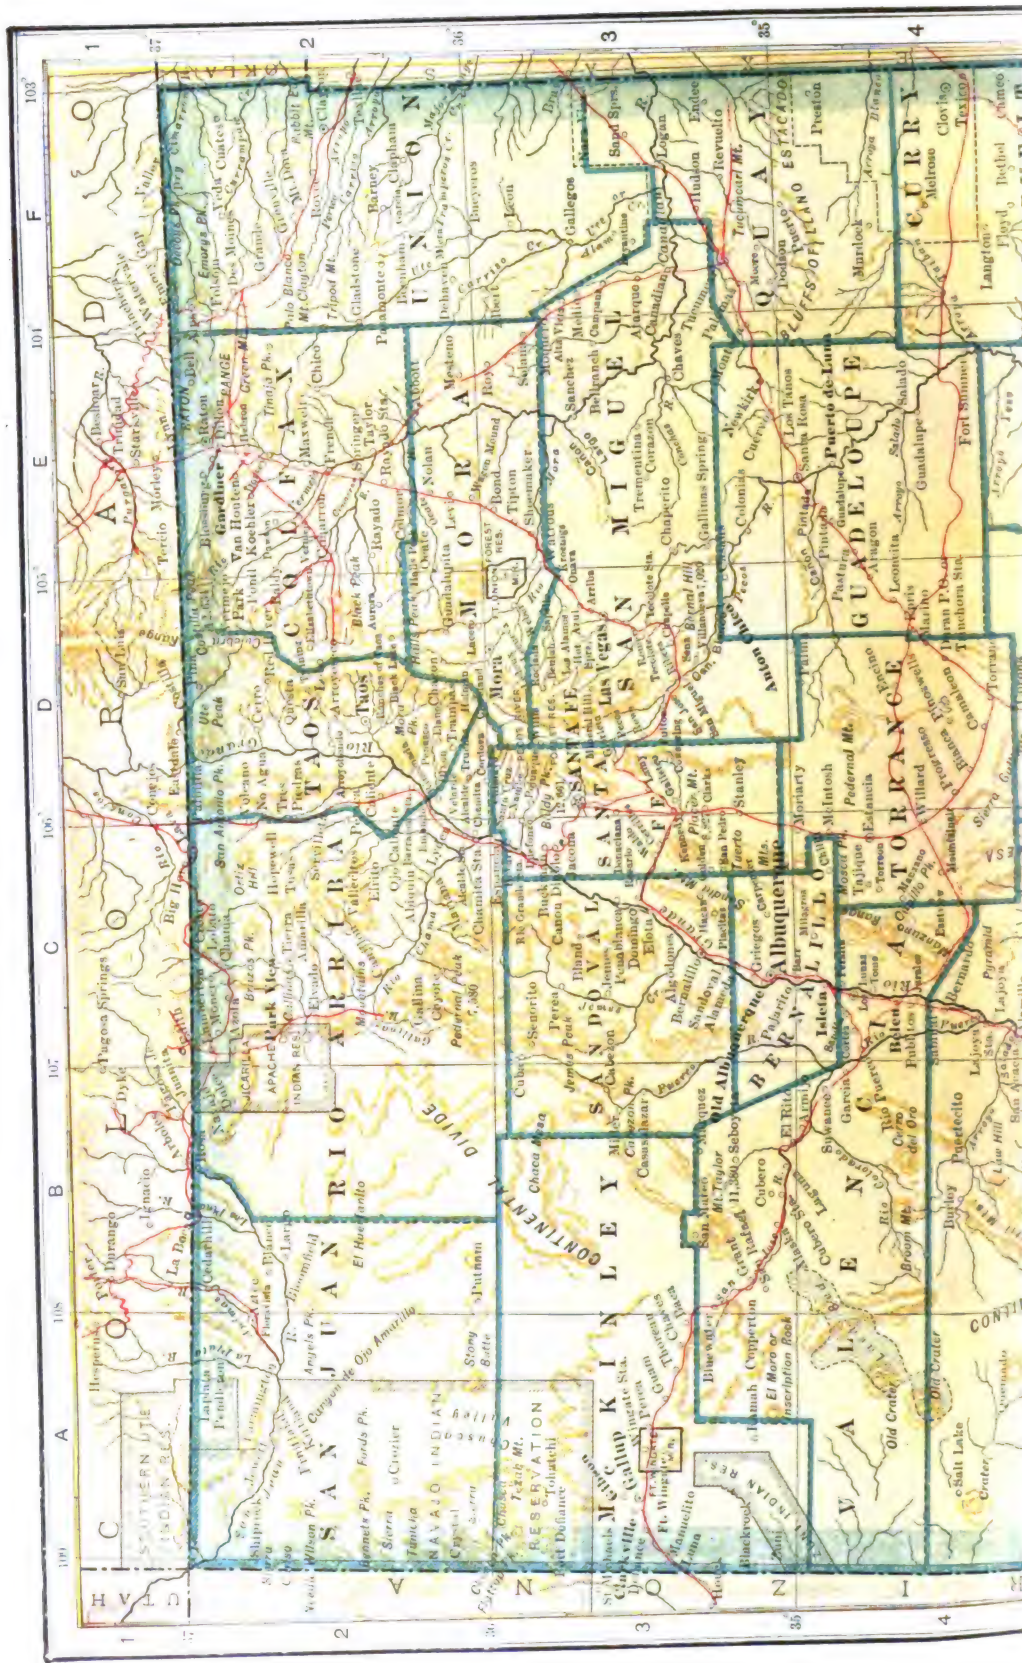

**Government supervision of the capitalization of all corporations:** "I do not wish to see the nation forced into the ownership of railroads if it were possible to be avoided, and the only alternative is thoroughgoing and effective regulation, which shall be based on the full knowledge of all the facts, including the physical valuation of the property. This physical valuation is not needed or at least is very rarely needed for fixing rates, but it is needed as the basis of honest capitalization."

**Combinations:** "For that purpose [of regulating corporations] the Federal Bureau of Corporations is an agency of the first importance. Its power, and therefore its efficiency, as well as that of the Interstate Commerce Commission, should be largely increased. . . . The Hepburn act and the amendment to that act in the shape in which it finally passed Congress at the last session represent a long step in advance and we must go yet further."

**An expert tariff commission:** "Such a commission can find out the real difference between cost of production, which is mainly the difference of labor cost here and abroad. As fast as its recommendations are made I believe in revising one schedule at a time. A general revision of the tariff almost inevitably leads to log-rolling and the subordination of the general public interest to local and special interests."

**Graduated income tax and inheritance tax:** "We grudge no man a fortune which represents

1911

his own power and sagacity, when exercised with entire regard to the welfare of his fellows. But the fortune must be honorably obtained and well used. It is not even enough that it should have been gained without doing damage to the community. . . . This I know implies a policy of a far more active governmental interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in government control is now necessary."

Regulation of the terms and conditions of labor as well as the use of wealth in the public interests: "No man can be a good citizen unless he has a wage more than sufficient to cover the bare cost of living, and hours of labor short enough so that after his day's work is done he will have time and energy to bear his share in the management of the community . . . . We need comprehensive workmen's compensation acts, both State and national laws to regulate child labor and the work of women, and especially we need in our common schools, not merely education and book learning, but also practical training for daily life and work."

Suppression of mob violence: "In the interest of the workingman himself, we need to set our faces like flint against mob violence, just as against corporate greed."

State and national efficiency: "The State must be made efficient for the work which concerns only the people of the State and the nation for that which concerns all the people. There must be no neutral ground to serve as a refuge for lawbreakers, and especially for lawbreakers of great wealth who can hire the vulpine legal cunning which will teach them how to avoid both jurisdictions."

"The new nationalism puts the national need before sectional or personal advantage. It is impatient of the utter confusion that results from local legislation attempting to treat national issues as local issues. It is still more impatient of the impotence which springs from the overdivision of government powers, the impotence which makes it possible for local selfishness or for legal cunning, hired by wealthy special interests to bring national activities to a deadlock. This new nationalism regards the executive power as the steward of the public welfare. It demands of the judiciary that it shall be interested primarily in human welfare rather than in property."

Direct primary: "We must have—I believe we have already—a genuine and permanent moral awakening, without which no wisdom of legislation or administration really means anything; and on the other hand, we must try to secure the social and economic legislation without which any improvement due to purely moral agitation is necessarily evanescent." See UNITED STATES, *Campaign and Election of 1910*, and ROOSEVELT, THEODORE.

**NEWNES, Sir GEORGE.** An English editor and publisher, died June 9, 1910. He was born in Derbyshire in 1851 and was educated at private and public schools. He began his business life as a merchant's clerk in Manchester. In 1875 he married a clergyman's daughter, who, it is said, founded her husband's fortune by suggesting to him the value of a magazine containing "titbits of notes and fun." With little or no capital he started a penny weekly, *Titbits*, in 1881, writing for a time most of its contents himself. The journal was a success from the start and

he soon accumulated a large fortune. In 1885 he was elected to Parliament from the Newmarket Division of Cambridgeshire as a Liberal and represented that division for ten years. In the meantime he continued to found and buy daily, weekly and monthly papers and magazines. In 1889 he founded the *Review of Reviews* and in 1891 the *Strand* magazine. To the latter Conan Doyle contributed the Sherlock Holmes stories. At this time he had as associates Alfred Harmsworth (Lord Northcliffe) and C. A. Pearson, who later became his rivals in the conduct of newspapers and magazines. Newnes founded or bought the *Westminster Gazette*, the *Wide World*, the *Grand Magazine*, the *Sunday Strand*, the *Captain*, *Fry's Magazine*, *Country Life*, the *Garden*, the *Ladies' Field*, *Woman's Life*, and the *Scholar's Own*. Prompted by the fact that W. W. Astor bought the *Pall Mall Gazette*, the only Liberal evening paper, and over night turned it into a Tory organ, Newnes bought the *Westminster Gazette*, took over the whole Liberal staff of the *Pall Mall* and gave the Liberals an evening organ with the same dispatch which marked their loss of one. He was notable for the ingenious schemes which he devised for increasing the circulation of his periodicals. Perhaps the most notable was his attempt to increase the circulation of the *Strand* by announcing that clues to the hiding-place of £500 would be found in a *Strand* serial story. He then made further hidings, ten of £100 each and when clues in the story seemed to indicate that some of the gold was hidden beneath Trafalgar Square, the police had difficulty in preventing the Square from being dug up. He was created Baronet in 1895. He was active in promoting international matches in chess and donated the international chess trophy which bears his name.

**NEW SOUTH WALES.** A state of the Australian Commonwealth. Capital, Sydney. Area, 310,372 square miles. Estimated population, June 30, 1910, 1,662,367. For details, see AUSTRALIA. The executive authority is vested in a governor appointed by the British Crown and acting through a responsible ministry. The legislative power devolves upon a parliament of two houses, the appointive Legislative Council and the elective Legislative Assembly. Governor in 1910 (appointed May 28, 1909), Right Hon. John Napier, Baron Chelmsford; Premier (in the ministry constituted October 21, 1910), J. S. T. McGowan.

**HISTORY.** Great losses of cattle and serious damage to the town of Tamworth were caused by floods on January 16, and several townships in the northern part of the state were devastated. The coal strike, which had been going on for eighteen weeks, came to an end toward the end of February. It had little public sympathy and its prospects were bad from the beginning. The government had continued its policy of encouraging immigration and the Premier announced in the spring that there had been a gain of 10,000 immigrants from Great Britain in 1910, all of them of the settler class. In his manifesto to the electors he urged their acceptance of the Federal financial agreement, saying that it would be fair both to the states and the Commonwealth and that rejection would mean financial chaos, increased taxation and an encroachment on state rights. The closer settlement policy at the close of the session of Parliament in the summer had resulted in the sub-

division of estates amounting to 181,796 acres. Among the measures passed by Parliament were bills for advancing money to groups of settlers desiring to acquire land, providing for reforms in the land laws tending to promote closer settlement, and establishing a superannuation fund for employes on railways and tramways, based on the contributory principle, but with a government subsidy. By another enactment authority was given to the industrial court to fix a minimum wage for clerical workers. The Premier announced the government's intention to open up great areas of Crown lands in the west and northwest for settlement. The proposals of the government included railway improvements, trade schools, a woman's college, a proposal for a referendum and a plan for the reform of the Council and the reduction of the number of members in the Legislative Assembly. Parliament closed in September, fixing the date, October 14 for the elections. The position of parties as a result of the elections was as follows: Labor Party, 46; supporters of Mr. Wade, 38; Independents, 6. At the end of October a new Ministry was formed under Mr. McGowan as Premier. At that time the returns of the local option referendum were made known. No single constituency went for "no license" and only 15 constituencies voted for a reduction of licenses, while 75 constituencies voted for the continuance of the present system. The new Premier in a public address soon after his appointment declared his intention of providing cheap lands for immigrants and the need of a thoroughly scientific system for regulating immigration and promoting it at points where it was needed. The government programme as announced by the Premier comprised state insurance, amendment of the Industrial Disputes Act, opening of lands for settlement, electoral reform and reform of legal procedure.

**NEW THEATRE.** See **DRAMA.**

**NEW YORK.** One of the North Atlantic Division of the United States. Its area is 49,204 square miles. Its capital is Albany.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 9,113,614 as compared with 7,768,894 in 1900 and 6,003,174 in 1890. The gain in the decade from 1900 to 1910 was 25.4 per cent. The State ranks first in point of population as it did in 1900. The population of the larger cities and towns will be found in the tables in the article **UNITED STATES CENSUS.**

**MINERAL PRODUCTION.** The mineral industry of the State has grown steadily since 1904. The chief products are iron, clay products, stone and salt. The iron mined in 1908, the latest year for which statistics are available, amounted to 697,473 tons, which was a decrease from the production of 1907, caused largely by business depression. The clay products of the State in 1909 were valued at \$8,929,224. There were produced in 1909 2,087,884 barrels of Portland cement, valued at \$1,838,462 as compared with 1,988,874 barrels valued at \$1,813,623 in 1908. In the production of salt the State ranks second, being surpassed only by Michigan. The production of petroleum is of considerable importance. In 1909 1,134,897 barrels were produced as compared with 1,160,128 barrels in 1908. The value of the product in 1909 was \$1,878,217 as compared with a value of the product for 1908 of \$2,071,533. Other products of importance are natural gas, pyrite, talc and crystalline graphite.

**AGRICULTURE.** The acreage, production, and value of the leading crops are given for 1909 and 1910 in the following table:

	Acreage.	Prod. bu.	Value.
Corn, 1910.....	680,000	26,044,000	\$16,408,000
1909.....	670,000	24,120,000	17,894,000
Winter wheat, '10	444,000	10,523,000	10,102,000
'09	420,000	8,820,000	9,790,000
Oats, 1910.....	1,338,000	46,161,000	19,348,000
1909.....	1,325,000	37,365,000	18,309,000
Barley, 1910....	78,000	2,207,000	1,545,000
1909.....	77,000	1,910,000	1,318,000
Rye, 1910.....	170,000	3,111,000	2,302,000
1909.....	160,000	2,720,000	2,176,000
Buckwheat, 1910	313,000	7,199,000	4,679,000
1909	313,000	7,512,000	5,183,000
Potatoes, 1910..	438,000	44,676,000	21,414,000
1909..	438,000	52,560,000	26,250,000
Hay, 1910.....	4,811,000	6,351,000a	87,009,000
1909.....	4,764,000	5,002,000	71,028,000
Tobacco, 1910...	5,900	7,375,000b	626,875
1909...	6,000	7,050,000	564,000

a Tons. b Pounds.

**EDUCATION.** The total number of students in attendance in the schools of the State in 1910 was 1,886,160 and the number of teachers employed was 52,075. The net value of public school property increased during the year \$15,475,110. The total expenditures for the year for educational purposes was \$74,423,825. Superintendent Draper in his annual report devotes considerable space to the discussion of industrial training in both elementary and secondary schools. In these schools discrimination is made between industrial work for boys and that for girls, and each is given instruction along the lines which have especial bearing upon the vocations natural to their sex. In agricultural communities the course of study includes elementary agriculture, mechanic arts and home-making. He points out the necessity for better provisions for playgrounds.

**CARE OF THE INSANE.** The Psychiatric Institute of the State Hospitals for the Insane is on Wards Island, New York City, in connection with the Manhattan State Hospital, and is under the directorship of Prof. August Hoch, M. D. The number of inmates in the various hospitals at the close of the fiscal year, September 30, 1910, was as follows: Utica, 1432; Willard, 2378; Hudson River, 3017; Middletown, 1888; Buffalo, 2014; Binghamton, 2361; St. Lawrence, 1967; Rochester, 1430; Gowanda, 1079; Mohansic, 12; Manhattan, 4585; Kings Park, 3291; Long Island, 753; Central Islip, 4328; Matteawan, 779; and Dannemora, 382. Total, 31,606. There were 1051 patients in the 22 licensed private houses, making a grand total of 32,657 patients. The total expenditure for maintenance was as follows: Officers' salaries, \$298,294; employes' wages, \$1,968,639; provisions and stores, \$2,050,603; farms and grounds, \$121,489; ordinary repairs, \$123,232; clothing, \$208,830; furniture and bedding, \$136,167; books and stationery, \$32,764; fuel and light, \$492,744; medical supplies, \$36,950; miscellaneous expenses, \$163,440; and transportation of patients, \$26,785; making a total of \$5,659,942. The receipts from partly or fully reimbursing patients, stewards' sales, and miscellaneous sources were \$408,797. The commissioners in lunacy are Albert Warren Ferris, M. D., Sheldon T. Viele, and William Cary Sanger. See **CHARITY.**

#### POLITICS AND GOVERNMENT

**THE LEGISLATURE.** Several important measures were passed in 1910 and these will be found

noted in the section *Legislation* below. The popular interest in the session, however, centred in the attempt of Governor Hughes to secure the passage of satisfactory direct primary bills. On February 11 a bill embodying his ideas was introduced into the legislature. A general discussion of this bill, which was known as the Greene-Hinman bill, will be found discussed in the article *NOMINATION REFORM*. The legislature refused to pass this bill in the form desired by Governor Hughes, but a modified measure known as the Cobb bill went through both Houses of the legislature. This bill was vetoed by the governor.

On January 5 in a special message to the legislature Governor Hughes stated that he was in favor of an income tax amendment to the constitution in theory, but asked that the legislature reject the amendment as passed by Congress on the ground that it conferred power to tax the income derived from State and municipal bonds. This the legislature did.

The legislature having failed to pass any primary bill which he could approve, Governor Hughes called a special session, which convened at Albany on June 2. There was a marked disposition to question the governor's right to construe the legislative situation regarding direct primaries as an emergency justifying the calling of a special session. The governor maintained that since the Senate had passed at the regular session the so-called Cobb bill, while the Assembly had refused to pass it, there was at least a possibility of the two Houses agreeing on some measure for primary reform if their attention could be concentrated on that particular subject without the distraction that made adequate discussion impossible during the closing hours of the regular session. In his message he requested action on three measures, which he regarded as of cardinal importance, a direct nominations bill, a broadening of the scope of the graft inquiry provided for at the regular session, and the institution of a graded inheritance tax. The governor favored the so-called Cobb direct primaries bill, so amended as to exempt the city of New York from its provisions as regards all offices except those of Representative in Congress, State Senators, and Assemblymen. The bill was defeated by a combination of Republican regulars with Tammany Democrats. It failed of passage by only one vote. The governor was able to secure the passage of the measure for the revision of the progressive inheritance tax law, and a bill was passed in accordance with his recommendations, which will increase the State's annual revenue by about \$4,000,000.

**TRIAL OF SENATOR ALLDS.** The death of Senator John Raines in 1909 made it necessary to choose a new leader of the Republican majority in the Senate. This leader, according to custom, is made president pro tempore of the body. In January the Republican caucus selected Senator Jotham P. Allds from Chenango county in the middle of the State. A small group of Republican Senators refused to act with the caucus on the ground of personal objection to Mr. Allds. The caucus selection was, however, duly chosen and installed. Shortly afterwards, a highly sensational statement appeared in the *New York Evening Post* charging Senator Allds with having received bribes, the statement being based upon accusations made by another Senator, Mr. Conger. The latter was

connected with bridge companies which built and repaired bridges under the control of the county and local authorities. Changes in laws affecting the matter of procedure by the highway authorities in their respective localities would have a bearing upon the business of the bridge companies and it was to their interest to prevent the passage of certain amendments to the highway laws. The bridge companies were said to have collected and disbursed certain money to ward off undesired legislation and Senator Conger asserted that Senator Allds had accepted certain amounts of this money. Senator Allds denied this accusation and demanded a trial and resolutions were at once passed providing for a hearing by the full Senate sitting as a judicial body.

Senator Conger testified that in his presence Hiram G. Moe, representing the interests of several bridge companies, including Conger's, had paid to Senator Allds, then the leader of the Republican majority in the Assembly, \$1000 to procure the killing of a bill which was distasteful to the companies. It appeared further from his testimony that the total amount furnished by the companies was \$6000, of which \$1000 was given to Senator Allds, and \$4000 to Assemblyman Jean L. Burnett, now dead. A second envelope containing \$1000, he testified, was given to S. Frederick Nixon, Speaker of the Assembly from 1899 to the time of his death, 1905. Senator Conger testified that the companies had raised funds to influence legislation not only in the year in question, but in 1902, 1903, and 1905. The same bill, which restricted the freedom of township officers in dealing with bridge companies without specific authority from the people, had been brought forward at every session and had been used, he alleged, to extort money from the companies. He declared that in 1905 the legislators raised their demand to \$10,000, which the companies refused to pay. As a punishment to them the bill was made a law. Senator Allds, on taking the stand in his own defense, denied that he had received \$1000, or had ever taken a bribe designed to affect legislation. He declared that he had never seen Moe and that the incidents testified to by Senator Conger had never taken place.

After the hearing of testimony, which occupied seven weeks, the Senate on March 29 voted upon the question whether the charges of Senator Conger against Senator Allds had been sustained. Some hours before the vote was taken Senator Allds resigned, by advice of his counsel. By a vote of 40 to 9 the Senate declared that he was guilty. Four Republicans and five Democrats voted in his favor.

**LEGISLATIVE INQUIRY.** These revelations led to the introduction in the legislature of bills for a broader investigation of legislative conditions. These bills were passed and a committee of the legislature was appointed to investigate any instances of legislative corruption within their knowledge. Governor Hughes's recommendation that the powers of the legislative graft committee be enlarged were disregarded by the legislature. The committee was made up from the membership of the Senate and the Assembly, and the Hon. M. Linn Bruce, a former lieutenant-governor was chosen as counsel. The committee was practically confined, by the action of the legislature, to those evidences of corruption disclosed by the Senate investigation during the trial of Senator Allds and the investigation

into insurance matters conducted by Superintendent Hotchkiss. During the progress of the inquiry a charge was made that Frank J. Gardner, a Republican member of the Senate from Brooklyn, had attempted to bribe certain members of the legislature to vote against race track bills passed in 1908. Gardner was indicted and was arrested at Scranton, Pa., October 13. The testimony upon which his arrest was based was that of Congressman Otto G. Foelker, who in 1908 was State Senator. Foelker cast the deciding vote in favor of the passage of the bill, arising from his sick bed to do so. He charged that Gardner had sent for him and attempted to buy his vote, remarking that he would pay him \$2000 more than some other senators would receive. Another witness testified that Gardner had admitted to him that the opponents of the bills had used a corruption fund of \$500,000, which was placed in the hands of a man who now held prominent office, and that this man profited by failing to keep the agreements made with certain legislators. Gardner, on the witness stand, refused to testify and was held in contempt of court.

In October Henry F. Zimmelin, formerly vice-president and representative at Albany of the Lyons Beet Sugar Refining Company testified before the committee that he had paid \$3000 a year for the last three years to the late John Raines, who was at that time the leader of the Republican majority in the State Senate. He testified also that \$3000 had been paid to Jean L. Burnett, a Representative who has since died, and that small sums were paid to other legislative officials. The company was interested in a law giving a bounty for beet sugar and wished to prevent a repeal of the statute. It was said that in 11 years the State paid \$545,000 in bounties for the manufacture of beet sugar, but in 1908 payment ceased as a result of the opposition of Governor Hughes, and that soon after this company went into bankruptcy. There was also testimony showing the collection by assessment of sums of money by the Street Railway Association for use at Albany and in political campaigns. It was alleged that one assessment of \$8000 paid by the Metropolitan Street Railway Company had been disguised as the payment of damages to an imaginary person for injuries received.

**INSURANCE INVESTIGATION.** An investigation into the conduct of certain fire insurance companies in the State was carried on in March by Superintendent Hotchkiss, the head of the New York Insurance Department. In the course of this investigation it was alleged that certain fire insurance companies had paid large sums of money apparently for the purpose of influencing legislation. E. R. Kennedy, a fire insurance broker, and a member of the legislative committee of the New York Board of Fire Underwriters, testified that in 1901 as a representative of the companies, he had expended \$13,311 at Albany, in connection with the passage and enactment of a bill designed to exempt the re-insurance reserves of fire companies from taxation. He testified also that about \$5000 was paid to influential politicians and that the same amount was given to the Republican State Committee. It was said that during the six years ended 1906, the insurance companies representing the New York Board of Fire Underwriters had paid something more than \$100,000 in "legal expenses" at Albany in connection with legisla-

tion pending there, the chief agent in these transactions being William H. Buckley, a politician who had been a subordinate officer in the insurance department. He admitted that in one year he had received \$27,000 from the companies for legal services, although he did not appear in any proceeding as an attorney of record. It was shown also that he borrowed large sums from officials of fire companies.

On April 11, Governor Hughes transmitted to the legislature a preliminary report from Superintendent Hotchkiss relating to his inquiry. The governor declared that Mr. Hotchkiss had come upon certain suggestive facts which required investigation. He stated further that he considered it a promising opportunity to investigate all alleged corruption which had been carried on in recent years in the State legislature. In accordance with his request the legislature adopted a resolution providing for a comprehensive investigation by a joint committee of three Senators and five Representatives, to report on March 1, 1911. See **INSURANCE**.

**CAMPAIGN AND ELECTIONS OF 1910.** The chief interest in the Republican party in the State prior to the holding of the convention centred about the control of the convention. This was largely brought about by the entrance of Mr. Roosevelt into active participation in the politics of the State. He had declared that he had not meant to be drawn into the campaign, but in June he had yielded to the urgent request of Governor Hughes, and had expressed himself in favor of the primary election and other reforms urged by the governor. The revelations of corruption on the part of some of the most important politicians in control of the machine of the State made it obvious that new conditions must be met. The leaders of the organization were determined, however, to control the convention and went so far as to make it appear that they had in this the support of President Taft. A meeting of the State Committee was called together and Vice-President Sherman was elected as temporary chairman of the convention, although it was well known that Mr. Roosevelt was a candidate for this office. The leaders of the organization made it appear, however, indirectly, that the selection of Mr. Sherman had the approval of President Taft. Mr. Roosevelt announced that he would fight for the nomination as temporary chairman in the New York Convention.

President Taft denied in a letter to Mr. Griscom, chairman of the State Committee, that he had any hand in the failure to nominate Mr. Roosevelt for temporary chairman at the meeting of the committee. In the course of this letter he said: "The suggestion that I have ever expressed a wish to defeat Mr. Roosevelt for temporary chairmanship of the convention, or have ever taken the slightest step to do so, is wholly untrue. I never heard Mr. Sherman's name suggested as temporary chairman of the State convention until I saw in the papers of August 16 that he had been selected at a meeting of the committee. When you called at my house on August 13, you told me that Mr. Roosevelt intended to go to the convention as a delegate, and you suggested, incidentally, his being temporary chairman, a suggestion in which I acquiesced. It did not occur to me that any one would oppose it. This was the first time that the subject of the temporary chairmanship was mentioned to me by any one." He added

that he had sent a telegram to Mr. Sherman stating that in his opinion the situation in New York would be saved by a full conference with Mr. Roosevelt and reasonable concessions as to platform and candidates. He stated that on August 15 he was told by Mr. Sherman that it was proposed to oppose Mr. Roosevelt with Senator Root's name, and no other name was mentioned. The President declared that he protested against the contest and again urged a conference with Mr. Roosevelt. He ended his letter by expressing his opinion that the solution of the direct primary issue could be found in provisions similar to those of the Cobb bill as amended.

Mr. Roosevelt expressed himself as greatly pleased with the letter of the President, and declared that although he at first had not intended to be a delegate to the convention, the attitude of the Old Guard toward him decided him to go there and make a fight against them. William Barnes, Jr., of Albany, the most prominent member of the State machine, issued a statement in which he expressed satisfaction that Mr. Roosevelt had come out in the open. Mr. Barnes declared that upon the question of direct primaries, Mr. Roosevelt would be opposed by all the power of those who were against the passage of such laws. To this Mr. Roosevelt replied that the fight would be to the end. He asserted that he was going to the convention because he felt that public interests, the interests of the people of the State of New York, demanded that the Republican party be given a chance squarely and uncompromisingly for clean, decent, honest politics. Mr. Barnes replied with a further attack upon the proposed direct primary legislation and defended the action of the committee in choosing Mr. Sherman as temporary chairman. In reply to a statement issued by State Chairman Woodruff that the direct primary was the chief issue in the mind of Mr. Roosevelt, the latter claimed that this was not the main issue. He said: "The main issue is that we stand against bosses, big and little, and in favor of genuine popular rule, not only at the election, but within the party organizations, and above all, that our rule is ruthless against every species of corruption, big and little, and against the alliance of corrupt business and corrupt politics, as to which it has been found that too often in the past the boss system has offered a peculiarly efficient and objectionable means of communication. We are against the domination of the party and the public by special interests, whether these special interests are political, business, or a combination of the two."

Before the delegates of the Republican convention assembled, it was well known that the majority of them would vote for Mr. Roosevelt as temporary chairman, and that Vice-President Sherman would be defeated. The leaders of the Old Guard predicted that the party would be beaten at the polls and asserted that Mr. Roosevelt had obtained a majority only by the aid of Federal officeholders. Mr. Barnes published a statement in which he declared that the elevation of Mr. Roosevelt was sought as the means of the humiliation of the President and that Mr. Roosevelt was the champion of doctrines which were a menace to public order. A meeting of the State Committee was held at which a letter from Mr. Sherman was read asking for investigation of the charge that the committee's vote in his favor had been obtained by deceit

and misrepresentation. The committee voted by 22 to 15 that there had been no deceit. On the first day of the convention the chairman of the State Committee, Mr. Woodruff, announced the selection of Mr. Sherman. Immediately after, a delegate nominated Mr. Roosevelt. After several nominating speeches had been made, a vote was taken and Mr. Roosevelt had 561 votes to 445 cast for Mr. Sherman. Mr. Roosevelt in his address praised the record of recent legislation at Washington and the record at Albany while Mr. Hughes had been governor. He declared that the first duty of the party was to war against dishonesty, against corruption in politics, against corruption in business and above all against degrading alliances of crooked business and crooked politicians. He spoke warmly also in favor of direct nominations. The convention was, from its beginning, controlled by Mr. Roosevelt and his supporters. On the second day Senator Root was made permanent chairman and a platform was reported. The only plank on which there was a contest was that on direct primaries. The majority and the minority reports were brought in on this subject. On the minority report Speaker Wadsworth, representing the Old Guard, made an address in which he declared that the minority report favored primaries only for the election of delegates to conventions and of members of party committees. Mr. Barnes spoke briefly, predicting that the plan proposed in the platform would lead to the adoption of the initiative and referendum and the recall. The majority report was vigorously defended by Mr. Roosevelt. "We trust the people," he said, "you do not." He said that sooner or later the party would be compelled to accept direct nominations and urged that conditions were at the present time ripe for it. The minority report was rejected by a vote of 610 to 403. On the evening of the same day the ticket for State officers was nominated. Mr. Roosevelt nominated for governor Henry L. Stimson. Congressman W. S. Bennet was also put in nomination. The vote resulted in 684 for Stimson and 242 for Bennet. The platform adopted began with the declaration of "relentless warfare upon official and legislative wrongdoing in this State." It promised that legislative inquiry into corruption should be a thorough one and that wrong-doers who have masqueraded in the name of Republicans should be punished if they were convicted. The plank relating to President Taft's administration was in part as follows: "We enthusiastically endorse the progressive and statesmanlike leadership of William Howard Taft and declare our pride in the achievements of his first eighteen months as President of the United States. Each succeeding month since his inauguration has confirmed the nation in its high esteem of his greatness of character, intellectual ability, sturdy common sense, extraordinary patience and perseverance, broad and statesmanlike comprehension of public questions and unfaltering and unswerving adherence to duty." The platform strongly commended the new tariff law. It declared that this measure had reduced the average rate of all duties 11 per cent., and had turned a national deficit into a surplus. It was urged that Congress should by joint rule permit the consideration and revision of separate schedules. The platform reviewed the record of Congress and commended the appointment of Governor Hughes to the Supreme Court. It

avored the encouragement of agriculture, the conservation, development and utilization of the natural resources of the State. The paragraph concerning direct nominations was as follows: "To Governor Hughes is due the credit for arousing the interest of the people and convincing them of the need of directly electing their party officers and directly nominating their party candidates. We promise legislation which will enact these principles into law."

The Democratic State Convention was held at Rochester on September 15. The candidate most talked of for the nomination for governor prior to the convention was Mayor William J. Gaynor of New York City. In two letters written to be read to the delegates to the convention, however, he refused to be considered as a candidate. He made the statement that if nominated he would decline to accept. At the opening session of the convention, Alton B. Parker, formerly Democratic candidate for the presidency, was temporary chairman. He made a long speech in which he attacked Mr. Roosevelt, denounced the "new nationalism," reviewed the history of the tariff legislation, asserting that there had been a corrupt alliance of the Republican political machines with the trusts and corporations for the benefit of the campaign fund. The convention was in the practical control of C. F. Murphy, leader of Tammany Hall. The permanent chairman was Herbert T. Bissell, and he too in his address dealt largely with the career and opinions of Mr. Roosevelt. After the elimination of Mayor Gaynor there was no candidate for the governorship who stood out conspicuously over all others, and it was only after a great deal of consideration that it was decided to nominate John A. Dix of Albany, Chairman of the State Committee. He at first refused the nomination, but finally accepted on condition that the other aspirants should unite in his support. All withdrew except Congressman Sulzer, who in the voting received 16 votes, while Mr. Dix received 434. The platform adopted by the convention began and ended with denunciations of the new nationalism advocated by Mr. Roosevelt, and contained the assertion, "The party pledges itself anew to the old nationalism embodied in the Constitution." The Payne-Aldrich tariff law was attacked with the assertion that it increased the exactions of former Republican tariffs and placed great additional burdens upon the shoulders of the average man, thereby largely contributing to the present high cost of living. The alleged Republican extravagance and legislative corruption were assailed and a plank was included favoring State-wide direct primaries. The popular election of United States Senators, extension and development of the parcels post, a constitutional amendment to permit the imposition of an income tax and the extension of the merit system were favored.

The campaign which followed the nominating conventions was one of the most aggressive in the political history of the State. Mr. Roosevelt took an active part, speaking in nearly every important town and city, and Mr. Stimson also made active campaigning. Mr. Dix made no regular campaign but concerned himself with several carefully prepared addresses, one of which was delivered in New York City. On October 28, Senator Root made an address in New York City in regard to the issues of the campaign. Among his significant utterances was

the following: "A good many Republicans at this time seem to ignore all the grave and substantial issues which are before the people of this State and intend to vote at the coming election upon no issue whatever, but simply as an expression of feeling against Mr. Roosevelt, whose course regarding national affairs they disapprove for one reason or another, and whom they desire to punish by defeating the party to which they belong, in which they believe and which they have long loyally supported, because he holds a distinguished and potent place in the councils and activity of the party." After praising the administration of President Taft and declaring that if he continued to be as good a president in the future as he had been in the past he would be renominated in 1912, he said: "If it should happen that the administration cannot hold its own party together, the national convention would be quite likely to look for a Moses to lead them out of the wilderness and they might go to Mr. Roosevelt or they might go to one of the far more radical leaders who are now looming up in the political horizon in the North and Middle West." He declared that Mr. Roosevelt well knew that all his efforts in behalf of the Republican candidates were services in aid of the Taft administration intended toward the renomination of Mr. Taft in 1912. He denied that Mr. Roosevelt had criticised the courts unfairly and asserted that he could see nothing new in the so-called "new nationalism" except that there should be a renewed and active sense of loyalty and duty to the old doctrines and the old ideals of American democracy. He praised Mr. Roosevelt's action in making the fight in the State convention and spoke highly of Mr. Stimson. In conclusion he said: "Some of you are thinking, because of a temporary side-wind of personal feeling and prejudice, of deserting the cause for which we have been fighting together for many years and giving aid and comfort to all that you most abhor in politics. I beg of you not to do it. You would gratify a momentary feeling but you would do a harm to your country and to your State and you would regret it hereafter."

In spite of the efforts of Mr. Roosevelt and the Republican nominees, the indications for Democratic success were apparent from the very beginning of the campaign. This was foreshadowed by the defeat on April 19 of George W. Aldridge by James S. Havens, who contested for the seat in Congress made vacant by the death of James Breck Perkins (see below). The vote on November 8 was as follows: Dix, Democrat, 689,700; Stimson, Republican, 622,299 or a plurality for Mr. Dix of 67,401. That the Democratic success was brought about rather by a diversion of Republican votes to the Democratic nominee than by a marked increase in Democratic votes is shown by the fact that Mr. Dix received over 100,000 less votes than were cast for Mr. Chanler, the Democratic nominee for governor in 1908. Mr. Chanler at that time received 735,189 votes. The voters of New York State, outside of New York City, in 1908 cast almost 500,000 votes for Governor Hughes, while in 1910 they cast considerably less than 400,000 for Mr. Stimson. While a considerable responsibility for the Republican defeat no doubt came from the factional differences in the party, it was doubtless due in greater measure to the general Democratic trend throughout the United States, resulting from dissatisfaction

with the Payne-Aldrich tariff bill and other causes with which the administration of Mr. Taft was identified. Those unfriendly to Mr. Roosevelt attributed to him a large responsibility for the Republican defeat, but his friends pointed out Democratic victories in other States of equal magnitude for which he could not have been held responsible.

With Mr. Dix was elected the entire Democratic ticket giving the Democrats control of the State for the first time since the administration of David B. Hill.

**OTHER STATE EVENTS.** As a result of the publication of charges relating to the purchase of land by the State for forest reserve in the Adirondacks and the Catskills where the State owns 1,641,000 acres, for which about \$3,500,000 has been paid, commissioners were appointed by Governor Hughes to make an investigation. It was alleged that large tracts were bought at tax sales for a few cents an acre and turned over to the State at very much higher prices, and that influential politicians benefited by these transactions. Senator Allds was among the counsel employed by the State Forest Commission in connection with the acquisition of land for the reserves.

On April 19 an election was held to fill the vacancy caused by the death of James Breck Perkins. The Republicans nominated George W. Aldridge, who for many years had been a so-called boss of Republican politics in Rochester and one of the managers of politics in the State. The Democrats selected as his opponent James S. Havens, a lawyer who had not been known in recent politics and who had no organization by which to oppose the political machine of Mr. Aldridge. In spite of this Mr. Havens was elected by a plurality of nearly 6000 votes. This result was no doubt largely due to the opposition to Mr. Aldridge by many independent voters.

An extraordinary session of the Supreme Court was convened in May by Governor Hughes to consider cases of alleged corruption among State officials at Schenectady. Fifty indictments were found against 27 persons. It was alleged that they had defrauded the county by false bills and in other ways. The offenses named were larceny, perjury, forgery and misdemeanors. It was charged that the county was systematically defrauded in payments for labor and supplies. The indicted officials were found guilty and were sentenced to fines ranging from \$1000 to \$500.

On April 25 Governor Hughes accepted the nomination to the bench of the United States Supreme Court tendered him by President Taft (see *UNITED STATES, Federal Judiciary*). He did not go on the bench, however, until October, when he was succeeded as governor by Horace White. On January 5, Governor Hughes announced a gift to the State of 11,000 acres of land and \$1,000,000 for creating a State park in Orange and Rockland counties, by Mrs. E. H. Harriman. Other contributions for the same purpose, aggregating \$1,625,000 were made public at the same time. The legislature passed measures authorizing the acceptance of this gift. On April 26 the Court of Appeals declared constitutional the law limiting the labor of railway telegraphers to eight hours a day (see *LABOR*).

**NEW YORK CITY.** The administration of Mayor Gaynor was in many respects the most

satisfactory enjoyed by the city for many years. There was an unusual lack of charges brought against city officials. The exception, however, was in the case of Queens Borough, where President Lawrence Gresser was subjected to examination for misconduct in office and petitions were made to Governor Hughes for his removal. Mr. Gresser was indicted on several charges for the alleged auditing of fraudulent claims against the city. The matter had not been decided at the end of the year.

The city budget for 1910 was \$163,130,270, while the budget for 1911 was \$174,079,335. The interests of the citizens during the year were more directly concerned with increased subway accommodations than with any other question. By the terms of the city charter the amount that can be expended by the city in a given year is ten per cent. of the city debt. The legislature passed measures exempting water and dock bonds from being included in the sum which made up this limit on the ground that they were self supporting. This gave the city a balance of \$60,000,000 which could be expended in public improvements, including subways. Several important plans for subway extension were presented by the Public Service Commission during the year. The first of these was the so-called tri-borough system, the plans for which have been in preparation for two or more years. This included a number of lines connected more or less directly with the present interborough system. Two methods were proposed for the construction of this route, the first by private capital and the second by the city. Bids were submitted on both methods. There were no bids for private construction, but several were received for construction with city funds. Before these contracts could be awarded, however, the Interborough Company, which operates the present subway and elevated lines, offered to continue the construction of this road and to build new lines if the city would contribute a portion of the cost, about \$52,000,000. The company itself offered to spend \$75,000,000. Another offer was presented by Mr. W. G. McAdoo, the builder of the Hudson River tunnels to New Jersey, but this offer was afterwards withdrawn. The Public Service Commission favored the acceptance of the offer made by the Interborough after it had received certain modifications. The Board of Estimate and Apportionment, which has the final decision, was considering the Interborough offer and other offers at the end of the year.

The year saw the destruction of the famous old Grand Central Station to make room for the magnificent new structure to be erected on its site.

On August 9, Mayor Gaynor, while boarding a vessel for Europe, was shot by a man named Gallagher, a former city official, who had been discharged for inefficiency. Mr. Gaynor, after several months of severe illness recovered sufficiently to attend to his duties. During his illness, John Purroy Mitchell, President of the Board of Aldermen, administered the affairs of the city as acting mayor. He carried on a series of aggressive attacks upon the conduct of police and severely criticised the Police Commissioner, W. H. Baker. Shortly after the Mayor's recovery, Mr. Baker was removed and John C. Cropsey of Brooklyn was appointed Police Commissioner, while William Flynn, who had charge of the United States Secret Service

in New York City and who had done notable detective work, was appointed Chief of the Detective Bureau.

A budget exhibit, similar to that held in 1909, except that it was made at the expense of the city, was attended by thousands of citizens. The object of these exhibits is to acquaint the public in the matter of the expenditure of the city money. Mayor Gaynor abolished during the year several commissions including several on water supply and aqueducts, which had been a source of expense to the State and city for many years.

**LEGISLATION.** Among the important measures passed at the legislative session of 1910 were the following: A new automobile law was enacted. This exempts from taxation as property all automobiles except commercial cars. Chauffeurs must pass a simple examination before obtaining a license. A new act for licensing and regulating private banking was passed. A deposit of \$10,000 with the State comptroller, and a bond with sufficient sureties, are required. Money received for transmission to a foreign country must be forwarded within five days. Hotel keepers, telegraph companies, express companies and private bankers who do business of less than \$500 in amount annually, and file bonds for \$100,000 in New York City and \$50,000 elsewhere, are exempt from this law. The child labor laws were amended by two acts. One of these provided that no minor under 16 years of age is permitted to work in any mercantile establishment, office, hotel or as a messenger more than 54 hours a week, nine hours a day or between seven at night and eight in the morning. No female between 16 and 21 years of age is permitted to work more than 60 hours a week or ten hours a day in any mercantile establishment except during the week before Christmas. Measures were also passed regulating the employment of children in certain dangerous trades. A measure was passed appropriating \$10,000 with which the Forest, Fish and Game Commission was to purchase and propagate trees to re-forest lands in the forest reserves. The Federal income tax amendment was defeated by a narrow majority in one House after passing the other. Several important measures were passed relating to education. A retirement fund for teachers who have reached the age of seventy years was established. These teachers must have been connected with a State educational institution at least ten years and must have taught 30 years in all. In case of disability, retirement is authorized at the age of 65. Each pensioner receives half his salary at the date of his retirement, and in any event at least \$300 as a minimum. The employers' liability law was modified by throwing upon the employer the burden of showing the employee's contributory negligence. An important measure was passed relating to State insurance of workmen against accidents, by permitting the risk of accident to be voluntarily assumed by the industry. Employer and employee are permitted to consent in writing to a compensation plan. Except for accidents caused by the employee's wilful misconduct, the employer is to pay in compensation for any injury leading to the workman's death a sum equivalent to 1200 times his daily wage if he left a dependent widow or child, or a proportion thereof in certain cases. The maximum payment is \$3000. If he leaves no dependent widow or child the employer is to pay the em-

ployee's funeral expenses up to \$100. When the injury does not lead to death, but the employee is partly or totally incapacitated for work, the employer is to make weekly payments not more than 50 per cent. in amount of the employee's full time weekly wage. Disputes are to be settled by agreement or arbitration, or a lawsuit may be brought as on a written contract and a lump sum given to the plaintiff as a judgment. The employee's claim is not assignable or attachable, is on the preferred basis of a claim for daily wages, and no attorney can claim a lien thereon unless with the approval of the court. The contract between employer and employee may be cancelled by either party on 60 days' notice to the other. The act is not applicable to railroads. A measure was passed regulating the sale of cocaine in the State.

Among the measures passed relating to the sale of liquors was one providing for a revision of the list of persons to whom the sale of liquor is forbidden. This prohibition includes minors under 18, habitual drunkards, Indians, intoxicated persons, inmates of State institutions and persons to whom a dealer has been requested in writing not to sell by some member of the person's family. A new inheritance tax amendment was passed at a special session after the governor had vetoed the measure adopted at the regular session. This law fixes the tax by the amount of each individual inheritance after making certain exemptions. The law applies to most property of non-residents, including shares in New York corporations. Other changes were made in the tax laws of the State. Important legislation was enacted relating to white slaves, as a result of the agitation carried on during 1909-10. See **JUVENILE COURTS and PROSTITUTION**; also **POPULATION, CONGESTION OF**.

**STATE OFFICERS, 1910:** Governor, John A. Dix; Lieutenant-Governor, Thos. F. Conway; Secretary of State, Edward Lazansky; Comptroller, William Sohmer; State Treasurer, John J. Kennedy; Attorney-General, Thomas Carmody; State Engineer and Surveyor, John A. Bensel; Superintendent of Insurance, William H. Hotchkiss; Superintendent Banking Department, Orion Howard Cheney; Superintendent State Prisons, Cornelius V. Collins; Superintendent Public Works, \_\_\_\_\_; Commissioner of Education, Andrew S. Draper; Chairman Commission in Lunacy, Dr. A. W. Ferris.

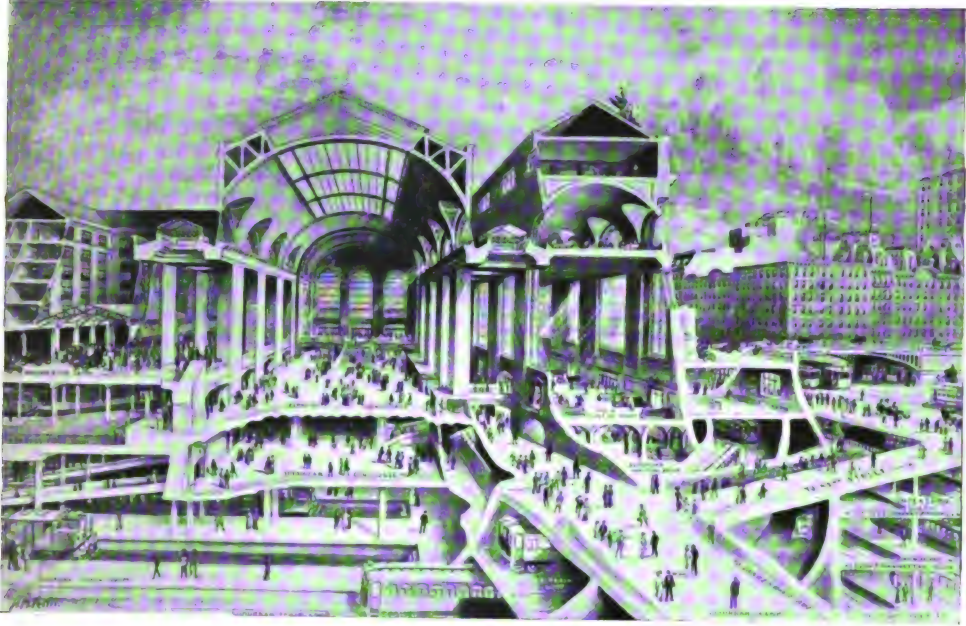

**STATE LEGISLATURE:** Senate, Republicans, 29; Democrats, 21; Independence League, 1. Assembly, Republicans 63; Democrats, 85; Independence League, 1; Independent Democrat, 1. Joint ballot, Republicans, 92; Democrats, 106; Democratic majority, 14.

**NEW YORK-PHILADELPHIA WATERWAY.** See **CANALS**.

**NEW YORK PUBLIC LIBRARY.** A public institution founded in 1895 for the consolidation of the Astor Library, the Lenox Library and the Tilden Trust. The library includes forty branches in different parts of the city, which form its circulation department. Among the buildings occupied by these branches are 32 erected from the Carnegie Fund. The Astor and Lenox libraries compose the reference department from which books cannot be removed.

**GRAND CENTRAL TERMINAL, NEW YORK CITY**  
Sectional View

**GRAND CENTRAL TERMINAL, NEW YORK CITY**  
General View

১৭০৬

In the reference branches during 1910 readers and visitors numbered 232,506. The total number of volumes catalogued in the two reference branches numbered in 1910 1,674,705. During the year there were catalogued 54,846 volumes and 42,395 pamphlets. The number of volumes in the circulation departments in 1910 numbered 809,350, and the circulation for home use during the year numbered 7,506,976 volumes. The new library building at Fifth Avenue and 42d Street is practically completed as to the exterior and work progressed so far during the year on the interior that it is expected that the library will be opened to the public May, 1911, or soon afterwards. The total expenditures for the calendar year 1910 amounted to \$872,835, of which \$216,150 were spent for the reference department and \$656,685 for the circulation department. On the staff of the library are 732 persons. The Director is John S. Billings.

**NEW YORK SCHOOL OF PHILANTHROPHY.** See CHARITY.

**NEW YORK UNIVERSITY.** An institution of higher learning at University Heights, New York City, founded in 1830. The total enrollment in 1909-10 was 4040, divided as follows: College of Arts and Pure Science, 176; College of Applied Science, 211; Graduate School, 281; Summer School, 563; School of Pedagogy, 465; Washington Square Collegiate Division, 342; School of Commerce, 970; University Law School, 739; Woman's Law Class, 47; University Medical College, 476; Veterinary College, 12. The most notable event in the history of the University during the year was the resignation of Chancellor Henry Mitchell MacCracken (q. v.), which took effect September 28, 1910. Harold D. Senior was appointed professor of anatomy and director of the laboratories of anatomy and histology in the University and Bellevue Hospital Medical College. As a result of the bequest from the estate of the late John S. Kennedy, amounting to \$750,000, the University was able in the autumn of 1910 to pay off its entire funded debt. A gift of \$100,000 by Helen Hartley Jenkins was used to found the Marcellus Huntley Chair of Medicine. The endowment fund of the University amounted to \$1,102,000 and the income for the year 1909-10 was \$416,934.

**HALL OF FAME.** In 1910 eleven names were added to those already in the Hall of Fame at the New York University by the vote of the Board of 100 electors. The names chosen with the votes given for each are as follows: Harriet Beecher Stowe, 74; Oliver Wendell Holmes, 69; Edgar Allan Poe, 69; Roger Williams, 64; James Fenimore Cooper, 62; Phillips Brooks, 60; William Cullen Bryant, 59; Frances E. Willard, 56; Andrew Jackson, 53; George Bancroft, 53; John Lothrop Motley, 51.

Of the names already in the Hall of Fame, 29 were chosen in 1900 and 11 in 1905, making the total now incorporated 51. The total number of ballots cast in 1910 was 97 and the number required for a choice was 51. Those who failed of election by less than ten votes were the following: Samuel Adams, 41 votes; Daniel Boone, 42; Patrick Henry, 44; Mark Hopkins, 45; Francis Parkman, 45; Charlotte Saunders Cushman, 45; Lucretia Mott, 41; Martha Washington, 43.

In the election of 1910 no representative of the scientist group or of the soldier or jurist groups secured election. The election was of

particular interest in that the name of Edgar Allan Poe was admitted to the Hall of Fame after having been refused at each previous election.

**NEW YORK ZOOLOGICAL SOCIETY.** The New York Zoological Society was incorporated in 1895 under a special charter granted by the legislature of the State of New York. The object of the society are, a public zoological park; the preservation of our native animals and the promotion of zoölogy. Control of the Zoological Park, which comprises the southern part of Bronx Park, 264 acres in extent, was assumed by the Society in July, 1898. In area, elaborateness of structures and number of specimens, it is the largest and most highly developed zoölogical park in the world. The city of New York provides an annual maintenance fund. The animal collections, which numbered on January 1, 1911, 1160 species, 5163 specimens, are provided by the Society.

The attendance during 1910 was 1,441,342 and the total attendance from 1900 to 1910 inclusive was 12,354,870.

The Society controls and manages the Aquarium in Battery Park, and through its efforts has developed the largest and most complete institution of its kind in the world. The attendance at the Aquarium is by far the largest of any public institution in the world. The Society is actively engaged in the protection of animal life throughout the world, and particularly the preservation of the native animals. It has been instrumental in establishing a herd of bison in southwestern Oklahoma, presenting to the United States government fifteen bison from the large collection in the Zoölogical Park, as the nucleus of a herd established in the Wichita Forest and Game Preserve. The membership of the society in 1910 was about 1770. The officers of the society are: Henry Fairfield Osborn, president; Samuel Thorne and John L. Cadwalader, vice-presidents; Madison Grant, secretary and chairman of the Executive Committee; and Percy R. Pyne, treasurer. Dr. William T. Hornaday is director of the Zoölogical Park, and Dr. Charles H. Townsend of the Aquarium.

**NEW ZEALAND, DOMINION OF.** A self-governing dependency of Great Britain, consisting of a group of islands in the South Pacific. Capital, Wellington.

**AREA AND POPULATION.** Total area, 104,751 square miles (North Island, 44,468; South, 58,525; Stewart, 665). Population (1906), 936,309, including 47,731 Maoris; estimate (June 30, 1910), 1,048,347. Immigration and emigration in 1908, 44,970 and 30,709, respectively. Estimated population of chief towns, with suburbs (January 1, 1910): Auckland, 97,929; Christchurch, 78,605; Wellington, 76,390; Dunedin, 62,584.

**EDUCATION.** Primary instruction is free, secular, and compulsory. In December, 1909, there were 2057 public primary schools, with 4310 teachers and 152,416 pupils; in addition, there are reported 306 private schools, with 17,930 pupils, and 94 village schools for Maoris. There are 31 secondary and collegiate schools, 4 normal, 5 art, and 11 industrial schools, and 7 schools of mines. Total public expenditure on education in the year 1908-9, £1,096,000.

**PRODUCTION.** The area under crop and broken up in 1910 is reported at 1,914,487 acres, besides over 13,600,000 acres in sown grasses. In 1908, there were 252,391 acres sown to wheat, producing 8,773,000 bushels; oats, 406,908 acres

and 18,907,000 bushels; barley, 48,853 acres and 1,983,000 bushels. Livestock (1909): 363,259 horses, 1,773,326 cattle, 22,449,053 sheep, and 245,092 swine. Wool clip (1908), 167,297,679 pounds. Chief mineral production in 1908: Gold, 506,423 ounces, valued at £2,004,925 (£2,027,490 in 1907); coal, 1,860,975 tons, £966,083 (£965,766 in 1907); silver, 1,731,336 ounces, £175,337 (£169,484 in 1907). The principal manufactures are meat freezing and preserving plants, establishments for tanning, wool scouring, etc.; saw mills, grist mills, butter and cheese factories, and iron and brass works.

**COMMERCE.** Total imports and domestic exports and total exports have been valued as follows:

	Total Impts.	Dom. expts.	Total expts.
1905 .....	£12,828,857	£15,503,530	£15,655,947
1906 .....	15,210,403	17,840,346	18,095,137
1907 .....	17,302,961	19,783,138	20,068,957
1908 .....	17,471,284	15,894,530	16,317,494
1909 .....	15,674,719	.....	19,661,996

Leading imports in 1908: Clothing and materials therefor, £3,867,493; iron and steel goods, machinery, etc., £3,671,138; paper, books, etc., £718,983; sugar, £592,849; alcoholic liquors, £447,292; oils, £410,510. Values of principal exports (domestic) in 1908 and 1909: Wool, £5,332,781 and £6,305,888 respectively; frozen meats, £3,188,515 and £3,601,093; butter and cheese, £1,954,601 and £2,744,770; gold, £2,004,799 and £2,007,043. Other exports in 1908 were: Hides, skins, and leather, £791,213; tallow, £481,335; phormium (fibre), £396,288; kauri gum, £372,798. Quantity of leading exports in 1908: Wool, 162,518,481 pounds; frozen meat, 2,120,303 hundredweights; butter, 229,971 hundredweights; cheese, 280,798 hundredweights; kauri gum, 5530 tons. Gold exports to December 31, 1909, aggregated £75,530,946.

Trade is chiefly with Great Britain, imports therefrom and exports thereto being valued at £10,441,837 and £13,143,780 respectively in 1908; Australia, £2,841,426 and £2,103,161; United States, £1,643,937 and £326,415.

Exclusive of coasting vessels, there entered in 1909 605 vessels, of 1,263,935 tons, and cleared 596, of 1,253,878.

**COMMUNICATIONS.** In March, 1910, there were open to traffic 2717 miles of government railway and 29 miles of private. For the year ending March 31, 1909, revenue from government railways, £2,929,526; expenditure, £2,114,815. Telegraph (1910), 10,901 miles of line (34,788 of wire); post-offices (1909), 2194.

**FINANCE.** For the fiscal years ended March 31, 1909, and 1910, revenue amounted to £9,001,185 and £9,238,917 respectively; expenditure, £8,785,513 and £8,990,992; in addition there were expenditures from loan accounts and "land for settlement acts" amounting to £4,294,727 in the former year and £3,112,153 in the latter. Revenue is derived largely from customs, railways and stamps; the chief items of expenditure are public debt charges (£2,258,365 in 1908-9), railways, education, and posts and telegraphs. At the end of the fiscal year 1909, the public debt was £70,938,534 and the sinking fund £3,156,989; 1910, £74,890,645 and £3,112,065.

**GOVERNMENT.** The style "Dominion" superceded "Colony" September 26, 1907. The executive authority is vested in a governor, who is appointed by the Crown and is advised by a

responsible ministry. The legislative power devolves upon a parliament of two houses, the Legislative Council (42 members, appointed by the governor) and the House of Representatives (80 members, including four Maoris, elected triennially by universal adult suffrage). In April, 1910, Sir John Poynder Dickson-Poynder, created first Baron Islington in 1910, succeeded, as governor, Rt. Hon. William Lee Plunkett, Baron Plunkett. Prime minister in 1910, Sir Joseph George Ward.

Attached to New Zealand are the Auckland Islands (uninhabited), Chatham Islands (375 square miles, about 400 population), Kermadec Islands (15 square miles), and Cook Islands and others (upwards of 280 square miles, population over 13,000). The Cook Islands have a legislature and an executive council, whose enactments require the approval of the British resident (Capt. J. Eman Smith, at Rarotonga). Niue Island has a council and resident (H. G. Cornwall) of its own.

**HISTORY.** Sir Joseph Ward announced on May 5 that the government had decided to carry out the plans recommended by Lord Kitchener, and would introduce the necessary legislation which would include the increase of the period for compulsory training to 25 years, and a peace establishment of 20,000 trained men between the ages of 19 and 25, besides the 38,000 junior and senior cadets between the ages of 12 to 18, and the 10,000 recruits between 18 and 19. The Premier estimated the annual cost of internal defense at £400,000. The government programme included the following measures of social legislation: National annuities for disabled workers; relief of widows with young children and women in maternity, each measure being based on the contributory principle. Lord Plunkett, whose term of office had expired, received a public farewell on June 1. Parliament was opened on June 28 with a speech from the new Governor, Lord Islington. The legislative programme included a sinking fund scheme for the repayment of the public debt; prison reform, state assumption of the sources of water power, land settlement, state aid in maternity cases, anti-trust laws, and the introduction of last year's land bill with amendments. The principle of assisted immigration for boys from England was discussed in July, when it was attacked by the Labor members and defended by the Minister of Agriculture, who declared that it was the part of wisdom to co-operate with Great Britain in inducing young men to settle in the country. Sir Joseph Ward introduced the Defense Amendment bill on September 23, based on Lord Kitchener's recommendations. This raised the number of men liable to military training from 30,600 to 75,000. After exemptions the number would be 50,000, all of whom were liable to service at the age of 25. It was to go into full operation in 1913. In October the government introduced a no-licensing bill which included a proposal for national Prohibition if 55 per cent. of the voters favored it, and provided in that case that no intoxicating liquors should be manufactured, sold or imported. The workings of the Arbitration Act were criticised by the New Zealand Employers' Federation. This declared in October that there was evidence of a tendency on the part of the unions to revert to their former attitude and seek to control by strength instead of arbitration. The employers declared that the

men were more persistent than ever in their demands for higher wages and shorter hours, and that the present situation was unsatisfactory since the men were not loyal to the Act. The Act should, in their opinion, be repealed or the working classes should be made to change their attitude toward it. The Licensing Bill passed its second reading early in November. It provided for a referendum on the question of the continuance of the present licenses or no license and also on the question of national prohibition. To carry the measure 60 per cent. of the voters was necessary. It was estimated that the loss of revenue would be £800,000. National Prohibition, if carried, would not go into effect until after four years. See **ANTHROPOLOGY AND ETHNOLOGY**.

**NIAGARA POWER PLANT.** See **TRANSMISSION OF POWER**.

**NICARAGUA.** A Central American republic. The capital is Managua.

**AREA AND POPULATION.** The area is estimated at 49,552 square miles. The estimated population is about 600,000, mainly Indians and mestizos. Persons of unmixed white race are few in number. The larger towns, with estimated population, are: León, 63,000; Managua, 40,000; Granada, 25,000; Matagalpa, 16,000; Masaya and Bluefields, 15,000 each. There have been reported 356 elementary schools and several institutions for secondary education. The prevailing form of religion is Roman Catholicism.

**INDUSTRIES.** Agriculture is the principal industry, and the leading crops are coffee, bananas, and sugar-cane. The coffee yield in 1908 was about 14,000,000 pounds. For 1909 the yield was estimated at 16,800,000 pounds, but on account of the revolution hardly a third of the acreage was harvested, and the total yield probably did not exceed 4,000,000 pounds. So unsettled were political conditions in 1909 and 1910 that scarcely any trustworthy statistics of production or commerce were issued. In 1907 the sugar output, including the by-products molasses and spirits, was valued at \$1,122,000. Cacao, tobacco, corn, and rubber are produced. The forests contain cabinet and other valuable woods. Numerous mineral deposits occur, but mining is largely restricted to gold.

**COMMERCE.** Government statistics have not been published, but an estimate places the import and export values for 1909 at about \$3,500,000 and \$3,600,000 respectively, against about \$3,452,000 and \$4,500,000 in 1908, and \$3,408,830 and \$4,231,048 in 1906. Leading exports in 1906 were: Coffee, 19,378,216 pounds, valued at \$1,375,679; bananas, 1,401,595 bunches, \$700,069; gold bullion and amalgam, \$870,969; rubber, \$385,472; mahogany, \$284,320. The United States has been first in both import and export trade, followed by Great Britain, Germany, and France.

**COMMUNICATIONS.** A railway connects the Pacific port Corinto with León, Managua, Masaya, Granada (on Lake Nicaragua), and Diriamba, totalling 171 miles. Steamship traffic is carried on between Granada and San Juan del Norte, on the Caribbean coast at the mouth of the San Juan River. Reported telegraph wire mileage, 3637, with 130 offices; telephone, 805 miles; post-offices, 135.

**FINANCE.** Revenue and expenditure, in thousands of paper pesos, are stated as follows:

	1904	1905	1906	1907
Revenue.....	9,554	11,580	12,065	10,219
Expenditures....	10,892	9,522	9,818	10,287

Later figures are not available. The paper peso fluctuates in value, but may be regarded as worth about 16 cents.

According to an official statement made in April, 1910, the entire public debt on December 31, 1909, was 67,229,533 pesos silver. As the value of the peso on that date was approximately 37½ cents, the debt was equivalent to \$25,211,075 in United States money. Of the total, the foreign debt was 36,585,397 pesos; treasury vouchers, 20,833,479; internal loans, 1,264,963; obligations on current account, 8,545,695. The principal item under treasury vouchers was treasury bank notes to the amount of 12,149,104 pesos outstanding. It is worthy of notice that in 1893 the total debt was only 4,532,129 pesos.

**GOVERNMENT.** The constitution of March 30, 1905, vests the executive authority in a president, elected by direct vote for six years and assisted by a responsible cabinet of five ministers. The congress is unicameral. In 1893 Gen. José Santos Zelaya made himself president in virtue of successful revolution. His position was legalized by the constitution of the following year. He served for the three four-year terms 1894-1906 and was re-elected for the term 1906-12. In 1909 there developed a revolution headed by Gen. Juan J. Estrada, who was declared provisional president in October and whose government was recognized by the United States on December 1. Zelaya resigned on December 16. The Zelaya faction, however, did not recognize Estrada, but declared José Madriz president, and civil war, between the followers of Estrada and of Madriz, continued in 1910 until late in August, when the revolutionists, as the Estrada party was called, captured Managua. On August 29, Estrada took charge of the government as provisional president. A congress elected later in the year convened December 31 and on that date unanimously declared Juan J. Estrada president for two years. Adolfo Díaz was chosen vice-president.

**HISTORY.** The revolutionary movement, which had kept the country in a turmoil during the closing months of 1909, resulted finally in the resignation of President Zelaya on December 16 of that year and the election in his place of Dr. José Madriz, Judge of the Central Court of Justice. Ex-President Zelaya took refuge in Mexico. Although it was generally believed that his overthrow was final he himself declared that he had given up his office only temporarily. One of the first acts of the de facto President, Dr. Madriz, was the acknowledgment that the execution of the two Americans, Cannon and Groce, by Zelaya's orders was illegal and that the anger of the United States at the affair was justified. War was continued after the resignation of Zelaya, the revolutionists adhering to their leader, General Estrada, and insisting that he should become President. They had been carrying on a successful campaign, defeating the government troops at Rama in December, and advancing by the middle of January far enough to threaten the capital, Managua. Estrada demanded the recognition of the revolutionists and the establishment of a provisional government under their direction. This President Madriz refused. The government troops and the revolutionists came into conflict on January 29, when

the former were defeated. A few days later the insurgents captured Boaca, which is 60 miles distant from Managua. On February 4, however, President Madriz was successful at Santo Tomás, and later, on February 6, the leader of the government troops announced that he had defeated the insurgents and was about to occupy Boaca. There were conflicting reports as to which side was gaining ground during the next two weeks, but it was later learned that on February 22 the government forces had been completely victorious, defeating General Chamorro, who escaped with only a few followers. The number of killed and wounded was placed at 800. At that time it appeared that the only hope for the revolution was a guerrilla warfare which, however, might be kept up indefinitely. There was some fear of a division of Nicaragua into two republics, the eastern half being favorable to Estrada. Gradually, however, the prospects of the revolutionists improved. The fighting continued until August, when Madriz, finding his cause hopeless, fled to Corinto. General Estrada who was proclaimed President on August 22, reached the capital, Managua, on August 29, where he was warmly welcomed. He afterwards appointed a Cabinet from the Conservatives. Many members of the opposing party were arrested. The new President submitted to Washington in September a plan for establishing a stable government in Nicaragua. It proposed that a commissioner should be sent to Nicaragua with power to arrange a treaty for the settlement of American claims.

**NICHOLAS I.** Crowned on August 28, 1910, the first king of Montenegro (see **MONTENEGRO**). He was born in 1841 in the village of Njegoš. He succeeded his uncle and predecessor, Prince Danilo as ruler of the principality in 1860, the latter having fallen at the hand of an assassin. Scarcely a year after his accession war broke out with the Turks, who were eager to avenge the defeats inflicted upon them by the Prince's father, Mirko, commonly called the "Sword of Montenegro," and in 1862 the troops of the Sultan entered the country at various points. Notwithstanding valiant defenses on the part of the Montenegrins the war proved disastrous and they were compelled to abandon the unequal struggle. Nicholas, who had received a good education, set himself resolutely, on the conclusion of peace, to ameliorate the condition of his people and improve their means of defense. With the aid of the Czar of Russia and Prince Michael of Serbia he rearmed and reorganized his forces, introduced an educational system and bestowed a constitution under which he surrendered certain prerogatives to the Senate. In 1875 the provinces of Bosnia and Herzegovina revolted and in the following year Prince Nicholas, in alliance with King Milan of Serbia, declared war against Turkey. The prince at the head of 11,000 men, invaded Herzegovina and gained a victory at Vochidol. The Servians, however, suffered reverses, and after four months an armistice was concluded. In the following spring Russia took the field and Prince Nicholas renewed the struggle with better prospects of success. In the campaign which followed he captured Nikšić, and then successively captured Antivari and Dulcigno. These successes realized the Montenegrin dream of reaching the Adriatic coast. Nicholas now proceeded to invest Skodra, but the conclusion of an armistice between Russia and Turkey put an end to the

war. The result of successes gained in this campaign was a great accession of territory by which the area of the principality was more than doubled. From that time peace has prevailed in Montenegro and Nicholas was enabled to carry out many of his projects for the moral and material regeneration of his country. On October 31, 1905, he announced to his people the gift of a free constitution with manhood suffrage, vote by ballot, a single chamber, and other provisions of an approved democratic type. He succeeded in having removed from the Berlin treaty the provisions which had entrusted to Austria-Hungary the administration of the maritime and sanitary police along the Montenegrin coast, and had closed the port of Antivari to the warships of all nations. On the anniversary of the fiftieth year of his accession, the Montenegrin Skupshtina voted him the title of King and thereby placed Montenegro among the kingdoms of Europe. The ceremonies in connection with the accession of Nicholas to the throne as King were attended by representatives of most of the countries of Europe.

**NICHOLSON, J. S.** See **LITERATURE, ENGLISH AND AMERICAN, Political and Social Science.**

**NICKEL.** See **ATOMIC WEIGHTS, MINERAL PRODUCTION.**

**NIGER, MILITARY TERRITORY OF THE.** A French territory in French West Africa (q. v.). Area, 1,300,000 square kilometres (501,200 square miles). Estimated population (1908), 1,053,157. Chief town, Niamey. Revenue in 1908, 1,824,746 francs (direct taxes, 1,115,174 francs; indirect taxes, 225,843; government subvention, 125,000; etc.); expenditure, 1,370,932. The administration is in the hands of the lieutenant-governor of Upper Senegal-Niger (q. v.). By the measures of Commandant Laverdure in Timbuktu and Commandant Mouret in Zinder, the pacification of these regions has progressed with notable results.

**NIGHTINGALE, FLORENCE.** An English philanthropist and nurse, died August 14, 1910. She was born in Florence, Italy, in 1820, and she took her name from that city. She was the daughter of an English gentleman who, with his wife, was traveling in Italy. As a young girl she had access to many medical books in the extensive library of her father and these she read and studied, acquiring an unusual education. Before she was seventeen it is recorded of her that she was skilled in science, nursing and mathematics, had a wide acquaintance with standard literature, was a fair artist, a clever musician, and an excellent linguist, speaking French, German and Italian. When she was eighteen years of age she was taken to London to be presented at Court. There she met Elizabeth Frye, the famous reformer, who had done much for the betterment of conditions in English prisons. She became interested in the idea of hospital work and in the course of a tour of the Continent in the following year she inquired into hospital systems. She subsequently spent nine years in visiting continental countries and studied their nursing sisterhoods. In 1851 she enrolled herself as a voluntary nurse in the training home at Kaiserswerth in Germany. She later studied in the Paris hospital conducted by the Sisters of St. Vincent de Paul, but her health broke down and she was obliged to return to England. When she recovered her strength she went to work in a hospital which had been

languishing through need of proper management. This she developed to a high state of efficiency. At the outbreak of the Crimean War, it was soon found that there was as much need of nurses as of soldiers. Miss Nightingale volunteered to go to the scene of war and she set out with a party of thirty-four nurses to take up the work. At first she met opposition among the surgeons and officers at the front, but by dint of perseverance and the great good that she accomplished, she soon conquered all the obstacles that were put in her way. Her work in the Crimea had the greatest possible influence on field hospitals, and on the treatment of the sick and wounded in all the wars that have come since that time. At the close of the war she was received in England with the greatest enthusiasm. She was presented with a fund of \$250,000 by the British people and this she used to establish a school for nurses in London. For several years she was inactive on account of her slow recovery from the cholera which she had caught at Sebastopol. The effects of the strain of this campaign never entirely left her. For many years she superintended this training school but retired from active life in the 80's. Her advice in regard to sanitary questions was eagerly sought, and she gave many useful suggestions to American nurses during the Civil War. Miss Nightingale had intimate friendship with many notable people of her day, including Lord Salisbury, Mr. Gladstone, Henry Ward Beecher, Canon Farrar and others. In 1907 she was gazetted as a recipient of the Order of Merit of British subjects who have won conspicuous distinction in the naval or military service or in letters, arts or science. She was the first woman to be so honored. In 1908 the freedom of the city of London was bestowed upon her. Only one other woman received this honor. On the occasion of her 90th birthday she received a message of congratulation from King George. Miss Nightingale never married. Among her publications are: *Notes on Hospitals* (1859); *Notes on Nursing* (1860); *Notes on the Sanitary State of the Army in India* (1863); and *Life or Death in India* (1874).

**NILE DREDGING.** See DREDGING.

**NILES, WILLIAM HARMON.** An American geologist and educator, died September 13, 1910. He was born in Northampton, Mass., in 1833. From 1862 to 1866 he was a student in comparative anatomy with Professor Louis Agassiz, and in the latter year graduated from the Lawrence Scientific School. This was followed by a year at the Sheffield Scientific School. From 1871 to 1892 he was professor of geology and geography at the Massachusetts Institute of Technology. After 1902 he was emeritus professor of geology. From 1888 to the time of his death he was professor and head of the department of geology at Wellesley College. For ten years he was lecturer on natural science at the Massachusetts State Teachers' Institute. From 1867 to 1890 he gave public lectures upon geological and geographical subjects. From 1892 to 1897 he was president of the Boston Society of Natural History. He was a member and correspondent of many scientific societies.

**NOBEL PRIZES.** A series of prizes provided for by the will of Dr. Alfred Bernhard

Nobel. By this bequest the interest from a fund of \$8,400,000 is to be distributed annually to those "persons who shall have contributed most materially to benefit mankind during the year immediately preceding." The prizes are distributed in accordance with statutes signed by King Oscar of Sweden on January 29, 1900. The value of each prize is approximately \$30,000. The prizes include work in physics, chemistry, medicine, literature and in the advancement of peace. Prizes in science and literature are given at Stockholm and the prize for peace at Christiania on the anniversary of the death of the founder on December 10, on nominations submitted before the February 1 preceding. The right to make nominations is bestowed upon members of the Swedish academies, members of corresponding academies of other countries, professors holding proper chairs in Scandinavian and certain foreign universities, recipients of Nobel prizes, and other persons of distinction. Prizes awarded since the foundation of the fund, are given in the table below:

Name.	Year	Nationality
<b>Physics</b>		
Wilhelm Konrad Röntgen .....	1901	German
H. A. Lorentz .....	1901	Dutch

**NOGUCHI, YONE.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**NOMINATION REFORM.** There has been no appreciable diminution of interest in nomination reform, although there has been an increasing appreciation of the fact that primary reform is only a step towards the restoration of popular government. Yet the best primary act, as the *Chicago Record-Herald* has wisely pointed out, is only a tool. It is not a substitute for hard work and intelligence. For a while there was danger that some of the more zealous advocates of the new politics might regard nomination reform as a panacea for all our political ills and as effective in itself. To-day nomination reform is to the forefront in those States which have not yet secured a law authorizing direct nomination. In those States where the law has been established the aim is to perfect and extend it, not to destroy it. The general result of recent experience, however, seems to show that where the voters are alert and interested the direct primary will accomplish the purpose for which it was intended.

Governor Fort of New Jersey, in an address before the meeting of the House of Governors (q. v.) at Louisville in December, 1910, declared: "The direct primary is here to stay. It will soon extend to all the States. Popular movements never go backward." Every governor present with the exception of one indorsed this sentiment of Governor Fort's address. The discordant note came from Governor Draper of Massachusetts, who had been defeated for re-election. Governor McGovern of Wisconsin not only advocated a direct primary, but declared that the "Wisconsin idea" will eventually become the law of every State. He said: "This is not a country of parties. Every voter should be allowed and encouraged to cast his ballot as he pleases. He should not be required to indicate in a primary election what party he favored. The future of this country rests with the independent voter, and he should be given all of the independence necessary. I don't think that it's any one's business whom I vote for, and it's none of my business whom my neighbor votes for." Governors Dineen and Hadley, who declared they were in favor of a direct primary for practically every office necessary for the conduct of State government, were of the opinion that Mr. McGovern went too far. They said a man should be proud to indicate his party affiliations and that the general primary law as practised in several States now was good enough. Both said they were party men and did not believe in allowing voters to "play horse" with candidates. Governors Marshall and Harmon, while making no public speeches, said they were in favor of the direct primary and believed it should extend to United States Senators.

New York was in 1910 the seat of a hard-fought campaign over direct nominations. A special legislative commission reported to the 1910 session. Testimony was taken before the committee at hearings in Boston, Philadelphia, Harrisburg, Pittsburg, Topeka, Des Moines, Saint Paul, Madison, Milwaukee, Chicago, Indianapolis and Detroit. It filled some 3000 pages. This report takes up the testimony State by State, giving a brief digest of the direct primary legislation of each State, a summary or brief of the testimony taken in each State, followed by the committee's observations on success of the laws.

Summarizing the report is a section of general observations with a marked bias against the direct primary principle, although the admission is made that there is a widespread and real demand for primary reform. To satisfy this the committee recommended the enactment of a bill providing:

A uniform primary day not earlier than September 1.

A joint primary election for all political parties recognized by the general election law to be held at regular voting places presided over by regular election officers and governed so far as possible by election day regulations.

A general Statewide enrollment of party voters to be made at the time of registration where personal registration is required, and on election day where registration is not required.

An official primary ballot printed at State expense with delegates' names arranged thereon so a straight or split ticket may be voted.

A direct vote at the primary to elect "party, county, town and ward committeemen." This phraseology implies a direct vote for State committeemen.

The abolishment of all intermediate conventions for electing delegates to other conventions.

The amendment of the corrupt practices act to include the primary elections.

Direct nominations were defeated in the regular session. Governor Hughes then called a special session, but he was again defeated through a combination of the reactionary elements in the Republican and Democratic parties. It was in connection with this measure in the extraordinary session that Colonel Roosevelt re-entered politics, sending to Chairman Griscom the following telegram:

"During the last week great numbers of Republicans and of independent voters from all over the State have written me urging the passage of direct primary legislation. I have seen Governor Hughes and have learned your views from your representative.

"It seems to me that the Cobb bill, with the amendments proposed by you, meets the needs of the situation. I believe the people demand it. I most earnestly hope that it will be enacted into law." See NEW YORK.

The Supreme Court of Wisconsin in July, 1910, declared the Wisconsin direct primary bill to be constitutional, and in December the Illinois Supreme Court declared by a vote of 4 to 3 the senatorial primary election law of that State constitutional. The Idaho law also received similar sanction in August.

**NORMAL SCHOOLS.** See EDUCATION IN THE UNITED STATES.

**NORRIS, G. W.** See NEBRASKA, *Politics and Government*.

**NORTH CAROLINA.** One of the South Atlantic Division of the United States. Its area is 52,426 square miles. Its capital is Raleigh.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,206,287, as compared with 1,893,810 in 1900, and 1,617,949 in 1890. The increase in the decade from 1900 to 1910 was 16.5 per cent. The State ranks sixteenth in point of population, whereas in 1900 it ranked fifteenth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most important of the mineral products of the State are clay

products. These were valued in 1908, the latest year for which statistics are available, at \$943,968, as compared with a value of the product in 1907 of \$1,315,822. Next in point of value is stone, the product of which amounted to a value of about \$800,000. Monazite and zircon are produced in considerable quantities. Other products are talc, soapstone, lime, mineral waters and sand-lime brick.

**AGRICULTURE.** The acreage, production and value of crops are given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	3,072,000	57,139,000	\$43,426,000
1909.....	2,898,000	48,686,000	41,383,000
Wln. wheat, '10	652,000	7,433,000	8,176,000
'09	570,000	5,415,000	6,877,000
Oats, 1910.....	190,000	3,458,000	2,075,000
1909.....	196,000	3,234,000	2,134,000
Rye, 1910.....	15,000	150,000	152,000
1909.....	13,000	122,000	126,000
Buckwheat, '10	5,000	95,000	76,000
'09	5,000	99,000	79,000
Potatoes, 1910..	26,000	2,314,000	1,689,000
1909.....	25,000	1,850,000	1,498,000
Hay, 1910.....	175,000	262,000a	3,825,000
1909.....	175,000	242,000	3,485,000
Tobacco, 1910..	216,000	129,600,000b	13,737,000
1909.....	240,000	144,000,000	13,680,000
Cotton, 1910..		675,000c	
1909.....		600,600	

a Tons. b Pounds. c Bales.

**EDUCATION.** The total school enrollment in the State in the year 1908-9, the latest for which statistics are available, was 521,202, while the total school population was 727,565. Of those enrolled 360,775 were white and 160,427 were colored. Of those enrolled 442,935 were in rural schools and 78,267 in city schools. The total number of teachers was 10,957, of whom 9370 were in rural schools and 1587 in city schools. The white teachers numbered 8129, and the colored teachers 2828. The average annual amount paid to each teacher in 1908-9 was \$165.02. The total value of school property was \$5,435,789.

**FINANCE.** The report of the treasurer for the fiscal year ending November 30, 1910, showed a balance on December 1, 1909, of \$123,830. The receipts for the year amounted to \$6,386,857 and the total disbursements to \$6,500,149, leaving a balance on November 30, 1910, of \$10,539. The State debt amounted on December 1, 1910, to \$7,239,550.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under the control of the State, with their populations in 1910, are as follows: State Hospital at Morganton, 1500; State Hospital at Raleigh, 1009; Hospital at Goldsboro, 916; Dangerous Insane Department, 66; Epileptic Colony at Raleigh, 159; School for the White Blind, 215; School for the Colored Blind and Deaf, 213; School for the White Deaf, 282; Soldiers' Home, 167; Oxford Orphanage for White Children, 376; Oxford Orphanage for Colored Children, 205; Stonewall Jackson Manual Training and Industrial School, 60; North Carolina Tuberculosis Sanatorium, 85. The greater number of the convicts of the State are in camps maintained by the counties. There were in these camps in 1910 1383 prisoners. In the State Prison at the end of the fiscal year there were 765 prisoners. The State maintains for these prisoners a camp near Elkin, where the convicts are employed on the Elkin

and Allegheny Railroad. Now a camp is maintained at Tar Heel.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the sessions are biennial and the last was held in 1909. The next session begins January 4, 1911.

**CONVENTIONS AND ELECTIONS.** The elections in November, 1910, were for minor State officers alone. The term of Governor Kitchin does not expire until January, 1913. The highest State official voted for was state auditor. The Democrats at their State Convention nominated W. P. Wood, while the Republicans nominated J. Q. A. Wood. Other nominations were for corporation commissioners, chief justice of the supreme court, associate justices of the supreme court and congressmen.

The platform adopted by the Democratic Convention condemned and denounced the tariff policy of the Republican party as enacted in the Payne-Aldrich tariff bill and declared it to be the most iniquitous tariff burden ever placed upon the United States. The Republican platform adopted by the convention of that party approved the administration of President Taft and congratulated him upon the Republican majorities in the Sixty-first Congress and the extraordinary number of wise measures enacted. The platform pledged allegiance to the Republican policy of protection and it commended the vigorous measures taken to conserve the national resources of the people.

As North Carolina is always strongly Democratic, Democratic nominations are ordinarily equivalent to an election. W. P. Wood, the Democratic candidate for state auditor, received 140,531 votes, as against 94,017 cast for J. Q. A. Wood, the Republican candidate. The other Democratic candidates were elected, including candidates for Congress. The Democratic majorities in most cases were large.

**STATE OFFICERS:** Governor, W. W. Kitchin; Lieutenant-Governor, W. C. Newland; Secretary of State, J. B. Grimes; Treasurer, B. R. Lacy; Auditor, B. F. Dixon; Attorney-General, T. W. Bickett; Superintendent of Education, J. Y. Joyner; Commissioner of Agriculture, W. A. Graham; Commissioner of Insurance, J. R. Young; Adjutant-General, R. L. Leinster—all Democrats.

**SUPREME COURT.** Chief Justice, Walter Clark, Democrat; Justices, Geo. H. Brown, Democrat; Wm. A. Hoke, Democrat; Wm. R. Allen, Democrat; P. D. Walker, Democrat; Thomas S. Kenan, Democrat.

**STATE LEGISLATURE, 1911.** Democrats, Senate, 43; House, 99; joint ballot, 142. Republicans, Senate, 7; House, 20; joint ballot, 27. Democratic majority, Senate, 36; House, 79; joint ballot, 115.

**NORTH DAKOTA.** One of the West North Central Division of the United States. It has an area of 70,837 square miles. Its capital is Bismarck.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 577,056, as compared with 319,146 in 1900 and 190,983 in 1890. The increase in the decade 1900 to 1910 was 80.8 per cent. The State ranks thirty-seventh in point of population, whereas in 1900 it ranked fortieth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The mineral products of the State are not important. They include clay products, natural gas, stone and coal; the last is the most important, the total production in 1909 being 404,496 tons, as compared with a production in 1908 of 320,742 tons.

**AGRICULTURE.** The acreage, production and value of leading crops are given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	214,000	2,996,000	\$ 1,738,000
1909.....	195,000	6,045,000	3,325,000
Spring wheat, 1910.....	7,221,000	36,105,000	32,494,000
1909.....	6,625,000	90,672,000	83,501,000
Oats, 1910.....	1,628,000	11,396,000	4,217,000
1909.....	1,550,000	49,600,000	16,368,000
Barley, 1910.....	987,000	5,428,000	2,985,000
1909.....	987,000	20,727,000	8,913,000
Rye, 1910.....	15,000	128,000	81,000
1909.....	26,000	478,000	272,000
Flaxseed, 1910.....	1,605,000	5,778,000	13,578,000
1909.....	1,530,000	14,229,000	22,340,000
Potatoes, 1910.....	35,000	1,435,000	1,306,000
1909.....	40,000	4,400,000	1,980,000
Hay, 1910.....	188,000	103,000a	783,000

a Tons.

**EDUCATION.** The total number of pupils of school age in the State on June 30, 1910, was 156,044. The total enrollment was 139,802 and the average daily attendance was 90,149. The average monthly salary of all teachers was \$51.80. The report of the Superintendent of Education for the fiscal year 1910 shows a steady growth of the educational institutions and schools of the State. The value of all school property at the end of the fiscal year was \$8,553,134.

**FINANCES.** The report of the State treasurer for the fiscal year ending October 31, 1910, showed a balance in the treasury November 1, 1909, of \$1,494,863. The receipts for the year were \$4,429,223, and the expenditures were \$4,982,528, leaving a balance in the treasury on October 31, 1910, of \$941,558. The chief expenditures were for education, support of State institutions and the maintenance of executive offices.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under the control of the State include the following: The Insane Asylum at Jamestown, the State Penitentiary at Bismarck, the School for the Deaf at Devil's Lake, the Reform School at Mandan, the Institution for Feeble-Minded Children at Grafton, the Blind Asylum at Bathgate, the Industrial School at Ellendale, and the Soldiers' Home at Lisbon.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the sessions are biennial, and the last was held in 1909. The next session begins Jan. 5, 1911. On Feb. 1, William E. Purcell was sworn in as United States Senator to succeed Fountain L. Thompson, resigned. Senator Purcell resigned in the latter part of the year.

**ELECTIONS.** Primary elections were held on June 30 for the nomination of U. S. Senators. Senator P. J. McCumber, a regular Republican, was successful over Thomas Marshall, the insurgent candidate. Senator McCumber made his campaign for renomination in the primaries on the new tariff law. As a member of the Senate Finance Committee, Mr. McCumber assisted

in the framing of the Payne-Aldrich bill and was strongly criticised by the insurgents, who sought to defeat him. He was, however, successful. A candidate to succeed Senator Purcell was also nominated at this election and in this the insurgents won. Representative A. J. Gronna, one of the nine insurgents who voted to depose Speaker Cannon, carried the primaries, and received the nomination. The Democrats renominated for governor John Burke, while the Republican nominee was C. A. Johnson. In the election on November 8 the Democrats succeeded in re-electing Governor Burke. The legislature, however, remains Republican, which insures the election of two Republican Senators in 1911.

**STATE OFFICERS.** Governor, John Burke; Lieutenant-Governor, U. L. Burdick; Secretary of State, P. D. Norton; Treasurer, Gunder Olson; Auditor, D. K. Brightbill; Attorney-General, Andrew Miller; Superintendent of Education, E. J. Taylor; Commissioner of Agriculture, W. C. Gilbrath; Commissioner of Insurance, W. C. Taylor—all Republicans, except Burke, Democrat.

**SUPREME COURT.** Chief Justice, David E. Morgan; Justices, Charles J. Fisk, B. F. Spalding, E. T. Burke, E. B. Goss; Clerk, R. D. Hoskins—all Republicans, except Fisk.

**STATE LEGISLATURE, 1911:** Republicans, Senate, 44; House, 87; joint ballot, 134. Democrats, Senate, 5; House, 13; joint ballot, 18. Republican majority, Senate, 39; House, 74; joint ballot, 113.

**NORTHERN NIGERIA.** A British protectorate in western Africa. Area (official estimate), 255,700 square miles. No census has been taken. A rough estimate from returns obtained during the assessment for tribute gives the native population at 6,714,138; Europeans (1909), 544. Death rate among Europeans, 23.89 per 1000. Mohammedanism prevails among the Fulani, Hansas, and other prominent tribes; the remainder are pagans. Schools are maintained by the missionary societies; Mohammedan schools are attached to the mosques throughout the protectorate. During 1909, 137 convictions were obtained in the courts for offenses against the laws for the suppression of slavery; number of slaves freed (January 1 to December 31, 1909), 1289. Fruits, rubber, kola nuts, cotton (1909, 375 tons), tobacco, capsicums, peanuts, etc., are grown. The main articles of export are forest products collected by the natives and bartered to the Niger and other companies for earthenware, hardware, and cotton goods. The Fulanis in the north are great herdsmen and breed large numbers of horses and cattle. Iron is mined. Large potash deposits are worked in Bornu. There is an extensive proved tin field in Bauchi. As Northern Nigeria possesses no coast line, a large proportion of its imports are consigned to the ports of Lagos and Southern Nigeria. Reliable statistics on the export trade are impossible to procure, as a large proportion is by barter. The Northern Nigeria Customs Department at Lokoja gives the following returns for the year 1909: imports, £113,205; exports £24,573 (tin, £24,145). Idah Station returns: imports, £851,281; exports, £309,742 (tin, £26,871). Tonnage entered at Lokoja (1909), 112,771 (British, 94,387; German, 18,384); cleared, 113,846 (British, 95,478; German, 18,368). Lokoja is situated on the Niger, 250 miles from the delta. The

railway from Barijuko to Zungeru (22 miles) with a 3-mile branch line, cost (including construction of Kaduna Bridge) £41,761. Cost to December 31, 1909, of the Baro-Kano Railway under construction, £967,808. About 1000 miles of road have been constructed by the government. Telegraph lines, 2297 miles. Revenue and expenditure (1908-9), £538,444 and £540,643 respectively (in 1907-8, £508,005 and £498,302). Governor and commander-in-chief, Sir H. Hesketh Bell, with headquarters at Zungeru.

**NORTHWESTERN UNIVERSITY.** An institution of higher learning at Evanston and Chicago, Ill., founded in 1851. The number of students enrolled in the several departments of the university for the year 1910-11 was 4106, while the faculty numbered 395. The university includes the College of Liberal Arts, the College of Engineering, School of Music, Evanston Academy and the School of Oratory. These departments are at Evanston. The Law School, School of Pharmacy, Dental School and the School of Commerce are in Chicago. There were no notable changes in the faculty during the year 1909-10. A new gymnasium, costing \$307,000 was completed during the year. The College of Engineering initiated, at the beginning of the year, a five-year course. The School of Commerce has developed within two years from a few evening classes to an established school with 600 students. Courses for teachers have been instituted in the university, and an extension course in music has been established. Plans are being formulated for dormitories and a commons to be built on the campus at Evanston. The benefactions received during the year include one of \$127,000 for the increase of the plant. The productive investments on June 30, 1910, amounted to \$3,095,417, while the income from investments was \$175,240, and the total income from all sources was \$703,927. The President is A. W. Harris.

**NORWAY.** A constitutional monarchy of northern Europe. Capital, Christiania.

**AREA AND POPULATION.** According to the Statistiske Centralbureau, the land area is 309,986.40 square kilometres; water, 13,000.17; total, 322,986.57 square kilometres, or 124,707 square miles. Population (1900), 2,240,032; estimated, December 31, 1908, 2,352,786; 1909, 2,363,511. Marriages in 1908, 14,150; living births, 60,800 (4100 illegitimate); deaths, 33,100; emigration over-sea, 8497 in 1908, 16,281 in 1909. Christiania had (1900) 227,626 inhabitants (estimated, 1908, 235,674); Bergen, 72,251 (82,200); Trondhjem, 38,180 (42,627); Stavanger, 30,613 (36,200).

**EDUCATION.** Primary education is compulsory. In the towns, during the year 1906, 89,620 children received elementary instruction; in the rural districts, 271,401 (schools, rural, 5961). Secondary schools, 92, with (1906-7) 16,527 pupils; communal and private, 112, with 4048; normal, 10, with 969. The University of Christiania had (1908) 1584 students. The national and only state-endowed church is the evangelical Lutheran. All religions, Jesuitism excepted, are tolerated.

**AGRICULTURE.** Total productive area (1907), 1,112,550 hectares; under crops, 257,663 hectares (oats, 106,279; barley, 35,919; rye, 15,055; wheat, 5020; wheat and rye mixed, 6155; peas, 4163; forage plants, 14,172; potatoes, 41,164; other plants, 8789; fallow, 10,963; gardens, 10,034); pastures, 854,887. Area under forests,

6,841,100 hectares (state 853,000). Production (1907 and 1908): Cereals, 3,928,697 hectolitres, valued at 31,439,900 kronen in 1907; 5,709,130 hectolitres, valued at 47,859,900 kronen in 1908. Potatoes, 5,075,290 hectolitres, 24,385,300 kronen in 1907; 9,877,865 hectolitres, 43,012,600 kronen in 1908. Hay, 2,878,482 metric tons, 143,924,700 kronen in 1907; 3,600,000 tons, 180,000,000 kronen in 1908. Live stock (census of September 30, 1907): horses 172,468; cattle, 1,094,101; sheep, 1,393,488; goats, 296,442; swine, 318,556; reindeer, 142,623.

**FISHERIES.** The number of vessels engaged in cod fishing in 1908 was 20,055; dories, 10,267; numbers of persons engaged, 90,615; catch, 48,329,300; value of catch, 18,118,400 kroner. Herring catch, 1,977,218 hectolitres, value, 6,274,700 kroner; mackerel, 12,579,914, 1,313,700 kroner; whiting, etc., value 7,977,000 kroner; salmon and sea trout, 854,647 kilograms, 1,249,300 kroner; lobsters, 1,203,965, 1,147,100 kroner; oysters, 10,000 kroner. Total value of fisheries products in 1908, 36,090,200 kroner.

**OTHER INDUSTRIES.** Number of persons engaged in mining (1907), 6331; output of all mines, 459,620,000 kilograms; value, 10,834,000 kroner. Persons engaged in the manufacture of finished metal products, 258; output 1,604,800 kilograms, value, 3,135,000 kroner. Number of establishments for the principal manufacturing industries, 4258, employing 102,852 work people.

**COMMERCE.** The imports and exports for four successive years are given in thousands of kroner as follows:

	1905	1906	1907	1908
Expts. Nor. ....	183,920	214,856	219,972	211,248
Expts. For. ....	29,040	31,066	33,129	28,829
Total .....	217,960	245,922	253,101	240,077
Imports .....	312,336	343,524	385,708	376,129

The figures for 1909 are given as follows: imports, 386,617,000 kroner; exports, 264,326,000 kroner. Details of the special trade in 1909 are seen below in thousands of kroner:

Imports	1000 kr.	Exports	100 kr.
Cereals .....	64,300	Animals, etc. ....	84,100
Textiles .....	40,600	Wood, wares .....	42,600
Oils .....	32,600	Timber .....	34,800
Col. prods. ....	31,300	Minerals .....	25,300
Coal .....	30,200	Paper, etc. ....	22,000
Minerals .....	24,700	Skins, etc. ....	15,000
Metal mfrs. ....	21,500	Oils .....	9,000
Skins, etc. ....	17,300	Metals .....	4,400
Metals .....	16,600	Cereals .....	3,400
Yarns .....	11,700	Textiles .....	1,500
Animals, etc. ....	13,400	Misc. ....	16,700

The principal countries of origin and destination with the value of their trade in thousands of kroner, are given as follows:

	Imports from 1908	1909	Exports to 1908	1909
Germany .....	111,583	117,223	37,482	46,565
Great Britain .....	94,400	89,323	91,730	85,145
Sweden .....	41,468	41,687	12,361	16,817
Denmark .....	27,324	19,739	9,606	5,980
Russia .....	26,674	28,484	6,510	9,844
United States .....	18,104	28,306	6,161	18,986
Netherlands .....	16,690	12,878	21,477	8,391
Belgium .....	14,714	12,093	11,090	9,212
France .....	7,271	9,473	11,110	12,401

The merchant marine, January 1, 1909, included 5741 sailing vessels, of 721,905 tons; 1645

steam, of 846,588 tons; 1164 motors, of 9166 tons; making a total of 8550 vessels, of 1,577,650 tons.

Vessels entered (1907) at Norwegian ports, 12,924, of 4,402,461 tons (Norwegian, 6684, of 2,376,711; foreign, 6240, of 2,025,750); cleared, 12,945, of 4,422,323 (Norwegian, 6689, of 2,405,365; foreign, 2,016,958).

COMMUNICATIONS. Total length of railway lines, June 30, 1909, 2859 kilometres (1776.5 miles), of which 2429 kilometres were owned by the state. Receipts (total) from April 1, 1908, to June 30, 1909, 26,785,732 kroner; expenditure, 19,970,800. Length of roads in 1905, 29,692 kilometres; in 1850, 16,091. The state telegraph and telephone lines (officially reported together) had a total length, March 31, 1909, of 18,760 kilometres (11,656.9 miles); wires, 131,807 kilometres; stations, 1052; receipts, year ending March 31, 1909, 4,892,039 kroner; expenditure, 3,488,000. Number of post-offices, 3307; receipts (1908), 7,437,196 kroner; expenditure, 6,576,926.

FINANCE. The unit of value is the krone, worth 26.8 cents. Revenue and expenditure for four successive years may be seen in the following table (in thousands of kroner):

	1905-6	1906-7	1907-8	1908-9*
Revenue .....	100,081	114,209	114,937	144,588
Expenditure .....	98,715	109,800	108,118	137,459

\* From April 1, 1908, to June 30, 1909; the other years are to March 31.

Details of 1908-9 budget below:

The national debt stood, June 30, 1909, at 329,304,529 kroner. The new financial year began July 1, 1909, instead of April 1 as formerly.

The Norges Bank (state) had, at the end of 1908, assets, 115,300,411 kroner; liabilities, 86,398,965. The Kongeriget Norges Hypothekbank (also state) had capital 20,500,000 kroner; reserve, 1,000,000; delcredere fund, 300,000; bonds, 157,756,200; loans on mortgage, 168,830,516. Savings banks, 469; depositors, 908,004; deposits, 452,060,991 kroner.

ARMY. The Norwegian army is a national militia organized on a skeleton or cadre basis according to the terms of legislation passed by the Storthing in 1909. Service is obligatory and begins with the *ligne* in which a recruit serves the required amount of military duty required for 12 years. Then he passes to the *Landvaern* for 8 years and finally to the *Landsturm* until he is 50 years. The reorganization provided for more rapid mobilization so that a force of 70,000 could be raised while the military force available for service beyond the frontiers would be 30,000. The regiment is the unit of organization and in times of peace is made up by various classes of recruits serving for 72 days annually

in the case of infantry and 126 days for the artillery. The organization is in five brigades, and in 1910 the permanent staff maintained amounted to 8344 officers and men.

NAVY. The navy in 1909 consisted of 4 armored coast-defense vessels, of 14,720 tons; 2 protected cruisers, of 3500; 4 gunboats; 36 torpedo boats; 1 destroyer; 1 submarine; besides transports, schoolships, and obsolete gunboats. There are in active service about 130 officers; in the reserve, 150; and about 1000 petty officers and men permanently in the service. Between seven and eight hundred conscripts are required to go into training for six months.

GOVERNMENT. Norway is a constitutional monarchy, the executive being vested in the king, acting through a council of state. The legislative power rests in the representative Storthing composed of the Lakthing and the Odelsting. Woman suffrage has obtained since 1907. Haakon VII, the present king, was born August 3, 1872; married (1896) to Princess Maud of Great Britain; elected king of Norway, November 18, 1905. Heir-apparent, Prince Olav, born July 2, 1903. The council as constituted February 1, 1910, was composed as follows: Premier and Minister of State, W. Konow; Foreign Affairs, J. Irgens; Worship and Instruction, J. Qvigstad; Justice, H. Scheel; Commerce, Navigation and Industry, B. Braenne; Agriculture, B. Holtsmark; Public Works, H. Darre-Jenssen; Finance, A. Berge; Defense, Col. S. Bull.

#### HISTORY

NEW MINISTRY. The Storthing assembled on January 11, but several weeks passed before it began business, owing to the large number of doubtful election returns. On January 27, the Knudsen Ministry, which had been defeated in the elections, resigned and M. Konow formed a new Ministry. The latter had played an active part in the politics of the Left in the decade from 1880 to 1890, but had not been prominent in political affairs except occasionally since that time. Although there were 42 Conservatives in the Storthing and only 21 Liberals the new Ministry comprised 5 Liberal and 4 Conservative members. Among the Liberal Ministers were parliamentary veterans such as M. Arctander, Minister of Commerce, and M. Berge, Minister of Finance. Among the Conservatives, M. Boenne, Minister of Public Works, had previously served as a deputy. The Ministry had been formed, however, as the result of conferences with the Conservative chief, M. Bratlie, and collaboration between the two parties was hoped for.

PARLIAMENTARY SESSION. A new Ministry was added to the Cabinet, that of Agriculture, and M. Holtsmark was appointed to the office. During the first session of the Storthing in 1910, the question of adjournment which had been agitated for a long time was finally settled. At one time there had been a marked disagreement between the political groups in the Storthing as to the duration of the session, the Right being strongly opposed to prolonging the Parliamentary session, while the Left, believing in the concentration of power in that Chamber, desired longer sessions in order to control, so far as possible, all the acts of government; but after the separation from Sweden, the Left showed a tendency to confine its attention to the voting of the budget and to the determination of general lines of policy, leaving the Ministry to deal with the details of current business. It was there-

fore possible to agree on the rules for expediting parliamentary business and a number of such rules were put into effect. A change was also made in the method of paying the salaries of members, which had hitherto been a per diem allowance of 12 kroner. By the law of March 9, 1910, this was altered to a regular salary of 3000 kroner a year, thus making it of no pecuniary advantage to members to prolong the session. This law was carried by a vote of 97 to 24, the majority comprising not only the coalition of the government parties, but also a considerable part of the Left. It was opposed by the Socialists and Radicals. Several laws were passed dealing with economic problems, among which was the new law concerning trade marks, aiming to give the purchaser of an article redress against misrepresentations as to its source or maker; a law applying to artistic models the same rules that deal with industrial inventions; changes in the patent laws for the protection of the inventor; a law regulating stock companies for the purpose of protecting the stockholder against deception and misuse of funds. The last-named law required that henceforth stockholders should be kept fully informed as to the operations of the companies and that the entire capital should be subscribed before the company was definitely established. The rules were somewhat relaxed in regard to banking and insurance companies, but they, on the other hand, were required to have a reserve capital, and provisions were made for preventing the declaration of fictitious dividends and for the protection of the interests of the minority of the stockholders.

The commission appointed to frame rules concerning property rights in mountain lands, continued its important work. The higher mountain lands, in general, belonged to the state, the lower to the local communities, but the limits had never been precisely fixed. The work of the commission was aimed at solving some of the difficult problems that this confused condition had occasioned, and as a result of which it was expected that the property rights throughout the greater part of the country would be placed on a firm basis. A new step was taken in the advancement of the cause of woman suffrage. Down to 1910 woman voters were subject to a property qualification of 300 or 400 kroner at all elections, while among men the suffrage was universal. This arose from the desire to proceed cautiously in granting the suffrage to an inexperienced class of voters. But it was thought that the time had now come for removing this discrimination and a law was passed and signed by the government on June 7, 1910, abolishing this property qualification for the communal elections. It was still retained, however, for the legislative elections. The Minister of Commerce, M. Arctander, tried to persuade the King not to promulgate the law. This was not in accord with the desire of his colleagues or the majority in the Storting. Accordingly he resigned, and was succeeded by M. Braenne, former Minister of Public Works, who in turn was succeeded by M. Darre-Jensen. As to foreign affairs nothing of importance happened during the session, but measures were taken to ascertain the rights of Norway over the Arctic Island of Spitzbergen, which had recently become of economic importance, owing to the discovery of coal mines and to the increase in the whale and seal fisheries. Representatives of the three Powers of the North, Russia, Sweden and Norway, conducted negotia-

tions on this question at Christiania during the months of July and August.

**NORWEGIAN MARSH LANDS.** See DRAINAGE.

**NOVA SCOTIA.** A maritime province of Canada. Capital, Halifax. Area, 21,428 square miles. Population (1901), 459,574. For details, see CANADA. The government consists of the Lieutenant-Governor, appointed by the Governor-General of Canada, the Executive Council (responsible ministry), and a legislature of two houses, the Legislative Council (21 appointed members) and the Legislative Assembly (38 elected members). In 1910, Lieutenant-Governor, James Drummond McGregor; Premier, George Murray.

**NOVICOW, M.** See LANGUAGE, INTERNATIONAL.

**NOYES, ALFRED.** See LITERATURE, ENGLISH AND AMERICAN, *Poetry and Drama*.

**NUTRITION.** See FOOD AND NUTRITION.

**NUTT, ALFRED TRUBNER.** An English scholar and publisher, died by drowning, in May, 1910. He was born in London in 1856, and was educated at the University College School and in France. After leaving school in 1874 he served three years' apprenticeship in Leipzig, Berlin and Paris. In 1878 he joined his father's publishing business and in the same year became a member of the Folk-Lore Society, in which he was elected to the council in 1881, and as president, 1897. He was also a member of several other philological societies and in 1898 was joint founder of the Irish Texts Society. Mr. Nutt first recognized and gave publication to the poems of W. E. Henley. Among his notable achievements as a publisher were the initiation of the "Tudor Translations," the "Tudor Library," the "Northern Library of Old Norse Texts," and other series. His chief interest as a scholar was in Celtic legend and folk-lore, in which he was a leading authority and an extensive writer. Among his published works are: *The Legend of the Holy Grail with especial Reference to the Hypothesis of its Celtic Origin* (1888) and a volume of essays on Celtic Sagas and other subjects, entitled *The Voyage of Bran, Son of Febal, and The Land of the Living* (2 vols. 1895-97).

**NYASSALAND PROTECTORATE.** A dependency of Great Britain, lying around the shores of Lake Nyassa and including the Shire Highlands and the greater portion of the Shire River Basin. Area, 43,608 square miles; population (1909 estimate), 594 Europeans (mostly in the Shire province), 457 Asiatics, and about 996,166 natives. Capital, Zomba; chief town, Blantyre, with about 200 Europeans and 6000 natives. Mission schools, 1051, with 99 European teachers and 84,000 pupils. The chief products and exports are coffee (export 1908-9, 934,896 pounds; 1907-8, 780,133); tobacco (export, 1908-9, 570,102 pounds; 1907-8, 554,395); cotton (crop 1908-9, 756,120 pounds; 1907-8, 403,486); tea (crop 1908, 23,948; 1907, 5600). Livestock: 54,581 cattle, 18,796 sheep, 102,357 goats, 9943 swine. Imports in 1909-10, exclusive of transit, £112,629 (£140,916 in 1908-9); exports, £110,866 (£122,644); revenue, 103,032 (£80,534); expenditure, £108,728 (£76,647); grant-in-aid, £30,000 (£15,000). A railway (113 miles) connects Port Herald with Blantyre, and is to extend to Lake Nyassa via Zomba. Telegraph lines connect with the Cape, Chinde, and

Quilemane. The African Trans-Continental Telegraph Company's line has been extended to Ujiji on Lake Tanganyika. Steamers ply the lake and the rivers. Good roads are building in all directions, and life and property are effectively safeguarded. A governor, who is also commander-in-chief of the military forces (1910, Sir Alfred Sharpe), administers the country under the control (since April 1, 1904) of the Colonial Office.

**OAKLAND, CAL.** See INITIATIVE AND REFERENDUM.

**OATS.** Although weather conditions were more or less unfavorable in the more important oats-producing countries, the world's crop in 1910 ranked second to the largest crop ever produced. The following table gives the world's production in 1909 and 1910:

WORLD'S OATS PRODUCTION IN 1909 AND 1910

Countries	1909	1910
	<i>Bushels.</i>	<i>Bushels.</i>
United States .....	1,007,434,440	1,126,855,990
Canada .....	375,587,680	343,692,425
Germany .....	628,768,720	544,335,900
Austria .....	171,953,870	142,013,670
Bulgaria .....	9,356,080	13,194,350
Denmark .....	50,275,875	46,105,120
Spain .....	34,309,420	29,020,890
France .....	383,173,570	358,954,550
Great Britain and Ireland .....	217,853,145	216,759,935
Hungary (incl. Croatia and Slavonia) .....	98,651,340	82,932,865
Italy .....	43,405,620	28,576,965
Luxemburg .....	3,587,190	3,509,215
Norway .....	10,260,840	11,971,860
Netherlands .....	21,136,650	20,359,030
Rumania .....	27,795,370	30,521,260

Sweden .....	80,804,790	88,781,865
Japan .....	5,067,300	2,387,385
Algeria .....	10,674,240	13,259,500
Tunis .....	5,443,100	5,374,200
Argentina .....	40,651,000	('09-'10)
Chile .....	2,425,280	('09-'10)
New Zealand .....	9,750,790	('09-'10)

The above figures, taken from the Bulletin of Agricultural Statistics, International Institute of Agriculture Rome, are final for Germany, Spain, Hungary, Italy, Canada and the U. S., and preliminary for all other countries.

The total production was estimated at about 4,000,000,000 bushels as compared with 4,295,000,000 bushels in 1909, the record year. The United States led the world in total yield and also produced its largest crop on record. The oat crop of Russian ranked second only to the record crop of 1909.

The growing oat crop of the United States in 1910 was affected by dry weather conditions of two seasons. The fall and winter of 1909 had been dry and the soil moisture reserves had been reduced. The following spring supplied sufficient moisture for a timely germination of the seed and a good early growth but later on in the season, when the rainfall became inadequate, the moisture supply of the soil was soon exhausted and the crop suffered. However, unusually good crops in certain States enjoying more favorable weather conditions more than discounted the crop shortage in drouth-stricken regions and a record crop was secured. The total production was 1,126,765,000 bushels produced on 35,288,000 acres, the average yield per acre being 31.9 bushels, the highest acre yield since 1905. In 1909, the only other year in which the country's yield was more than a billion bushels, the production amounted to 1,007,353,000 bushels and the average yield per acre to 30.3 bushels. Owing to a fall in price the

farm value of the crop in 1910 on December 1 was only \$384,716,000 as compared with \$408,174,000 in 1909. The States leading in the production of oats in 1910 were as follows: Iowa produced 181,440,000 bushels on 4,800,000 acres; Illinois 171,000,000 bushels on 4,500,000 acres; Minnesota, 78,523,000 bushels on 2,736,000 acres; Nebraska 74,220,000 bushels on 2,650,000 acres; Wisconsin 69,136,000 bushels on 2,320,000 acres; Ohio 65,658,000 bushels on 1,765,000 acres; and Indiana 65,490,000 bushels on 1,850,000 acres. In North Dakota where the crop suffered most from drouth the average yield per acre was only 7 bushels. The Secretary of Agriculture points out that the share of the oat crop produced by the North Atlantic States has declined since 1889 from 10.8 to 8.6 per cent.; of the South Atlantic States from 2.9 to 2 per cent.; of the North Central States from 79.7 to 77.2 per cent.; and that the share of the South Central States has risen from 4.7 to 6.5 per cent.; and of the Western States from 1.9 to 5.7 per cent. Oats have been high in price during several years of short crops but the large yield of 1910 caused a marked reduction in the bushel value. December 1, 1909, the farm value per bushel was 40.5 cents and December 1, 1910, it was 34.1 cents.

**OBALDÍA, JOSÉ DOMINGO DE.** President of the Republic of Panama, died March 1, 1910. He was born in 1845, son of the President of Colombia. He studied at the Institute de Christo at Bogotá, and completed his education in the United States, studying at French's School in New Haven and subsequently in New York. In 1903 he was made governor of the Colombian province of Panama, and when the district declared its independence he was elected its second vice-president. In 1904 he was appointed Minister to the United States. He returned to Panama in 1908 and served as acting president in the absence of President Amador in Europe. While in office he removed certain officials whom he charged with dishonesty in office, and enforced the reimbursement of the government for money taken by them. When President Amador returned he restored the officials whom Obaldía had removed, and this incident became the issue in the next election. Obaldía's affiliations were Conservative, but he was also placed at the head of the Liberal ticket. His opponent, Señor Arias, withdrew prior to the election, and Obaldía's election was unanimous. He was a man of wealth and owned ranches in Panama and had interests in Costa Rica and other Spanish-American countries.

**OBERLIN COLLEGE.** An institution of higher learning at Oberlin, O., founded in 1833. The total number of students enrolled in the several departments of the college in 1909-10 was 1993, divided as follows: College, 982; Theological Seminary, 56; Conservatory of Music, 483; Academy, 356; Drawing and Painting, 72; Summer Session, 44. The faculty, including officers of administration, numbered 141. President King returned to the college after a year's leave of absence for study and travel in Asia, and Professor F. S. McLennen of the department of philosophy returned after a year's leave of absence for study in Europe and the United States. Professor Frederick O. Grover, professor of botany, returned from a year's leave of absence of study and travel in Europe. Professor E. B. Branson of the department of geology, resigned to accept a similar position

in the University of Missouri. Dr. Samuel H. Robinson became head of the department of physics. Dr. Carl E. Geiser received permanent appointment as head of the department of political science. During the year \$50,000 was received from the estate of John Stewart Kennedy. The productive funds of the college in 1909-10 amounted to \$1,842,590 and the income amounts to about \$90,000 annually. The president is Henry Churchill King.

**O'BRIEN, R. B.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**OCEANIA, FRENCH.** See FRENCH ESTABLISHMENTS; also ANTHROPOLOGY.

**OCCUPATIONAL DISEASES, NEED OF LEGISLATION IN THE UNITED STATES.** This subject received conspicuous attention during the year. Largely as the result of the efforts of the American Association for Labor Legislation various investigations were carried on and public sentiment to support advanced legislation was developed. As in the matter of compensation for industrial accidents, the United States is many years behind the best legislation of Europe on the proper safe-guarding of the health of the workers in occupations especially conducive to disease and physical deterioration. It is believed that, although such diseases are less obvious than industrial accidents, they result in greater loss of life and economic power. Nevertheless, although very elaborate legislation on employers' liability and workmen's compensation has been worked out little or nothing has been done with respect to this even more important subject.

**PHOSPHORUS POISONING.** The Association, in coöperating with the United States Bureau of Labor, completed an investigation into phosphorus poisoning in match factories. The results are published in *Bulletin No. 86* of the Bureau. Phosphorus poisoning results in the loathsome disease known as phosphorus necrosis or "phossy jaw," which eats away the bone tissues causing frightful disfigurement. The investigation covered fifteen factories, in which eighty-two cases of poisoning and records of more than one hundred others were found. Sixty-five per cent. of all the employees of these factories were found working under conditions exposing them to fumes of phosphorus and to the danger of poisoning, ninety-five per cent. of all women and eighty-three per cent. of all children employed were thus exposed. This exposure to a dreadful disease is no longer necessary owing to the discovery of a harmless substitute for phosphorus in match making. Through the efforts of the International Association for Labor Legislation the leading countries of Europe, including Germany, France, Great Britain, and Scandinavia had entered into treaties to prohibit the manufacture, importation, and sale of matches made from poisonous phosphorus. On the basis of the above investigation a bill was introduced in Congress in June by Representative Esch of Wisconsin, prohibiting the transportation in interstate commerce of matches made from white or poisonous phosphorus. Most of the principal manufacturers of the county signified their entire willingness to accept the provisions of the bill. In the August report of the Diamond Match Company attention of the stockholders was called to the impending legislation. It was also stated that the company was making preparations for the use of the harmless substitute for white phos-

phorus and that in all probability "before the proposed legislation is enacted the company will have succeeded in producing a satisfactory match without being required to use poisonous forms of phosphorus."

**WORK OF INVESTIGATION.** On June 10, was held in Chicago a Conference on Industrial Diseases. This was called by the Commission on Industrial Hygiene of the Association for Labor Legislation. It was attended by representatives of State commissions, manufacturers' organizations, and trade unions, as well as by persons interested in progressive social legislation. The Conference appointed a committee of five to urge upon the President of the United States the necessity of a national inquiry into this subject. Governor Deneen of Illinois appointed a commission of nine members, of which Professor Charles R. Henderson of the University of Chicago was made secretary, to investigate industrial disease in that State. This is the first such State commission in the United States. The legislature appropriated \$16,000 for this investigation. Both American and European experts were secured, either as advisers or direct investigators, and efforts were concentrated on the subject of lead poisoning. Some attention was to be given also to caisson disease, bisulphide poisoning and the effects of gases in metal works. The commission planned to investigate the shops and factories, the death records of trade unions, mutual benefit societies, coroners and hospitals; and to take the testimony of employers, workmen, and physicians. It was to report in January, 1911.

Perhaps the most thoroughgoing study of this subject is the English treatise on *Diseases of Occupation*, by Sir Thomas Oliver. In this, the subject is classified under the following heads: (1) diseases due to gases, vapors, and high temperatures; (2) diseases due to increased or decreased atmospheric pressure; (3) diseases due to metallic poisons, dust, and fumes; (4) diseases due to organic and inorganic dust and heated atmospheres; and (5) diseases due to fatigue. Mr. John B. Andrews, Secretary of the American Association for Labor Legislation, declared that a great deal of the modern labor problem is a health problem. He said, in briefly classifying occupational diseases, that there is a long list of diseases occasioned by the breathing of impure air; a second group due mainly to extremes or rapid variation in temperature; a third class due to humidity; and a fourth due to over fatigue.

The second meeting of the Permanent International Commission for the Study of Diseases of Occupation met at Brussels, Belgium, September 10-14. This commission is composed mainly of physicians, members of public health boards, factory inspectors, economists, and social workers of the United States and principal European countries. Its membership combines expert scientific medical and chemical knowledge with intimate knowledge of industrial facts. The topics for discussion included lead, mercury, and white phosphorus as industrial poisons, temperature and dust in factories, work under compressed air, effects of fatigue and overwork, and conditions of special trades. The secretary of the American section is William C. Hanson, M. D., State Board of Health, Boston, Mass. The next session is to meet at Vienna in 1912.

**OGILVY, J. S.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**OHIO.** One of the East North Central Division of the United States. Its area is 41,040 square miles. Its capital is Columbus.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 4,767,121 as compared with 4,157,545 in 1900 and 3,672,329 in 1890. The increase in the decade from 1900 to 1910 was 14.7 per cent. The State ranks fourth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Ohio ranks fourth among the States in the production of coal. It is surpassed by Pennsylvania, West Virginia, and Illinois. The coal production in 1909 was 27,919,861 short tons, as compared with a production in 1908 of 26,270,639. According to the estimates of the United States Geological Survey, the production of 1910 increased between three million and four million tons over 1909, reaching a total of approximately 31,500,000 short tons. This is the first year in which the production of coal in the State has exceeded 30,000,000 tons. This was due chiefly to the long continued idleness in the fields west of the State. The marked curtailment of the Illinois output, which normally goes to Chicago and the northwest, created a demand for coal in Ohio, which was not affected by the strike to the same extent as Illinois. The prices for Ohio coal ranged during the year from 25 to 35 cents a ton higher than in 1909. The only strike of any importance during the year was one of eight months' duration in the Crooksdale and in the Goshen or middle Ohio district. This brought increased demands on the Hocking Valley district, which increased the production fully 25 per cent. during the year. The State is an important producer of petroleum. The production in 1909 was 10,632,793 barrels. Of these 5,915,357 barrels came from the Lima field and 4,717,069 barrels from the southeastern part of the State. The Lima field has shown a decline in recent years. The production of that field in 1908 was 6,748,676 barrels. The southeastern fields, on the other hand, showed an increased production. There were produced in 1908 in these fields 4,109,935 barrels. The value of the product in 1909 was \$13,225,377 as compared with a value of \$14,178,502 for the product of 1908. There were in the State at the close of 1909 2280 wells. The production in 1910 according to the estimates of the United States Geological Survey showed a decrease from the previous years in the total production, due largely to the desire to invest in the newer ventures of Illinois. The cement industry of the State is important. There were produced in 1909 1,770,900 barrels valued at \$1,329,547 as compared with 1,521,764 valued at \$1,305,210 in 1908. The State ranks first in the value of its clay products. These in 1908, the latest year for which statistics are available, were valued at \$26,622,490. In the production of salt Ohio ranks third, being surpassed only by Michigan and New York. In 1908 there were produced 3,427,478 barrels, valued at \$864,710. Ohio is second only to Pennsylvania in the production of pig iron. The amount produced in 1908 was 2,861,325 long tons. Other important mineral products were grindstone, coal products, building stone, natural cement, and metallic paints.

**AGRICULTURE.** The acreage, production, and

value of leading crops in 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	3,960,000	144,540,000	\$66,488,000
1909.....	8,875,000	153,052,000	85,715,000
Wm.wheat, 1910	1,944,000	31,493,000	28,344,000
1909	1,480,000	23,532,000	26,056,000
Oats, 1910.....	1,765,000	65,658,000	22,980,000
1909.....	1,730,000	56,225,000	23,052,000
Rye, 1910.....	56,000	924,000	665,000
1909.....	57,000	980,000	745,000
Barley, 1910....	31,000	884,000	530,000
1909.....	32,000	829,000	506,000
Buckwheat, 1910	14,000	252,000	189,000
1909	15,000	318,000	248,000
Potatoes, 1910..	182,000	14,924,000	7,611,000
1909..	182,000	16,926,000	9,479,000
Hay, 1910.....	2,840,000	3,948,000a	49,350,000
1909.....	2,820,000	4,033,000	43,960,000
Tobacco, 1910..	92,700	75,087,000b	6,382,395
1909...	90,000	83,250,000	8,741,250

a Tons. b Pounds.

**EDUCATION.** The school population of the State, according to the enumeration in 1910, was 1,227,127. The enrollment for the year was 838,080 and the average daily attendance was 648,544. There were about 1000 high schools in the State. The average monthly salary in the township elementary schools was: for men, \$46; for women, \$45; in the high schools, for men, \$83; for women, \$59; in other districts, city, village, special, and elementary schools, for men, \$56; for women, \$46; in the special high schools, men \$87; women, \$66. The total expenditures for education during the year amounted to \$27,328,460.

**FINANCE.** The report of the State treasurer for the fiscal year ending November 15, 1910, showed a balance at the beginning of the year of \$4,170,880. The total receipts of the year were \$11,567,122, and the total expenditures were \$12,074,835, leaving a balance at the close of the year of \$3,363,167. The school fund of the State amounted to \$2,559,781, the sinking fund to \$610,643, and the university fund to \$770,500.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under State control, and their populations on November 15, 1910, are as follows: Athens State Hospital, 1328; Cleveland State Hospital, 1523; Columbus State Hospital, 1700; Dayton State Hospital, 1167; Longview Hospital, 1322; Massillon State Hospital, 1630; Toledo State Hospital, 1874; Ohio Hospital for Epileptics, 1433; Home for Soldiers' Widows, Army Nurses, etc., 38; Soldiers' and Sailors' Home, 1460; Soldiers' and Sailors' Orphans' Home, 677; State School for the Blind, 263; State School for the Deaf, 451; Institution for Feeble-Minded, 1570; Ohio Penitentiary, 1570; State Reformatory, 885; Boys' Industrial School, 1180; Girls' Industrial School, 547; Total, 20,618.

The most noteworthy change in legislation relating to charities and corrections made by the last legislature was the passage of what is commonly called the "pay patient law." By this law the patients admitted after the enactment of the measure will be supported as far as possible by relatives, guardians, and friends. The amount to be paid for their support is to be determined by the Board of State Charities. The amount shall not be greater than the average gross per capita cost of the preceding year. The Board is to appoint an agent to investigate the financial condition of inmates now in these institutions or hereafter committed and of the

relatives liable for their support in order to determine the ability of any inmate or relative to make payment in whole or in part for the support of the inmate. In case the estate of the inmate is sufficient for his or her support and no guardian has been appointed for such estate, the agent shall petition the probate court of the proper county to appoint a guardian. By the provisions of this act a husband may be held liable for the support of a wife while an inmate of any of these institutions, a wife for a husband, a father or mother for a son or a daughter, and a son or daughter or both for a father or mother. This act does not apply to honorably discharged soldiers or sailors of the United States who are inmates of these institutions. This law proved very satisfactory during 1910, though it will probably require two years before the whole population of the institutions affected by the act have been investigated and matters adjusted among the relatives and guardians.

#### POLITICS AND GOVERNMENT

The State legislature met in 1910 and the principal measures passed will be found noted in the section on *Legislation* below. Governor Harmon in his annual message to the legislature recommended the ratification of the income tax amendment to the constitution. The amendment was, however, never reported out of committee.

**CONVENTIONS AND ELECTIONS.** The campaign and the election of 1910 were of unusual national interest in Ohio as the State's attitude toward President Taft's administration was of great interest throughout the country. In 1908 the State elected a Democratic governor, while at the same time giving President Taft a majority of about 70,000 votes. This was due largely to factional disputes in the Republican party and to the powerful personality of Judson Harmon, the Democratic candidate for governor. Governor Harmon has in the past few years been frequently spoken of as a possible presidential candidate, and it was assumed that if he were able to carry the State in 1910 he would be one of the most prominent Democratic candidates for the presidency in 1912. He had no opposition for renomination. The Republican party, on the other hand, was divided by factional differences as it has been for several years. These disputes were largely over local issues and resulted in an effort for control by contending elements of the party. The progressive wing, although not so conspicuous in Ohio as in many other mid-western States, was strong enough to present a formidable front to the regular machine leaders, headed by George B. Cox of Cincinnati, who has been for several years the leader of the Republican political machine. The leaders of the progressive element numbered James R. Garfield, Secretary of the Interior in President Taft's Cabinet.

The Democratic State Convention met at Dayton, on June 22. Governor Harmon was renominated by acclamation and a resolution was adopted declaring him to be the choice of the Democrats of Ohio for President in 1912. The platform adopted by the convention reviewed the administration of Governor Harmon and declared that his administration had been one of the best ever enjoyed by the State. The platform favored the ratification of the income tax amendment to the Federal constitution. It called for election of United States Senators by

direct vote of the people and pledged the Democratic legislature to take the necessary action looking to a convention of the States to adopt the constitutional amendment required. It favored the application of business methods to the administration of the Federal government and demanded a revision of the present tariff, reducing rates so as to lower the prices imposed on consumers. It also favored the immediate enactment of a dollar a day pension bill introduced into the 60th and 61st Congresses by an Ohio Representative, General Isaac R. Sherwood. The convention nominated for lieutenant-governor, Atlee Pomerene.

The Republican State Convention was held on July 26 and 27. Among the candidates for nomination for governor were Representative Longworth, James R. Garfield, Judge O. B. Brown, and Warren G. Harding. Judge Brown was the favorite candidate of the State machine headed by George B. Cox. Mr. Garfield represented the progressive element and he urged before the convention that the platform approve several projects of progressive legislation. On the first day of the convention, the candidate for the chairmanship of the platform committee, supported by Mr. Garfield, was defeated by a vote of 15 to 3. Representative Longworth was chosen temporary chairman at the first day's session and he made an address in which he strongly praised President Taft and his administration. The permanent chairman of the convention was Senator Theodore E. Burton, who, in his address of acceptance, defended the tariff and the recent legislation and praised the legislation passed by Congress. For the nomination for governor three ballots were required. On the first ballot a large number of votes was cast for Warren G. Harding, who had 485, Judge Brown had 413, Mr. Longworth 92, and Mr. Garfield, 73. On the second ballot Mr. Harding had 497, Judge Brown 363, and Mr. Longworth 164. On the third ballot Mr. Cox threw his support from Judge Brown to Mr. Harding and this resulted in the latter's nomination with 746 votes, 534 being necessary for a choice. Mr. Harding is editor of a newspaper at Marion, was lieutenant-governor in 1904-06 and had long taken an active part in State politics. The convention passed a resolution endorsing the administration of President Taft and calling for his renomination. It reviewed the most important enactments of the administration and declared the record of its achievement and of that of the 61st congress unequalled in the history of the government. The platform favored such amendment to the anti-trust law as official judicial interpretation proves to be necessary for the proper regulation of monopolies. It commended the action of Congress in the creation of a commission to investigate the question of employers' liability laws, and workmen's compensation acts. It demanded the enforcement of existing laws and the enactment of new laws for the protection, wise use and conservation of all the natural resources under the control of the Federal government. It favored legislation for the revival of the merchant marine, an adequate navy, arbitration for the settlement of international disputes, publicity for campaign funds and ratification of the income tax amendment. Certain planks advocated by Mr. Garfield and others asking for the recall and for ballot reform, for the enlargement of the powers of the tariff board, and for measures to check

the influence of special interests were omitted from the platform. The campaign which followed the nomination was aggressive from its beginning. In the last weeks, four cabinet officers, Secretaries Knox, MacVeagh, Wilson, and Attorney-General Wickersham made speeches in the State urging the people to support the President by carrying his own State for the Republican party. Secretary Knox highly commended the new tariff law, declaring it the wisest and broadest measure for practical reciprocity ever enacted. Secretary MacVeagh spoke of it as the first legislative step in the progress of actual revision and declared that the President was the leader of this movement for tariff reform. Ex-President Roosevelt also made several speeches in the State and in the course of these made sharp attacks on Governor Harmon, declaring that as a receiver of a bankrupt railroad he had approved the indirect payment of rebates. He also asserted that Governor Harmon had wished to indict Paul Morton in the Atchison rebate cases without having any evidence against him. Governor Harmon was at that time Attorney-General of the United States under President Cleveland. Governor Harmon replied to these assertions with a general denial. The election on November 8 resulted in the reelection of Governor Harmon by a plurality of 100,377 votes. The total vote cast was for Harmon, 477,077, and for Harding, 376,700. The Democrats elected the entire State ticket. A Democratic State legislature was also elected with a majority on joint ballot of 35. This ensures the election of a Democratic Senator to succeed Senator Dick, whose term expires in 1911.

**OTHER EVENTS.** On February 17 at a referendum election held in Cleveland the so-called Taylor street railroad grant was approved by a majority of 8110 in a total vote of 46,504. This franchise had been proposed by Judge Robert W. Taylor of the Federal district court, with headquarters in Cleveland, and had been passed by the city council December 18 during the last days of the Tom L. Johnson administration. The distinctive feature of the ordinance is that it proposes to furnish the public transportation service at bare cost, plus a 6 per cent. return to stockholders, and no more. A sliding scale of fare is arranged, starting with a flat 3 cent fare, though transfers instead of being free are sold at 1 cent each. The ordinance went into effect on March 1 and the initial rate of fare was to continue for a trial period of eight months. Long before the expiration of the eight months, however, it was seen that the success of the experiment was such that the low fare would continue for an indefinite period longer. Under no condition is the railroad company permitted to charge more than four cents cash fare or seven tickets for a quarter. The city council retains a close supervision of the financing and operation of the road. The city has the right to purchase the lines at the end of the 25 year grant, if the State law then permits. A street railway commissioner acts as adviser to the city. His salary of \$12,000 and the additional \$28,000 a year which the ordinance permits him to spend for the expenses of his office the company is required to pay. Gerhard M. Dahl, a Cleveland lawyer, was appointed the first commissioner. Judge Taylor died suddenly on November 26.

On July 8, a mob of 500 citizens broke into

the county jail in the city of Newark and took from it a prisoner named Carl Etherington and hanged him in the county courthouse square. Etherington was one of a party of detectives employed by the Anti-Saloon League, who had made a raid upon a beer saloon occupied by a former chief of police of the city named Howard. While they were in the saloon Howard was shot by Etherington who asserted that he had acted in self defense. The officers were engaged in looking for cases of violation of the law against the sale of liquor, which is forbidden in Newark. The officials of the Anti-Saloon League declared that the mob was allowed to lynch Etherington because of the cowardice of the mayor and the weakness of the police. On July 10 Governor Harmon went in person to Newark and inspected the jail. After questioning the officials of the city he suspended the mayor on the following day. Residents of the city promptly filed charges of neglect of duty against the sheriff of the county. A new mayor was appointed and he removed the chief of police and captain of police for failure to enforce the liquor laws. The sheriff resigned his office as did the mayor, Herbert Atherton, thus avoiding a trial for neglect of duty. Fifteen men who took part in the lynching were arrested and warrants were served on thirty-five saloon keepers for violating the law. On August 10 a grand jury returned forty indictments in connection with the lynching of Etherington. Among those indicted were several of the most conspicuous politicians of the city.

For an account of the street car strikes and the accompanying riots in Columbus during the summer of 1910, see the article **STRIKES**.

Charges of wholesale fraud in the elections on November 8 in Adams and Hamilton counties were made in December and as a result several thousand citizens were indicted by grand juries for corrupt practices.

On December 21 Cincinnati was visited by one of the most disastrous fires in the history of the city. The scene of the fire was the factory district and the factories burned included shoe factories, leather concerns, and safe and lock factories. The total loss was \$1,500,000 and about 1500 persons were thrown out of work.

**LEGISLATION.** Among the important measures enacted at the legislative session of 1910 were the following: Measures were passed providing for agricultural education in the State, and permitting county commissioners to cause marshy lands to be drained and reclaimed for agricultural purposes. Several important measures were passed relating to banks and banking. The publication either orally or in writing of statements derogatory to a bank was made a criminal offense. The child labor laws were slightly amended, and age and school certificates, and the duties of truant officers were revised. A measure was enacted forbidding messenger boys under 18 years of age being employed between nine o'clock at night and six in the morning. An amendment to the constitution dealing with the method of submitting to the voters of the State the question of the constitutional convention, was submitted to the people. The laws dealing with corporations were amended and a section was added to the trust act which declares that foreign organizations violating the act shall do no business in Ohio. Proceedings by quo warranto are authorized and by injunction against violation of the

law. All parties to any trust agreement are to be made parties to the suit whether they live in the State or not. An act was passed punishing the making or use of false statements to obtain property or credit, and a law for the punishment of dishonest peddlers was revised. A measure was passed authorizing the governor to remove any sheriff who shall permit a mob to take a prisoner from his custody. A commission was appointed to investigate the subject of an employers' liability law and a law for workmen's compensation. A measure was passed declaring that minor employes working contrary to the child labor law, are not deemed guilty of contributory negligence nor will assume any risk, but the employer may show fraud or misrepresentation of such employe in mitigation of damages. The employe is also given the right to begin a new action within one year after final judgment against him, otherwise than on the merits, although the statutory time limit may have in the meantime expired. Employes with a judgment against their employers are subrogated to all the employer's rights in insurance contracts. A personal representative of the deceased employes has all the rights of the deceased. A measure was also passed declaring void those provisions in employers' liability insurance policies which render the policies inoperative in case of the employers' insolvency; and permitting employers and insurance companies to be joined in the same action. These provisions, however, were vetoed by the governor. A measure was passed regulating the sale of cocaine in the State. A law was passed permitting city boards of education to establish special elementary schools for children with tuberculosis. October 12 was made a legal holiday, to be known as Columbus Day. Several amendments were made to the insurance laws. By one of these minors between 15 and 21 years of age may contract for life insurance, surrender policies, and give valid discharges. The selling of any insurance note before delivery of the policy is made a criminal offense. Rebates direct or indirect on fire insurance policies are penalized. There is also a penalty for changing, destroying or altering any book or papers which are material to the investigation of State inspection officers. A statute was passed requiring the selection of candidates for congress and delegates and alternatives to the national conventions at primary elections by direct popular vote. A measure was passed extending the classified service to cover all appointed city school district employes, except school physicians and a few others. After three years' service no such employe may be discharged except for cause after a hearing. A law was passed limiting the tax rates. In any one district the rate is not to exceed ten mills on one dollar for all purposes under certain conditions. Important legislation was enacted relating to white slaves, as a result of the agitation carried on during 1909-10.

**STATE OFFICERS.** Governor, Judson Harmon; Lieutenant-Governor, Atlee Pomerene; Secretary of State, Charles H. Graves; Treasurer, David S. Creamer; Auditor, Edward M. Fullington; Attorney-General, Timothy S. Hogan; Adjutant-General, Charles C. Weybreth; Commissioner of Insurance, Charles C. Lemert—all Democrats, except Fullington.

**SUPREME COURT.** Chief Justice, William T. Spear; Associate Judges, James G. Johnson,

Maurice H. Donohue, John A. Schauck, William Z. Davis, James L. Price; Clerk, Frank McKean—all Republicans except Johnson, Donohue, and McKean.

**STATE LEGISLATURE, 1911:** Republicans, Senate, 15; House, 49; joint ballot, 64. Democrats, Senate, 19; House 70; joint ballot, 80. Democratic majority, Senate 4; House, 21; joint ballot, 25.

**OHIO STATE UNIVERSITY.** An institution of higher learning at Columbus, O., founded in 1870. The total number of students registered in 1909-10 was 3275, while the faculty numbered 220. Dr. William Henry Scott, professor of philosophy, retired after thirty-eight years of service. Lewis Addison Rhoades, Ph. D. (q. v.), professor of German, died August 30, 1910. George David Hubbard, Ph. D., assistant professor of geology, resigned to accept the headship of the department of geology at Oberlin College. Dr. Joseph A. Leighton of Hobart College, was appointed professor of philosophy to succeed Dr. Scott. The productive funds of the University amounted in 1909-10 to \$924,053 and the present income is about \$925,000. The President is W. O. Thompson, D. D., LL. D.

**OHIO VALLEY EXPOSITION.** See EXPOSITIONS.

**OKLAHOMA.** One of the West South Central Division of the United States, formed in 1907 by the union of Oklahoma and Indian Territory. Its area is 70,057 square miles. Its capital is Oklahoma City.

**POPULATION.** The population in 1910, according to the Thirteenth Census, was 1,657,155 as compared with 790,391 in 1900 and 258,657 in 1890. The increase in population in the decade 1900 to 1910 was 109.7 per cent. Oklahoma was second among the States in the percentage of increase in the decade 1900 to 1910, being surpassed only by Washington. It ranks twenty-third in point of population, whereas in 1900 it ranked thirtieth. The population and percentage of increase in 1890 and 1900 includes Indian Territory. The population of the larger cities and towns will be found in the tables of the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The development of the petroleum fields of the State has been one of the most important features in the mineral developments of the country in recent years. The Oklahoma fields form, with the Kansas fields, the Oklahoma-Kansas field, which is second in production among the petroleum fields of the country. In recent years the production in Kansas has decreased while that in Oklahoma has slightly increased. There were produced in 1909 47,859,218 barrels of petroleum valued at \$17,428,990 as compared with a production in 1908 of 45,798,765 barrels, valued at \$17,694,842. There were 2742 completed wells in the State at the end of 1909. The coal production of the State has increased greatly in the last few years. The production of 1909 showed an increase over that of 1908, which, however, was surpassed by that of 1907. The production in 1909 was 3,116,500 short tons as compared with a production in 1908 of 2,948,116 short tons. The coal mining industry of 1910, according to the estimates of the United States Geological Survey will show a decrease from that of 1909. The gold products of the State are of considerable value. In 1908 these amounted in value to \$562,929. Among other mineral products are

coal products, gypsum, lime, mineral waters, stone, sand, and gravel.

**AGRICULTURE.** The acreage, production, and value of leading crops is given for 1909 and 1910 in the following tables:

	Acreage	Prod. bu.	Value
Corn, 1910.....	5,772,000	92,352,000	\$47,100,000
1909.....	5,950,000	101,150,000	55,632,000
W. wheat, 1910	1,556,000	25,363,000	22,066,000
1909	1,225,000	15,680,000	15,837,000
Oats, 1910.....	632,000	23,068,000	8,535,000
1909.....	550,000	15,950,000	7,337,000
Barley, 1910...	32,000	960,000	518,000
1909	30,000	690,000	448,000
Rye, 1910.....	4,000	35,000	45,000
1909..	4,000	54,000	50,000
Flaxseed, 1910..	5,000	45,000	50,000
Potatoes, 1910.	26,000	1,560,000	1,560,000
1909	27,000	1,890,000	1,796,000
Hay, 1910.....	900,000	945,000a	7,938,000
1909.....	900,000	810,000	6,913,000
Cotton, 1910 ..		900,000b	
1909		544,954	

a Tons. b Bales.

**FINANCE.** The report of the State Treasurer for the fiscal period November 30, 1908, to November 30, 1910, showed a balance in the treasury on November 30, 1908, of \$32,124. The total receipts during the period were \$3,386,488 and the total expenditures were \$3,212,130 leaving a balance in the treasury November 30, 1910, of \$174,358. The chief receipts were from taxes, from insurance companies and from State institutions. The chief disbursements were for education, maintenance of State institutions, and support of the executive offices.

**CHARITIES AND CORRECTIONS.** None of the charitable and correctional institutions of the State is completely constructed, but nearly all are in operation in temporary quarters. Among these are the Oklahoma State Home at Pryor Creek, which cares for orphans and had an average population in 1910, of 130; the Oklahoma State Home, formerly the Whitaker Orphan Home, which contains 53 children, nearly all of whom were on the tribal rolls of Indians; the State School for Feeble-Minded at Enid was established by the second legislature of the State, but until August, 1910, no steps were taken toward building; the Oklahoma Hospital for the Insane at Supply, which had an average of 511 patients during the year. This is housed in the residences and buildings of old Fort Supply. For the Eastern Hospital for the Insane, \$200,000 was appropriated by the legislature of 1909 to construct buildings. The buildings have not yet been completed. The other institutions of the State are Oklahoma Hospital for the Insane at Norman, the Oklahoma Training School, Oklahoma School for the Blind, Oklahoma School for the Deaf, the Industrial Institute for Negro Dependent and Defective Children, the State Reformatory at Granite and the State Penitentiary at McAlester. Buildings for most of those institutions are in course of construction or money has been appropriated for their construction in the future.

#### POLITICS AND GOVERNMENT.

There was no regular session of the legislation in Oklahoma in 1910 as the sessions are biennial and the last was held in 1909. There were special sessions, however, held for various purposes at the call of Governor Haskell, and the most important measures passed at these sessions will

be found in the paragraph *Legislation* below. On January 12, the governor called a special session in order to have certain statutes relating to finances amended.

**ELECTIONS.** Primary elections for the nomination of candidates for governor and for Congress were held on August 2. An important measure also to be decided at this election was that relating to the disfranchisement of negroes. This was in the form of the so-called "grandfather clause" amendment to the constitution similar to clauses enacted by several Southern States, exempting illiterate whites and Indians. As a result of the primaries Joseph W. McNeal, Republican, and Lee Cruce, Democrat, were nominated for governor. The grandfather clause amendment was carried, depriving about 30,000 negroes in the State from franchise. There was no real issue in the campaign between the insurgents and regulars in the Republican party. The election on November 8 resulted in the election of the Democratic candidate for governor, Mr. Cruce. He received 120,218 votes as against 99,520 votes for the Republican candidate and 24,707 for the Socialist candidate. The Democrats also elected three congressmen, while the Republicans re-elected two. A constitutional amendment granting suffrage to women was rejected at this election as was also a measure providing for local option. The operation of the grandfather clause mentioned above threatened disturbances at the polls. The Federal authorities refused to admit the constitutionality of the measure and threatened arrests for conspiracy followed any attempt made to prevent negroes who can read and write from voting. The State Supreme Court had decided that the grandfather clause is constitutional. The threatened disturbances, however, did not take place. In Guthrie all precincts where negroes voted were not counted in the returns, although Attorney-General West held a final opinion that no precinct could be thrown out unless the face of the returns showed gross frauds. As a result of the complications over the enforcement of the clause against negroes special grand juries were called together at Guthrie, McAlester and Wagoner to consider alleged violations of the law.

An attempt was made to bring about the removal of the capital of the State from Guthrie to Oklahoma City. An election was held on June 11, providing for such a removal and the capital was removed by Governor Haskell to Oklahoma City, although strong protests were made by citizens of Guthrie and others against this action. On July 27 the State Supreme Court denied the right of prohibition asked by the governor to enjoin Judge Huston in the District Court from enforcing the injunction issued by him to restrain the removal of State offices and records from Guthrie to Oklahoma City. By this decision all State officers, with the exception of the governor over whom the court has no jurisdiction, were required to remain in Guthrie pending the final determination of the case in court. On November 15 the court made its final decision fixing the capital at Guthrie. The court declared the election held on June 11 unconstitutional on the ground that the title of the ballot did not conform to the law. Governor Haskell declared his intention to call a special session of the legislature to remove the capital to Oklahoma City, which was done, and the capital of the State is now fixed at Oklahoma City.

The most sensational events in the State from the national standpoint were related to the charges made in the Senate near the close of Congress by Senator Gore of Oklahoma that an attempt had been made to bribe him to withdraw his opposition to contracts made with the Indians of the Choctaw and Chickasaw tribes for the sale of coal and asphalt lands valued at more than \$30,000,000. The government had authorized the sale of these lands and a certain law firm had secured contracts from some 10,000 Indians to act for them as their representatives in the sale of these lands for a fee of 10 per cent., and Senator Gore accused this lawyer and his agents of having attempted to bribe him. Senator Gore in January introduced a resolution providing for a general investigation into the affairs of the "Five Nations," and requiring the Attorney-General and Secretary of the Interior not to confirm any contracts pending the investigation. In May he introduced another measure making all contracts relating to money and property owned by the Indians subject to approval by Congress. The Senator alleged that he was approached by the would-be briber to withdraw this bill or at least have it reported unfavorably. He further related that the man who had offered him money had mentioned the names of several other men high in government office as being interested in the transfer of the lands. A committee of Senators was appointed to investigate these charges.

During the first week in August testimony was taken at Muskogee by a special committee of the House of Representatives regarding their charges. Senator Gore was made the first witness. He said that in 1905 he had directed the attention of Senator La Follette and others to the great value of the lands. Afterward tribal contracts for the sale of these lands were obtained by J. F. McMurray, who was to receive a commission of 10 per cent. These contracts were disapproved of by President Roosevelt. The attorney of Mr. McMurray then procured contracts of the Indians as individuals. Senator Gore declared that he had told Mr. McMurray, who came to his office, that 10 per cent. was too much and that the Indians ought not to pay any commission. Furthermore, in letters to the President and others, he denounced the contracts. He said that he had been told in Secretary Ballinger's office that former Senator Long of Kansas had an interest in them. Senator Gore asserted that he introduced a resolution providing that all such contracts be void unless approved by Congress, and a favorable report was ordered on this resolution. On the following day, Jacob L. Hamon, a lawyer from Oklahoma, and formerly chairman of the Republican committee of that State, came to see him, saying that he was interested in the contracts and asked that the Senator's opposition should cease. Senator Gore said that \$25,000 or even \$50,000 was promised to him by Hamon if opposition should be withdrawn. He later added that Senator Curtis of Kansas, Congressman McGuire of Oklahoma, and a man of even higher position, were interested in the contracts. In response to a request from the members of the committee, the Senator gave the name of the man thus alluded to as that of Vice-President Sherman. The Senator testified that his relations with Hamon had been friendly and that he had been interested with him in business projects. Congressman C. E. Creager of Oklahoma followed Senator Gore

on the witness stand. He testified that he had met Hamon at the Washington Hotel by appointment and that he had been urged by the latter to withdraw his opposition. Hamon, he declared, told him that he might have an interest in the profits. The witness declared that he would not permit Hamon to go any further. D. F. Gore, the Senator's brother and secretary, testified as to Hamon's interview with the Senator. He declared that he heard no part of the conversation, being in the next room, but when Hamon came out, complained that the Senator was hard on his friends. Hamon's reply to this testimony was a series of denials. He declared that he had called upon Senator Gore to talk about his campaign and that he had never said anything about the contracts or about Vice-President Sherman, or Senator Curtis or Congressman McGuire. He declared also that he had never spoken of the contracts to Creager and declared that he never had any interest in them. He asserted that he had frequently loaned money to Senator Gore, who just before the adjournment of Congress had asked him for \$5000 to pay a debt that he owed to Senator Owen of Oklahoma. Hamon declared that he had been in Washington attending to the interests of Governor Haskell, then under indictment, and that he had not seen McMurray for a year. On cross examination he attacked the character of Senator Gore, saying that he believed that the Senator could be safely approached with an improper offer and that he had taken bribes. He furthermore charged that Senator Gore had entered into a combination with him and others, binding themselves not to bid against each other in the purchase of Indian lands. Green McCurtain, a Choctaw Indian chief, testified that he had protested against the individual contracts, but that he had been urged by George W. Scott to withdraw his opposition, offering him one-fourth of the 10 per cent. commission if he would do so. The Indians, he said, had signed the contracts because they had lost faith in the government officers, who had not kept their promise. His son, D. C. McCurtain, testified that when he was a Choctaw delegate at Washington, McMurray at an interview, had offered him \$25,000 if he would not oppose the contracts. Vice-President Sherman declared that there was no shadow of foundation for the alleged reference to him made by Gore. He declared that the statement that he had any interest in these or any other contracts made with the Indians, or any interest in any contract having anything to do with the government in any way or that he had profited by his public service was absolutely false. Senator Curtis denied also that he had any such relations with the contracts as had been charged and declared that he and the Vice-President had called upon the President by invitation to discuss the questions relating to the Indians and that both of them opposed the 10 per cent. contracts, holding that the Indians needed no attorneys and should not pay any commission. McGuire denied that he had ever been interested in the contracts and said that he had received no financial aid from anyone who was interested in them. Mr. McMurray denied that anyone had offered a bribe in his interest.

On August 6, Senator Gore published a statement in which he declared that he had made no charge against Vice-President Sherman. He said that he had been required by the committee to repeat what Hamon had said and

that he had named Mr. Sherman with extreme reluctance.

Several Indians, members of the Chickasaw tribes, testified at the hearing that they had signed the contracts because of the government's delays and were willing to pay a 10 per cent. fee for a prompt settlement. They declared that they would have paid even 25 per cent. for such a settlement. It was testified that McMurray employed agents to procure the signatures of the Indians, paying them \$1 each. Douglas F. Johnson, chief of the Chickasaws, 85 per cent. of whom gave the required authority, testified that these Indians signed willingly, seeing no other way to obtain their money. The attorney, it was alleged, also employed agents to procure letters and telegrams to be sent to President Taft and members of Congress in favor of the 10 per cent. agreement. Fifty of these letters were sent just before May 6, when Senator Gore alleges that Hamon offered him the bribe. Congressman Carter of Oklahoma testified that among those who had helped in securing these contracts were Congressman McGuire and Dr. Wright, a Choctaw delegate.

The hearing of the charges of attempted bribery made by Senator Gore were continued before the Congress Committee on the re-assembling of Congress in December. Richard C. Adams, hereditary chief of the Delaware tribe of Indians, testified before the committee that he held contracts with the Delawares covering the payment of \$20,000,000 of claims, that his fees were to be from 10 to 25 per cent. and that all the contracts, fee provisions included, had been approved by the government. His compensation will be between \$2,000,000 and \$5,000,000 when the claims are paid.

**OTHER EVENTS.** The trial of Governor Haskell, W. T. Hutchings, C. W. Turner, Walter Eaton, A. Z. English and F. B. Severs on charges of conspiracy to defraud the government in the purchase of town lots at Muskogee, was begun on September 26. Indictments were found against these men in 1909, but for technical causes they failed, and it was necessary to bring new indictments. The Assistant Attorney-General, S. R. Rush, entered a plea of nolle prosequi, and Judge Marshall ordered the cases dismissed and the defendants discharged. Mr. Rush declared that the cases had been brought in good faith to protect an Indian tribe in the State and to enforce the governmental policy of the United States in respect to Indians and their property. It was necessary, however, to abandon the prosecution because of the decision by the Circuit Court of Appeals rendered in June, 1910. This decision overruled a decision made by Judge Marshall wherein he held that the prosecution of deeds by the conspirators through dummy schedules to themselves were proper overt acts and done to effect the object of the conspiracy. Mr. Rush declared that in spite of this failure the suits had resulted in the return to the government of \$40,000 in cash and about 100 lots, making a total value of about \$920,000. This money and property had been returned by the defendants, Severs and English.

On July 7, an agreement was reached between the State authorities and the Waters-Pierce Oil Company by which the latter paid a fine of \$75,000 and confessed judgment to the allegation that it had not offered its commodities according to the laws of the State. A third agree-

ment was to the effect that until the Corporations Commission had time to regulate the prices of the defendant company uniform prices should be maintained on petroleum products in Oklahoma. The Waters-Pierce Company in the near future is to erect in Oklahoma a refinery to cost not less than \$150,000 convenient to the oil fields. This refinery is to be exempt from municipal taxation for five years. There was also a stipulation not made public fixing the maximum price the defendant company may charge for oil in Oklahoma.

**LEGISLATION.** Among the important measures enacted by the legislative session of 1910 were the following: An act was passed regulating the collection of debts. The act aims to prevent the assigning, transferring or sending of claims to persons or organizations out of the State for the purpose of collection, when all the parties including a garnisheed corporation are within the jurisdiction of Oklahoma. Violation of this statute is made a misdemeanor and is punishable by a fine of from \$500 to \$1000, or by imprisonment of from thirty days to one year, or by both, and the aggrieved debtor may recover from the creditor the amount of the claim and costs. The Federal income tax amendment was passed. Amendments were made to the statutes regulating probate procedure and in matters relating to the initiative and referendum. Prison-made goods sold in the State are to be labeled so as to identify the source of manufacture. A measure was passed regulating the sale of cocaine in the State. The general election laws of the State were revised and the party column ballot was substituted for the Massachusetts form which adopts the alphabetical arrangement. Several important tax laws were passed. One of these classifies railroads in accordance with the percentage of operating expenses to gross receipts and requires a State tax varying from .02125 to .016875 on valuations, and a county tax of from .004625 to .00375, according as this percentage ranges from less than 60 per cent. up to 90 per cent. The State gross receipts taxes on public service, mining and oil producing companies were changed in some particulars. A third measure imposes a license tax on all private business corporations except insurance and banking companies, fifty cents per \$1000 of capital for domestic and \$1 per \$1000 for that proportion of the capital of foreign corporations employed in Oklahoma, except in a business paying income or gross receipts taxes on its own account.

Important legislation was enacted relating to "white slaves" as a result of the agitation carried on during 1909-10. A legal rate of interest of 6 per cent. was fixed. The exaction of any rate up to and including 10 per cent. was permitted without incurring the penalties of usury.

**STATE OFFICERS.** Governor, Lee Cruce; Lieutenant-Governor, J. J. McAlester; Secretary of State, Ben Harrison; Treasurer, Robert Dunlop; Auditor, Leo Meyer; Attorney-General, Charles West; Commissioner of Insurance, P. A. Ballard; Commissioner of Education, R. H. Wilson; President of Board of Agriculture, Thomas Bryan—all Democrats.

**SUPREME COURT.** Chief Justice, Jesse J. Dunn; Associate Justices, Matthew J. Kane, Robert L. Williams, John B. Turner and Samuel W. Hayes; Clerk of the Court, W. H. L. Campbell—all Democrats.

STATE LEGISLATURE, 1911: Republicans, Senate, 15; House, 33; joint ballot, 48. Democrats, Senate, 29; House, 76; joint ballot, 167. Democratic majority, Senate, 14; House, 43; joint ballot, 57.

**OKUMA, S** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**OLD-AGE PENSIONS.** The old-age pension movement has become world-wide, and has taken a variety of forms. Some governments and many cities have established retirement pensions for their civil employees. States have long maintained retirement allowances for soldiers and sailors. Germany was the first to provide a general system of old-age insurance for working people. Many countries have followed her example. In the United States, while there is some agitation for public old-age pensions, the movement is taking the form of the establishment of retirement allowances by corporations and other large employers. Public old-age pension systems are now in operation in Austria, Australia, Belgium, Denmark, Finland, France, Germany, Great Britain, Ireland, New South Wales, New Zealand, Sweden and Victoria. The chief difference in these systems is that some, such as those of Great Britain, Australia and New Zealand, are granted without any previous contributions from recipients, while others, such as those of Germany, Belgium and France, are based primarily on contributions from the beneficiaries with supplement from the public treasury. The latter are either compulsory, as in Germany, Sweden and Iceland; or voluntary, as in other countries. The German system has been in operation since 1889. It provides insurance at the age of 70 on the basis of compulsory payments from employer and employee. Austria provided for a system of voluntary old-age insurance on the basis of contributions by employers and employees in 1909. While Denmark grants small sums to the aged worthy poor, England and Austria have endeavored to remove all stigma of poverty from their systems, by viewing the pension as a right, earned by years of honest toil. In Belgium the practice of granting subsidies to mutual benefit societies prevails. The important developments of the year are noted below.

**UNITED STATES.** *Massachusetts.* The final report of the commission appointed in Massachusetts in 1907 to investigate old-age pensions was submitted in January, 1910. This final report presented in full the results of a comprehensive study of all existing schemes. It classified these schemes as universal, non-contributing, such as Edward Everett Hale's universal grant of \$100 per year to every person 69 years of age or over; partial non-contributing, such as those in Great Britain and Australia, where pensions are granted to only specially needy persons; compulsory contributing with State subsidy, as in Germany; voluntary contributing, with State subsidy, as in Belgium; voluntary old age insurance under public administration, as is provided by the Massachusetts savings bank insurance; and voluntary insurance under private management, as is provided by industrial insurance companies and the old-age retirement plans of corporations. The commission strongly favored granting old-age pensions to public servants, especially of cities. The reason for this was primarily that economy and efficiency would be secured, but it was also pointed out that at present the political influ-

ences tend to prevent the discharge of public employees who have outlived their usefulness. A non-contributing old-age pension plan for the State was rejected, primarily because the probable annual expense would be about \$10,000,000; but also because this plan discourages saving and leads to family disintegration by relieving children of the support of aged parents; and because employers would reduce wages so as to recompense themselves for the heavier taxes which the plan would make necessary. The investigators held such a plan to be suitable only for a State in a condition of decadence. A compulsory plan was also rejected as not likely at present to commend itself to public opinion in this country. The commission, however, stated its belief that some plan of compulsory State insurance would be ultimately adopted. The report, therefore, limited itself to recommending an increased use of present facilities. It favored compulsory instruction in thrift in the public schools; it urged upon employers and employees greater use of the Massachusetts savings bank insurance and other industrial insurance; it commended the old-age retirement schemes adopted in recent years by leading American railways and industrial corporations; it recommended that a law be enacted allowing fraternal societies to give old-age pensions; and it presented a contributory plan for the retirement of public employees.

This report led to a law, approved May 26, authorizing employees and employers to establish coöperative retirement annuity or pension systems. Both parties must contribute; and annuities or pensions must be paid on scales approved by the State insurance department. The plan can be inaugurated only by the approval of two-thirds of the employees present at a meeting called for that purpose. Acts were also passed authorizing the city of Boston to pension its school teachers and authorizing cities and towns to establish retirement systems for civil service employees. This latter was an elaborate statute providing in detail the basis for both annuities and pensions and rules of administration.

*National.* Late in June a petition of 16,000 employees of the executive departments in Washington and 5500 employees of the United States Civil Service in other cities asking for a national old-age pension law for civil servants of the government was presented to Congress by Secretary of the Treasury MacVeagh. This petition was in line with the agitation which the civil service employees of the United States, through their Retirement Association, have maintained for several years. President Taft had stated his hearty sympathy with some plan of providing for those who have become too old to render proper service, some such plan being necessary to the efficiency of the merit system. Those interested in the old-age pension proposal have pointed out that many large corporations have provided for the retirement of their older employees and have found it economical to do so; and that, among civilized nations, two South American republics, Santo Domingo and the United States are the only ones that have not provided for superannuated employees. The government now provides old-age pensions for the army and navy; it is asked why it should not provide similarly for the more than 150,000 persons in the executive civil service. It was argued that a contributory plan would not be justifiable for such employees since only about

seven and one-half per cent. attain to the age of sixty and only a little more than one-half per cent. to the age of seventy; also, the expense of collection and bookkeeping would be economically wasteful. On the other hand, for one per cent. of the pay roll the government could provide for the retirement of all employees of the classified civil service at seventy. The Goulden bill, which was before Congress in 1910, provided for retirement at different ages with compensation based on the number of years of service; thus for retirement at the age of sixty years after a service of thirty years the retirement pay would be 75 per cent. of the average annual pay for the last five years; for retirement at the age of sixty-five after twenty to twenty-five years of service, the retirement pay would be 40 per cent. of the average annual pay. Moreover, for disablement at any age after five to ten years' service the retirement pay would be 30 per cent. of the average annual pay; and after more than twenty-five years of service would be 75 per cent.

*New York and New Jersey.* That these movements in Massachusetts and the national government are not isolated is shown by the demand of the Comptroller of New York State for a system of retirement pensions for employees reaching an age limit as a means of raising the efficiency of the office force. He pointed out that such was a matter of economy also because at present many employees are retained at high salaries who have passed the age of greatest efficiency. A special commission was appointed in New Jersey to inquire into the subject of public old-age pensions.

*ENGLAND.* Under the old-age pension law of 1908 there were 699,352 pensions in force on April 1. They were distributed as follows, according to number of shillings per week: 5s., 638,147; 4s., 22,870; 3s., 22,239; 2s., 10,536; 1s., 5560. By countries: England and Wales, 441,489; Scotland, 76,889; Ireland, 180,974. The cost for the year was about £8,800,000, or \$42,500,000. Beginning with January 1, 1911, those previously disqualified because of poor relief will become eligible. This is expected to increase the cost by £2,500,000 per year.

The United States Department of Commerce and Labor published the first of a series of studies on the civil service pension systems of other countries, dealing with Great Britain and New Zealand. It showed that from 1834 to 1859 England retired male civil employees on the basis of annual deductions from their salaries. From 1859 to the present time retirement pensions have been granted out of the public treasury. In 1902, however, seventy thousand of the one hundred thousand persons in the service formed the Deferred Pay Committee. They claimed that on account of the pension system their salaries were unduly small, so that they were in reality contributing the funds for the payment of their own pensions. A commission appointed to investigate conceded this claim, with the result that a law of 1909, while reducing the size of pensions in general, made some allowance for this claim. See *GREAT BRITAIN, History*.

*NEW ZEALAND.* The New Zealand system showed several improvements over the English. New Zealand had tried both a lump sum payment on retirement and the system of pensions based on compulsory deductions from salaries, but in 1907 the present plan based on contribu-

tions from employes with a subsidy from the government was adopted. The contributions are based on the age at entrance to the service, and the annuity is determined by the length of service and the amount of salary. Both men and women, including teachers and railway employes, and the widows and orphans of beneficiaries are included in the scheme. It has the defect of not compelling retirement at a certain age. Moreover, the amount refunded to those resigning before the age of retirement does not include interest on their contributions.

*FRANCE.* In 1906 the Chamber of Deputies passed an old-age pension bill, but the Senate refused to concur. Agitation for the passage of the old-age pension measure was continued from year to year, but it was not until 1910 that a measure finally passed both houses. This law, which becomes effective January 1, 1911, provides for the compulsory insurance of all farmers, workingmen, servants, whose annual earnings were below \$600 per year. It provides optional insurance for farmers and small proprietors whose incomes range from \$600 to \$1000 per year. It was estimated that, out of a total of twenty million persons engaged in gainful occupations, twelve millions would be included under the compulsory provision and six millions under the option clauses. The whole scheme is placed on a contributory basis as in Germany and Belgium, rather than on a non-contributory basis as in England. Laborers are required to make compulsory contributions at the rate of 9 francs per year for men, 6 for women and 4½ for boys under 18 years. Equal sums must be contributed by employers, who are also authorized to deduct workers' contributions from wages. Benefits of the law will be granted at age 65, but only to those who have been wage-earners for 30 years; however, persons too old at the beginning of the plan to pay for 30 years will benefit. The law provides for a lump sum or *rente* based on the compulsory contributions, and an annuity or *viagère* granted by the state. It is estimated that the annual cost to the state will be about \$100,000,000.

*OLEOMARGARINE.* See *MEAT AND MEAT INSPECTION*.

*OLIVER, FRANK.* See *CANADA, Government and History*.

*OLMSTEAD, FREDERICK LAW.* See *MUNICIPAL GOVERNMENT*.

*OMAN.* An independent Mohammedan state in southeastern Arabia. Area, about 82,000 square miles; population (estimated), about 500,000, chiefly Arabs. Capital, Muscat, with 25,000 inhabitants; it has the only good harbor. The country is arid, the rainfall averaging only about five inches annually. Little is known of the resources of the interior. The trade amounted (1909-10) to £831,300, about 71 per cent. with India and Great Britain. Dates are the main article of export. Transport is by pack animals. The sultan (1910, Seyyid Feysal bin Turki, born 1864, succeeded 1888) is subsidized by the government of India. Tribal warfare and brigandage are a constant menace to his authority, and British warships have been several times in requisition to sustain the government. British Political Agent, Major A. P. Trevor.

*OMAN, W. C.* See *LITERATURE, ENGLISH AND AMERICAN, History*.

*ONTARIO.* A province of Canada (since July 1, 1867). Capital, Toronto. Area, 260,-

862 square miles. Population (estimated 1910), 2,687,861. For details, see CANADA. The government consists of the Lieutenant-Governor, appointed by the Governor-General of Canada, the Executive Council (responsible ministry), and the unicameral Legislative Assembly of 106 members. In 1910, Lieutenant-Governor, Col. John Morison Gibson (appointed September 22, 1908); Premier, Sir James P. Whitney.

**OPERA.** See MUSIC.

**OPIUM.** According to reliable reports, China was making great progress in the suppression of the opium traffic in 1910, and anti-opium leagues have been formed in many of the large Chinese cities. One missionary states that in Fu Chau there is not a single opium den, where three years ago these places were more numerous than rice shops. One encouraging evidence is the fact that the danger of famine in the western district of China has been lessened by the amount of land diverted from opium culture under the recent laws and devoted to the growth of food products. In place of enormous fields of poppy flowers, there are now plantations of rice and hemp, and the open culture of the opium plant is becoming a thing of the past. While there are opium dens in some provinces, especially near European settlements, and hand to hand selling still continues to some extent, the outlook is decidedly encouraging.

On December 12 the State Department at Washington announced the completion of long-continued negotiations for an international conference to suppress the opium traffic. With one exception all the nations addressed have agreed to confer at The Hague on May 30, 1911. The nations to be represented are China, Great Britain, France, Germany, Italy, Japan, the Netherlands, Persia, Portugal, Russia, and Siam. Great Britain proposed to include morphine and cocaine in the prohibition to be enforced, and the United States will support this proposition. The Department of State is preparing legislation to be submitted to Congress regulating the interstate traffic in this drug. See CHINA, paragraphs on *History*.

**OPIUM COMMISSION.** See CHINA, and OPIUM.

**OPPENHEIM, E. P.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**ORANGE FREE STATE.** Formerly the ORANGE RIVER COLONY. A province (since May 31, 1910) of the Union of South Africa (q. v.); originally an independent republic, deprived of name and independence, May 24, 1900, for participation with the South African Republic in the war with Great Britain, and annexed, under the name the Orange River Colony, to the British crown. By the South Africa Act of 1909, under which the colony became an original province of the Union, the old name, Orange Free State, was restored. Provincial capital, Bloemfontein.

**AREA AND POPULATION.** Total estimated area, 50,392 square miles. Population (1904), 387,315 (white, 142,679). Bloemfontein had 33,883 (white, 15,501) inhabitants; Kroonstad, 2454 whites, 3343 natives; Ladybrand, 2333 and 1515; Harrismith, 2238 and 3068. Government schools, 400, with 19,000 pupils. There are special schools, and Grey College at Bloemfontein. The country is essentially pastoral; but in the eastern portion are wide tracts adapted to grain

cultivation. Government lands allotted, 1,457,541 acres, distributed among 650 settlers. Acres under wheat (1906-7), 155,330; under tobacco, 1543. Livestock (1907): 127,579 horses, 585,077 cattle, 8,020,308 sheep, 62,439 swine. Total value of mining output in 1908-9, £1,191,334 (1907-8, £1,247,316), distributed as follows:

	1907-8		1908-9	
	Tons	£	Tons	£
Coal .....	524,487	145,374	470,591	125,627
Diamonds .....	505,452*	1,069,942	654,319*	1,048,607
Salt .....	2,135	32,000	1,456	17,100

\* Carats.

Trade and finance are given for three years below:

	1907	1908	1909
Imports .....	£3,317,770	2,945,860	3,662,696
Exports .....	3,789,653	3,558,373	4,777,126
Revenue*	740,367	915,266	952,890
Expenditure *	733,233	952,513	957,741

\* For fiscal years 1907-8, 1908-9, 1909-10.

For railways, see TRANSVAAL. Telegraph lines, 6938 miles; telephone lines, 555 miles. The postal savings banks had (1908) 6831 depositors and £165,968 deposits. The government is administered by an administrator (1910, A. E. W. Ramsbottom), aided by a provincial council, elected for three years. There is an executive committee of four members.

**HISTORY.** The educational controversy continued to bring up sharp antagonism in the Legislative Council where the Classification of School Teachers bill was read a second time at the beginning of April. This measure imposed disabilities on teachers unless they spoke both languages. In the latter part of 1909 there had seemed to be a chance of amicably settling the school question. In November, 1909, a conference was held between General Hertzog and the opponents of the government's school policy. It was adjourned to meet again on Jan. 31, 1910, but it was soon clear that the government would do nothing to improve the situation of the English speaking children in the schools. General Hertzog refused the request of delegates that the medium of instruction should be left to the choice of the parents and the conference finally broke up without any result. Another conference was held on February 21, but General Hertzog insisted on such limitations upon the use of English that the conference adjourned after resolving that it could not offer any further suggestions. At a brief extraordinary session of Parliament, which began on March 15, the governor's message referred to legislation for promoting agricultural coöperation and for authorizing the sale of the government's interest in the national banks. There was some discussion of appeal to the Home Government on the education question, but in reply to a question addressed to the Colonial Office it was said that this was clearly a matter for the province to decide. The opponents of the Hertzog policy seemed inclined to found independent schools as the only alternative. An amendment to the School Teachers bill, lessening the disabilities of English teachers who do not speak both languages, was brought forward by General Hertzog, but the opposition continued to fight it bitterly and finally the opposing members withdrew from the Assembly as a protest. The bill was then passed in their absence. See SOUTH AFRICAN UNION.

**ORCHARDSON, SIR WILLIAM QUILLER.** An English artist, died April, 1910. He was born at Edinburgh, in 1835, and entered the Trustees' Academy in that city in 1850. His first work was exhibited at the Royal Scottish Academy. In 1863 he went to London and exhibited in the Royal Academy, of which he was elected an associate in 1868. He became a fellow in 1877. He was especially successful in the delineation of certain of Shakespeare's characters, among them "Hamlet" and "Ophelia." Among his other notable works are: "The Challenge" (1865); "Christopher Sly" (1866); "Napoleon I on board H. M. S. Bellerophon," (1880); "The Rift within the Lute" (1887); and "In the Gloaming" (1901).

**ORCHESTRAS.** See MUSIC.

**ORE DEPOSITS.** See GEOLOGY.

**ORE SHOOT.** See GEOLOGY.

**OREGON.** One of the Pacific Division of the United States. It has an area of 96,699 square miles. Its capital is Salem.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 672,765, as compared with 413,536 in 1910 and 317,704 in 1890. The increase in the decade 1900 to 1910 was 62.7 per cent. The State ranks thirty-fifth in point of population, whereas in 1900 it ranked thirty-sixth. The population of the chief cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The most important mineral in point of value is gold, which in 1910 was produced to the value of \$631,173. This was a marked decline from the product of 1909, which was valued at \$829,000. There were also produced 628,486 fine ounces of silver, as compared with 69,800 fine ounces in 1909. The State produces a considerable quantity of coal and the product in 1909 was 87,276 short tons, having a spot value of \$235,085. This differed only slightly from the production of the preceding year, which was 86,259 short tons, valued at \$236,021. Only two mines in the State, both in Coos county, shipped coal in large quantities, shipments being made almost entirely by way of San Francisco. This State also produces sand and gravel, limestone and mineral waters.

**AGRICULTURE.** The acreage, production and value of leading crops in 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	18,000	459,000	367,000
1909 .....	17,000	522,000	418,000
Winter wheat, 1910 .	467,000	11,068,000	9,297,000
1909 .	535,000	11,235,000	10,449,000
Spring wheat, 1910 ..	297,000	5,346,000	4,491,000
1909 ..	275,000	5,142,000	4,782,000
Oats, 1910 .....	302,000	10,419,000	4,897,000
1909 .....	288,000	10,886,000	5,661,000
Barley, 1910 .....	64,000	2,016,000	1,250,000
1909 .....	63,000	1,984,000	1,309,000
Rye, 1910 .....	15,000	226,000	226,000
1909 .....	9,000	153,000	153,000
Potatoes, 1910 .....	44,000	4,620,000	3,234,000
1909 .....	46,000	7,360,000	4,416,000
Hay, 1910 .....	439,000	922,000	11,156,000
1909 .....	422,000	865,000	10,120,000

**EDUCATION.** A marked increase in the development of the high school, and the re-establishment of the Oregon State Normal School by a vote of the people of the State through the initiative are the two points of interest in educational affairs for 1910. The normal schools have been closed for two years on account of the legislature of 1907 refusing to appropriate funds

for their maintenance. By the use of the initiative the voters of the State have decided that Oregon must have a good normal school. Under new laws a county may establish one central high school maintained by a county tax, or it may establish a county high school fund, and apportion the money to the various district high schools. The former plan suits the sparsely settled counties; the latter is better for the more thickly populated counties. Seven counties have the central county high school. Two counties adopted the county high school fund law in 1908, and in the November, 1910, election the same law was adopted in five more counties. The establishment of the county high school fund increases the efficiency of the high schools by placing their administration on a secure basis; it increases the number of high schools, and this makes it possible for the boy and girl to complete a good high school course without having to leave home; it increases the attendance of high schools, and the very large increase tends to show that home-seekers are choosing those counties which maintain the best system of schools. Oregon now has three State institutions for higher education, the University, located at Eugene; the Agricultural College, located at Corvallis, and the Normal School, located at Monmouth. The Reed Institute at Portland will open in September, 1911. Private institutions for higher education include Willamette University, Pacific University, Albany College, McMinnville College, Pacific College, and Dallas College.

**FINANCE.** The report of the State treasurer for the biennial period, October 1, 1908, to September 30, 1910, showed a balance in the treasury on October 1, 1908, of \$658,320. The receipts for the period amounted to \$7,095,855 and the disbursements to \$7,329,262, leaving a balance on September 30, 1910, of \$424,913. The common school fund of the State amounted on September 30, 1910, to \$6,038,454, the agricultural college fund to \$198,783, and the university fund to \$103,635.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State, with their population in 1910, are the following: Baby Home at Portland, 35; Boys' and Girls' Aid Society at Portland, 60; Children's Home, Portland, 65; Oswego Orphanage for Girls, 90; Beaverton Home for Boys, Beaverton, 120; Reform School for Boys, Salem, 94; Detention Home, Portland, 210; State Penitentiary, Salem, 426; Asylum for the Insane, Salem, 1617; Institution for Feeble-Minded, Salem, 181. A bill has been introduced into the legislature changing the name of the Reform School for Boys to the Oregon State Training School. The indeterminate sentence law of the State is to be amended to apply to all cases except capital crimes. Efforts are being made to pass legislation which will take out of the prison the contract system at present in operation. The convicts are leased to a private concern at the rate of 45 cents a day per man. It is intended to amend this system by having the convicts work on the public roads of the State.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910, as the sessions are biennial, and the last one was held in 1909. The next session begins January 3, 1911.

**ELECTIONS.** Elections in Oregon are held under a unique system of election laws passed in 1905, and amended in later years, which provides for the popular election of Senators and does away with the system of party conventions. Nominations for State officers, for Congress and for Senators are made in the primary elections. The national interest in the working of these laws is great and the results of the election in 1909 were regarded with great interest outside the State. Although conventions as such are abolished, the Republicans held a meeting before the primaries under the name of Assembly, and Jay Bowerman, President of the State Senate, and Acting Governor of the State, was recommended for governor. Legally, the Assembly could do no more than advise the voters. Mr. Bowerman was nominated subsequently in the primaries. The Democrats nominated in the primaries Oswald West, then a member of the State Railroad Commission. In addition to the election of State officers, Congressmen and Senators, there were 32 laws and amendments to the State constitution to be adopted or rejected by a vote of "yes" or "no." There were two questions of unusual importance in the State elections, the first, the working of the direct primary law in the election of governor, and the other, the question of State-wide Prohibition. The State has a local option law, adopted in 1905, which permits whole counties or even single precincts to go "dry." Under these provisions practically all the State, excepting counties containing large towns and cities, had voted no license. The advocates of no license endeavored to bring about Prohibition in these cities and towns by the use of the Prohibition vote in "dry" counties. They made an aggressive campaign for a State-wide Prohibition amendment of the constitution, and speakers were brought from all parts of the country. The opponents of Prohibition proposed a "home rule" amendment to the constitution, which practically makes cities and towns units in the matter of voting license. The Prohibitionists were defeated by 17,681 votes, while the "home rule" amendment was carried by 2542 votes. An amendment providing for woman suffrage in the State was defeated for the fifth time. A constitutional amendment providing for the complete reorganization of the legislature and proportional representation, was also defeated. An employers' liability law was adopted, while a measure proposing a commission to consider the subject was defeated. An amendment permitting counties to issue bonds for good roads was carried by a substantial majority. A bill to extend the direct primary in nominating presidential candidates, and for paying expenses up to \$200 of delegates to national presidential conventions and electing delegates by popular vote was adopted by a narrow majority. A measure creating a Board of People's Inspectors of Government, to watch the business affairs of the State and to issue a magazine every two months to every voter free, giving an account of matters and making suggestions, was defeated.

Although Oregon is normally a Republican State by some 25,000 votes, Mr. West, the Democratic nominee, was elected by 6102 votes over Mr. Bowerman. This result was largely brought about by local issues. Although the insurgent Republicans are not as aggressive in Oregon as in several of the other western States, they succeeded in electing A. W. Laf-

ferty as member of Congress over John Manning, Democratic candidate, by 11,165. On the other hand, W. C. Hawley, a regular Republican from the first district, was returned to Congress by a majority of 8024.

Strong opposition developed in the State during the year to what is known as the Oregon system of voting on senatorial candidates. This opposition was chiefly within the Republican party, and the assembly referred to above, representing the faction opposed to the Oregon system, met in opposition to this system. But there was also a sentiment in the State in favor of even more radical laws relating to government. "The People's Power League of Oregon," which had been organized for the purpose of bringing about certain changes in the system of elections, proposed to amend a legislative article of the State constitution so as to secure the following changes: A six-year term for all members of the legislature, abolishing the hold-over system for Senators; election of Senators and Representatives by a system of proportional representation; power vested in the voters to recall any member of the whole Senate, of the whole House of Representatives, or the whole legislature; the presiding officers of the two Chambers not to be members of the legislature; they to appoint no committees and to have no voice or vote; making the life of a bill six years, if necessary, so that it may be acted upon any time within that period without dying a natural death because of adjournment; giving a majority of the members of each Chamber the power to call a special session of the legislature; limiting the power of the legislature to use the "emergency clause" in passing a bill, so as to prevent the filing of a referendum petition; amending the oath of office so as to prevent or minimize log-rolling. The amendment was defeated by 7335 votes.

The People's Power League was also sponsor for the presidential primary bill, which was adopted; for the defeated measure proposing to create a board of government inspectors and for a constitutional amendment, which carried, designed to eliminate consideration of technical errors in appeals to the Supreme Court. Perhaps the most important governmental step taken was the adoption of a constitutional amendment withdrawing from the legislature the power to enact laws relating to regulation and exemptions in taxation. The legislature may propose tax laws, but they must be ratified by the people at the polls, or the people may initiate and adopt tax laws without recourse to the legislature. Counties are given jurisdiction over tax exemptions and regulations within their own borders subject to general laws.

Radical legislation affecting employers' liability for injuries to employes was adopted through the initiative. The new act wholly eliminates assumption of risk, negligence of the employe and the fellow servant doctrine as defense in actions for damages for personal injury instituted by employes against employers. Right of recovery in the event of death is extended to heirs not dependent on the employe.

**OTHER EVENTS.** On February 14 the jury in the case of Binger Hermann, former Congressman and Commissioner of the General Land Office, charged with land frauds, disagreed. Hermann was indicted in 1904 by United States Senator Mitchell, of Oregon, for alleged conspiracy to defraud the United States govern-

ment in the matter of public lands. Special investigators had discovered that the grossest frauds had been perpetrated, involving millions of acres of the public lands and something like \$15,000,000. It was charged that government lands had been granted under fictitious names. Hermann was subsequently indicted on the charge of destroying 35 copies of official letters in the records of the Land Office. On this indictment he was tried in Washington in 1907 and was acquitted. The other indictment was the one on which the jury disagreed as noted above. Francis J. Heney prosecuted in behalf of the government. Later in the year the case against Mr. Hermann was dropped by the United States government.

On December 28 the government brought suit against the Southern Oregon Company as successor to the Coos Bay Wagon Road Company for the recovery of 96,676 acres of land in southern Oregon. The value of the land is said to amount to millions of dollars. The government stipulated in the grant that the land was to be sold in tracts not greater than 160 acres to each person, and for a stipulated consideration. According to the Federal authorities all the land except 6983 acres was sold on June 22, 1875, to Joseph Miller, agent for Collis P. Huntington, Charles Crocker, Leland Stanford, and Mark Hopkins. It was further alleged that in an effort to clear the title from the cloud on it a mortgage to secure an alleged indebtedness was made to the Boston Safe Deposit Company in 1884. This indebtedness, the government claims, was fictitious and untrue, and the foreclosure of this mortgage was "with the intent and in the hope that the restrictions upon the sale and disposition of the granted lands might be defeated."

Construction of two railroads into a territory comprising about two-thirds of Oregon and lying east of the Cascade Mountains and south of the Columbia River attracted a large influx of home-seekers to the State. This territory, until now unserved by railways, has an area of about 42,000 square miles or in excess of that of the State of Ohio. Agriculture has begun to take the place of stock-raising to which this section has been devoted. The two railroads, one constructed jointly by the Northern Pacific and Great Northern Railways, and the other by the Harriman interests, parallel each other for 165 miles, following the Deschutes River the major portion of the way. About 110 miles of each railroad was nearly ready for operation at the beginning of the year.

In 1910 the Northern Pacific and Great Northern also acquired two electric railway systems, one extending south from Portland to Salem, the capital, and the other built westward from Portland about 14 miles. The former will build 200 miles of extensions in the Willamette Valley and the latter will be extended 75 miles to the coast at Tillamook Bay. The same interests have also purchased the Pacific & Eastern, a railroad of limited mileage in the Rogue River Valley in southern Oregon and will build the Central Oregon road across the Cascade Mountains to a connection. Surveys have been adopted by the Hill and Harriman systems for railroads east and west across the centre of the State but immediate construction has not been determined upon. The Harriman system had practically completed 98 miles of new railroad between Portland and Tillamook Bay, a section of the State

heretofore dependent on water transportation.

**STATE OFFICERS.** Governor, Oswald West, Democrat; Secretary of State, F. W. Benson, Republican; State Treasurer, Thomas B. Kay, Republican; Superintendent of Public Instruction, L. R. Alderman, Republican; Adjutant-General, W. E. Finzer, Democrat; Attorney-General, A. M. Crawford, Republican; Commissioner of Insurance, S. A. Kozier, Republican.

**SUPREME COURT.** Chief Justice, Robert Eakin; Justices, Thomas A. McBride, Frank A. Moore, Henry J. Bean and George H. Burnett; Clerk, J. C. Moreland—all Republicans.

**STATE LEGISLATURE, 1911:** Republicans, Senate, 27; House, 58; joint ballot, 85. Democrats, Senate, . . . ; House, 2; joint ballot, 5. Republican majority, House, 56; joint ballot, 80.

**ORGANIC CHEMISTRY.** See **CHEMISTRY.**

See **ARBITRATION, INTERNATIONAL.**

**ORNITHOLOGY. BIRD PROTECTION.** The Bureau of Biological Survey, United States Department of Agriculture, in a report issued May 21, 1910, stated that 469,090 birds were imported into the United States during the year 1909. Of this number 371,910 were canaries, but 37,511 were game birds. The report states that protection of non-game birds made great progress during the year, North Dakota and Oklahoma having passed model laws. On the Pacific coast a strong sentiment aided in the enforcement of the laws against the sale of bird plumage. The legislature of the State of New York, during its 1909-1910 session, passed a stringent law governing the sale of bird feathers and skins, which goes into effect on July 11, 1911. Under this law it will be illegal to sell aigrettes. The law protects egrets, and other plume bearing herons, gulls, terns, albatrosses, eagles, vultures, as well as all song or insectivorous birds. In an address by James Buckland, before the Royal Society of London, the statement was made that in Venezuela there had been a tremendous decrease in the number of white egrets killed in recent years, indicating that the birds are approaching extinction.

**STUDIES OF THE BLACK BILLED CUCKOO AND HOATZIN.** Herrick studied the nesting habits of the Black Billed Cuckoo, which, contrary to the habits of the European Cuckoo, builds its own nest and cares for its own young, there being no more of a parasite mode of life here than in the thrushes. When disturbed the cuckoo may transfer the eggs to a new nest, but this not true parasitism. The most remarkable feature possessed by the young bird is its climbing ability. It has strong grasping reflexes, and is able, shortly after birth, to hang by one toe from a limb, and even to draw itself up to a limb by this foot. Mr. and Mrs. Beebe published in 1910 a popular account of observations made earlier on the Hoatzin in Venezuela and British Guiana. It has long been known that the young of this bird climbs by means of the claw-like ends of the fingers which, it was supposed, were later so covered with feathers that the wings had no use as climbing organs. Mr. and Mrs. Beebe discovered that while, as a matter of fact, the wings are covered with feathers, they are nevertheless used as climbing organs, so that the feathers at the end are always frayed and broken. The birds are sedentary in their habits, apparently staying the year round in one tree, "ver-

itable feathered sloths." Beebe states that the crop of these birds has taken on the function of a gizzard. He also from observations made on the Motmot in captivity decided that the racket shape of the tail is not a self mutilation, for purposes of ornamentation, but that the barbs are very weak, and drop away when the bird is preening its feathers.

**OTHER EVENTS.** The Fifth International Ornithological Congress met in Berlin May 30 to June 4, under the presidency of Dr. Anton Reichenow. A gift by Mrs. Russell Sage of \$15,000 to the Audubon Society was announced in 1910. Early in 1910 a number of ornithologists agreed to offer the sum of \$1000 to be given in prizes for the discovery of the nesting site of the passenger pigeon in North America. No public announcement, however, was made of any awards under this head, and it is not probable that any nests were discovered.

The third edition of the *Check List* of the American Ornithologists' Union appeared in 1910. The list contains 802 species and 394 subspecies. Since it appeared to the editors wise strictly to apply the priority rule in the nomenclature many changes were made from the names given in previous editions.

**OVERSTREET, JESSE.** A former member of Congress, died May 27, 1910. He was born in Franklin, Johnson county, Ind., in 1859, and graduated at Franklin College in 1882. He was admitted to the bar in 1886 and from that time until 1896 practiced at Franklin. He then removed to Indianapolis. He was a member of Congress from 1895 to 1909. He was the author of the gold standard law passed by Congress in 1900 and his ability along financial lines and his keen perception of the needs of the country's financial system led to his being made a member of the National Monetary Commission, a place which he held when his last term in Congress expired. He served as secretary of the National Republican Congressional Committee from 1898 to 1904.

**OXYCHINOLIN SULPHATE.** See CHINOSOL.

**OXYGEN.** See ATOMIC WEIGHTS.

**OXYNTIN** is a compound of protein and hydrochloric acid, containing 5 per cent. of absolute hydrochloric acid in unstable combination. The drug is a dry, granular powder, readily miscible in water, and is prepared by combining hydrochloric acid with the albumen of fresh egg, desiccating the product at a low temperature and standardizing it to a uniform content of hydrochloric acid. Oxyntin is said to be a useful substitute for dilute hydrochloric acid in cases of dyspepsia where this element is lacking in the gastric juice. It is approximately one-half the strength of dilute hydrochloric acid U. S. P. and may be given dry upon the tongue or in capsules.

**OYSTER TRUST.** See TRUSTS.

**OZMUN, EDWARD HENRY.** An American public official, Consul-General at Constantinople, died December 8, 1910. He was born in Rochester, Minn., in 1857. He studied at the Universities of Michigan and Wisconsin and in 1881 was admitted to the bar, practicing in St. Paul from 1881 to 1897. From 1893 to 1897 he was a member of the Minnesota Senate and from the latter year until 1906 was Consul at Stuttgart, and was appointed to the Consul-Generalship at Constantinople in 1906. In the same year he was a member of the board to reorganize the Consular service. In 1907-8 he made journeys far into the interior of Asia Minor and in Syria, Palestine and Egypt, collecting data upon which government reports were published. He was well known as a lecturer on the diplomatic and Consular service.

**PAINE, ROBERT TREAT.** An American philanthropist, died August 11, 1910. He was born in Boston in 1835, the great-grandson of the signer of the Declaration of Independence for whom he was named. He graduated from Harvard College in 1855. He studied law and in 1859 was admitted to the bar. He ceased active practice in 1870. In 1884 he was elected a member of the Massachusetts House of Representatives and in the same year was nominated by the Democrats and Independents for Congress, but was defeated. He organized in 1879 the Wells Memorial Workingmen's Institute, of which he remained president until the time of his death. He was also president of the Workingmen's Coöperative Bank from 1886 to 1903 and of the Associated Charities of Boston from 1878 to 1907, after which he was made honorary vice-president. From 1891 to the time of his death he was head of the American Peace Society. With his wife, in 1900, he created a trust for charitable purposes, named the Robert Treat Paine Association, which they endowed with \$200,000. He was connected with many other charitable and philanthropic organizations in Boston and elsewhere.

**PAINTING.** Of the National Academy of Design's two exhibitions of 1910, that held in the spring was by all odds of the greater interest and importance. The prize awards in that display indicated a wide range of taste on the part of the jury. The Thomas B. Clarke prize for "the best American figure composition painted in the United States by an American citizen" went to Frederick A. Waugh for his "Buccaneers," representing a lively scrimmage aboard ship, with flashing swords, powder smoke and a scene of carnage. There was ample supply of movement, but the composition was confused by surplus of detail, much of it capital. Some of the figures were admirable in their suggestion of savage vitality. The Saltus medal fell to Douglas Volk for a group entitled "The Little Sister," two children happily treated in a golden tone. For the best landscape J. Francis Murphy's "In the Shadow of the Hills" received a first prize, the Inness gold medal, an award with which no one was disposed to quarrel. It was a picture full of quiet charm, with a group of trees and a green meadow, the whole simple as to composition and restful in color.

The Hallgarten prizes for the best three pictures painted by Americans under thirty-five years of age went to Gifford Beal, Louis D. Vaillant, and Charles Rosen. The winner of the Shaw Memorial prize for the best work by an American woman was awarded to Susan Watkins for an interior showing much Chinese porcelain, rugs and a polished floor, a delightful room to work or dream in.

Landscape was well represented by E. W. Redfield's "Old Bridge," W. E. Schofield's "Snow Clad Hills," E. H. Potthast's "New England Coast," Childe Hassam's "Moonlight on Kattegat," George Bellows's "Floating Ice," Ben Foster's "Summer Day," Bruce Crane's "Shadows of the Afternoon," and Robert H. Bisbet's "Summer." Not exactly landscape, but picturesque and effective was Mr. Colin Campbell Cooper's "Bowling Green—Snowstorm," with the skyscrapers of which Mr. Cooper makes a specialty, in a swirl of smoke and snow.

In portraiture, Ernest L. Blumenschein's "German Tragedian" was one of the noted pictures. In expression, pose, costume, the portrait was a triumph for the artist. This stout elderly gentleman, with his unctuous smile of contentment, his cigarette, his cane, his fur-lined coat, had his profession written all over him; it was one of the few portraits in which character stood out. A "Portrait Group" by the same artist calls only for mention. Sergeant Kendall's several portraits of children showed no particular growth in a style of work that is certainly popular and has unquestioned cleverness of handling. William M. Chase's portrait of Spencer Kellogg owed much of its interest to a porcelain jar, and Irving Wiles had a fairly clever portrait of Miss Alice Chase. Good portraits were contributed by Charles Hawthorne (one of the notable canvases of the show) and by Robert Henri, who showed his customary and somewhat affected dexterity. Other portraits worth mention were by F. Luis Mora, Robert MacCameron, Frank Fowler, Alden Weir, August Franzen, George Bellows, H. O. Tanner and John de Costa.

Symbolic decorations by Will H. Low, Richard Newton and Paul Chalfin were not important. Neither was H. O. Tanner's "The Holy Women." Smaller figure subjects were contributed by William J. Hay and J. Alden Weir.

The winter exhibition at the Academy brought up once more the urgent need for a larger gallery for New York City. So restricted was the space that no more than two pictures by one painter could be accepted. The most interesting exhibit of the Winter Academy was perhaps that of the four Winslow Homers, loaned by citizens and institutions. They were "Camp Fire," "The Coming Storm," "High Cliff," and "The West Wind," all of them familiar to admirers of the late artist. In two of them there is the elemental power and simplicity of the sea pieces which he loved to paint and in which his greatness affirmed itself so simply. The post of honor in the exhibition was held very rightly by John W. Alexander's vision of two pretty girls, entitled "A Summer Day," which had previously been seen in Philadelphia. It was a subtle bit of work with a lovely misty atmosphere and much grace in composition. The prizes were awarded as follows: The Carnegie prize for the most meritorious oil painting not a portrait went to William S. Robinson for his landscape "Golden Days"; the Thomas R.

Proctor prize for the best portrait to Douglas Volk's "Marion of Hewnooks"; the Isidor Memorial medal for the best figure composition to Kenyon Cox.

One of the important portraits in the exhibition was Edmund C. Tarbell's portrait of President Timothy Dwight, presented to Yale University by the class of 1891, a work of dignity and of credit to the artist. It was criticised as presenting the scholar with the head minimized in comparison with the figure, but upon the whole the impression made by the portrait was excellent. Mr. Douglas Volk's prize picture was almost pre-Raphaelite in its painstaking execution. Wilton Lockwood's portrait of Dr. J. W. Elliot was attractive in color and atmosphere, and Robert MacCameron's portrait of Joseph B. Thomas, Jr., was one of the creditable pictures. Sergeant Kendall's portrait of Dr. Pruden was fairly strong, but lacked atmosphere and failed to stand out from the background. A clever sketch, or perhaps more than that, by Irving R. Wiles, was "The Student," a pretty art worker getting her palette ready. William Funk's picture of the three rosy children of William R. Coe had a sturdy, Teutonic sort of vitality. Some excellent work in portraiture was also contributed by Lydia Field Emmet, Adelaide Cole Chase, William T. Smedley, Alphonse Jongers, W. H. Hyde, and Percival de Luce. Ben Ali Haggin's portrait of the dancer, Rita Sacchetto, previously shown with the "Independents," was a decidedly clever affair.

In landscape Mr. Robinson's prize picture, "Golden Days," showed an effective treatment of nature in its serene mood, a rare autumn day, with the American golden haze at its best. It was an ideal New England landscape, the glorification of autumn. Childe Hassam's "Summer Idyl" suggested the freshness of deep foliage in shadow. Arthur Hoeber's "Walnut Grove" was impressionistic, but not aggressively so. Harold Camp's "Young Summer Night" was noted for a beautiful sky and Ballard Williams had a Welsh mountain landscape. Ben Foster showed one of the best landscapes of the year, his "Afternoon at Longpré," a pool of water in the foreground with a group of tall spindly trees in the background, the whole admirable in atmosphere and full of delicate charm. "Harlem River at High Bridge," by Ernest Lawson held an important place and deserved it. The water was prismatic and the canvas seemed to live. The same painter's "Umbrellas at Coney Island" had cleverness as composition but was crude in its rendering of glaring light. Other notable landscapes were by A. L. Groll and C. W. Eaton.

Among the figure pictures Henry S. Hubbell's large painting of two women in yellow draperies before an open fire was good in tone but rather confused in composition, the figures seeming extraordinarily large for the canvas. Mr. Weir's child holding a cat was in his best vein and full of charm, a trifle mannered perhaps, but nevertheless delightful. Two pictures by Susan Watkins showed good taste and a faculty for using rich material to advantage. William M. Chase had an interior that allowed him full scope for his admirable faculty in still life painting. The canvas was low in tone with a dull red floor, a dull green curtain, bronzes, brasses, silks and metals all contributing to a rich whole. E. L. Henry in "One Hundred Years Ago" showed a steamboat-landing on the Hudson with

WINSLOW HOMER

JOHN LA FARGE

TWO FAMOUS AMERICAN ARTISTS WHO DIED IN 1910

100

scores of figures supposed to be historically accurate, and was fairly interesting as a study of earlier days while not impressive as art. Charles W. Hawthorne's "Refining Oil" was more remarkable for brilliant success in the painting of big glass jars than for the strength of the figures, vigorous as they are.

**WATER COLOR SOCIETY.** The forty-third annual exhibition of the Water Color Society opened in New York in April and had as its most conspicuous contribution John S. Sargent's portrait of William Butler Yeats, the Irish poet. F. Luis Mora, L. L. Kaula, who had a lovely head, entitled "Vanity"; C. C. Cooper, Henry Reuterdahl, R. M. Shurtleff, E. L. MacRae and Arthur B. Davies were among the artists well represented. One entire panel was given up to etchings by the late James D. Smillie, and there were several drawings by the late Frederic Remington. One room was devoted to magazine illustrations by such men as John La Farge, Joseph Pennell, Winslow Homer, Everett Shinn, John Slan and Wallace Morgan. The Evans prize of \$300 was awarded to R. M. Shurtleff for his picture entitled "June." The Water Color Club, which held its exhibition in October, had as its best pictures Rhoda Holmes Nichols's "Japanese Parasol," E. C. Volkert's "October Afternoon," Jerome Myer's "Street Carousel," Alexander Robinson's "Chioggia Boats," W. M. Post's "Early Spring," Frank Tenney-Johnson's "Sheep Herder," C. C. Cooper's "Laufenburg Bridge," and Charles Sarka's "Mahomet."

**INDEPENDENT ARTISTS.** A curiosity in the way of art exhibitions was the show held in New York by the Independent Artists. Nearly 300 paintings, some of them excellent, some of them merely grotesque experiments, were shown to the bewilderment of many visitors. Of Robert Henri's four paintings of interest and even technical brilliancy his "Salome Dancer" deserved first place; John Sloan's "Clown Making Up," Ben Ali Haggin's "Sacchetto," Ernest Lawson's "White Horse," "A Prize Fight," by George Bellows, a "Race Course Scene," by W. J. Glackens, "A Night Scene on the River," by Léon Dabo, were pictures that made the exhibit worth a visit. An exhibition of ten artists who show yearly as "The Ten" had a remarkably good picture by J. Alden Weir entitled "The Flower Girl," a dark haired child with a basket of blossoms. T. W. Dewing, W. L. Metcalfe, Robert Reid, E. S. Tarbell, and F. W. Benson were among those represented by canvases most of which had already been seen elsewhere.

**PENNSYLVANIA ACADEMY OF FINE ARTS.** The one hundred and fifth Annual Exhibition of the Pennsylvania Academy of Fine Arts was held in Philadelphia in January with 481 paintings and 112 sculptures, representing the work of 370 artists. The Temple gold medal for the best picture went to Howard G. Cushing for his portrait of a favorite and effective model. The Lippincott prize was awarded to J. Alden Weir for a landscape, "The Hunter's Moon," and Childe Hassam received the Sesnan gold medal for his "Summer Sea." The Mary Smith prize for the best picture painted by a Philadelphia woman went to Mrs. Alice Mumford Roberts. Among the pictures of note shown were Sargent's portrait of Joseph Pulitzer and that of the Philadelphia surgeon, Dr. J. William White. Mr. Chase's excellent portrait of James C. Carter, one of his best, appeared again. John W. Alex-

ander showed his portrait of Richard Watson Gilder and also some of his remarkable fish studies. Charles W. Hawthorne had a pair of his brawny fishermen already seen in New York, and Colin Campbell Cooper one of his skyscraper scenes. Portraits by George Bellows and Robert Henri, Susan Watkins's portrait of the artist, Maurer; Woolf's character study of an old news-dealer, Philip L. Hale's "La Princesse Lointaine," Alice K. Stoddard's portrait of a charming young woman, and Mary Cassatt's "Children Playing with a Cat," are all worth mention, but many of them had already been seen in New York and elsewhere.

At the Corcoran Exhibition in December in Washington the first prize of two thousand dollars was awarded to Edmund C. Tarbell for his picture entitled "Interior." The second prize went to Gari Melchers for his "Penelope," the third prize to Childe Hassam for "Springtime," and the fourth to Daniel Garber for "April Landscape." Among other pictures of note in the exhibition were Cecelia Beaux's portrait of Dr. W. H. Howell, Dean of John Hopkins Hospital; Hawthorne's strong picture of a young man and woman entitled "Youth," and a harbor scene in Boulogne by W. E. Schofield. Mr. E. W. Redfield had a vigorous snow picture and Melchers, in addition to his prize picture, showed some strong figures of working people in his picture entitled "The Smithy."

The Annual International Exhibition held yearly in the galleries of the Carnegie Institute in Pittsburgh was in 1910 of more than usual importance. William M. Chase is said to have pronounced it the finest collection of pictures ever hung in America. The first prize of \$1500 went to William Orpen of London for his "Portrait of an Artist"; the second prize to Karl Anderson of New York for his "Idlers"; the third prize to Edward F. Rook for a landscape. Honorable mention was awarded to Joseph Oppenheim, Berlin, Germany; Charles Morris Young, Jenkintown, Penn.; Daniel Garber, Lumberville, Penn., and Louis Betts, Chicago. Several pictures by Childe Hassam were highly effective. William M. Chase had an interior of remarkable felicity, which adjective can hardly be applied to the "Girl and Horse" of Irving R. Wiles. Neither was Miss Beaux particularly successful. Almost every American artist of note contributed something to the exhibition. Among the foreign pictures were Nicholas Fechin's portrait of Mlle. Lapojnikov, a work of marked strength and sincerity.

**FOREIGN EXHIBITIONS.** The two Salon Exhibitions of Paris, that of the Société des Beaux Arts and of the Artistes Français were held in usual, each with a display of several thousand pictures. In the Beaux Arts show were conspicuous Lucien Simon's "The Pursuit," and "The Bath." La Touche, Delacroix, Lévy-Dhurmer, Aman Jean, Cottet and Lhermitte were distinguished among the Frenchmen. Portraits by J. J. Shannon, an American by birth but an Englishman by adoption, were much praised. Among the American exhibitors whose work found favor were Myron Barlow, Alexander Harrison, Walter Gay and Julius H. Stuart. A vast canvas by Thévenot showed Blériot landing in his aeroplane at Dover in July, 1909.

At the Salon of the French Artists Jean Paul Laurens's "Surrender of Yorktown," painted for the Baltimore Courthouse, held an important

place. In the same genre was Eugène Chicot's "Peace," intended for the Peace Palace at The Hague. D  taille had a barricade fight of his customary merit. Paul Steck, Henri Delacroix, Jules Adler, Joseph Bail, Paul Chabas, and L  on Bonnat, all had pictures of note. Among the Americans who found a place were Seymour Thomas, Frank Boggs, Robert MacCameron, Mildred Copeland, Richard Miller, H. S. Hubbell, Augustus Koopman, H. O. Tanner, E. W. Redfield and Walter McEwen.

The American Woman's Art Association of Paris held an exhibition in which while there were some good pictures most of the canvases shown hardly ranked higher than studies. Anne Goldthwaite, president of the association, contributed a good interior and a portrait. The Boston artist, Mildred Copeland, showed her attractive study of a young woman entitled "Vanity." Other exhibitors were Maude Hunt Squire, Constance Bigelow, Alice McClure, Maude Murray and Anna Richardson. Miss Mary Cassatt held in March an exhibition of her own work that received praise from the French critics.

At the one hundred and forty-second exhibition of the London Royal Academy in April, Sir Edward Poynter's picture of King Edward in his robes of state attracted most attention. E. A. Abbey's "Pennsylvania's Treaty with the Indians" and "American Army at Valley Forge," both for the Pennsylvania State Capitol, were also conspicuous. Four small pictures were contributed by Sargent, and there were also a portrait by Cyrus Cuneo of San Francisco, and a fairly effective painting by W. B. Wollen of the "Fight on Lexington Common." "Aristocrats," by Frederic Roe, depicting an incident in the French Revolution; a portrait of Mrs. Cyprien Bridge by John Collier; Harland Fisher's "Old Rose Garden," a graceful girl watching doves in flight; and H. G. Riviere's portrait of Lady Bulough, were other pictures of note.

**PALESTINE.** See *ARCH  OLOGY*.

**PALISADE PARK.** See *NEW YORK*.

**PALLADIUM.** See *ATOMIC WEIGHTS*.

**PALMER, F.** See *LITERATURE, ENGLISH AND AMERICAN, Travel and Description*.

**PANAMA.** A republic occupying the Isthmus of Panama. The capital is Panama.

**AREA AND POPULATION.** The area is variously estimated at from 31,570 to 33,776 square miles. By the treaty of November 18, 1903, the United States guaranteed the independence of Panama, and the latter granted to the United States, in perpetuity and with sovereign rights therein, a strip of land (the Canal Zone) extending to a width of five miles on either side of the Panama Canal. The United States acquired also several small islands in the Bay of Panama. In 1909 the population was estimated at 419,029 (mostly a mixed race of Spanish, Indian, and negro origin); an estimate of 1910, however, puts the total as low as 361,000. The larger towns are: Panama, with estimated population of 43,819 on December 31, 1909; Col  n, about 18,000; David, 12,000; and Bocas del Toro, 10,000. Important sanitary improvements have been undertaken in the capital and especially Col  n. At the end of the year 1909-10, public schools numbered 238, with 14,305 pupils enrolled and 396 teachers. There are a few schools for secondary and technical education.

**PRODUCTION, COMMERCE, ETC.** The principal industry is the cultivation of bananas. Other

products, which are raised in small quantities, are sugar-cane, cacao, coffee, rice, corn, yams, and sweet potatoes. Efforts are being made to promote the production of sugar, for which the country is said to be excellently adapted. There are numerous mineral deposits, but mining is little developed.

In 1908 imports (exclusive of non-dutiable supplies for the Panama Canal) and exports were valued at \$7,806,812 and \$1,827,050 respectively; in 1909, \$8,756,308 and \$1,502,475. The principal classified imports in 1909 were: Vegetable products, \$2,251,767 (\$1,424,347 from United States); textiles, \$1,712,829; animal products, \$1,510,822 (\$1,044,884 from United States); mineral products, \$943,398; liquors, \$649,691. Of the imports, the value of \$4,996,627 came from the United States, \$1,762,411 from Great Britain; \$914,756 from Germany; \$297,352 from France, and \$210,426 from Italy. Of the exports, the United States received the value of \$1,264,906; Great Britain, \$142,174; and Germany, \$86,972. Of the exports to the United States, bananas amounted to \$853,419; rubber, \$109,821; cocoanuts, \$97,583; ivory nuts, \$74,618; hides, \$65,908.

The Panama Railway crosses the Isthmus from Col  n to Panama, 47 miles. The government has contracted (March 30, 1910) for the construction of a railway from Panama to David (274 miles). At end of 1909, telegraph offices, 32; post-offices, 96.

**FINANCE.** For the period January 1, 1909, to December 31, 1910, the estimated revenue and expenditure, as sanctioned by the legislature, were \$5,050,315 and \$6,877,470 respectively. The President, however, under legal authority, subsequently reduced the authorized expenditure to equal the estimated revenue. For 1909 the actual revenue, which is derived principally from customs and excise, was \$2,973,292. There is no public debt, and the government has upwards of \$7,500,000 invested. The unit of value is the gold balboa, equivalent to the American dollar.

**GOVERNMENT.** The executive authority is vested in a president elected by popular vote for four years and assisted by a cabinet of five members. The people do not elect a vice-president, but every two years the National Assembly names three *designados*, the first *designado* taking the place of the President in case of the latter's absence or disability. The Assembly is unicameral. The President for the term beginning October 1, 1908, was Jos   Domingo de Obald  a, who died March 1, 1910. The executive duties were assumed by Carlos Antonio Mendoza, the second *designado*, the first *designado* having died the previous year. The Assembly convened on September 1, 1910, and on the 14th elected as first *designado* Pablo Arosemena (inaugurated October 5), who thus became acting President for Obald  a's unexpired term. Second *designado* for the two years ending October 1, 1912, Federico Boyd. There is no army, but the government maintains a national police corps, which in 1909 numbered 1008 officers and men. The navy includes two armored gunboats and two auxiliary vessels. The seven provinces of the republic are administered by governors appointed by the President.

**HISTORY.** Criticism was caused by the reported remark of the American Charg   d'Affaires at Panama that if the Republic did not choose a vice-president agreeable to the United States, annexation would follow. The State Department

**"PORTRAIT OF A GERMAN TRAGEDIAN"**  
**BY ERNEST L. BLUMENSCH**

॥ ॥ ॥

ordered him to repudiate the interview, in which he was quoted as saying this and he afterwards expressed in person to the President of Panama his regret for having misunderstood his duty and offered an apology. He was later recalled. The United States government authoritatively denied that it contemplated annexation before the opening of the Panama Canal, pointing to the clause in the Hay-Varilla treaty declaring that the United States guarantees the independence of the Republic of Panama. On September 14 the Assembly, which was controlled by the Liberal party, voted almost unanimously for Pablo Arosemena as first vice-president (*designado*), to serve as acting president for the unexpired term (ending October 1, 1912) of the late President Obaldia. For second vice-president, Federico Boyd was chosen, and for third, Rodolfo Chiari. The estrangement between Panama and Colombia showed a prospect of coming to an end in 1910, when Panama sent Dr. Carlos Mendoza on a mission to Colombia, but the mission was later reported to be unsuccessful.

**PANAMA CANAL.** Work on the canal progressed steadily through 1910 without serious hindrances of any sort. The total amount of excavation and a comparison with the excavation of 1909 will be found in the accompanying table. The year was notable for the marked absence of criticism of the plans and performances of those in charge of the work. The movement, which originated in the latter part of 1908 and continued during the early part of 1909 against the lock canal, and for a water-level canal subsided, and there was no revival of this criticism in 1910. In November visits were made to the canal by President Taft and by a party of engineers representing the American Institute of Civil Engineers. The President expressed great satisfaction with the progress of the work and the engineers were equally favorable in their comments and expressed the opinion that from an engineering standpoint the work could not be improved.

The organization of the Isthmian Canal Commission remained the same during 1910, except that Hon. J. C. S. Blackburn, who resigned on December 4, 1909, was succeeded by Maurice H. Thatcher on April 12, 1910. By an executive order of April 16, 1910, the position of counsel and general attorney was created. Among minor changes made in the organization was the abolition of the mechanical division as it formerly existed, and the work formerly done by the division was distributed among the different shops in the Canal Zone. An inspector of shops was added to the organization with the duty of looking after the economical distribution of work among the different shops, the distribution of tools, besides the additional shop facilities and the adoption of standard shop methods. A standard wage scale for employes on the gold roll was adopted and put into effect. After its adoption the heads of departments and divisions fixed a maximum limit of pay for the various positions considered by them as necessary for the proper conduct of the work in their charge, and the pay of positions on the gold roll is now standardized, no variation being allowed except in cases where increased responsibilities and duties fall upon its occupant.

The work of the canal is divided into four divisions. The First Division, which is charged with the design of the locks, dams, regulating works and accessories, is in charge of Lt.-Col.

H. F. Hodges of the Corps of Engineers, U. S. Army. The Atlantic Division has charge of construction work, which is divided into four parts: First, that comprising the excavation of the channel between the Gatun locks and the Atlantic Ocean; second, the construction of the Gatun locks; third, the construction of the Gatun dam and spillway; and fourth, the municipal engineering work. This division is in charge of Lt. William L. Siebert, Corps of Engineers, U. S. Army. The work of the Central Division includes excavation in that part of the canal which embraces the entire extent of the former Culebra and Chagres sections of the Central Division. It is in this division that the greatest amount of excavation work is done. The division is in charge of Lt.-Col. D. D. Gailard of the Corps of Engineers, U. S. Army. The Pacific Division includes the excavation and construction for a distance of 11 miles from Pedro Miguel to deep water in the Pacific Ocean. It is divided into four districts: First, locks, dams and dry excavation; second, dredging, hydraulic excavation, Balboa shops and shopways; third, municipal and sanitary work; fourth, Ancon quarry. This division is in charge of S. B. Williamson.

**FIRST DIVISION.** During the year detailed drawings for the upper lock at Gatun and for the single lock at Pedro Miguel were made and the general features of the lower locks at Gatun and the lock flight at Miraflores were adopted. These general features include the use of intermediate gates in the middle and lower locks at Gatun, but of no intermediate gates at the lower lock of Miraflores. The south approach wall at Pedro Miguel was designed of massive concrete and the larger part of it is constructed. The northeast wing wall will also be of massive concrete, and reinforced concrete walls have been designed for the northwest, southeast and southwest wing walls in the same locality. During the year general and detailed drawings for all the gates required fully to equip the locks were completed and bids were issued. The lowest bid was that of the McClintic-Marshall Construction Company of Pittsburg, Pa. This was accepted and a contract made with this firm. The advertisement called for the erection complete of all the gates of the canal, 46 in number or 92 leaves, by January 1, 1914. The contractors bind themselves to complete the work by January 1, 1913. In the contract the work of erection at Gatun is to begin on January 1, 1911, and to be completed on February 1, 1913; at Pedro Miguel the work of erection is to begin March 1, 1911, and to be completed May 1, 1912; and at Miraflores work is to begin January 1, 1912, and to be completed June 1, 1913. Much study has been given by the engineers of the commission to the question of the machinery for operating the gate leaves. As the result, the recess in the wall into which the leaf fits when open was modified so as to admit of freer exit of water around the mitre post when the gate is near the position of rest, and a type of machine was adopted in which the force applied increases and the rate of motion decreases near the beginning and end of the movement. The machinery adopted consists of a rigid horizontal strut connected to the upper girder and the gate leaf. The other end of the strut is attached to a large horizontal gear wheel near its circumference. As the large gear wheels turn the effect of the strut is practically that of a crank pin on a connecting rod. The

rate of travel of the gate increases gradually from the beginning to a point just beyond the middle of the path between the recess and the mitre. After passing its maximum the rate gradually diminishes until just at mitring it becomes very small. It has been thought desirable to provide all the gate leaves with a positive lock which will hold them together against wave action and at the same time it has seemed possible to arrange a locking device which will force the gates to meet perfectly at the mitre, thereby reducing the care which is usually necessary in closing large lock gates to avoid a false mitre.

The general plan of the machinery to be used in the raising and lowering of the gates on the crest of the spillway dam at Gatun has been prepared. The machinery has been mounted in a tunnel in the main body of the dam for the purpose of protecting the parts of the machinery and the counterweights, this arrangement at the same time obviating the installation of cumbersome and heavy material on the foot bridge which extends over the gates. Designs have been prepared for an electric locomotive which, it is thought, will prove satisfactory to tow vessels through the locks and have full control of them from the time they approach until they are locked through to a point from which they can proceed under their own steam.

Investigation of the expenditure of water from Gatun Lake as affected by the design adopted for the locks was carried on during the year. The results indicate that during ordinary years there will be a surplus of water even during the dry season, and that the water supply of the worst known dry season for the last 19 years, that of 1908, will be sufficient to maintain through the canal an average daily number of passengers three or four times as great as the average number now passing through the Suez Canal.

**ATLANTIC DIVISION.** The work of excavating the locks was continued in 1910 by steam shovels and to some extent by dredges, resulting in the removal in lock chambers during the year of 3,965,699 cubic yards in the dry, and 435,178 cubic yards in the wet. In addition to this excavation there were removed 646,520 cubic yards of material in auxiliary work, including dredging in the French canal. The excavation in the upper locks was completed. The excavation for the lower locks, exclusive of the approach walls, was undertaken, and but 375,000 cubic yards remained to be removed at the close of the fiscal year. During the fiscal year there were laid in the Gatun locks 513,083 cubic yards of concrete. The total amount of concrete to be placed in the locks, including the approach and wing walls, is estimated at 2,046,100 cubic yards, so that the total amount remaining to be placed at the end of the fiscal year was 1,532,297 cubic yards. With a view to reducing the cost of concrete, instructions were issued to make arrangements to embed large stone, not less than one-man size, in the masses of concrete, which would amount to about 20 per cent. of the mass. This was begun in March, 1910, and up to the close of the fiscal year aggregated a total of 10,786 cubic yards.

At the Gatun Dam prior to January, 1910, the operations in the construction were practically limited to that portion between the locks in Spillway Hill. In the latter month it was decided that a larger amount of material for the toes of the dam should be procured from the Central Division, this supply to be utilized as long

as it could be economically furnished. At the close of the fiscal year the north and south toes of the portion of the dam east of Spillway Hill had reached an elevation of 65 feet above mean tide and the hydraulic fill between the toes an average elevation of 51 feet. West of Spillway Hill the north toe had been carried to an elevation of plus 30 feet and the south toe to an elevation of plus 35 feet. The total amount of material placed in the dam during the fiscal year was, dry fill, 2,577,234 cubic yards, and hydraulic fill, 2,933,175 cubic yards. Trestles aggregating 7486 cubic feet were constructed during the year. Excavation for the spillway was continued during the year, resulting in the removal of 127,210 cubic yards. The excavation for the foundation of the spillway dam was completed except at the extreme end and that for the curtain and side walls and for the floor was fully completed. By April 25 the side walls, floor and curtain walls were completed and the foundation of the dam sufficiently advanced to warrant turning the Chagres River through the spillway. Considerable time was lost owing to the excessive floods of November and December, 1909.

Excavation in the dry in the channel between the Gatun locks and the Atlantic Ocean was continued until November 20, 1909, when work was suspended due to the cut being filled by the high water in the Chagres River which had access to the French Canal. There were excavated in the dry, 991,572 cubic yards of earth, and 233,144 cubic yards of rock. The deepest part of the cut had reached a depth of 42 feet below sea level at the time work was suspended.

**CENTRAL DIVISION.** The work on this division embraces all the excavation between the Gatun dam and Pedro Miguel locks, including diversion channels, construction of the Naos Island breakwater, clearing of timber from the channel and anchorage basin, municipal improvements in the various settlements included within the division limits and such sanitary engineering work as is prescribed by the sanitary department. In this division is included the famous Culebra cut. The total excavation in this division during the fiscal year 1910 was 17,865,808 cubic yards, which was something more than 2,000,000 cubic yards less than the amount excavated in the fiscal year 1909. It is estimated by the engineers that the total amount to be excavated from this division is 38,309,475 cubic yards.

From the Culebra cut 14,921,750 cubic yards were excavated during the fiscal year, leaving 34,893,531 cubic yards to be removed in order to complete this section of the canal. This also includes an increase of 6,408,560 cubic yards over the estimate made in September, 1908. This increase is due to the widening of the canal north of Pedro Miguel lock so as to form a basin, and to allowance made for slides and breaks, as a number of new ones developed during the year and could not be foreseen when the estimates of 1908 were made. These slides and breaks are the chief obstacles with which the engineers have to contend in making the excavations in this cut. Four large slides occurred prior to 1910 and these made it necessary to remove over 1,000,000 additional cubic yards of excavation. Three bad breaks occurred during the fiscal year 1910. On the west bank of the canal at the town of Culebra the break covers an area of 10½ acres and during the fiscal year 1,500,388 cubic yards were

PANAMA CANAL. GENERAL VIEW OF UPPER LOCKS AND FOREBAY AT GATUN, LOOKING NORTH. JULY, 1910

34

removed. Another break occurred directly opposite this one, covering an area of  $11\frac{1}{2}$  acres on the east side of the canal. The third break was at La Pita Point and permitted the waters of the Obispo diversion to flow into the canal for a period of three days, drowning out some of the shovels that were at the north end. The total amount of material removed from all slides and breaks in this division during the fiscal year amounted to 2,649,563 cubic yards or about 15 per cent. of the amount removed from the Culebra cut. During the year floods seriously interfered with the progress of the work. The most serious of these occurred on December 26, 1909, overflowing the dike separating the cut from the Chagres River, cutting a channel through it about 200 feet long and 21 feet deep. During the year 17,749,306 cubic yards of material were deposited in various dumps. A considerable portion of this amount was dumped on the Panama Railroad relocation for filling trestles and for raising the embankment of the new line to the desired level. Work was continued during the year on the breakwater from Balboa toward Naos Island, with the object of cutting off silt-bearing currents from the excavated channel in the Pacific, thereby reducing the cost of maintenance and making navigation of the channel easier by protecting vessels from the existing cross currents. Prior to July 1, 1909, the trestle had been constructed for a distance of a little over 2 miles and during the fiscal year it was extended 1123 feet, giving a total length from the shore of 2.4 miles. The work so far accomplished has been of material benefit in securing the objects originally sought. The average cost of excavation for the year was 66.99 cents per cubic yard; including plant charges and division expenses.

**PACIFIC DIVISION.** The work in this division consists in the construction of the locks and dam at Pedro Miguel, the locks and dams at Miraflores, the Ancon quarry and excavating a channel between the locks and below Miraflores locks to deep water in the Pacific. The total amount of dry excavation in this division during the fiscal year was 1,269,865 cubic yards and the total amount of dredge excavation was 6,990,391 cubic yards. Work continued during the year in excavating the lock site at Pedro Miguel and the approaches thereto from the south. When the excavation on this point was nearly completed two slides occurred on the east side delaying the work and increasing the amount to be removed by 75,299 cubic yards of earth and rock. The laying of concrete began on April 4, 1910, and the total amount of concrete laid during the fiscal year was 166,869 cubic yards.

The west dam at Pedro Miguel consists of two mounds or toes of all classes of waste material, a large percentage being rock, with the intervening space filled with selected material forming an impervious core. The selected material is clay excavated from the canal prism and is deposited from sump cars in layers about 6 feet deep. In the fiscal year 51,827 cubic yards were added to the impervious portion and 41,964 cubic yards to the toes. The excavation for the upper locks of the flight at Miraflores was practically completed during the year and the work of preparing the foundations, erecting concrete plant, and placing concrete was begun. The total amount excavated was 234,731 cubic yards by steam shovels and 59,098 by hand, scrapers and cranes. The total amount of con-

crete laid during the year was 1630 cubic yards. The estimated amount of concrete in the locks, including approach and wing walls, was 1,327,300 cubic yards. A reinforced concrete power house at Miraflores was completed during the year at a total cost, including equipment, of \$486,096.

The west dam extended from the head of the locks to Cocoli Hill, consisting of two mounds or toes made up of waste material obtained from rock excavation, mostly rock, and of hydraulic fill between them, was continued during part of the fiscal year.

**LABOR.** The average number of gold employes and skilled laborers on the rolls of the Commission during the fiscal year was 4369 and on the Panama Railroad, 753, or a total of 5122. During the year there were 2890 separations from the service of the Commission and there were employed in the United States 1099, on the Isthmus 1092, and re-employments on the Isthmus 967, or a total of 3158, which indicates that more than 60 per cent. of the force was changed during the year. Laborers recruited during the year aggregated 2519. These were all West Indians, a large number from Barbados. The last recruiting was done in January, 1910, from which date immigration exceeded emigration. During the last four months of the fiscal year an immigration movement began from Europe and more than 200 laborers came from Spain and Italy of their own volition. From the beginning of the fiscal year there was a steady increase in the force until on March 30, 1910, a maximum of 38,676 was reached. This is the largest force on record in the history of the work on the canal. Following this date there was a slight decrease, but the total effective force on June 30, 1910, was 35,578, as compared with 33,493 on June 30, 1909. A number of new buildings were constructed during the year for the accommodation of gold employes and laborers. The total number of buildings in the Canal Zone owned by the Commission was, at the end of the fiscal year, 3078, of which 1147 were acquired by purchase from the French.

**ISTHMIAN CANAL ZONE.** On April 12, 1910, Maurice H. Thatcher was chosen head of the Department of Civil Administration to succeed Hon. J. C. S. Blackburn, resigned. No congressional legislation of importance affecting the Zone was passed during the year. Negotiations were carried on with the officials of the Republic of Panama which resulted in the adoption of sanitary regulations, the amendment of the agreement with Panama for the maintenance and operation of Santo Tomás Hospital, the maintenance of the insane of the Republic of Panama in commission hospitals, the verification of the survey of the Canal Zone boundaries and the enforcement of the executive decree of Panama prohibiting the recruitment of labor in the cities of Panama and Colón. A reorganization of the police department, by which the Zone was, for police purposes, divided into four districts co-extensive with the administration, became effective February 1, 1910. During the year 12 schools for white children and 12 for colored children were maintained.

**IMPROVEMENTS IN COLON AND PANAMA.** Municipal improvements continued to be made under the agreement between the United States government and the government of Panama for sanitary and other improvements in these cities. The amounts thus expended are to be refunded to

the United States at the end of a 50-year period from the collection of water rents. In Colon work was undertaken on the construction of a sewer at an estimated cost of \$136,000. In Panama streets were graded and macadamized, sewers and water mains were laid and concrete curbs and gutters were placed, making a total expense for improvements thus far undertaken of \$134,750.

**PANAMA RAILROAD.** The construction of a new line for the operation of the Panama Railroad was being done by the Panama Railroad Company under an agreement with the Commission. At the beginning of the fiscal year work was in progress along the entire stretch from Gatun to Gamboa, with the exception of 8 miles through the valley of the Gatun River. As canal construction contemplated the closing of the west reversion and discharging the Chagres River through the spillway, the elevation of the floor of which was placed 10 feet above sea level, work on the relocation during the year had to be arranged so as to give continuous communication at such times as the Panama Railroad is flooded. This made necessary the construction of several trestles. The material for embankments for the relocation was obtained from the excavation of the canal.

**COST OF THE CANAL.** The appropriations made by Congress for the Isthmian Canal available to the close of the fiscal year 1909 amounted to \$210,146,468, or 56 per cent. of the total estimated cost of the canal, which is fixed at \$375,201,000. On June 25, 1910, \$37,855,000 was appropriated for the fiscal year 1910-11, leaving \$127,199,531 of the estimated total cost of the canal to be appropriated. The total classified expenditures for canal work to June 30, 1910, was \$191,258,113, of which amount \$31,188,426 were the net expenditures for the fiscal year. Of the total expenditures to June 30, 1910, \$25,699,450 were for plant and equipment for construction work, of which \$4,388,511 were expended during the fiscal year. The expenditures for the fiscal year were distributed as follows: Department of Civil Administration, \$719,351; Department of Sanitation, \$1,803,040; Department of Construction and Engineering, \$26,300,166; General Items, \$2,866,088. The canal excavation to the end of 1910, including that done by the French companies and by the Americans, together with the excavation done in the several divisions, is shown in the following table:

CANAL EXCAVATION TO DECEMBER 31, 1910

**PANAMA EXPOSITION.** See EXPOSITIONS.

**PANAMA LIBEL SUITS.** See UNITED STATES, *Administration*.

**PAN-AMERICAN CONFERENCE.** The fourth Pan-American Conference was held at Buenos Ayres July 12—August 30, 1910. Among the American delegates were former Ambassador to France, Henry White, Professor John Bassett Moore, Professor Paul Reinsch, Professor David Kinlay, Professor Bernard Moses, E. B. ~~sett Moore, Professor Paul S. Reinsch, Professor~~ Quintero, and Colonel Enoch Crowder. Many important questions were discussed, including the question of a steamship service between the United States and South America, Pan-American railway, an agreement concerning patents, trade marks and copyrights, proposals for interchange of university professors and the subject of sanitation.

It was decided by the Conference that it would be unwise to make a general declaration in support of the Monroe Doctrine and the subject was therefore not taken up by the Conference. A committee drafted a report on the proposed treaty calling for compulsory arbitration of the pecuniary claims of one nation against another. In the committee appointed to consider sanitary regulations for commerce there occurred some difference of opinion. Venezuela objected to the proposition supported by the United States and Cuba that the condition of ports of departure should be such as to satisfy the nation receiving shipments that in these ports there is no dangerous infectious or contagious disease. The representative of Venezuela complained that such requirements would attack the sovereignty of the country from which shipments were made. A delegate from Santo Domingo asked that the programme of the Conference be extended to permit declaration of the intentions of European, North American or South American powers with respect to domestic politics of any American nation. The Cuban delegates declared that the time for making such an extension was when the programme was arranged at Washington by representatives of the Republics. No action was taken on this suggestion. The national holiday of Argentina occurred during the session of the Conference, and Professor Paul S. Reinsch, of the United States delegation, made an address in Spanish, speaking for his country. The Conference also celebrated the anniversary of Peruvian

**GATUN LOCKS LOOKING SOUTH. END OF MIDDLE LOCK IN FOREGROUND**

**GATUN SPILLWAY LOOKING NORTH**

**PANAMA CANAL**

11701

independence. An address in Spanish was delivered by Professor Bernard Moses of the United States delegation. It was proposed that in recognition of Argentina's centenary, a building for a permanent Pan-American exposition be erected in Buenos Ayres, and that the cost of this be shared by all the republics.

It was decided that the International Bureau of the American Republics should hereafter be known as the Pan-American Union (q. v.). During the session of the Conference four conventions and twenty resolutions were passed. The conventions related to provisions for payment of pecuniary claims, and for the regulation of trade marks, copyrights and patents. They accord with instructions given to the American delegation by Secretary Knox before their departure. Among the matters considered by the congress were arrangements for the opening of the Panama Canal in 1915, and ways to establish better water communication between the countries.

**PAN-AMERICAN UNION.** An official institution under the support of the Republics of North, South and Central America, for the encouragement of Pan-American commerce, friendship and peace. Previous to the fourth Pan-American Conference (q. v.) this institution was known as the International Bureau of the American Republics. It was established in 1890 in accordance with resolutions passed at the first International Conference of American Republics, held at Washington, and it has been continued by succeeding conferences. The most important purpose of the Union is to develop commerce and trade, to promote better political relations, closer acquaintance and more intimate association among the American republics. In order to accomplish these results it keeps in close touch with the commercial affairs of the republics and publishes numerous handbooks, pamphlets and maps relating to them. Its most important publication is the *Bulletin of the Pan-American Union*, issued monthly, which contains a variety of information relating to commerce, finances and history of the American republics. In the July and August, 1910, numbers of the *Bulletin* there were included important and exhaustive summaries of the commerce of the various republics during the year 1909. In April, 1910, the handsome new building of the Union was dedicated at Washington. This building was erected as the result of a gift of \$750,000 from Mr. Andrew Carnegie, together with additional sums from the governments of the various republics. The director-general of the Union is John Barrett, and the secretary, Francisco J. Yanes.

**PANTOCHROMISM.** See **CHEMISTRY**, *Color of Dyestuffs*.

**PAPER.** The paper industry in 1910 experienced the effects of political discussions and proposed legislation and treaties by the United States and Canada. It was proposed that a reciprocity treaty be negotiated and one of the features of this would be the importation of paper or wood pulp duty free or at a low rate into the United States. This was demanded in the United States by those looking for cheaper paper and for the conservation of the forests and opposed by papermakers, while in Canada the manufacturers were demanding protection for raw materials and the conservation of the forests and water supply. The Canadian farmers were anxious for complete reciprocity and

the entire situation was awaiting solution at the end of the year.

So far as the paper trade itself in the United States was concerned, business was more satisfactory in 1910 as regards volume than in 1909, though it was considered far from ideal and a tendency towards overproduction was manifested, causing an unstable market. In the first half of the year water conditions upon which the paper industry is so dependent were favorable and as a result 94 3/10 per cent. of the normal output of writing paper was made and 98 per cent. shipped. In the second half of the year there was a lack of water and as shown in the production of writing paper, there was a decrease to but 87 per cent. of the normal output, with shipments of 85 per cent. In 1910 the actual daily production of writing paper was 500 tons, as compared with 429 tons in 1909. The book paper trade experienced an ordinary routine year, with a product aggregating 740,125 tons, as against 717,300 tons in 1909, a figure that was considered by many an overestimate. The normal increase in the production of book paper is stated at about 8 per cent. For 1911 it was announced that about a dozen new machines had been contracted for and this would increase the output by about 60,000 tons. In addition to the output of ordinary book paper there was the coated and enameled book paper, of which the output was about 180,000 tons. The production of "news" paper for 1910 was below the capacity of the plants on account of a strike of the International Paper Company's employes and the severe droughts in the latter half of the year. There was an increase in the amount of paper imported during the year, due to the lowering of the duty by the tariff act of 1909. The paper bag trade was reported as being in rather a demoralized condition during the year. White tissue stocks increased and the prices were lowered.

The business for the year with foreign countries showed an increase in the quantity of raw materials brought in to meet increased domestic demand for the finished product. New plants were built during the year, and while there was some drought in certain sections mills have been busy but conservative. At Water-vliet, Mich., a 136-inch Fourdrinier paper-making machine was installed in a new mill. This installation was unique in that it was able to make a roll of paper complete in 40 minutes.

The great Harmsworth combination, which controlled extensive wood supplies and pulp mills in Newfoundland, during the year were engaged in getting their English paper mills at Gravesend-on-the-Thames in readiness for work and other new mills in addition were being built, all to be finished in 1911. Two large machines for the manufacture of "news" paper were built during the year and were ready for installation in three weeks. The pulp from Newfoundland is transported directly to these mills and many interesting developments in the British trade are anticipated once they are in operation.

The Oji Paper Manufacturing Company at Tomakomai, Iburi province, Japan, completed its \$3,500,000 plant for the manufacture of book and "news" paper. It has a capacity of 350 feet of paper a minute 100 inches in width. Other paper plants were in course of construction during the year in Japan and considerable effect on the import trade was anticipated.

Climatic conditions in Chile are reported to be such that young trees grow twice as fast as in other wood-producing countries and in many sections the supply of good trees is extensive. A French combination was endeavoring to secure a concession near Lake Chapo and there erect a pulp mill to supply wood pulp for export to Europe and the United States. Later they proposed to build a paper mill and compete in the markets of South America, which is now a large importer of American and European paper. Japanese in Tieling, Manchuria, have undertaken the manufacture of pulp from millet, which grows in abundance in this country and a large acreage has been planted for an experiment.

The use of India paper for reference books received an impetus during the year when contracts were placed in Europe for 2000 tons of this paper the amount being distributed among a number of mills, though only a few are able to supply the product, the annual output of which ordinarily is only about 200 tons, used mainly for Bibles and small books. The manufacture is a long and lengthy process. See **CHEMISTRY, INDUSTRIAL**.

**PAPER BOARD ASSOCIATION.** See **TRUSTS**.

**PAPUA, TERRITORY OF.** A British possession, a dependency of the Commonwealth of Australia, made up of the southeastern portion of the island of New Guinea and the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups of islands. Total area, 90,540 square miles (87,786 mainland, 2754 all islands). The foreign white population (census of June 30, 1908) numbered 711; colored, 511. The native population is placed at 500,000; but large areas of the hinterland remain unexplored and no estimate of their population is possible. Capital, Port Moresby. On March 31, 1909, there were 130 European plantations, with a total planted area of 7740 acres, divided as follows: 5365 acres in cocoanuts, 1702 in rubber, 382 in sisal-hemp, 180 in coffee, 111 in other economic plants. These figures are exclusive of grains, etc. The ordinance compelling the natives to plant cocoanuts for their own use is being generally enforced with good results, and the total acreage planted up to 1909 was estimated at 350,000, with about 100 trees to the acre. Sugar-cane, tobacco, ginger, bamboos, tropical fruits, and valuable timbers are indigenous, and cacao, cotton, vanilla, tea, etc., are being grown at the government experiment stations. Total livestock (June 30, 1909), 1519. The gold mines employed (1908-9) 102 white and 969 colored miners, and yielded 14,710 ounces, valued at £51,108. The highest value obtained was in 1899-1900—£89,075. The Astrolabe copper field exported (1908-9) 67 cwt., value £1341. Lead, mercury, graphite, osmiridium, zinc, and sulphur occur. Pearls, *bêche-de-mer*, tortoise-shell, and sandalwood are produced for export. Total imports (1907-8), £94,061 (foodstuffs, £33,440; hardware and ironmongery, £10,774; clothing, £9300; tobacco and cigars, £7653; liquors, £2297); exports, £80,616 (gold, £52,837; copra, £7515; sandalwood, £6346; natural history specimens, £3661; pearls, £3310; copper ore, £2479; *bêche-de-mer*, £1069; rubber, £483). In 1908-9 the imports and exports were valued at £94,680 and £79,691 respectively. Port Moresby, Daru, Samarai, and Bonagai are the ports of entry, at which entered and cleared in 1907-8, 263 vessels,

of 183,772 tons. There are 1247 miles of cart roads and horse and pedestrian tracks. Revenue (1908-9), £27,706; expenditure, £51,824; 1909-10, £35,918 and £64,873. Grant, 1908-9, £23,000; 1909-10, £26,000. Lieutenant-governor (1910), J. H. P. Murray; administrator, commissioner for lands and surveys, etc., M. Staniforth Smith.

**PAPUANS.** See **ANTHROPOLOGY AND ETHNOLOGY**.

**PAPYRUS.** See **ARCHÆOLOGY**.

**PARAGUAY.** An interior republic of South America. The capital is Asunción.

**AREA AND POPULATION.** The area has been estimated at 97,722 square miles, but it cannot be positively determined until the settlement of the boundary dispute with Bolivia. On December 31, 1908, the estimated population was 715,841, mostly a mixture of Spanish, Guarani Indian, and negro origin. The larger towns are: Asunción, with upwards of 60,000 inhabitants; Villa Rica, 30,000; Concepción, 25,000; Carapegua, 13,000. Immigration, 1906-7, 1226; 1907-8, 1024.

Primary instruction is free and compulsory. The reported number of public primary schools at the beginning of 1909 was 344, with 40,605 pupils and 756 teachers. In addition there were between 2000 and 3000 pupils in private schools. The University of Asunción has about 200 students. The state religion is Roman Catholicism, but religious toleration prevails.

**PRODUCTION AND COMMERCE.** The greater part of the soil has been alienated to capitalists, syndicates, and foreign bondholders. Agriculture is not greatly developed, but livestock raising has become important. Livestock in 1908: Cattle, 5,500,000; horses, 182,790; mules and asses, 7626; goats, 32,334; swine, 23,900. Of the crops, yerba maté, tobacco, and oranges are commercially the most important. Annual production of maté, about 17,600,000 pounds; tobacco, about 6,000,000. Other products are corn, alfalfa, beans, cotton, manioc and various fruits. The quebracho tree affords a profitable industry; estimated yield of quebracho extract in 1908, 15,000 tons, valued at 1,275,000 pesos (gold).

Imports and exports have been valued as follows, in thousands of pesos (the gold peso is equivalent to the Argentine peso, worth 96.5 cents):

	1906	1907	1908	1909
Imports .....	6,267	7,513	4,073	3,789
Exports .....	2,695	3,237	3,732	5,137

The foregoing figures show a notable increase in exports and the return of imports to a normal amount. The principal imports are foodstuffs, textiles, hardware, and liquors. The leading exports are livestock products (about 40 per cent. in 1908), tobacco, maté, quebracho extract and wood, and oranges. Of the imports in 1908, 29 per cent. came from Germany, 21 from Great Britain, 19 from Argentina, 9 from France, and 7 from Italy; of the exports, 52 per cent. went to Argentina, 25 to Germany, and 15 to Uruguay.

**COMMUNICATIONS.** A railway is in operation from Asunción to Pirapó, 155 miles. An extension of about 78 miles to Villa Encarnación was expected to be finished in 1911. Encarnación is on the Paraná River, opposite the Argentine town Posadas, to which a line was opened August 16, 1910. There was thus the probability of rail communication (excepting

1941

1941

Paraná ferry) between Asunción and Buenos Ayres in 1911. At present the Paraguay and Paraná rivers are the principal means of transportation. Telegraph, over 60 offices, with nearly 2500 miles of line, connecting with the Argentine system. Post-offices (1909), 383. In 1909, there entered the port of Asunción 969 steamers (mostly Argentine and Brazilian), of 256,654 tons, and cleared 1017, of 248,660 tons.

**FINANCE.** For 1908, revenue is stated at 1,771,680 pesos gold and 6,291,926 pesos paper; expenditure, 567,636 gold and 28,327,337 paper. Of the revenue, import duties represented 1,077,811 pesos gold; property tax, 1,941,956 paper; stamps, 1,688,723 paper. According to the budget, the revenue for 1910 was computed at 1,771,000 pesos gold and 6,236,000 paper; expenditure, 710,552 gold and 27,094,943 paper. The gold peso coincides in value with the Argentine peso, 96.5 cents. In recent years, the gold premium has fluctuated greatly; in 1906 it was about 1000 and in 1909 it varied from about 1300 to nearly 1700. The English funded debt December 31, 1909, was 4,018,218 pesos gold; floating debt, 750,000 gold; paper money (1908), 35,000,000 pesos.

**ARMY.** Although every citizen between the ages of 20 and 25 is liable to military service, only a small standing army is maintained, numbering about 1500 men, though nominally about 100 officers and 2500 men. It is formed into 4 battalions of infantry, 6 squadrons of cavalry, 5 batteries of field artillery, 2 machine-gun sections and 1 battalion of coast artillery.

**GOVERNMENT.** The executive authority is vested in a president, elected indirectly for four years, and assisted by a cabinet of five members. The legislative power devolves upon a congress of two houses, the Senate and the Chamber of Deputies. For the term ending in 1910, Gen. Benigno Ferreira was elected, but, as a result of the revolutionary movement of 1908, was superseded by the Vice-President, Emiliano González Navero. In 1910 Manuel Gondra and Juan Gaona were elected President and Vice-President respectively for the term ending in 1914, and were inaugurated in December.

**PATRIOTIC SOCIETIES.** Organizations which have as their objects the preservation of the records of important historical events and especially of the wars in which the United States has participated; the encouragement of love of country, the saving and restoration of historical sites and objects, the celebration of anniversaries and historic events and the fostering of fraternal feeling and intercourse among the veterans. The most important soci-

eties of this nature, including societies of men and women, with the date of their foundation and their membership in 1910, when it could be ascertained, are noted in the table below:

	Founded	Members 1910
Army and Navy Medal of Honor Legion		458
Army and Navy Unions	1888	
Army of the Tennessee Association	1902	
Aztec Club of 1847	1847	228
Colonial Dames of America	1890	6,000
Daughters of the American Revolution	1890	60,250
Daughters of the Revolution	1891	
Daughters of Veterans	1885	
Imperial Order of the Dragon	1908	
Military Order of Foreign Wars	1894	
Military Order of the Loyal Legion	1865	8,902

United Sons of Confederate Veterans	1896	
United Spanish War Veterans	1904	
Grand Army of the Republic	1866	213,901

**PATTERSON, EDWARD.** An American jurist, died January 28, 1910. He was born in New York City in 1839, and his early education was received in Philadelphia. He pursued law studies in New York City and was admitted to the bar in 1860. He soon built up a profitable practice and was engaged in many prominent cases. In 1884 he was candidate for judge of the Court of Common Pleas of the State of New York, but was defeated. In 1887, however, he was elected to the Supreme Court bench of the State and was elected in 1900 to succeed himself. At the time of his death he was presiding justice in the First Department of the New York Supreme Court.

**PATTERSON, ROBERT WILSON.** American editor and newspaper publisher, died April 3, 1910. He was born at Chicago in 1850 and graduated from Williams College in 1871. He began the study of law in Chicago and after the great fire became reporter on the *Chicago Times*. He was later on the staff of *The Interior*. He became connected with the *Chicago Tribune* in 1873 and was successively assistant night editor, Washington correspondent, editorial writer, managing editor, and editor-in-chief of this paper. He was also president of the Chicago Tribune Company.

**PAVEMENTS AND ROADS.** For city pavements, stone blocks, brick, asphalt and wood blocks continue to be used in accordance with local conditions of street travel, of nearness or

remoteness to points of production, of relative prices, and of preferences on the part of city officials and of property owners. Rectangular wood blocks, treated with preservatives against decay, are perhaps extending in relative use more rapidly than the three other forms of pavements just named. Brick is still widely and increasingly used near the centres of paving-brick production, particularly in the North Central States. Bituminous concrete, generally composed of refined-gas tar and broken stone, but sometimes with asphalt in place of tar, occupies a place intermediate between sheet asphalt and dust-and-water-bound broken stone or macadam. Tar is also widely and asphalt less generally used as a binder for macadam roads in place of stone dust or clay and water, the tar being sprayed onto the successive layers of broken stone. The use of the bituminous binders in broken-stone road construction has been greatly accelerated by motor vehicles, particularly heavy, high-speed cars. To keep down dust on old-style macadam roads, tar-spraying and tar-painting are used. Heavy asphaltic petroleum oils are also widely used to lay dust on both macadam and dirt roads; likewise in the construction or improvement of dirt and gravel roads. These oils are more extensively used in California and the Southwest and West than in the East, on account of heavy freight charges from the California and Southwestern oil fields to the East.

Pavement and road problems were the subject of a number of important conferences in 1910. In February, engineers in charge of city pavements met in Chicago, considered standard specifications for pavements at length and in much detail, adopted tentative specifications and appointed committees to consider the various topics further and to report to a second conference, to be held in New York City, in January, 1911. Later in 1910, State highway commissioners and engineers met in conference over road problems, and in December an American Good Roads Congress was held at Indianapolis. A large portion of the time of the annual convention of the American Society of Municipal Improvements, held at Erie, Pa., October, 1910, was devoted to pavement specifications and construction. The event of the year was the Second International Roads Congress, held at Brussels, Belgium, in August. The first Congress was held at Paris in 1908. As an outgrowth, a Permanent International Roads Commission was created, with headquarters at Paris. This Commission arranged for the Brussels Conference, at which 117 papers, on nearly all phases of road and pavement construction, were presented. The papers were printed in advance, in French, German and English. They centred around nine "questions," or main topics. All the papers in each group were summarized by a "reviewer," who presented "conclusions" to the Conference for discussion and adoption or amendment. The "Final Conclusions" embodied the consensus of opinion of engineers from all parts of the world, in so far as such opinion could be crystallized and agreed upon by such an assemblage. Among the conclusions adopted by the Conference were resolutions favoring the further development and use of tar and other bituminous materials as binders for broken-stone roads, and a recommendation looking to the use of stone blocks for city pavements, where noise is not objectionable and neither wood nor asphalt admissi-

ble. The use of stone blocks of regular size, laid with close joints, was advised. A third international road conference will be held in 1913, presumably in London, but possibly somewhere in the United States, although the failure of either the general government or any of our State governments to join the other nations of the world in the financial support of the Permanent Road Commission tends to work against holding a congress in this country.

**PEABODY MUSEUM OF HARVARD UNIVERSITY.** An institution for anthropological and archaeological research, founded in 1866 by George Peabody, who gave \$150,000 for that purpose and for a professorship in Harvard University, which has become the anthropological section of the University Museum. The Museum has carried on work during 1910 in Guatemala under the direction of Dr. A. M. Tozzer. This expedition returned in May, 1910, having accomplished important results. Another expedition to Guatemala with Raymond E. Merwin as field director, started November 4, 1910, to continue the work in that region. During the year the Museum has published and issued to about 400 exchanges one Memoir and two Papers on the archaeology, hieroglyphs and picture writing of Central America. In November, 1910, the Museum was endowed with a new fund to be entitled the Mary Hemenway Fund for archaeology. This was received from the estate of Mary Hemenway. The officers of the Museum in 1910 were Abbott Lawrence Lowell, President; Frederic W. Putnam, honorary curator; Roland B. Dixon, librarian, and Frances H. Mead, Secretary.

**PEAK, JOHN L.** An American diplomat, died September 24, 1910. He was born in Scott county, Ky., in 1839, and graduated from Georgetown College in 1858. He studied law and graduated from the Louisville Law School in 1860. From 1870 to the time of his death he practised law in Kansas City, Mo., and was at one time prosecuting attorney of Jackson county. From 1895 to 1897 he was United States Minister to Switzerland.

**PEARY, ROBERT EDWIN.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**PEASE, J. A.** See GREAT BRITAIN, *Government*.

**PEET, T. E.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**PEILE, JOHN.** An English scholar and educator, died October 9, 1910. He was born in 1838 at Whitehaven, Cumberland. He was educated at Christ's College, Cambridge, where he took high rank. He early made a reputation by his *Introduction to Greek and Latin Etymology*, which was published in 1869. It represented great advance in the study of compara-

tive philology. He afterward popularized the elements of philology in a small primer, which had a wide circulation. He was appointed university reader in philology in Christ's College in 1884 and became vice-chancellor in 1891. On the death of Dr. Swainson in 1887 he became the first lay Master of Christ's College. He performed a great part in the reform and development of the university and for 33 years was a member of the Council of the Senate. During his mastership a large block of new buildings was erected at Christ's College, and a considerable addition has since been made in commemoration of the quarter centenary of the Lady Margaret's foundation of the college. The college library was also reconstructed and enlarged. Among his publications, in addition to those mentioned above, were *Notes to Tale of Nala* (Sanskrit) (1881), and *History of Christ's College* (1900).

**PEIXOTTO, E. C.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**PELLAGRA.** According to the bulletin of the Census Bureau, in 1909 there were 116 deaths in the United States from this disease, as against 23 in 1908. The actual mortality is probably much higher than this, since the registration area comprises only a small portion of the area of its occurrence. The finding of so many cases in the Southern States within the past few years has stimulated interest in the United States, but the disease was studied still more attentively in Austria and Italy, where pellagra is widely prevalent. While there seems to be no doubt as to the relationship between the eating of damaged maize and pellagra, yet this theory does not always square with facts observed, and other factors must be sought for to explain its occurrence. Raubitschek in the Laboratory at Czernowitz carried on extensive experimental work to determine the value of the various theories in regard to the origin of pellagra. He believes that none of the theories at present in vogue is correct. His researches seem to indicate that beriberi and pellagra are the result of some toxic substance in rice and corn, which does not become active unless sensitized by direct sunlight. Laboratory animals fed exclusively on corn or rice remained healthy as long as they were protected from direct sunlight, but on exposure soon became emaciated and developed paralysis, and died in from one to three weeks. Other animals, removed from the light soon after the onset of the disease, rapidly recovered. Again, white animals fed on buckwheat remained healthy while kept in the dark and died when exposed to the sun. Dark-colored animals, on the contrary, did not suffer in this way. The bearing of these observations upon pellagra is shown, when it is considered that symptoms develop in summer with special vigor, and that the skin lesions are almost exclusively confined to the areas exposed to the sunlight. Raubitschek therefore explains pellagra as due to a toxin which develops in the parts of the skin exposed to the sun from the action of chemical rays on the fatty alcohol soluble element in corn.

Verney, an Italian investigator, marshals the facts in favor of the theory of a specific microbic infection as a cause for pellagra. He points out that cases occur in individuals who have never eaten corn (Neusser and Antonini, however, discovered that some patients drank brandy made from damaged maize) and that the disease per-

sists unmodified after corn is eliminated from the diet. No other intoxication, he says, is known, which does not improve when the source of poisoning is withdrawn. The existence of chronic, acute and fulminating cases of pellagra harmonizes better with our conception of germ infection than with an intoxication. Even admitting that occasionally the symptoms may be the result of a superimposed malaria, typhoid or meningitis, he believes that the evidence points to a protozoan infection. The toxic and the infective theories do not conflict, but reinforce each other. The digestive disturbances induced by a diet of spoiled corn, and the consequent lowered resistance, pave the way for the development of the specific microbic infection. Still another theory is advanced by Sambon, as a result of investigations in several districts in Italy. Sambon believes that pellagra is an insect-borne disease and that the sand-fly is responsible for its dissemination. He did not discover any parasite, but suggests a parallelism between yellow fever and pellagra. No doubt exists as to the microbic character of yellow fever and of its dissemination by mosquitoes, and yet no specific parasite has been discovered. (See INSECTS AND THE PROPAGATION OF DISEASE.) The Austrian government has taken practical steps to stop the progress of pellagra, by the erection of six modern steam rye bakeries, which are under close supervision and the product of which is sold at a fixed price, in order to popularize the rye bread and stop the use of infected corn meal as a popular food.

**PENANG.** See STRAITS SETTLEMENTS.

**PENTLAND, Lord.** See GREAT BRITAIN, *Government*.

**PEND OREILLE BRIDGE.** See BRIDGES.

**PENITENTIARIES.** See PENOLOGY.

**PENNSYLVANIA.** One of the Middle Atlantic Division of the United States. It has an area of 45,126 square miles. Its capital is Harrisburg.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 7,665,111, as compared with 6,302,115 in 1900 and 5,258,113 in 1890. The increase in the decade 1900 to 1910 was 21.6 per cent. The State ranks second in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Pennsylvania surpasses every other State in the value of its mineral products. Its coal includes practically 50 per cent. of the coal mined in the United States. The total production in 1909 was 137,845,815 short tons of bituminous and 80,658,049 short tons of anthracite. The bituminous production was considerably larger than that of 1908, which was 117,179,527 short tons. The production of anthracite, however, fell off. There were produced in 1908 83,268,754 tons. The production of bituminous coal in 1910, according to the estimates of the United States Geological Survey, showed a considerable increase over that of 1909. The different fields were variously affected during the year. In the western part, particularly in Allegheny and Washington counties, the production was stimulated almost beyond that of any previous year. On the other hand, in the Connellsville coking-coal district, the production of 1910 was not materially different from that of the preceding year, although

indications are that it was slightly increased. In the Clearfield or central Pennsylvania district, conditions were unsatisfactory. The increased production in the western counties was due chiefly to the idleness of six months caused by the strike in the Mississippi Valley States and to an unusually large amount of coal shipped to the Upper Lake markets during the summer. The production of anthracite coal was estimated at 64,374,200 tons. The statistics for the last few years indicate that no decided increase in the production of anthracite coal is to be expected. Anthracite is becoming more and more a luxury and this tendency will continue to be more pronounced until the mines are exhausted. It is now almost entirely marketed for domestic use in the Eastern States. In the manufacture of coke Pennsylvania stands first among the States. The quantity produced in 1908, the latest year for which statistics are available, was 15,511,634 short tons, which was considerably more than half the total production of the country. This, however, was a decided falling off from the production of 1907, largely as a result of the financial depression throughout the country. The production of petroleum has steadily increased since 1896. There were produced in 1909 1,134,897 barrels, as compared with 1,160,128 barrels in 1908. The petroleum developments during the year were generally limited to well-defined oil-producing regions. The estimates of the United States Geological Survey indicate a still diminished production in 1910. The price of oil declined from \$1.43 a barrel at the beginning of the year to \$1.30 in June, remaining at this figure to the end of the year. Pennsylvania is first among the States in the production and value of cement. There were produced in 1909 20,923,606 barrels, valued at \$14,746,755, as compared with 18,254,806 barrels, valued at \$13,899,807 in 1908. There were 21 plants producing Portland cement in 1909. Other important mineral products are slate, coal products, sand and gravel, iron ores, salt and tale.

**AGRICULTURE.** The acreage, production and value of leading crops in 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	1,586,000	65,026,000	\$38,365,000
1909.....	1,525,000	48,800,000	34,160,000
Winter wheat 1910	1,556,000	27,697,000	25,481,000
1909.....	1,545,000	26,265,000	28,629,000
Oats, 1910.....	998,000	35,130,000	14,403,000

#### POLITICS AND GOVERNMENT

The State legislature was not in session in 1910, as the sessions are biennial and the last was held in 1909. The next session meets January 3, 1911.

**CONVENTIONS AND ELECTIONS.** Dissensions in the Republican party in the State and the general feeling of possible Democratic success in the November election compelled the Repub-

licans to seek for the strongest possible candidate for governor. A strong effort was made to induce Philander C. Knox, Secretary of State, to become the Republican candidate, and Secretary Knox went so far as to give a tentative promise that he would serve. Objections on the part of President Taft, however, induced him to withdraw his consent, and he declined to have his name used before the convention. The State Republican machine, which dictates Republican nominations, is under the control of Senator Penrose, and at the meeting of the Republican Convention at Harrisburg on June 22, practically no opposition was made to the nominations favored by him. These were the following: For governor, John K. Tener; for lieutenant-governor, John M. Reynolds; for secretary of internal affairs, Henry Houck; and for State treasurer, Charles F. Wright. (Subsequently the Supreme Court decided that Mr. Wright, serving as treasurer by appointment, should hold over a year, and trusteeship nominees were dropped from the several tickets.) The platform adopted by the convention indorsed the national and State administrations, approved the Payne-Aldrich tariff law and outlined a series of State issues for the campaign. The platform declared for a ship canal from the Ohio River to the Great Lakes, a system of main State highways, compulsory arbitration of labor disputes, enforcement of the pure food laws, vigorous prosecution of the civil suits to recover the millions of dollars misspent on the State Capitol; liberal appropriations for schools and a State health campaign, and an investigation of the caving in of the surface over abandoned coal mines.

The Democrats in their convention held on June 15 nominated Webster Grim for governor, Thomas H. Creedy for lieutenant-governor, and James I. Blakslee for secretary of internal affairs. The platform adopted by the convention attacked the Republican policy of protection, declaring that the party had taxed the necessities of life for the benefit of corporate trusts and declared that trusts and monopolies should be abolished or controlled by the supervision and management of their business by legislation. A demand was made for the conservation of public lands, forests, water-power and mineral resources. A plank was incorporated favoring the income tax amendment to the Constitution of the United States.

A body of Republicans and Democrats, who were dissatisfied with the results of their party conventions, organized a new party known as the Keystone Independent. The convention was held at Philadelphia on July 28, at which William H. Berry, former State treasurer, was nominated for governor; D. Clarence Gibbon, President of the Philadelphia Law and Order Society, for lieutenant-governor; Cornelius D. Scully of Pittsburg for State treasurer; and John J. Casey of Harrisburg for secretary of internal affairs. Of this ticket, Berry and Casey were Democrats and Gibbon and Scully Republicans.

That the Republican majority would be reduced in the November elections was indicated by the result of the congressional primaries held on June 4. In this election, Representative Dalzell, one of the most prominent members of the House of Representatives, and a strong conservative or reactionary, narrowly escaped defeat for renomination, Joseph C. Sibley, formerly a member of Congress, was nominated in the 28th District, but several months later he was

indicted on the charge of bribing voters to secure his renomination. According to his own statement, Mr. Sibley spent \$42,500 to secure the Republican nomination in the five counties composing the 28th District.

The campaign which followed the nominations was a bitter one and was not free from personalities. Charges were made by various newspapers reflecting upon the character of the Republican nominee, Mr. Tener, and he brought libel suits against several journals making these charges. The nominees of all three parties made an active campaign throughout the State. The result of the voting on November 8 was as follows: John K. Tener, 415,611 votes; Webster Grim, 129,395 votes. Mr. Berry, candidate for the Independent Keystone Party, received 362,127 votes or nearly three times the number cast for the Democratic nominee. A falling off in the Republican vote is indicated by the fact that in 1908 President Taft received 745,779 votes. The entire Republican ticket was elected.

**PITTSBURG GRAFT CASES.** The most sensational events in the history of the State were those connected with the indictment and prosecution of persons accused of receiving and giving bribes in Pittsburgh. These prosecutions were begun as a result of the work of the Voters' League from 1906 to 1908 in investigating the methods of Councils, especially in passing ordinances providing for contracts with banks to be city depositories. The city had up to July 1908, been paid 2 per cent, upon its bank deposits. An ordinance was introduced in Councils providing that certain city depositories be designated by Councils for a term of four years, the city to receive only 2 per cent. on daily balances. Certain other banks offered to pay 2½ per cent. Out of 77 votes cast at the balloting on this ordinance in Common Council, 76 were in favor of it. The ordinance was vetoed by Mayor Guthrie and was re-passed over his veto by a vote of 73 to 2 in Common Council and 42 to 6 in Select Council. Investigations by the Voters' League disclosed a remarkable condition of corruption among municipal officers and officials of certain banks. As a result, seven councilmen were arrested for receiving bribes on December 31, 1908. At the same time the president and the cashier of the German National Bank of Pittsburgh were arrested on charges of bribery. On February 18, 1909, W. W. Ramsey, former president of the German National Bank, was convicted on a charge of bribing councilmen to have his bank named as one of the six city depositories. He was convicted and sent to the penitentiary; A. A. Vilsack, the cashier, pleaded no defense and was sentenced to jail. Prosecutions were carried on during 1910 and many convictions were obtained. Many cases were pending at the close of the year 1909 and several men were under bail.

On January 14, 1910, five prominent citizens of Pittsburgh were arrested, charged with conspiracy, perjury, bribery, and other offenses. These men were Edward H. Jennings, president of the Columbia National Bank; Frank F. Nicola, a prominent and influential business man; Max G. Leslie, Allegheny county delinquent tax collector; Frank A. Griffin, formerly vice-president and cashier of the Columbia National Bank, and Charles Stewart, formerly member of the Council.

In February Max G. Leslie was tried and acquitted. E. H. Jennings, president of the Co-

lumbia National Bank, and F. A. Griffin, formerly cashier of the bank, testified that they had given to Leslie \$25,000 to be used in procuring by bribery the passage of an ordinance making their bank a depository for city funds.

John F. Klein, a former councilman, who had been convicted of giving and receiving bribes, in March made a confession to the prosecuting attorney which implicated not less than eighty persons. Among these were several bankers, but the larger part were former or present members of the Select or Common Councils. Klein confessed that he had been one of the persons who distributed the bribe money which was paid by six banks to procure ordinances making them depositories of city funds. He had kept complete records of these transactions and after the bribers refused to pay him \$60 a month for the support of his wife and two young children during his term of 3½ years imprisonment in the penitentiary, he resolved to confess. His confession was a few days later supplemented by those of two of his former associates in Council, Joseph C. Wasson and William Brand, both of whom had been convicted. Following Klein's confession the district-attorney on March 20, invited all the bribe-takers to confess in open court. He promised to favor those who confessed and to prosecute those who refused. On the following day ten of these confessed. These, with one exception, had, as members of the Council, sold their votes for sums ranging from \$80 to \$500. The exception was Dr. W. H. Weber, who had received \$10,000, of which he had given \$6000 to Klein and had distributed \$4000 among forty others. In the three days following 24 more persons confessed to Judge Frazer. These received sums ranging from \$50 to \$1100. On May 25 an indictment against 31 persons was brought by the grand jury. That body also demanded that the directors of the six banks named as city depositories should investigate in relation to the action of the officers of the institutions and report in writing. These banks were the Farmers' Deposit National Bank, the Second National, the German National and the Columbia National, of Pittsburgh, and the German National and the Workingmen's Savings and Trust Company of Allegheny. In the interest of these banks, \$102,500 was alleged to have been paid in bribes. The grand jury published a list of fifty-four councilmen and the sums they received, ranging from \$50 to \$500 for the passage of one ordinance. Max G. Leslie, who had been acquitted a few days before, was again accused. The exposure of corruption was due largely to the efforts of the Voters' League, who employed detectives.

During the last week in March, 24 other persons were indicted, making a total number of 97. Among those thus accused was Dr. E. R. Walters, formerly president of the Select Council and at the time of his indictment director of public health and charities. He was charged with having accepted a bribe of \$1000 for voting to make one of the banks a depository for city funds. Much of the evidence upon which these indictments were based was obtained from already convicted councilmen. In response to the district-attorney's invitation, six more councilmen came into court in the same week and admitted their guilt. On April 1, a mass-meeting was held in which the subjects of discussion were the graft cases and the movement against vice. To this meeting the mayor, William A.

Magee, came, and without invitation undertook to defend himself against the criticism of several speakers. His defense was not well received by his listeners.

On April 6 the grand jury indicted Frank N. Hoffstot, president of the Pressed Steel Car Company and of the German National Bank of Allegheny, and the director of several other corporations. It was charged that he gave or caused to be given in New York City, to a Councilman, Charles Stewart, \$52,500 to be used in bribes for an ordinance making three banks, the German National Bank of Allegheny, the Farmers' Deposit National and the Second National, depositories of city funds. This bribery was alleged to have occurred in 1908. He was also accused by the grand jury of having solicited and obtained a contribution of \$21,000 from the cashier of the Second National Bank as a part of the bribery fund. Previous to the indictment of Hoffstot, the court had heard the confession of Charles W. Friend, vice-president of the Clinton Iron and Steel Company, a director of Hoffstot's company and of the Second National Bank. He admitted that he had paid bribe money to Stewart. Emil Winter, president of the Workingmen's Savings and Trust Company, also confessed to the court that he had paid to Morris Einstein \$20,000 to be used for an ordinance in favor of that company. Councilman P. B. Kerns confessed that he had taken and distributed bribe money, adding that he had held back for himself more than was assigned to him. Max G. Leslie, county delinquent tax collector, was indicted for a second time.

In April M. L. Swift, Jr., a former member of the Common Council, was placed on trial for taking bribes. John F. Klein was the chief witness against him. He was found guilty with a recommendation to mercy. In the same week, A. V. Simon, a councilman, was put on trial. After deliberating 46 hours the jury reported a verdict of acquittal, providing that Simon would pay all costs of the case and would at once resign from the Council. The judge declined to accept this curious verdict and discharged the jury. Leslie asked for a change of venue, alleging that public prejudice would prevent a fair trial in Pittsburgh and that the county authorities would pack the jury against him. District Attorney Blakeley joined in asking for a change of venue on other grounds. His remark to the court implied an inference that he could not expect justice in a trial in Pittsburgh of a person prominent and active in politics. He declared that a large fund had been raised and was being used against the interests of justice. In the case of Frank N. Hoffstot who was arrested in New York City Governor Hughes decided to honor the requisition of the governor of Pennsylvania. Hoffstot delayed extradition by securing a writ of habeas corpus, and appealed to the United States Supreme Court. The decision was against him and he returned to Pittsburgh and gave bail.

Maurice S. Coffey, a former councilman, was tried for bribery and the jury disagreed, standing seven to five for conviction.

On May 14 the following men who had been found guilty of bribery or who had admitted their guilt, received the following sentences: A. A. Vilsack, formerly cashier of the German National Bank, who pleaded guilty and testi-

fied for the prosecution, eight months in jail and a fine of \$5000; Charles Stewart and Hugh Ferguson, former councilmen, eight months in jail and a fine of \$500; Dr. W. H. Weber, former member of the council, six months in jail and \$500 fine; P. B. Kerns, former councilman, six months in jail and \$250 fine; Morris Einstein, former councilman, six months in jail and \$2500 fine. Charles W. Friend, vice-president of the Clinton Iron and Steel Company, was fined. M. L. Swift, ex-councilman, finally was imprisoned. Dr. F. C. Blessing, president of the Common Council, was convicted of bribery, but the jury asked the court to be lenient. He appealed. In the case of Charles C. Schad, formerly a councilman, the jury disagreed and was discharged. Frank F. Nicola, a wealthy business man who was accused of having assisted in bribing councilmen in the interest of the Columbia National Bank, was acquitted. Joseph G. Armstrong, director of public works, was arrested on charges that he was guilty of forgery, perjury and subornation of perjury in connection with the falsification of pay rolls. E. H. Jennings was sentenced to jail for two months and fined \$500 and Frank A. Griffin was sentenced to jail for four months and fined \$500.

**STATE CAPITOL FRAUDS.** Prosecutions were carried on during the year against those who had been indicted for frauds in the furnishing of the State Capitol at Harrisburg.

The sentence of two years' imprisonment and a fine of \$500 against William P. Snyder, auditor-general, and James M. Schumaker, general superintendent of the public buildings and grounds, found guilty in December, 1908, of conspiracy to defraud the State in connection with the furnishings of the State Capitol at Harrisburg, was affirmed by the higher court on March 7. Two other persons, William L. Mathues, state treasurer, and John H. Sanderson, were in 1908 found guilty on the same charges. They both died, however, before sentence could be executed. On the same date the attorney-general of the State started suit to recover, if possible, the moneys fraudulently taken, by bringing suits in equity for more than \$5,000,000. The defendants were ex-Congressman Burd Cassell, president of the Pennsylvania Construction Company, E. L. Reinhold and E. B. Reinhold, officers of the same company, I. G. Harris, formerly State treasurer, E. B. Hardenbergh, formerly auditor-general of the State, T. Larry Eyre, formerly superintendent of public buildings and grounds, William P. Snyder, formerly auditor-general, James M. Schumaker, formerly superintendent of public buildings, Joseph M. Huston, architect of the Capitol, and the estates of W. L. Mathues and John H. Sanderson. Suits were brought also against various trust companies, surety companies and individuals, in sums exceeding \$2,000,000. It was alleged in these suits that Sanderson received \$5,376,308 for articles worth only \$1,344,077 and that \$2,000,000 was paid to the Pennsylvania Construction Company for metallic filing cases which in reality were not worth more than \$750,000. It was charged also that a corrupt agreement had been made in 1902 even before the contract for the erection of the new Capitol had been awarded.

Joseph M. Huston in the latter part of April was found guilty of conspiracy to defraud the State. The jury at first insisted upon a verdict that Huston was guilty of fraud, saying there

CAPITOL (HARRISBURG)**

৪৭৩

had been no conspiracy, but finally a verdict in conformity with the indictment was rendered. Huston was accused on 34 indictments in addition to the one on which he was tried, and is a defendant in a civil suit of the State for the recovery of \$5,000,000. Huston was sentenced to pay a fine of \$500 and to be imprisoned for an indeterminate sentence of from six months to two years.

The last of the defendants to be tried in the criminal cases arising out of the Capitol frauds at Harrisburg, was Charles G. Wetter, a member of the firm that erected the building. He withdrew the plea of not guilty on the understanding that he should make restitution for the overcharge. A new trial was denied Joseph M. Huston, the architect. Wetter paid \$14,518 in restitution and was discharged.

**OTHER EVENTS.** The great dam of the Pennsylvania Water and Power Company at McCall's Ferry was formally opened on October 14. This dam provides power for supplying light and power to the city of Baltimore and for other purposes. On February 5, eleven men were killed by a gas explosion in a coal mine near Indiana.

The notable pieces of statuary by George Gray Barnard, made for the State Capitol at Harrisburg, were placed in position in 1910. They are generally regarded as the most important works of sculpture produced by an American sculptor.

**STATE OFFICERS.** Governor, John K. Tener; Lieutenant-Governor, John M. Reynolds; Secretary of the Commonwealth, Robert McAfee; Treasurer, C. F. Wright; Auditor-General, A. E. Sisson; Adjutant-General, Thos. J. Stewart; Attorney-General, John C. Bell; Superintendent of Public Instruction, N. C. Schaeffer; Insurance Commission, S. W. McCulloch; Commissioner of Agriculture, N. B. Critchfield,—all Republicans, except Schaeffer and McCulloch, Democrats.

**SUPREME COURT.** Chief Justice, D. Newton Fell; Associate Justices, J. Hay Brown, Wm. P. Potter, John Stewart, Robert Von Moschzisker, S. L. Mestrezat, and John P. Elkin—all Republicans, except Mestrezat. Prothonotary, Eastern District, James T. Mitchell, Prothonotary, Middle District, William Pearson; Prothonotary, Western District, George Pearson.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 38; House, 161; joint ballot, 199; Democrats, Senate, 12; House, 45; joint ballot, 57; Independent, House, 1; Republican majority, Senate, 26; House, 115; joint ballot, 141.

**PENNSYLVANIA UNIVERSITY OF.** An institution of higher learning in Philadelphia, Pa., founded in 1740. The departments of the university include the College, the Graduate School, Law School, School of Medicine, School of Dentistry and School of Veterinary Medicine. The attendance in these departments in the college year 1910-11 was as follows: College, 3730; Graduate School, 416; Law School, 347; School of Medicine, 460; School of Dentistry, 462, and

School of Veterinary Medicine, 154, or a total of 5389. The officers of instruction numbered 630, of which 259 were in the college. The university has a large representation from the different States and from foreign countries. The students from foreign countries in 1910-11 numbered 262. There were 24 from China, 22 from Canada, 18 from Australia, 8 from Japan, and representatives from nearly every country in Europe and South and Central America. The library includes about 300,000 volumes. The most important event in the history of the university in 1910 was the resignation of the Provost, C. C. Harrison. Edgar F. Smith, Blanchard professor of chemistry, was appointed Provost in his stead. The productive funds of the university in 1910-11 amounted to \$12,774,372, the total income to \$1,362,927 and the receipts from benefactions to \$464,820.

**PENOLOGY.** Several features of the progress in the treatment of crime and criminals are notable. The fundamental fact has been the wider acceptance of the views that crime and delinquency are indications either of faulty inheritance or vicious environment; and that society is on the whole responsible for allowing either the congenital criminal to be born or the otherwise socially desirable individual to be corrupted by bad surroundings. The result is the introduction of more humane treatment, and a demand for more exact knowledge both of the so-called criminal type and its inherited traits and of social conditions productive of law breaking. Instead of harsh primitive methods, advanced prison policy seeks to remedy the defects of previous training by sanitary and wholesome surroundings, by prison schools, by teaching trades and by emphasizing the dignity of labor. So far as possible individual treatment of each convict is practised. Young and incipient criminals are separated from the old and hardened. Criminal law and court procedure are being reformed through the decline of the idea that society must be revenged; by the creation of separate courts for children (see JUVENILE COURTS) and women; by the increasing use of the indeterminate sentence and the parole and probation systems. Agencies for assisting the released convict into a respectable position are being perfected, as are also plans for enabling the imprisoned father to care for his family by his prison labor. Then in the United States there is a very powerful movement for the reform of jail and prison construction, so as to make them more sanitary and association in them less corrupting.

**MEETINGS OF ASSOCIATIONS. AMERICAN PRISON ASSOCIATION.** During the last days of September and the first week of October there met in Washington, D. C., the American Prison Association, the American Institute of Criminal Law and Criminology, and the International Prison Congress. In his presidential address before the first of these, Mr. Amos W. Butler of Indianapolis brought out the enormous waste resulting from ineffective utilization of prison labor. He advocated the extension of the system of State farms now profitably conducted in the South. Other speakers declared that the reformatories and prisons receive altogether too many persons who would be diverted from a life of crime if the reformatory and preventive methods of work-houses, jails, and house of correction were more effective. A number of speakers advocated a just and humane treat-

ment of criminals while in prison and the extension of a helping hand to those released. The general conclusion from experience seemed to be that fair and humanitarian treatment accomplished a great deal more than harsh and severe punitive methods. Great stress was laid upon the salutary benefits of the indeterminate sentence and the laws allowing commutation of sentence for good behavior. Mr. Albert H. Hall of Minneapolis strongly advocated an increase in facilities for the correction and utilization of criminal statistics. He also made the radical suggestion that Bertillon measurements and photographs of every citizen be made matters of public record. He believed that the benefits of such a full biographic and civic record of every man would be of great benefit to the improvement of social policy. The 1911 session of the association will be held at Omaha, Neb.

**AMERICAN INSTITUTE OF CRIMINAL LAW AND CRIMINOLOGY.** At the sessions of the American Institute of Criminal Law and Criminology, the president, Prof. John H. Wetmore of Northwestern University pointed out that the Institute during its first year had stimulated the organization of local bodies of similar nature. State conferences were held in Kansas and Wisconsin. The work of the Institute is organized under nine committees, of which seven were able to report. One of these had established the *Journal of the American Institute of Criminal Law and Criminology*. The committee on translation of European treatises had completed the translation of the following: *Criminal Psychology*, by Hans Gross; *Modern Theories of Criminology*, by Bernaldo de Quiros; *Criminal Sociology*, by Enrico Ferri; *Individualization of Punishment*, by Raymond Saleilles; *Crime, Its Causes and Remedies*, by Cesare Lombroso; *Penal Philosophy*, by Gabriel Tarde; *Criminality and Economic Conditions*, by W. A. Bonger; *Criminology*, by Raffaele Garofalo; *Crime and Its Repression*, by Gustav Aschaffenburg. The series is published by Little, Brown and Co., Boston. A third committee on "an effective system for recording the physical and moral status and the hereditary and environmental conditions of delinquents and the persistent offender," presented an elaborate schedule of juvenile and municipal courts. Reports were had on the organization of courts, criminal procedure, and criminal and judicial statistics. New committees were organized to investigate the "insane offender" and "the alien and the courts." The invitation of the International Criminalistic Union to become its American unit was accepted by the institute. Nathan W. MacChesney, of Chicago, was chosen president for the coming year, and Harry E. Smoot, of Chicago, secretary.

**INTERNATIONAL PRISON CONGRESS.** The ninth quinquennial session of the International Prison Congress at Washington, October 2-8, was attended by delegates from twenty-two adhering countries and from Spain, Egypt, several South American republics, China and Japan, not yet officially members. This Congress is supported by the adhering governments and the delegates make official reports to their respective powers. Preceding the sessions, the delegates had been taken on a prearranged tour of inspection to various jails, prisons, industrial homes, and reformatories of the northern and central States. This brought very clearly before the visitors the progress the United States has

made in reformatory methods as well as the mediæval conditions prevailing in local jails. The delegates strongly condemned the mode of construction followed in these, with cells opening into a central corridor, with little light, no sunshine, no outside air, the prevalence of tuberculous conditions, the absence of facilities and rules for regular exercise or healthful employment. The frequent placing of two or more persons in one cell, and the promiscuous association of young and old, the convicted, the drunken, and those awaiting trial. Even the cell system at Elmira Reformatory was condemned as not up to modern ideas. The existence of the most advanced methods in the world in American State reformatories, alongside of conditions in city and county jails which some European countries long ago ceased to tolerate, was attributed to the decentralization of local administration in this country.

The congress met in four sections. Unlike American conferences papers were not read and discussed, but summaries of papers were presented and the time of the sessions was devoted to the discussion of resolutions. The resolutions adopted by the sections were later submitted to the general assembly of all. The section on criminal law was occupied with the use and limits of the indeterminate sentence, methods of giving effect to the penal sentences of foreign tribunals, how to deal with persons who associate with criminals or indirectly participate or aid in the commission of offenses. One of the greatest achievements of the congress was the formal approval of the indeterminate sentence, a product of American developments. There was, however, a strong demand for statistical and other data, making possible a scientific judgment of the indeterminate sentence and of parole. The second section, devoted to prison administration, considered reformatory methods, the parole system, and prison labor. Resolutions approved by the congress favored the centralization of control of all penal institutions, including local jails; the useful employment of all inmates, whether merely detained for trial or sentenced for long terms. The systems of labor in the United States were classified as the lease, the contract, the piece price, the State account, and the State use systems. The last three were regarded as best; farm and market garden work were advocated for short term prisoners. In the discussion the introduction of factory methods as shown in various American institutions was condemned as making the convict a mere automatic machine tender rather than a skilled workman master of a trade. This second section held that sentences should be not only retributive and deterrent in purpose but also reformatory; but since reformation and short sentences are incompatible longer sentences with a parole system were advocated. Special treatment for adolescents was strongly approved. The section on prevention declared that prisoners should be paid for their labor, such pay to be available for needy dependents of the prisoner. The treatment of inebriate criminals, the relation between inebriety and insanity, and the effect of alcoholism of parents on the nervous systems of offspring were discussed, and the plan of detention in hospital of habitual criminal drunkards was declared successful. Resolutions of the congress divided vagrants and mendicants into three classes, the incapacitated,

the accidental, and the professional; they advocated workhouses, giving prominence to agricultural and industrial training, for the third class; and they favored a system of classification and identification for this class. The congress also approved the discreet use of the probation system, and advocated central supervision of probation in each State. The fourth section dealt with the methods of criminal procedure suitable for children and minors, institutions for backward and feeble-minded children, the idleness of children in large cities, and protection for illegitimates. The methods of American juvenile courts were approved, including separate hearings, probation system, medical examination, and separate quarters for detention. Experience was declared to be inadequate for judging the advantage of separating abnormal children with criminal tendencies from other defectives. Resolutions were adopted calling for greater responsibility of parents for the wrongdoing of their children; for greater coöperation between public schools and parents to prevent idleness and secure training in handiwork; for "vast additions to playgrounds, wholesome recreation centres, gymnasiums and athletic fields as the surest preventives of juvenile mischief and crime." The congress resolved that legislative action should "make the care, support and inheritance of illegitimate and legitimate children as nearly identical as possible"; that the care of the illegitimate child should be governed by the fact that he is a future citizen; and that instruction should be given to youth so as to prevent illegitimacy and to girl-mothers so as to prevent abortion and prostitution. Running through the deliberations of the entire congress was the repeated emphasis on the lack of adequate and exact information, statistical and other, for the accurate judgment of recent reforms or the formulation of still newer policies. Likewise there was continued stress on the principle of individual treatment of each delinquent.

The next session of the congress will be held in London, 1915.

**PROBATION SYSTEM.** A bill was introduced in Congress early in the year by Senator Owen of Oklahoma, authorizing the introduction of the probation system in the United States courts, outside of the District of Columbia. It was shown that in 1908 these courts disposed of 8023 criminal cases. In that year 1372 persons were committed to Federal penal institutions; of these eighty-one per cent. had never been in prison before; sixteen per cent. were under twenty years of age; thirty-nine per cent. were between twenty and thirty; forty-six per cent. were married; and forty-five per cent. were reported as temperate in habits. These facts furnished the basis for the bill.

The National Committee on Prison Labor was incorporated in New York in March, its object being to concentrate all forces working on the problems of prison labor. It will investigate the systems now in use; formulate plans for improvement; and endeavor to secure uniform legislation. Its circular stated that the market value of products of prison labor in 1900 was \$35,000,000.

**NEW YORK.** The Page Commission appointed in 1908 to study the courts of inferior criminal jurisdiction in New York, Buffalo and Rochester secured the passage of a law effective September 1. This law, which dealt with New York City

only, provided new children's courts for the boroughs of Queens and Richmond; a separation of the night court into two sections, one for men and one for women; the creation of two courts on domestic relations, to deal primarily with cases of non-support; additional probation officers; the introduction of the finger-print system of identification in the night court; and medical examination of prostitutes. For greater details see **JUVENILE COURTS** and **PROSTITUTION**.

**ENGLAND.** In August Home Secretary Winston Churchill outlined some radical reforms in prison administration. These included more humane treatment of convicts; extension of the time allowed for the payment of fines in order to lessen the number imprisoned for non-payment; the abolition of imprisonment for persons under 21, except for gross crimes; the institution of special plans for the correction of delinquent boys and girls; the abandonment of police surveillance of released criminals; provision of lectures and concerts in convict prisons; and special treatment for passive resisters and suffragettes.

**BELGIUM.** The International Union of Penologists held its eleventh session at Brussels in August. Psychological problems received chief attention, particularly the psychology of testimony; and the question whether, in order to reconcile individual liberty and social safety, persons committing criminal acts while temporarily unbalanced by nervous excitement should be treated as criminals or as nervous defectives.

**PENSIONS.** See **UNITED STATES**.

**PEOPLE'S POWER LEAGUE.** See **OREGON**.

**PERIDOTS.** See **CHEMISTRY**.

**PERKINS, JAMES BRECK.** An American public official and historian, died March 11, 1910. He was born at St. Croix Falls, Wisconsin, in 1847 and graduated from the University of Rochester in 1867. He was admitted to the bar in 1868 and remained in active practice until the time of his death. In 1874 he was elected city attorney of Rochester for a term of two years, and in 1876 was re-elected for a second term. From 1890 to 1895 he lived in Paris where he was engaged in researches in French history. In 1887 he published *France under Mazarin*; in 1892, *France under the Regency*; in 1897, *France under Louis XV*; and in 1900, *The Life of Richelieu* in the *Heroes of the Nations* series. He returned to Rochester in 1895 and in 1898 was elected to the New York State Assembly. He was elected to the 57th, 58th, 59th and 60th Congresses and was re-elected to the 61st Congress. Mr. Perkins was considered one of the strongest members of the House of Representatives and took an active part in the proceedings of that body. He was a member of several important committees.

**PERLIS.** A Malay state transferred (March 10, 1909) from Siamese to British protection. Area roughly estimated, 300 square miles; population (estimate), 27,000. Rice is the staple product. No records of imports and exports exist. Revenue and expenditure (1909-10), 102,552 dollars and 87,310 dollars respectively. (Straits Settlements dollar = 56.7758 1/2 cents.) Present raja, Syed Alwi. British adviser, Meadows Frost.

**PERMUTIT FILTERING.** See **CHEMISTRY, INDUSTRIAL**.

**PERSIA.** A constitutional monarchy in western Asia. Capital, Teheran.

**AREA, POPULATION, ETC.** Area, 628,000 square miles. The ill defined western boundary marches with Turkey, giving rise, since 1906, to serious disputes with that country. Population, about 9,500,000. The nomads number about two millions, chiefly Arabs, Kurds, Turks, and Leks. Teheran has about 280,000 inhabitants; Tabriz, 200,000; Ispahan, 80,000; Meshed and Kerman, 60,000 each. The laws and popular education are based on the precepts of the Koran, which is the only book the people are encouraged to study. Instruction in religion, Persian and Arabic literature, science, etc., is imparted to children of the higher classes in Persian colleges, and European institutions are maintained by private subscription. The Shah is of the Shi'ah sect, to which about 8,000,000 of the people belong; 800,000 belong to the Sunni sect; 45,000 are Armenians, 35,000 Jews, 25,000 Nestorians, 9000 Parsis.

**PRODUCTION.** In the central and eastern parts of Persia are vast salt deserts. In the north and west are extensive forests encircled by mountains rising in the north to 18,500 feet. The chief products are cereals, cotton, gums, tobacco, fruits, silk, opium, wool, and carpets. Opium exported in 1908-9, 5164 hundred-weight; 1905-6, 1992. The production of tragacanth is increasing. Sheep and goats are numerous. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, etc.; turquoises are mined. Oil fields in the south have been exploited by a British company. Persian carpets are made entirely by hand. The use of aniline dyes is prohibited by the government.

**COMMERCE.** The trade for four years, according to the published statistics of the Minister of Customs, is given below in thousands of krāns (the krān being equal in 1905-7 to about 8.11 cents; in 1907-8, to about 9.73; in 1908-9, to about 9.05):

	1905-6	1906-7	1907-8	1908-9
Imports .....	386,463	431,040	408,434	372,484
Exports .....	293,143	353,377	317,081	326,207

Principal articles of trade (1908-9) in 1000 krāns:

Imports	1000 kr.	Exports	1000 kr.
Cottons .....	128,678	Cotton (raw) .....	42,378
Sugar .....	91,798	Fruits .....	46,746
Tea .....	21,955	Carpets .....	39,547
Yarn .....	7,214	Rice .....	28,754
Petroleum .....	6,829	Fish .....	24,587
Woolens .....	6,638	Skins .....	16,973
Rice .....	5,124	Opium .....	14,381
Spices .....	3,040	Silk (raw) .....	13,958
Copper, etc. ....	2,290	Wool .....	10,387
Matches .....	2,042	Gums .....	10,294
Timber .....	2,107	Silk stuffs .....	6,807
Dye-stuffs .....	2,425	Animals .....	6,593
Flour .....	2,978	Cereals .....	4,650
Pressed meats ..	21,759	Cottons .....	3,762
Coin .....	5,428	Coin .....	37,466

Countries of origin and destination, with trade for two years in 1000 krāns are shown in table at top of next column.

Tonnage entered at Bushire, Lingah, Bender Abbas, and Mohammerah (1908-9), 1,259,640 (British, 1,038,980); at Caspian ports, 590,948 (all Russian).

	Imports		Exports	
	1907-8	1908-9	1907-8	1908-9
Russia .....	191,172	178,817	202,662	229,817
Great Britain .....	169,065	148,814	36,579	33,989

Total .....	408,434	372,484	317,080	326,207

**COMMUNICATIONS.** Persia's relations with Russia are chiefly through ports on the Caspian (on which Russian vessels alone are permitted), and by the Trans-Caspian Railway; with England and British India, by way of the Persian Gulf. New roads from the frontier, bounties placed on sugar, and proximity to the more populous and best cultivated provinces have combined with the Trans-Caspian to extend Russia's trade and influence. The only navigable river is the Karun, open since 1888 to foreign vessels, from Mohammerah to Ahwaz; thence as far as Shuster to Persian vessels only. A (Belgian) railway runs south from Teheran about six miles. Travel is mostly by caravans and transport by pack animals, making the cost of transportation very heavy; the trade centres are reached by long and difficult trade routes, infested with marauders. The telegraph system includes 6312 miles of line, 10,754 of wires, and 131 stations. A new line from Teheran to Karachi (India) has been constructed by British capital. Most of the important telegraphs are under the management of the Indo-European Telegraph Department of the government of India. Post-offices, 144. There is also a Persian Minister of Posts and Telegraphs, who is a member of the cabinet.

**FINANCE.** The unit of value is the krān, a silver coin, fluctuating in value from 7.2 to 9.73 cents (December, 1909, about 8.85). The country is in serious financial difficulties. No official statistics of revenue and expenditure are published. Taxes are levied in kind, and fall most heavily upon the poor. Estimated revenue from land tax, crown lands, customs, and lease of monopolies (1907-8), about 80,000,000 krāns. No estimate of expenditures can be made, except for the cost of the Foreign Office, about 2,600,000 krāns. The debt amounts to £5,470,000 (to the Russian government, £3,300,000, to the Bank of Russia, £1,160,000; to the British government, £320,000, to the Bank of England, £690,000). The Russian debt is secured on the customs, which (with the post-office) have been in the hands of European officials since 1900. There are British and Russian banks, and a concession was granted in 1907 for a German bank.

**ARMY.** The army in 1910 was undergoing a complete reorganization. There was a reform commission composed of twenty members. The commander of the army was the Minister of War Firman Firma, while the foreign instructors of troops were General Maletta and Colonel de Kosteritz-Marenhorst. The theoretical organization ordered in 1905 provided for various divisions and commands from the different branches of the service, but with the exception of the Cossack brigade under command of a Russian officer there is but little unity and efficiency in the army. On account of shifting

organizations and varying strength, figures for the Persian army are of little value.

**NAVY.** The navy includes one screw steamer of 600 tons, one police boat, one steam yacht, and five launches; all employed in the Persian Gulf customs service, and of little use in war.

**GOVERNMENT.** The government is a constitutional monarchy, hereditary in the Shi'ah dynasty of the Kajars. Reigning monarch (1910), Ahmed Shah Kajar (son of the abdicated Mohammed Ali Shah), born January 20 (21), 1898; succeeded July 16, 1909, under the regency of Ali Reza Khan Azad-el-Mulk, chief of the Kajar tribe. On the death of the regent, September 22, 1910, the Mejliss elected (September 25), Aboul Kassim Khan Nasr-el-Mulk, a former exile and an Oxford graduate. The Cabinet formed in the spring of 1910 was superseded in July by a provisional ministry composed as follows: Premier, Mustaufi el Mamalik; Foreign Affairs, Hassein Kuli Khan Navab; Interior, Ain-ed-Daouleh; War, Firman Firma; Posts and Telegraphs, Assad Ullah Mirza. The legislative body is the Mejliss (national council) whose members (162 in 1910) are elected for two years. Heir-presumptive, Mohammed Hassan Mirza (brother of the sultan), born February 19 (20), 1899.

### HISTORY

**INTRODUCTION.** By the Anglo-Russian agreement of August, 1907, each Power engaged not to seek any concessions of a political or commercial nature beyond certain lines defined in the agreement and to respect the integrity and independence of Persia. The Russian sphere of influence by this arrangement was limited to the north and the British sphere to the south-eastern portion of the country. As to the remaining part, it was to be regarded as a neutral region in which neither Power was to oppose concessions on the part of the Persian government to the other. The disordered state of the country since that time has led to the occupation of Persian territory by Russian troops, which has been the source of constant anxiety to the Persian government and has also caused some uneasiness to certain of the European Powers. On the death of the Shah Muzaffer-ed-Din on January 8, 1907, after promising a constitution, his successor Mohammed Ali Shah, who was in spirit a reactionary, entered upon his policy of alternately withdrawing and granting a constitution until the success of the Nationalist movement in 1909 led to his deposition and the accession of the young Ahmed Kajar under the regency of Azad-el-Mulk.

**THE CABINET AND THE MEJLISS.** Two of the leaders of the uprising for the restoration of constitutional government in 1909, the Sipahdar, who had led the Nationalists, and Sardar Assad, chief of the Bakhtiari, agreed to form a new Cabinet if they were allowed a free hand in the choice of their associates; and the former became Premier. On April 30th it was agreed that the existing Ministry should continue in office. Dissensions soon arose, however, and in the summer there was a deadlock which ended only with the resignation of both the Sipahdar and Sardar Assad in July and the forming of a new Cabinet under Mustaufi-el-Mamalik. The new Ministry announced its programme at the end of July. It comprised the employment of foreign advisers; the reform of the police; the improvement of the provincial administration;

the suppression of disorder; the increase of the provincial garrisons and the creation of a central armed force of 6000 men; the reform of the courts of justice and schools, and prompt measures to cover the budget deficit. The Foreign Minister declared that he hoped soon to secure the withdrawal of the Russian troops in northern Persia. The Russian force, however, remained in the north and their presence tended to make the position of the Cabinet insecure. The regent, Azad-el-Mulk, died on September 22, and was succeeded by Nasr-el-Mulk, who received a majority of votes in the Mejliss.

**INTERNAL DISORDERS.** There were reports of an uprising at the end of May under an officer in the Russian service, the insurgents being recruited, it was said, from among the partisans of the deposed Shah. It was reported early in July that the government troops had been defeated by Kurds near Kermanshah. The most serious task before the new government, however, was the suppression of disorder at Teheran where a large and unruly rabble had gathered as a result of the Nationalist expedition of 1909. The leaders of this turbulent element were Satar Khan and Baghir Khan, who had led in the defense of Tabriz in 1909. The tribe of the Fidias took the leading part in this agitation and at one time almost threatened a counter-revolution, a large body of them refusing to surrender their arms. Finally the government issued an order requiring them to lay down their arms within forty-eight hours. A number of the Fidias having assembled at a park loaned to their chief, Satar, in recognition of his services in defense of Tabriz, the government troops fired upon them and after an engagement of eight hours, in which artillery was employed, the rebels surrendered, the loss of the government side being about twelve killed and wounded and on the side of the Fidias 30 killed and wounded and 300 prisoners. The leaders, Satar Khan and Baghir Khan were then required by the government to start on a pilgrimage to Mecca.

**RELATIONS WITH GREAT BRITAIN.** The pressing need of the Persian government was for money, and in December, 1909, it had applied to Great Britain and Russia for a loan. The two Powers, however, imposed conditions which the Persian government regarded as of a political nature and which in a note addressed to the British and Russian Ministers early in April, 1910, it declined to accept, pointing out that the distrust of Russia had increased to such an extent that the Mejliss would certainly oppose any conditions which interfered with the political freedom of the country. Many complaints had been made in recent years of the damage to British interests arising from the disordered condition of the country and especially of the failure of the Persian government to police adequately the southern trade routes. The British government repeatedly remonstrated and finally in October addressed a note in regard to the internal disorders and especially the insecurity of the Bushire-Ispahan route. The note informed the Persian government that unless order was restored on the southern roads within a period of three months, Great Britain would organize a body of local police under British officers and pay them out of a surcharge of 10 per cent. on the Persian Gulf customs. Rates on the roads had recently risen to so high a figure as virtually to close up some of them and attacks had been made on British escorts. Brit-

ish trade in that region had practically come to a standstill. The government of Russia concurred in this action. The German press, however, immediately accused Great Britain of an attempt to compass the partition of Persia. Popular opinion was especially hostile in Turkey, where a mass meeting was assembled on October 23, and a committee appointed to draft a telegram to the Kaiser, urging him to come to the aid of the Moslem state. The telegram declared that the Persians, who belonged to the great Moslem family, were seriously alarmed by British threats of invasion and that the entire Moslem world built its hope on the generosity of the Kaiser. The latter, however, sent no acknowledgment in reply to the message. Soon afterwards a Turkish battalion was dispatched to the Persian frontier ostensibly for the purpose of repressing Kurdish raids. The Persian note in reply to the British demands attributed the disorders chiefly to the presence of the Russian troops, which encouraged the reactionaries; and it accused the foreign legations of harboring wrongdoers. It called attention to the improved condition of the country; and as to the disorders in the south, it declared that it was most important that the government should have the necessary funds for administration, but it had not been able to negotiate the foreign loan. It hoped therefore that the British government would permit the levy of an additional 10 per cent. on customs, which surplus would be used in restoring and maintaining order. At the end of October a British gunboat landed blue-jackets at Lingah on the Persian Gulf at the request of the authorities to prevent a threatened raid of tribesmen. This called forth a note from the Persian government to which the British Ministry replied that the troops would be recalled as soon as order was assured. In answer to the Persian note as to the policing of the southern roads, the British government said that it could not discuss the presence of foreign troops and it denied that any measures imposed by Great Britain encroached upon Persian sovereign rights. It said that there could be no lasting revival of trade if the disorders in the south continued.

**PERU.** A South American republic, between Ecuador and Chile. Capital, Lima.

**AREA AND POPULATION.** Neither Peru's area nor population is definitely known. Perhaps the most plausible estimate of area is 679,000 square miles. At the end of 1910, the boundary dispute with Ecuador was assuming an angry appearance. The census of 1876 showed 2,660,881 inhabitants (exclusive of many uncivilized Indians), and there appears to be some doubt as to whether the population is increasing. An estimate accepted by many is about 4,500,000, but this figure is doubtless excessive. Roughly one-half of the inhabitants are Indians and most of the remainder mestizos. The larger cities are: Lima (140,484), Callao (34,436), Arequipa (35,000), Cuzco (26,000), Iquitos (20,000), Ayacucho (20,000). Immigration is small. The condition of Japanese immigrants, who number about 5000 and are employed chiefly on sugar plantations, was reported in 1910 as very unsatisfactory.

**EDUCATION.** Primary instruction is free and nominally compulsory. At the beginning of 1909 there were 2339 public primary schools, with 3105 teachers and 162,298 pupils. There are normal schools and in the departmental

capitals high schools. Some provisions are made for higher instruction. The State religion is Roman Catholicism, and the public exercise of other religious forms is unlawful.

**INDUSTRIES.** Peru is pre-eminently a mining country; many minerals and metals occur, including petroleum, coal, gold, lead, nickel, zinc, iron, and salt, but at present the exploitation of copper and silver is most important. The leading crops include sugar, cotton, rice, and coffee. Rubber, cacao, and coca are valuable products. The rearing of wool-bearing animals—sheep, alpacas, and llamas—is of increasing importance. Except in the treatment of mining products, manufacturing is conducted on only a small scale.

**COMMERCE.** Imports and exports (except those of the department of Loreto) have been valued as follows in thousands of soles:

	1904	1907	1908	1909
Imports .....	42,980	55,148	52,956	43,565
Exports .....	40,666	57,477	53,757	61,334

The department of Loreto showed imports and exports in 1907 of 6,158,000 and 9,270,000 soles respectively. The latest figures in detail available are for 1907, when the chief imports and exports were valued as follows in thousands of soles (exclusive of Loreto):

	Imports	Exports
Minerals and metals....	11,505	Minerals and metals. 20,037*
Cottons.....	6,512	Rubber, gums etc. 9,546
Machinery.....	2,937	Sugar 8,273†
Woolens.....	2,593	Cotton 5,163
Coal.....	2,446	Wool 4,281
Wheat.....	2,407	Guano 3,928
Timber, etc.....	2,086	Leather wares 1,247
Earthenware, etc.....	1,867	Cocaine 666
Drugs, etc.....	1,557	Petroleum 490

\* In 1906, 11,880,880.

† In 1906, 14,151,460.

The greater part of the trade is with Great Britain (imports from and exports to, 16,341,290 and 24,339,130 soles respectively in 1907) and the United States (11,646,670 and 13,671,060).

**COMMUNICATIONS.** The reported length of railways open to traffic in 1909 was 1478 miles. The principal railways are the Central, from Callao to Oroya, Cerro de Pasco, and Huancayo, and the Southern, from Mollendo to Puno, on Lake Titicaca (connecting there by steamer with the Bolivian line), and to Juliaca and Cuzco. Several lines extend inland from minor ports for comparatively short distances. An electric line connects Callao, the chief port, with Lima. Post-offices (1909), 639; telegraph offices, 178, with 5986 miles of line.

**FINANCE.** Gold is the standard of value. Ten soles comprise one libra, which is equivalent to the pound sterling, or \$4.8665. Estimated revenue and expenditure have been as follows for fiscal years, in thousands of soles:

	1905	1907	1908	1909
Revenue.....	25,278	26,793	29,974	30,474
Expenditure.....	21,783	21,070	30,430	32,400

The principal items of estimated revenue for 1909 were: Customs, 14,502,500 soles; taxes, 9,505,200; salt monopoly, 1,800,000; posts and

telegraphs, 1,095,000. Estimated revenue for the fiscal year 1910 was 27,463,450 soles. The government was reported in financial difficulties at the end of the calendar year 1910, and considerable retrenchment was deemed necessary. The external debt is stated at £3,140,000, of which £2,160,000 represents the capitalized value of annuities payable to the Peruvian Corporation (for 30 years, beginning with the monthly instalment of July, 1907); a further debt of £1,200,000 was contracted in 1909. The internal debt (1907) is stated at 42,544,500 soles.

**ARMY.** Military service is compulsory by the law of December 27, 1898, and the number of the annual contingent is fixed by the minister of war in accordance with circumstances. A recruit serves three years in the infantry or four years in the cavalry of the active army, seven years in the first reserve, five years in the second reserve, and 15 years in the National Guard. On a peace basis the army is formed by 1 regiment of mountain artillery with 36 Krupp guns, 1 section of field artillery, 1 section of foot artillery and engineers, 6 battalions of infantry, 6 squadrons of cavalry, 1 military school with 500 cadets, and the garrisons of Loreto and of Madre de Dios. The effective strength in 1910 was: Artillery, 41 officers and 756 non-commissioned officers and men; infantry, 132 officers, 1938 men; cavalry, 72 officers, 750 men; garrison troops, 27 officers, 378 men; making a total strength of about 277 officers and 4000 men.

**NAVY.** The navy consists of 14 small vessels, none of which has any considerable fighting value except the protected cruisers *Almirante Grau* and *Coronel Bolognesi* (3200 tons each, 24 knots, launched in England in 1906) and perhaps the cruiser *Lima*, 1700 tons, recently reboilered and rearmed.

**GOVERNMENT.** The executive authority is vested in a president, popularly elected for four years. The legislative power devolves upon a congress of two houses, the Senate (51 members) and the House of Representatives (116 members). The president in 1910 was Augusto B. Leguia, who was inaugurated September 24, 1908; 1st vice-president, E. Larrabure y Unanne; 2d vice-president, B. Sosa. See **ARBITRATION**, **INTERNATIONAL**.

**PETRE, F. L.** See **LITERATURE, ENGLISH AND AMERICAN, Biography**.

**PETROGRAPHY.** See **GEOLOGY**.

**PETROLOGY.** See **GEOLOGY**.

**PETROLEUM.** The total production of petroleum from all the fields of the world in 1909 was 297,413,791 barrels as compared with a production of 285,090,390 barrels in 1908. The fields of the United States produced in 1909 nearly three times the quantity produced in Russia, which ranks second in point of production. Other countries producing more than 1,000,000 barrels are Galicia, Dutch East Indies, Rumania, India, Mexico, Japan, Peru, and Germany. The production in Russia showed a slight increase in 1909 over the five years preceding, but it was over ten million barrels less than the production in 1904 and twenty million barrels less than the amount produced in 1901. The production in Galicia has increased steadily since 1900. The product of the fields has nearly doubled in two years. Rumania has shown a rapid gain in production from 1900 to 1907, but in 1908 this rate was checked to such an extent

that oil was imported from the newly developed additions to the oil fields of Galicia. This was necessary in order to supply the increased capacity of the Rumanian refineries.

During 1909 prospecting was vigorously carried on in South Africa, Egypt, and Persia. Oil was found in Egypt in considerable quantities and also in Persia. The following table shows the production of petroleum in the various oil fields of the world in 1908-9:

Country	1908	Barrels
United States .....	178,527,355	182,134,274
Russia .....	62,186,447	65,970,350
Galicia .....	12,612,295	14,932,799
Dutch East Indies .....	10,283,357	11,041,852
Rumania .....	8,252,157	9,321,138
India .....	5,047,038	6,676,517
Mexico .....	3,481,410	2,488,742
Japan a .....	2,070,929	2,012,409
Peru .....	1,011,180	1,316,118
Germany .....	1,009,278	1,018,837
Canada .....	527,987	420,755
Italy .....	50,966	550,000
Other .....	530,000	530,000
Total .....	285,090,390	297,413,791

a Including Formosa except in 1905 b Estimated.

Further details in relation to the production of petroleum in the respective States will be found in the paragraphs *Mineral Production* under the headings of these States.

The production of petroleum in the United States in 1909 showed a slight increase over that of 1908. There were produced in the former year 182,134,274 barrels as compared with 178,527,355 barrels in 1908. California in 1909 took first place among the States in point of production, surpassing Oklahoma which in 1908 held first rank. The product in California was about 6,500,000 barrels more than any other State has ever produced in a year. Only three States contributed greatly to the increase of the quantity produced. These were California, Oklahoma, and West Virginia. In all the other States there were decreases, the greatest decline being in Louisiana, where the production fell off 47 per cent.

The use of fuel oil by the railroads of the United States resulted in a consumption in 1909 for this special purpose of 19,939,394 barrels as compared with 16,889,070 barrels in 1908. The consumption of oil per mile of road operated was 3.66 barrels in 1909 as compared with 3.81 barrels in 1908 and 3.93 barrels in 1907, which indicates that the methods now employed are more economical than those in use when oil was introduced as a fuel by the railroads of the country. The oil consumed on the railroads is mostly crude, but includes a considerable quantity of residuum, the part left after the lighter oils have been extracted by refining.

Fuel oil has been introduced into the United States navy with good success. During 1909 two battleships, the *North Dakota* and the *Delaware* were equipped with auxiliary oil burning plants and four battleships under construction will each carry 400 barrels of oil to burn as auxiliary to coal. In England, Germany, France, Italy, and Austria similar experiments have been made. The table given at the top of next column shows the amount of petroleum produced in each State in the Union in 1908-9.

State	Quantity 1908	Quantity 1909
	<i>Barrels</i>	<i>Barrels</i>
California .....	44,854,737	54,433,010
Colorado .....	379,653	310,771
Illinois .....	33,686,238	30,898,339
Indiana .....	3,283,629	2,296,086
Kansas .....	1,801,781	1,263,764
Kentucky .....	727,767	639,016
Louisiana .....	5,788,874	3,069,531
Michigan .....	15,246	5,750
Missouri .....	1,160,128	1,134,897

Pennsylvania .....	11,206,464	9,534,467
Texas .....	17,775	22,137
Utah .....	9,523,176	10,745,092
Wyoming .....		
West Virginia .....		
Total .....	178,527,355	182,134,274

The total value of the production of 1909 was \$128,248,783 as compared with a value for the product of 1908 of \$129,079,184.

According to the United States Geological Survey the year 1910 was sufficiently eventful in the development of new oil supplies in the United States to more than keep up the country's phenomenal production of the last three years. The production increased to over 200,000,000 barrels, which is two-thirds of the world's production, several million barrels more than the whole world produced seven years previously. The most surprising developments were in the Sunset-Midway District of California. The developments in the Caddo Field of Louisiana also entirely changed the position of that field. The production of oil in the United States in 1910 as estimated by the United States Geological Survey, was between 200,000,000 and 208,000,000 barrels, distributed approximately as follows:

	Barrels
Illinois .....	32,000,000
Appalachian and Lima .....	
Indiana fields .....	32,000,000
Gulf and Caddo fields .....	14,000,000
Mid-Continent and Rocky Mountain fields .....	53,000,000
California .....	73,000,000
	204,000,000

**PFLÜGER, EDUARD FRIEDRICH WILHELM.** A German physiologist, died April, 1910. He was born in Hanau in 1829, and studied at the universities of Marburg and Berlin. In 1859 he became director of the Physiological Institute and professor in the University of Bonn. He made special studies in the nervous systems of lower animals. In 1868 he founded the *Archiv für die gesamte Physiologie*; and wrote *Sensorische Funktionen des Rückenmarks der Wirbeltiere* (1853); *Physiologie des Elektrotonus* (1859); *Untersuchungen aus dem physiologischen Laboratorium zu Bonn* (1865), and *Ueber die Kunst der Verlängerung des Lebens* (1890).

**PHILIPPINE ISLANDS.** An insular possession of the United States, the most northerly group of the Malayan Archipelago. The total

number of islands is 3141, and the area of the total land surface is 115,026 square miles. The population of the Philippines was not taken in the census of 1910. The latest available figures are for 1903, when the total population was 7,635,426, of whom 647,740 were wild peoples. The average density of the population was 67 per square mile. The area and population of the most important islands are as follows:

Island	Area in miles	Popu- lation	Popper sq. m.
Bohol .....	1,441	243,148	169
Cebu .....	1,762	592,247	336
Leyte .....	2,722	357,641	131
Luzon .....	40,969	3,798,507	93
Marinduque .....	352	50,601	144
Masbate .....	1,236	29,451	24
Mindanao .....	36,292	499,631	14
Mindoro .....	3,851	28,361	7
Negros .....	4,881	460,776	94
Palawan .....	4,027	10,918	3
Panay .....	4,611	743,646	161
Samar .....	5,031	222,690	44

**MINERAL RESOURCES.** The Bureau of Science of the Division of Geology and Mines at Manila publishes each year the annual report of the mineral resources and production of the islands. According to this report, which is for the year 1909, the production of gold in the islands showed a slight increase over the preceding year. Gold is found in Ambos Camarines, in the Baguio mineral district, and in the Aroroy mineral district. Gold placers are found in Nueva Ecija. The mineral in small quantities is found in other portions of Luzon, but the output is as yet inconsiderable. Its value is about \$200,000. Iron is found in considerable quantities in the provinces of Bulacan and Rizol, but difficulties of transportation and lack of native coking coal have prevented incoming of sufficient capital for production on a large scale.

After nearly a decade of prospecting and of preparation, two coal mines were in operation in the islands in 1909. They were both situated on the small island of Batan in the province of Abbay, Luzon. Coal is also found in the provinces of Cebu, Tayabas, Sorsogon, Mindoro and Moro. Coal was first discovered in the Philippines in 1827 on the island of Cebu and in 1904 the United States Army began development work on the western end of Batan island. The coal industry has now passed beyond the stage of prospect, and development and production have begun. Iron is known to exist in various places in the islands, but the only province in which any marked development has been made is Bulacan. In this province is the Hison mine, which has been longest and most successful in operation. At this mine is the only successful iron furnace in the islands. It is owned and managed by a Tagalog woman. Of the metallic minerals known to exist in larger or smaller quantities are copper, silver, lead, manganese, platinum, cinnabar and arsenic. There were also large quantities of stone, gravel, sand, lime, clay products and salt. The total value of these products in 1909 was 1,504,091 pesos as compared with a value of 1,815,918 pesos in 1908. But investigations of the Bureau of Science show that the mineral resources of the islands are practically untouched and await only the introduction of capital in sufficient quantities and the adjustment of labor conditions to make the mining industry of great importance.

**AGRICULTURE.** Owing to economic and other conditions, the agricultural development of the

islands has been slow since American occupation. The passage of the tariff law in 1909, however, had the immediate effect of increasing the value of the agricultural products. In many portions of the islands, especially in Batangas, Pangasinan, Cebu and Negros Occidental, the industry of agriculture has been greatly delayed for several years through the loss of work animals by rinderpest. A specific preventive by inoculation has been found effectual and the disease is now well under control (see BERIBERI).

The establishment of an agricultural bank in 1908 was expected to result in better conditions in the agricultural industries. This, for several reasons, however, has not been realized. Owing to the delay in establishing title under the Torrens system, which is the basis of the credit extended by the bank, only a few loans have been made. The capital is too small to bring about any substantial result. Unless the bank should establish more agencies at central points where loans can be negotiated with a minimum expense to borrowers, the utility of the bank will fail or will be confined to a comparatively small area. The increase in the exportation of agricultural products as a result of the tariff will be indicated in the section *Commerce* below.

The principal agricultural products of the islands are sugar, rice, hemp and tobacco. Coconut oil is also made. Coffee was formerly grown in considerable quantities in the islands, but efforts to produce it have been abandoned and hemp has been substituted as a more profitable crop. Developments in agriculture during the American occupation have been delayed by a series of destructive typhoons and also by an epidemic of rinderpest as noted above.

**COMMERCE.** The commercial returns for the fiscal year 1910 in comparison with those of 1909 may be roughly considered as showing the effects of the tariff legislation of August 5, 1909, by which free trade, subject to certain limitations was extended to the islands. Both imports and exports in the first year of the new law reached an unprecedented figure. The value of the imports for the fiscal year 1910 was \$37,067,630 as compared with \$27,792,397 in 1909, while the value of the exports increased from \$30,993,563 to 39,864,169. This increase in the aggregate trade value of the year is, to an extent, discounted by the fact that the recent commercial depression throughout the world was still felt in the Philippines in 1909 making the figures abnormally low, while the imports of 1910 were somewhat affected by the withdrawal under the present tariff of the free entry privilege previously extended to government supplies.

The net result of the year, however, shows that the establishment of free commercial relations between the two countries marks a new era in the material development of the islands. Of the total value of imports, about two-thirds is included under cotton, rice, iron and steel, meat and dairy products, wheat flour, illuminating oil, coal and cattle. The chief articles of import and export and their value in the fiscal years 1909 and 1910 are shown in the table at the top of next page.

The imports of iron and steel as is indicated in the table show a large increase. This may be credited almost wholly to the American product. British iron and steel amounted to \$701,211 against \$518,196 in 1909. The coal trade for 1910 was characterized by increased volume and change in source. Imports from Australia

amounted to \$473,773; from Japan \$411,557; while Borneo coal was an increasing but minor factor in the trade. Under the tariff advantage of 25 cents a metric ton, there were no commercial imports of coal from the United States. A very material reduction was made by the new tariff on the import duty on illuminating oil and this trade almost doubled in value. Of this American oil made almost the entire total.

In the export trade the leading place heretofore held by the United States in consequence of the large American demand for hemp, became more pronounced in 1910 by heavy purchases also of sugar and cigars under free trade. Of the total exports, shipments to the United States amounted to \$18,741,771 or 47 per cent. as compared with \$10,215,331 or 33 per cent. in 1909. Large quantities were marketed in all of the five great export staples except in unmanufactured tobacco, which showed a slight decline. The increase in the output of hemp and cigars was large. Hemp production continued to increase heavily and a new record was established of 168,090 tons as compared with 147,621 tons in 1909.

A steady increase in price characterized the copra trade throughout the year, with an average price of over 3½ cents as compared with 3 cents in 1909. The quantity also increased. France was the largest purchaser. Considerable quantities were sold to Spain and Germany. Exports of sugar amounted to \$7,040,690, which is an increase of \$2,667,353. The quantity exported was 15,095 tons more than in 1909, but the favorable condition was due chiefly to prices, the annual average of which increased from 1¼ cents in 1909 to 2½ cents in 1910.

The effect of free trade was shown in the cigar industry, the export production of cigars reaching 196,192,000 against 115,977,000 in 1909, an increase of approximately 70 per cent. This was taken almost entirely by the newly opened American market. With the largely increased demand for cigar leaf in the local manufacturing industry there was an advance in the price and a reduction in the quantity of leaf exported.

Among the minor products of the islands the most notable feature is to be found in the hat trade, which increased in value from \$168,522 in 1909 to \$290,356 in 1910 and showed the effect of free entry into the United States upon an industry well adapted to Philippine conditions.

The total shipments of merchandise from the United States to the Philippines in the calendar year 1910 amounted to \$19,941,539 as compared with \$13,791,595 in the calendar year 1909. The shipments to the United States from the Philippines during the calendar year 1910 were valued at \$18,040,741, compared with a value of \$13,556,916 in the calendar year 1909. Of the exports to the United States in the calendar year 1910 manila hemp represented the largest value, \$8,662,926. This was a slight decrease from the value of the export of 1909, which was \$10,108,698. The cigars, cigarettes and cheroots imported to the United States in the calendar year were valued at \$1,878,938 as compared with the value of the export for 1909 of \$378,868.

**EDUCATION.** The public educational work in the Philippines is under the supervision of the Secretary of Public Instruction, and is performed through the Bureau of Education, at the head of which is the Director of Education. The Archipelago is divided into 36 educational divisions, each in charge of a Division Superin-

a Imports from and exports to the United States subsequent to August 5, 1909, under certain limitations, are free of duty.

tendent, embracing in all 460 school districts, each in charge of a supervising teacher. The total number of schools in operation during the fiscal year 1910 was as follows: Primary schools, 4595, an increase of 401 over 1909; intermediate schools, 198, an increase of 5 over 1909; secondary schools 38, an increase of 1 over 1909; total: 4731 as compared with 4424 in 1909. The arts and trades, normal, domestic science, agricultural and special insular schools are included in intermediate or secondary schools. The teaching force maintained directly by the Insular Government is approximately 1742, of which 732 are American teachers. The force of Filipino Insular teachers was increased to 1010, of whom 823 were men and 187 were women. Of the men, 145 were engaged in district supervision; 2 men were giving secondary instruction, and 211 men and 82 women were teaching in intermediate schools, while 465 men and 104 women were teaching in primary schools.

The total enrollment during the school year was 587,317, exclusive of 4946 pupils enrolled in the schools of the Moro Province. The average monthly enrollment during the school year was 427,165 and the average monthly attendance was 337,307. The monthly enrollment of pupils for September was 451,938, representing a considerable advance over the enrollment in any other month since the establishment of the Bureau of Education.

The total number of American and Filipino teachers and apprentices employed during the year advanced to 9007 as against 8774 for the preceding year. Of the 8275 Filipino teachers employed, 1010 receive salary from the Insular Government, 7120 from municipal governments, and 145 were apprentices, working without pay. The average compensation of the Filipino In-

sular teachers was \$22.33 monthly; of the municipal teachers, \$9.14½.

The school enrollment in primary and intermediate grades for the month of February, 1910, was 445,826, of whom 381,878 were engaged in some form of industrial work. Of this number, 214,054 were receiving instruction in hand weaving; 3741 in loom weaving; 69,311 in gardening and other agricultural work; 12,461 in woodworking; 270 in iron working; 46,570 in bamboo working; 613 in pottery; 16,460 in domestic science and household arts; 40,840 in miscellaneous industries, and 128,119 first and second grade pupils were occupied in various kinds of busy work which bear a direct relation and lead normally to the practical handwork of higher classes. A large proportion of the pupils were of course engaged in more than one of these lines.

The current appropriation for the Bureau of Education amounted to \$1,637,500. This was augmented by other appropriations and transfers of funds to \$1,782,166.24 available for expenditure.

School work among the non-Christian people of the Philippines was continued in 1910 with decided success. For this work there was appropriated \$2600 for non-Christian tribes in Palawan in addition to \$92,500 appropriated for the support of schools in the non-Christian provinces. Schools for the Negritos, of whom there are estimated to be from 25,000 to 30,000, were opened in the provinces of Zambales and various other points in the islands. In these schools are taught reading, writing, knowledge of money values and simple business figuring. Schools were also started among the primitive Malayan people, in the Visayan Islands and in Northern Mindanao. Industrial boarding

schools and village primary schools were established among the Igorotes and other island people of northern Luzon, of whom there are several hundred thousand. As fast as the native boys can be trained as teachers the village schools will be opened in the different communities. Among the subjects taught to the Igorotes are basket-making, truck gardening, pottery, blacksmithing, carpentry, cloth weaving and brass casting.

**CITY OF MANILA.** The government of the metropolis was conducted in 1910 without special incident. Much work has been done in the important matter of street widening and opening. The new sewer and water system is finished and is giving complete satisfaction. The health of the city has been remarkably good, and were it not for the great infant mortality the death rate would compare favorably with any American or European city. There have been a few cases of cholera, but the health officers have kept it from spreading and the city is at present free. There has been no plague and almost no smallpox. Two new sanitary barrios have been established and are proving effective in relieving insanitary, congested districts. Formerly it was the custom of the poor to pay a small rental to a landowner for the privilege of erecting and maintaining a house and to locate it on his land wherever fancy dictated and space permitted, with the result that there are large tracts wholly covered with the cheapest class of houses without a street, alley, sewer, or water pipe in the whole tract. It is manifestly impossible to keep such areas clean, and they are breeding-places for all kinds of disease and epidemics. These are now being condemned and the inhabitants removed to the sanitary barrios, which are prepared beforehand with streets, alleys, and improvements, the houses being removed thereto, or erected thereon, without expense to the individual, who can thus live in a sanitary neighborhood without increased expense.

A census of the city of Manila completed in February, 1910, showed that the total population was 234,409 as against 223,542 in 1907, and as to nationalities was as follows: Americans 5199, Filipinos 195,292, Spaniards 2903, other Europeans 977, Chinese 18,028, all others 1143.

The sanitary sewer system which was completed by the city of Manila at a cost of approximately four million pesos has now been in operation and available for service in a greater portion of the city for a period of one year. A number of houses have been connected with the sewer and the work is still in progress.

**CONSTABULARY.** The strength of the constabulary at the close of the fiscal year 1910 was 296 officers and 4130 enlisted men, 17 officers and 95 men of the medical division, and 1 officer and 80 men with the band—aggregate number 4305, distributed throughout the Archipelago in 138 stations. The Director, four of the Assistant Directors and three Inspectors are detailed from the United States Army.

**BUREAU OF LABOR.** The Bureau of Labor was created by Act No. 1868, passed the legislature on June 18, 1908, and was placed under the control of the Department of Commerce and Police, but did not begin to operate until July 1, 1909.

**POSTS AND TELEGRAPHS.** On June 30, 1910, 556 post-offices were in operation as compared with 553 at the beginning of the fiscal year.

A free delivery municipal letter carrier service was established in 35 municipalities last year. During the present year the free delivery letter carrier service at post-offices outside of Manila was established at 80 additional offices. There were 118 money-order offices at the end of the year, an increase of 79. There were on June 30, 1910, 6,217.96 kilometres\* of Insular telegraph lines, 3,008.78 kilometres of telephone lines, and 1,861,844 kilometres of cables. The total length of Insular telegraph, telephone and cable lines at the close of the fiscal year was 11,088,584 kilometres. At the close of the fiscal year 1910 there were 293 postal savings banks in operation. There were 13,102 accounts as compared with 8782 at the beginning of the fiscal year. The amount of deposits in the bank on June 30, 1909, was 1,681,237.75 pesos as compared with 1,031,994 pesos on June 30, 1909. Of the 13,046 depositors, 8547 were Filipinos.

**RAILROADS.** During the fiscal year 1910, the Manila Railroad Company completed 38.4 kilometres\* of grading; 34.6 kilometres of track were laid, and 27.4 kilometres of line put in operation. Length of lines in operation June 30, 1910, were as follows: Main line, 567.0 kilometres; sidings, 66.3 kilometres; total 633.3 kilometres. There remained to be completed approximately 732.5 kilometres of line. The Philippine Railway Company, during the fiscal year, graded 30.2 kilometres, laid 32.1 kilometres and opened 8.1 kilometres of track for operation, making a total of 168.1 kilometres of track constructed and in operation and 29.0 kilometres constructed and not in operation, leaving 171.5 kilometres to be constructed to complete the length of lines authorized. The total railroad constructed in the Philippines in kilometres at the close of the fiscal year 1910, was as follows: Manila Railroad Company 583, with 732.5 to be constructed; Manila Electric Railroad and Light Company, 39.8, with 5.2 to be constructed; Manila Suburban Railways Company, 9.9, with 10.0 to be constructed; Tarlac Railway Company 20.6; Daet Tramway Company 7.2; Philippine Railway Company 197.1, with 171.5 to be constructed; Insular Coal Company, 12. The total length of road operated in the fiscal year was 824.6 kilometres, with 919.2 to be constructed.

**HEALTH AND SANITATION.** Among the new projects for the Islands is the establishment of hospitals of modern construction where there have been no hospitals of any kind heretofore.

The Philippine General Hospital is almost completed and the equipment has already been secured. A reinforced concrete hospital at Culion was finished and is now occupied; plans have been drawn, land secured, and work virtually commenced on the Southern Island Hospital at Cebu; similar progress has been made toward one at Bontoc; a new dangerous communicable disease hospital and a modern steam laundry are actually under construction at San Lazaro; plans are in progress for a sanitarium at Subul Springs; a tuberculosis camp is nearly ready for occupancy on the outskirts of Manila; and funds are available for hospitals at Tuguegarao, Butuan and elsewhere.

By an enormous expenditure of time, effort and money, cholera has been held in check; smallpox has been further reduced by the continuation of vaccination; beriberi has been eliminated from Culion, and rice regulations enforced

\* Kilometre = 0.62137 miles.

which it is hoped will exterminate it from the Islands, in time; the segregation of all known cases of leprosy has been successfully accomplished except in the Moro Province and the incidence of the disease has markedly decreased as a result. The fight against tuberculosis has been actually begun.

Food inspections have been continued with noticeable improvements in foodstuffs; the markets of Manila now compare favorably with model markets elsewhere; many satisfactory provincial markets have been actually constructed and others projected.

The sanitary barrio idea is in effect in the city of Manila and much low land has been drained and made available from a sanitary standpoint. Definite steps have been taken towards a non-pathogenic water supply for Manila.

During the year 82 new artesian wells were installed making 189 wells that have been completed since 1906 when the boring of artesian wells was first commenced in the Islands.

#### POLITICS AND GOVERNMENT

**VISIT OF THE SECRETARY OF WAR.** The Secretary of War, Jacob M. Dickinson, accompanied by General Clarence R. Edwards, Chief of the Bureau of Insular Affairs, visited the Philippine Islands, arriving in Manila on July 24 and leaving on the evening of September 2. After allotting a fair proportion of his time to the people of Manila, the Secretary visited the provinces of Tayabas, Albay, Samar, Cebu, Iloilo and Capiz, and drove the last spike in the new railroad connecting the towns of Iloilo and Capiz, which was thrown open for the first time on the occasion of his visit. This marks a great advance in the history of the transportation development of the Philippine Islands. The Secretary visited also Moro Province, crossing Mindanao from Camp Overton to Malabang and visiting the towns of Cotabato, Zamboanga, the capital of the Moro Province, and the Island of Jolo, and the town of Puerto Princesa, in the province of Palawan, where the penal colony was inspected.

Upon his visit to Bontoc, the lieutenant-governors from the neighboring subprovinces arrived to meet the Secretary and brought with them numbers of representative people of the tribes they govern. Thus there were gathered in Bontoc a large number of Kalingas, Ifugaos, and Igorotes, with a few Tinguians. Many of these people had never before left the limits of their own subprovince and there had never been, in the history of the islands, such a gathering of savage peoples of different tribes in one place as was witnessed in Bontoc on the occasion of the visit of the Secretary of War.

**FRIAR LANDS** Much notoriety was given during 1910 in Congress and elsewhere by recent sales of Friar lands in the Philippines. These lands amounted in all to 392,000 acres. Of this, 260,000 acres are near Manila, 25,000 are in Cebu and 107,000 are in the provinces of Mindoro and Isabela. There were paid for these lands \$6,930,462 by the United States government. This price was considered large, and it was anticipated at the time of purchase that in the disposal of them there would be a loss to the government. The purchase was made, not as a speculation nor for the purpose of distributing the land but "on political grounds and for the purpose of bringing on tranquillity." The question of distribution was only incidental to

the sale and reimbursement. The main reason for the purchase was to eliminate the friars as landholders. Inasmuch as the Philippine government had burdened itself with a bonded debt drawing interest to get rid of these landholders, it seemed to the government that it would be following the dictates of common sense to dispose of the lands as soon as possible on the most advantageous terms. Proposals had been made for the purchase of lands in the province of Mindoro and it seemed advisable to the government that the sale should be made and it was made. Shortly after this sale had been completed strong opposition developed against the sale of any additional friar lands. This opposition was based mainly upon objection to the investment of any foreign capital and especially American capital in the Islands. The opinion is held by those who mainly voice this opposition that the investment of foreign capital and especially American capital in the Philippines will, in time, develop such a demand for the continuance of American control as will tend to postpone, if not effectually destroy the realization of Philippine independence.

In addition to this opposition charges were made public in Congress and in public prints involving the conduct of certain officers in the Philippines in relation to these sales. These officers were F. W. Carpenter, Executive Secretary and Dean C. Worcester, one of the Commissioners, and Secretary of the Interior. The Secretary of War, during his visit to the islands made a special investigation of these charges. He reported that he found nothing whatever detrimental to the character of either of the men accused, and that they had no improper connection with the sale of the friar lands.

An investigation was authorized by Congress and in November Mr. Worcester and several other officers of the Philippine government sailed for the United States, bringing with them official records in order that they might testify in the investigation. A bill was introduced in the Philippine Assembly demanding the removal of Secretary Worcester, alleging that in a recent speech he had insulted the Filipinos. Petitions from the provinces supported the bill and the native press denounced the Secretary with great bitterness.

**OTHER EVENTS.** In the libel suit brought by Dean C. Worcester, Secretary of the Interior against *El Renacimiento*, the newspaper organ of the Nationalist party, the court awarded to Mr. Worcester \$30,000 damages. In 1909 Secretary Worcester caused the prosecution of the managers of this paper and three members of the staff for criminal libel. Two of the defendants were found guilty, sent to jail and required to pay a fine of \$1000.

In July Mr. Worcester narrowly escaped assassination while on the island of Palawan, where he had attended the installation of the new governor. He was attacked by Moro outlaws, three of whom were killed by the Filipino scouts who came to his defense. A new governor was required on the island because of the death of Lieutenant Edward J. Miller of the regular army, who had been governor since the war with Spain. His service in this capacity had been remarkably successful. After his death the piratical Moros whom he had driven from the island, returned and it was by a band of these that Mr. Worcester was attacked. In August the Philippine constabulary pursued a band

CONFERENCE BETWEEN THE SECRETARY OF THE INTERIOR, THE GOVERNOR OF THE MOUNTAIN PROVINCE, LIEUTENANT GOVERNOR OF  
SUBPROVINCE OF IFUGAO, AND THE HEADMEN OF THE DISTRICT OF QUIANGAN

Digitized by Google

of raiding Moros, and killed the leader, the noted Datto Appa.

**LEGISLATION.** On June 30, 1910, there were on the statute books 1994 laws, 194 of which had been enacted since the inauguration of the first Philippine legislature, on October 16, 1907. Of these 194 laws 161 were enacted by the legislature (20 during the recent special session) and 33 by the Commission acting alone.

The most important laws enacted by the legislature during the special session were as follows:

An act transferring the Bureau of Agriculture from the Department of the Interior to the Department of Public Instruction.

An act providing for the establishment of classes for the instruction and training of male and female nurses under the supervision of the Director of Health.

An act to extend further the powers of the provincial governments in certain particulars.

An act providing for the creation of a commissioned and enlisted service within the Bureau of Navigation, the creation of a pension fund in connection therewith, and for the punishment of offenses against good order and discipline within such service.

An act providing for the establishment of a sanitarium at Sibul, San Miguel de Mayumo, province of Bulacan.

An act extending for a period of ten years during which timber, firewood, resin, stone, earth, and other forest products may be cut and taken from the public forests without the payment of forest charges, subject to certain conditions.

During the year the Philippine Commission, acting within its exclusive general legislative jurisdiction passed the following important acts:

An act to incorporate the city of Baguio.

An act providing for the apportionment and disposition of internal-revenue taxes collected in the Philippine Islands.

Acts making certain acts of the first and second legislature applicable to the territory of the Philippine Islands inhabited by Moros and other non-Christian tribes and legalizing, confirming, and ratifying the collection of taxes and all other action heretofore taken in said territory under the provisions of said acts.

The legislature on adjournment had voted, in accordance with the provision of the act of Congress approved February 27, 1909, to change the date for future sessions to October 16 of each year, the ensuing session to be held on October 16, 1910. As under the provision of this act, No. 1929, no legislative session was provided for the fiscal year 1910, the Governor-General convoked an extraordinary session of the legislature to be held in Baguio on March 28, to continue for 20 days and to consider only such matters as were submitted to it by the Governor-General, as provided for by the act of Congress approved July 1, 1902.

**ADMINISTRATION.** On February 10, 1910, the nomination of Commissioner Newton W. Gilbert, as Vice-Governor of the Philippine Islands, was confirmed by the United States Senate and on February 14, 1910, Vice-Governor Gilbert filed his oath of office and entered upon the duties of said office.

On February 10, 1910, the nomination of Justice Charles B. Elliott of the Supreme Court of the Philippine Islands as member of the Philip-

pine Commission and Secretary of Commerce and Police was confirmed by the United States Senate, and on February 14, 1910, Commissioner Elliott filed his oath of office and entered upon the duties of the two positions.

The personnel of the Commission on June 30, 1910, was as follows:

Hon. W. Cameron Forbes, Governor-General, ex-officio President; Hon. Newton W. Gilbert, Vice-Governor, Secretary of Public Instruction; Hon. Dean C. Worcester, Secretary of the Interior, member; Hon. José R. de Luzuriaga, member; Hon. Gregorio Araneta, Secretary of Finance and Justice, member; Hon. Rafael Palma, member; Hon. Juan Sumulong, member; Hon. Frank A. Branagan, member; Hon. Charles B. Elliott, Secretary of Commerce and Police, member.

**PHILLIPS, STEPHEN.** See LITERATURE, ENGLISH AND AMERICAN, *Poetry and Drama*.

**PHILLIPS, DAVID GRAHAM.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**PHILLPOTTS, EDEN.** See LITERATURE, ENGLISH AND AMERICAN, *Poetry and Drama*.

**PHILOLOGICAL ASSOCIATION, AMERICAN.** See PHILOLOGY, CLASSICAL.

**PHILOLOGY, CLASSICAL.** In 1910 so much valuable work was done in classical philology that little can be attempted here beyond enumeration of the titles of some of the more important works and articles. Occasionally reference is made to publications of 1909, not mentioned in the last YEAR BOOK.

In this country and in England much activity is displayed by the various Classical Associations. In the United States there is, first of all, the American Philological Association, now in its forty-second year of vigorous life. The annual meetings are well attended, and the annual volume of *Transactions and Proceedings* contains much work of value, on a very wide array of topics. The Classical Association of the Middle West and South, the Classical Association of the Atlantic States, and the Classical Association of New England seek to stimulate interest in the classics and to develop better methods of teaching them. The Classical Association of the Middle West publishes *The Classical Journal*, now in its sixth volume; *The Classical Weekly*, published by the Classical Association of the Atlantic States, is in its fourth volume. Both these periodicals devote much attention to the pedagogical aspects of classical study. So too does *The School Review*.

The English Classical Association is interested in questions of Latin pronunciation, in methods of teaching, and especially in the working out of a system of uniform grammatical terminology. A joint committee, representing the Classical Association and numerous other organizations, has just published a tentative report on this subject embodying a number of interesting suggestions, looking to the adoption of identical terms in various languages, ancient and modern, to characterize identical or nearly identical grammatical phenomena. The English Classical Association also owns and publishes *The Classical Review* and *The Classical Quarterly*, both journals of consequence. In June, the Society for the Promotion of Roman [Latin] Studies was organized in London; its duty is to do for Latin studies what has been done so long and so well for Greek studies by the Society for the Promotion of Hellenic Studies.

Other repositories of classical work in the

United States are *The American Journal of Philology* (Baltimore), edited through all its volumes by B. L. Gildersleeve, and *Classical Philology*, published at Chicago. Articles in the former that may be named here are "The Seventh Nemean Revisited," B. L. Gildersleeve; "Latin Inscriptions in the Johns Hopkins University," H. L. Wilson; "New Greek Inscriptions from Attica," D. M. Robinson; "Laurel in Ancient Religion and Folk-Lore," M. B. Ogle; "The Final Monosyllable in Latin Prose and Poetry," A. G. Harkness; "Serviana," E. G. Sihler, a study of Servius as man, grammarian and rhetorician; "Relative Temporal Statements in Livy," R. B. Steele, which sets up a new theory of the origin of the subjunctive *cum*-clause by deriving that clause from indirect discourse. Two reviews, one by K. F. Smith of Duff's *A Literary History of Rome*, the other by E. W. Fay of Friedrich's edition of Catullus, may be singled out as distinct contributions to the study of Latin literature.

From *Classical Philology* we may name the following articles: "The Boeotian Federal Constitution," R. J. Bonner; "The Athenian Phratries," W. S. Ferguson; "Studies in Greek Noun-Formation," E. H. Sturtevant; "Early Mediæval Commentaries on Terence," E. K. Rand; "Propertius as Præceptor Amoris," and "Erotic Teaching in Roman Elegy," A. L. Wheeler (the author seeks to weaken belief in the indebtedness of the Roman elegiac poets to Alexandrian influences). Several writers deal minutely with textual criticism: F. W. Shipley writes on the text of Livy, E. T. Merrill and F. E. Robbins on that of Pliny, and B. W. Ullman on that of Catullus. The book reviews are also of a high order.

Volumes of classical studies published by various Universities (California, Columbia, Cornell, Harvard, Michigan, Nevada), as well as numerous dissertations, also bear witness to the amount and to the wide range of the classical work done in the United States.

In Germany, too, much attention is devoted to the development of the best methods of teaching the classics, and to the production of works which shall help to orientate the student and make his path easier. Mention may be made of such unpretentious, but useful works as W. Kroll, *Das Studium der klassischen Philologie*, O. Immisch, *Wie studirt man klassische Philologie?* and the earlier book by Dettweiler, *Lateinischer Unterricht* (second edition, 1906). Much more pretentious than these and most distinctly useful is a work entitled *Einleitung in die Altertumswissenschaft*, by A. Gercke and E. Norden, in three volumes, two of which have already appeared (Leipzig), containing articles by various distinguished scholars on such topics as *Methodik*, *Sprache*, *Antike Metrik*, *Griechische und römische Literatur*, Greek and Roman Private Life, Art, and Religion. One especially valuable feature of the discussions of Greek and Latin literature is formed by the sections dealing with the sources, with *Gesichtspunkte und Probleme zur Erforschung der griechischen und römischen Literatur*; here experts indicate many fields in which work yet remains to be done in the study of Greek and Latin literature, setting forth what has been done and showing the lines along which new studies should proceed. The work does this far better than it was done by Freund's obsolete *Triennium Philologicum*. Useful too is G.

Fock's *Catalogus Dissertationum Philologicarum Classicarum*, a list of 24,000 dissertations.

In the field of inscriptions we may notice especially Wilhelm's *Beiträge zur griechischen Inschriftenkunde* (Vienna), of prime importance; Fr. Solmsen, *Inscriptiones Græcæ ad illustrandas Dialectas Selectæ*, a third edition of a well known work; O. Marucchi, *Epigrafia cristiana*; in the Manuali Hoepli series, published at Milan, an excellent handbook. Besides a general introduction and bibliography there are 491 inscriptions, classified according to their bearing on the Church and its doctrines; there are also 80 good plates. Progress was made by H. Collitz's *Sammlung der griechischen Dialekt-Inschriften* (Band IV, 3 Heft, with Grammatik, etc., zur 1 Hälfte des 3 Bandes). Of special interest to Americans is H. A. Sanders, *The Old Testament Manuscripts in the Freer Collection. Part I: The Washington Manuscript of Deuteronomy and Joshua*. The book discusses elaborately one of the four manuscripts of the Bible which Mr. Charles L. Freer of Detroit bought at Cairo in 1906. Professor Sanders dates the Washington Manuscript in the earlier half of the fifth century, A. D. As noted above, inscriptions have received much attention in *The American Journal of Philology*. For results in Roman epigraphy reference may be made, as last year, to *L'Année Epigraphique*.

Important works on religion and mythology are R. Reitzenstein, *Die hellenischen Mysterienreligionen, ihre Grundgedanken und Wirkungen*, reviewed in *The American Journal of Philology*; J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion: a Study in Survivals*, reviewed in *The Classical Review*; subject to the limitation which the author imposed upon himself when he elected to confine his attention to survivals of ancient Greek religion, the work is rated very highly; P. Stengel, *Opferbräuche der Griechen*. Franz Cumont's *Die orientalischen Religionen im römischen Heidentum* has been translated into German by G. Gehrich. Though American scholars have as yet produced no books on Greek or Roman religion, aside from *Greek Religion*, by A. Fairbanks, Director of the Boston Museum of Fine Arts, papers at the meetings of the American Philological Association and at those of the Archæological Institute of America, as well as short articles and reviews in various periodicals, give testimony to increasing interest in this field of classical study.

Lexicography is fairly well represented. Olcott's *Thesaurus Linguae Latinae Epigraphicae* is progressing. H. van Herwerden brought out the second edition, very much enlarged and improved, of his *Lexicon Græcum Suppletorium et Dialecticum* (Leyden); important too is A. Kyriakides's *Modern Greek-English Dictionary, with a Cypriote Vocabulary* (London), a revised edition; Volume 3, Fascicule 6 (*cito-coetus*) and Volume 5, fascicule 1 (*d-decus*) of the great *Thesaurus Linguae Latinae* (Munich) appeared; several parts of Rocher's *Ausführliches Lexicon der griechischen und römischen Mythologie* also were published (the work has reached *seismos*); Stowasser's *Lateinisch-Deutsches Schul- und Handwörterbuch* appeared in a third edition by Petschenig (Vienna and Leipzig). H. Merguet, who has done so much for the lexicographical study of particular authors, has carried a *Lexikon zu Vergilius* through two parts of 80 pages each.

In the field of syntax some work of interest

has appeared. The treatment of Latin grammar and style in Müller's *Handbuch* by F. Stolz and J. H. Schmalz reached its fourth edition last year; the book is very much enlarged and is more important than ever to the careful student. In America a notable event was the publication of Volume I of *The Syntax of Early Latin: The Verb*, by Charles E. Bennett. The book aims to cover the whole field of the uses of the verb in Latin down to 100 B. C. It is thus much wider in scope than Holtze's *Syntaxis Priscorum Scriptorum Latinorum*, which it will at once supplant. Students of Plautus and Terence in particular will find the book indispensable, even though inevitably, in this first edition, the author has not in fact, in many instances, made as exhaustive a collection of examples as he feels certain, according to his preface, he has made. It is at once more extensive, however, and more conveniently arranged than Lindsay's *Syntax of Plautus*, published several years ago.

C. D. Buck published an *Introduction to the Study of Greek Dialects*; Thumb's *Handbuch der neugriechischen Volkssprache* reached a second edition. Volumes 2 and 3 of *Grammatici Graeci Recogniti et Apparatu Critico Instructi*, by R. Schneider, a companion work to Kell's *Grammatici Latini*, were published.

Some interesting books on Greek and Roman life appeared. Easily first in interest is E. N. Gardiner's *Greek Athletic Sports and Festivals*, a very excellent book, in which the author gives the results of many years of careful and competent study. T. G. Tucker has published *Life in the Roman World of Nero and St. Paul*. *The Imperial Civil Service of Rome* is the title of a book by H. Mattingly (Cambridge University Press). Less scholarly and more popular is W. S. Davis, *The Influence of Wealth in Imperial Rome*; the author claims to be breaking new ground. He belongs to the school of Ferrero in the stress he lays on economic considerations as a factor in Roman history. Friedländer's invaluable *Darstellungen aus der Sittengeschichte des Roms* is appearing in the eighth edition (four volumes; the first has been published). Mention may be made also of J. Jüthens's *Philostratus über Gymnastik*; the introduction and commentary are excellent, and the book is well-nigh a complete history of ancient *Gymnastik*. Lastly a delightful book published in 1909 is *Greek Lands and Letters*, by Mr. and Mrs. F. G. Allinson, a description of parts of Greece lighted up by numerous translations of passages in Greek authors who mention the place under discussion.

Probably the most important work of the year was done in the field of Greek and Latin literature, not only in the way of important editions of classical authors, but in the revision of standard general histories of the literatures of Greece and Rome.

Under the latter head belongs, in part, the *Einleitung in die Altertumswissenschaft*, by Gercke and Norden, mentioned above. W. Schmid brought out another part of his thorough-going revision of W. von Christ's *Geschichte der griechischen Litteratur* (Part II, first half). This part covers the postclassical period, in particular the New Attic Comedy. Schanz's *Geschichte der lateinischen Litteratur*, a part, as Christ's book is, of Müller's *Handbuch*, reached its third edition in the second half of part one, which deals with the literature of

the Republic from the Social War onward. Teuffel's well known *Geschichte der römischen Litteratur* is undergoing revision, by W. Kroll and F. Skutsch; the letterpress is not much altered, but in the new edition the bibliography, the distinctive merit of Teuffel, is far less ambitious and exhaustive, a rather regrettable fact. The second volume of the revision has appeared, covering 31 B. C. to 96 A. D.

Turning to work less wide in scope we note first that the year has been extraordinarily fertile in studies in Homer, of first-rate importance. The general tendency of these works has been in the direction of regarding the Homeric Poems as giving a fairly consistent picture of a single, actual civilization, and as the work of one creative poet. The books of first interest here are August Fick, *Die Entstehung der Odyssee und die Versabzählungen in den griechischen Epen* (Göttingen); A. Lang, *The World of Homer*, in which Mr. Lang fortifies the position taken in his *Homer and the Epio*; Muelder, *Die Ilias und ihre Quellen* (Berlin); C. Rothe, *Die Ilias als Dichtung* (the author began his Homeric studies as a follower of Kirchhoff; but he now concludes that the reasons for believing in a single creative Homer are unanswerable); P. Cauer, *Grundfragen der Homerkritik*, second edition (Leipzig); F. M. Stawell, *Homer and the Iliad*, an essay to determine the scope and characteristics of the original poem.

We may conclude by listing some of the important editions of classical authors which appeared during the year: the *Agamemnon* of *Æschylus*, a posthumous work of W. Headlam, completed by A. C. Pearson; *Aristophanes Acharnians*, by J. M. Starkie, *Knights*, by B. B. Rogers; *Dionysius Halicarnassus de Compositione*, by W. Rhys Roberts; *The Bacchantes of Euripides and Other Essays*, by A. W. Verrall; *Hesiod, Erga*, by W. Meyer; *Menander, Four Plays*, by E. Capps, an excellent edition of the new fragments of Menander discovered within the last few years; *Pausanias*, the concluding part of the definitive edition by Hitzig and Blümner; the *Characters of Theophrastus*, a revision of the fine edition by Sir Richard Jebb which has long been out of print (the revision is by J. E. Sandys); *Ammianus Marcellinus*, Volume I, by C. U. Clark, of Yale University, an edition of the text which will supplant all other text-editions and which ranks first among textual editions by American classical scholars, if indeed the book has any peer in the United States. Due heed has been given to the rhythmical clausulæ in Ammianus. This subject has been handled at length by Professor Clark's pupil, Professor A. M. Harmon, in a long paper entitled *The Clausulæ in Ammianus Marcellinus*, published in Volume 16 of the *Transactions of the Connecticut Academy of Arts and Sciences*; *A Bibliography of Persius*, by M. H. Morgan; *Seneca, Questiones Naturales*, a translation by J. Clarke, with notes on the Latin treatise by Sir A. Geikie; *Varro, De Lingua Latina*, etc., by G. Goetz and F. Schoell; *Apuleius, Cupid and Psyche*, by L. C. Purser, the first separate edition in English of this piece (the introduction deals elaborately with Apuleius's life, his language and his style; the notes are full); *Stobæi Anthologium*, Volume 4, by C. Wachsmuth and C. Hense. The minor poems attributed to Vergil have attracted much attention; we may note C. Plérent, *Le Culex: Étude sur L'Alexandrinisme latine*, and

*Le Culex: Poème Pseudo-Vergilien. Édition critique et explicative* (Paris, both); Birt, *Jugendverse u. Heimatpoesie Vergils*, discussed in a lecture by R. Ellis (Oxford University Press).

Mention may now be made of *Addresses and Essays*, M. H. Morgan; *Platon*, C. Ritter, Volume 1, accounted a good book, discussing Plato's life, and classifying and analyzing the various dialogues, and *Neue Untersuchungen über Platon*, by C. Ritter (the latter is a republication of his *Studies in Plato* since 1889); H. Diels, *Die Fragmente der Vorsokratiker*, Volume 2, second half (Berlin); Daos: *Tableau de la Comédie grecque pendant la période dite nouvelle*, by Ph.-E. Legrand, a voluminous book dealing with many matters nowhere else discussed, at least with fulness, relating to the content and the form of the New Attic Comedy; W. Ridgway, *The Origin of Tragedy, with Special Reference to the Greek Tragedians*. At the very close of the year appeared *A Companion to Latin Studies*, edited by J. E. Sandys, a companion volume to Whibley's *A Companion to Greek Studies*. The book contains in nearly 900 pages many articles by different scholars which aim to cover the whole field of Latin studies. Valuable as the book is, sometimes the treatment is entirely too brief; this is especially true of the discussion of Latin metre.

**PHILOLOGY, MODERN.** The most noteworthy feature in the history of philology for the year 1910 is the activity of Slavic and Celtic scholars. The general tendency of the last few years has been toward these two extremely rich fields, which afford such exceptional opportunities for research. The Romance languages, by reason of their varied dialects and vast literature, have also received considerable attention. In Germanics and English there has been a slight decline in works of importance.

**SLAVIC PHILOLOGY.** Probably the most important work in the Slavic field is the monumental *Geschichte der slavischen Philologie* (1910, 961 pages), written in Russian and German by the venerable Professor Jagić. In addition to philology, in the narrower sense, this work treats of the literature, law and ethnography of the Slavic peoples. J. Peisker, in his *Neue Grundlagen der slavischen Altertumskunde* (Berlin, 1910), places the primitive home of the Slavic races in the swamps of Polesia, though we must admit that his arguments are not always convincing. Berneker's well-known *Etymologisches Wörterbuch der slav. Sprachen* has now reached the sixth *lieferung*. Other works worthy of mention are Bogorodizky's *Kurzer Abriss der Dialektologie und der Geschichte der russischen Sprache* (Kazan, 1910), and Slonski's *Die Uebertragung der griechischen Nebensatzkonstruktionen in den albulgarischen Sprachdenkmälern* (Kirchhain, 1908), Šćepkin's *Lehrbuch der bulgar. Sprache* (1909) is worthy of notice, notwithstanding its defects. Vondrák's *Kirchenslavische Chrestomathie* (Göttingen, 1910) and Durnowo and Ushakov's *Chrestomathie der grossrussischen Dialektologie* (Moscow, 1910) are very helpful. The most important dictionaries published during the year are Mizatek's *Bulgarisch-russisches Differential-Wörterbuch*, which also contains a complete grammar of Bulgarian (St. Petersburg, 1910), and Kout's *New Croat-Servian Dictionary* (*Novy kapesní slovník srbocharvatský a průvodce po jazyku srbocharvatském*, Trebitsch, 1910). Finally, we must

not omit Dr. Trautmann's excellent *Altpreussischen Sprachdenkmäler* (Göttingen, 1910), which, besides being carefully edited, contains a complete grammar and dictionary.

**GERMANIC PHILOLOGY.** Turning to the Germanic languages, our attention is called at once to Manacorda's *Germania filologica* (Cremona, 1910), a bibliography of the German language and literature, containing some 20,000 titles. The 7th edition, revised and enlarged, of Kluge's *Etymologisches Wörterbuch der deutschen Sprache* (Strassburg, 1910) is a valuable addition to philology. Professor Delbrück's *Germanische Syntax I* (Leipzig) is devoted to the negative sentence. Professor Wright's *Grammar of the Gothic Language, and the Gospel of St. Mark* (Oxford) is well adapted to the needs of the English student. Two useful lexicographical contributions are Jelinek's *Mittelhochdeutsches Wörterbuch zu den deutschen Sprachdenkmälern in Böhmen* (Heidelberg, 1910) and the 30th *lieferung* of Fischer's *Schwäbisches Wörterbuch* (Tübingen, 1910). The subject of Minutti's interesting *Mitologia tedesca* (Milan, 1910) is the conception of the divinity. In his two works entitled *Das altfranzösische Siegfriedlied* (Kiel, 1908) and *Von mittelhochdeutschen Volksepen französischen Ursprungs* (*Erster Teil*, Kiel, 1910), Gustav Brockstedt claims a French source for the Nibelungenlied, the Siegfriedlied, Gudrun and other Middle High German poems. Other notable works are Fischer's *Die Lehnwörter des Altwestnordischen* (Berlin, 1909), Loewe's *Deutsches Wörterbuch* (Sammlung Götschen), Ranke's *Die deutschen Volksagen* (Munich) and Wertke's *Sächsische Volkskunde* (Leipzig). In Dutch, we note the excellent *Mittelniederländische Grammatik mit Lesebüchern und Glossar* of J. Franck (Leipzig).

**SCANDINAVIAN PHILOLOGY.** The Scandinavians are submitting their languages to rigorous study; and their work is of a very high quality. Noreen's *Grunddragen av den fornsvenska grammatiken* (Stockholm, 1910) is worthy of this distinguished scholar. A much needed elucidation of the complicated vowel-system of Swedish is found in Kock's *Svensk Ljudhistoria, II, Enkla Vokaler* (Lund). Söderwall's *Ordbok öfver svenska Medeltids-Språket* (Lund, 1910) is a most welcome lexicon. In Danish, Falk and Torp's *Norwegisch-dänisches etymolog. Wörterbuch* was continued (17th *lieferung*), and Kalkar's monumental *Ordbog til det aeldre danske Sprog (1300-1700)* reached its 49th *heft* (Copenhagen, 1910). Mention should also be made of vol. III of *Islandica*, an annual relating to the Fiske Icelandic collection in the Cornell University Library. This volume contains a *Bibliography of the Sagas of the Kings of Norway*, etc., by H. Hermannsson (New York, 1910). Finally Zoëga's *Concise Dictionary of Old Icelandic* (Oxford, 1910) is very useful.

**ENGLISH PHILOLOGY.** Viëtor's *Einführung in das Studium der englischen Philologie* (Munich) reached its 4th edition; and Zupitza's *Alt- und mittelniederländisches Übungsbuch* was also reprinted (Leipzig, 9th ed.). Sedgefield's *Beowulf*, edited with biography, glossary, etc. (London, 1910) and Panzer's *Beowulf-Studien* (Leipzig) are the most important contributions to Beowulfian literature. Trampe Bödtker's *Critical Contributions to Early English Syntax, 2d series* (Christiania, 1910) treats of the pronouns. Other works of importance are Charles Butler's

*English Grammar* (1634), reprinted and edited by A. Eichler (Halle, 1910), Tupper's *The Riddles of the Exeter Book* (Boston, 1910), and the continuation of Dr. Murray's *Oxford English Dictionary*. Lannert's *Investigation into the Language of Robinson Crusoe as Compared with That of Other 18th Century Works* (Upsala, 1910) completes our list.

**ROMANCE PHILOLOGY.** The most absorbing topic in Romance philology has been the bitter attack of Rajna and Clœtta in behalf of the old school on the revolutionary doctrines of Bédier. Notwithstanding these objections, scholars are now agreed that Bédier has proved in his *Légendes épiques*, by means of his remarkable discoveries, that the *jongleurs* and monks "se sont entendus pour exploiter les traditions carolingiennes." Behrens' *Beiträge zur französischen Wortgeschichte und Grammatik* (Halle, 1910) is a careful work. *Les Mélanges de Philologie romane et d'histoire litt. offerts à M. Maurice Wilmotte* on the 25th anniversary of his professorship (2 parts, Paris, 1910) contains contributions from almost all the famous Romance scholars of Europe. Mario Roques has published the first part of *Gaston Paris, Mélanges de Litt. franç. du Moyen Age* (Paris, 1910). The last fascicule of the monumental *Atlas linguistique de la France* of Gilliéron and Edmont (Paris, 1910) also appeared. Faral's *Les Jongleurs en France au Moyen Age* (Paris, 1910) and Beck's *Les Mélodies des Troubadours* (Paris, 1910) are both epoch-making works. Devic's supplement to Littré's *Dict. de la Langue franç.* (Paris, 1910), Lecomte's *Le Parler Dolois* (Paris, 1910), and Westerbled's *Baro et ses dérivés dans les langues romanes* (Upsala, 1910) are worthy of note. The Rumanian Academy's *Dictionarul Limbii Române*, which has now reached its 5th fascicule, supplies a long-felt want. Trabalza's *Storia della grammatica italiana* (1908) is a remarkable work in which philosophy, philology, pedagogy and æsthetics are combined. Bertoni's study on *Buvallesi, Trovatore bolognese* (1908) and Frisoni's *Dizionario genovese-italiano e italiano-genovese* (Genoa, 1910) are useful. In Provençal, we note Levy's *Provenzalisches Supplement Wörterbuch* (Leipzig, 1910), containing additions and corrections to Raynouard's *Lexique roman*, and Wechsler's *Das Kulturproblem des Minnesangs* (vol. I, 1909). In Spanish, Pidal published the series of lectures given at Johns Hopkins University under the title *L'épopée espagnole* (Paris, 1910). Plaza y Salazar's *Etimologías vascongadas del Castellano* (Bilbao, 1910) is useful, if controlled. Professors Todd and Weeks of Columbia University, with the coöperation of a number of professors of other American universities, have founded the *Romanic Review*, a quarterly journal devoted to research in the field of early Romance languages and literatures. The first volume appeared during the year 1910. This is the first review in English devoted entirely to this field.

**CELTIC PHILOLOGY.** The Celtic scholars have been active. The indefatigable Holder published the 19th *Lieferung* of the third volume of his *Alt-keltischer Sprachschatz* (Leipzig, 1910); and Thurneysen completed the *Texte mit Wörterbuch* of his *Grammatica*. The second volume of Déchelette's monumental *Manuel d'Archéologie préhistorique celtique et gallo-romaine* also appeared (Paris, 1910). Other notable works

are Philippon's *Les Ibères: Etude d'histoire, d'archéologie et de linguistique* (Paris, 1909), the late Whitley Stokes's *A Supplement to Thesaurus Palæohibernicus* (Halle, 1910), and the third volume of Camille Jullian's remarkable *Histoire de la Gaule* (Paris, 1910), a veritable mine for the philologist. The late Professor Strachan's *Introduction to Early Welsh* (Manchester, 1909), containing a middle Welsh reader and glossary, supplies a long-felt want. Mention should also be made of O'Maille's *Language of the Annals of Ulster* (Manchester, 1910), Bergin's *Stories from Keating's History of Ireland*, edited with notes and glossary (Dublin, 1910), *Duanair Fionn, the Book of the Lays of Fionn*, edited and translated by E. MacNeill (London, Irish Texts Society, 1908), and Marstrander's *Fleadh Duin na nGéadh agus Cath Muighe Rath*, edited with introduction and glossary (Christiania, 1910). In Welsh, we note the following: Arthur Jones's *History of Gruffydd ap Cynan*, with translation and notes (Manchester, 1910) and Anwyl's *The Poetry of the Gogynfeirdd*, with an introduction to the study of Old Welsh Poetry (Denbigh, 1909). G. P. Williams's *The Preverbal Particle Re in Cornish* (Halle, 1908) and Jamieson's *Dictionary of the Scottish Language*, revised by Dr. Longmuir and Mr. Metcalfe (London, 1910), should not be omitted. Finally Lindsay's *Early Irish Minuscule Script* (Oxford, 1910) is of importance for both philology and paleography.

**PHILOSOPHY. RECENT TENDENCIES.** The keen interest in philosophy which has marked the end of the nineteenth and the beginning of the twentieth centuries may be said to be growing instead of diminishing. Ever since the reaction had set in against post-Kantian speculation, the theory of knowledge has been assiduously studied, and the history of philosophy, which received such an impetus from Hegel, has been pursued with diligent care. But for many years after the rise of the natural sciences and their mechanical interpretations of the universe, metaphysics assumed an apologetic tone or did not speak at all. The period of diffidence now seems to have passed, and there is intense activity in all the fields of philosophy, in metaphysics, ethics, æsthetics, the philosophy of law, the philosophy of religion, as well as in epistemology and the history of philosophy. We note that this activity is not restricted to any one of the civilized nations and that the thinkers of different countries are coöperating more and more in the solution of problems; even the Germans, who have shown a tendency, for many years, to ignore the writings of their English and American contemporaries, are beginning to discuss and translate their works. It is even held by some that the philosophical hegemony is passing out of the hands of the Germans; however that may be, the present leaders of philosophy in France, Italy, England, and America are producing works of merit. We also note that the occupation with philosophical problems is becoming more popular among mathematicians and natural scientists, as well as among students in other branches of knowledge, and that the insufficiency of the materialistic conception of the world is acknowledged, at least among the leaders of science.

**OPPOSING SCHOOLS.** Within the domain of epistemology, which is still the most important subject of study, the controversy between the idealists, on the one hand, and the pragmatists,

realists, empiricists, and pluralists, on the other, has not come to an end. The death of the greatest figure in the radical camp, Professor William James (q. v.), occurred during the year and caused universal sorrow. A group of younger American philosophers has promulgated a "platform of the realists," which formed the chief topic of discussion at the last meeting of the American Philosophical Association, where, also, many papers were read upon this question. The differences between the idealists and pragmatists are more thoroughgoing than those between idealists and realists, concerning, as they do, the problems of the nature and origin of knowledge, the criterion of truth, and the entire structure of experience. In spite of the attacks, however, which have been made upon it, objective idealism may still be regarded as the dominant theory: the result of the controversy has been a clarification of ideas and a greater emphasis upon phases of experience which had been more or less neglected.

**LITERATURE OF RECENT MOVEMENTS.** A notable article by A. Chiappelli on "The Vital Tendencies in Contemporary Philosophy" (*Revue Philosophique*, March, 1910) throws much light on the present situation. The following books also discuss the recent movements: Fabbriotti, *Appunti critici di filosofia contemporanea*; Thilly, *Contemporary American Philosophy in Studies in Language and Literature*; Walker, *Theories of Knowledge: Absolutism, Pragmatism, Realism*; Lyman, *Theology and Human Problems: A Comparative Study of Absolute Idealism and Pragmatism as Interpreters of Reality*; A. Chiappelli, *Dalla critica al nuovo idealismo*; L. Chiappelli, *La filosofia dell'assoluto in Inghilterra e in America*; de Laguna, *Dogmatism and Evolution*; Schinz, *Anti-Pragmatism*; O'Sullivan, *Old Criticism and New Pragmatism*; A. W. Moore, *Pragmatism and its Critics*; Bawden, *Principles of Pragmatism*; Switalski, *Der Wahrheitsbegriff des Pragmatismus nach William James*; Gillouin, *Henri Bergson*; Dolson, *The Philosophy of Henri Bergson* (articles in *Philosophical Review*, November, 1910, January, 1911); Archambault, *Emile Boutroux*. An English translation of Bergson's (the leader of the French opposition to idealism) *Time and Free Will* has appeared, and a translation of his *Matière et mémoire* is announced. Schiller, the English humanist, has republished his *Riddles of the Sphinx*.

**WORKS ON LOGIC AND EPISTEMOLOGY** are: Dörner, *Encyklopädie der Philosophie*; Kern, *Das Erkenntnisproblem und seine kritische Lösung*; Dürr, *Erkenntnistheorie*; Rau, *Das Wesen des menschlichen Verstandes und Bewusstseins*; Wodehouse, *The Presentation of Reality*; Bonnucci, *Verità e realtà*; Ramousse, *Essai d'une théorie scientifique du concept de vérité*; Häberlin, *Wissenschaft und Philosophie*; Delvolvé, *Rationalisme et tradition*; Lüdemann, *Das Erkennen und die Werturteile*; Lodge, *Reason and Belief*; Wilhelm Wundt, *Die Principien der mechanischen Naturlehre*, second edition; Volkmann, *Erkenntnistheoretische Grundzüge der Naturwissenschaften*; Natorp, *Die logischen Grundlagen der exakten Wissenschaften*; Oswald Külpe, *Erkenntnistheorie und Naturwissenschaft*; Lourie, *Die Principien der Wahrscheinlichkeitsrechnung*; Paulhan, *La logique de contradiction*; A. Sidgwick, *The Application of Logic*; Bode, *An Outline of Logic*; Meinong, *Ueber Annahmen*; T. V.

Moore, *The Process of Abstraction*; Brunswig, *Das Vergleichen und die Relationserkenntnis*; Lechallas, *Étude sur l'espace et le temps*; Bauch, *Das Substanzproblem in der griechischen Philosophie*; Cassirer, *Substanzbegriff und Funktionsbegriff*; Berkeley, *Mysticism in Modern Mathematics*; Pillsbury, *The Psychology of Reasoning*; Verworren, *Die Mechanik des Geisteslebens*, and McCabe, *The Evolution of Mind*, will also prove helpful in connection with a study of epistemological problems, as will also many of the books to be mentioned under the head of metaphysics, and historical works like the following: Cohen, *Kants Begründung der Ethik*, 2d greatly enlarged edition; Goldschmidt, *Zur Wiedererkennung kantischer Lehre*; von Aster, *Immanuel Kant*; Wenley, *Kant and his Revolution*; Tocco, *Studi kantiani*; Jünemann, *Kantiana*; Haering, *Der Duisburgsche Nachlass und Kants Kritikismus um 1775*; Wiegand, *Aenesidem-Schulze*; v. Zynda, *Kant-Reinhold-Fichte*; Cunningham, *Thought and Reality in Hegel's System*; MacTaggart, *Commentary on Hegel's Logic*; Lassen, *Beiträge zur Hegelforschung*. A long-desired translation of Hegel's *Phenomenology of Mind* has been published by Baillie. The dictionary of philosophy (*Wörterbuch der Philosophie*) by F. Mauthner, which is appearing serially, will prove useful in all branches of philosophy.

**CONSTRUCTIVE PHILOSOPHY.** In the field of constructive philosophy, philosophy as *Weltanschauung*, or metaphysics, a number of interesting works have appeared. Rehmke, who belongs to the group of so-called "immanent philosophers" led by Schuppe in Germany, presents a system of objective idealism in his *Philosophie als Grundwissenschaft*. According to him, philosophy must say good-bye to phenomenalism, subjectivism, and relativism, and base itself upon the solid ground of reality. Another idealistic book, which, however, would serve as a good corrective to the preceding, is Varisco's *I massimi problemi*, offering a theory similar to the monadism of Leibnitz, but purged, as Professor Taylor, its reviewer in *Mind*, thinks, "of the worst features of Leibnitz's doctrine, the absence of real interaction between the monads, the pre-established harmony, and the rigid determinism." De Cyon, the well-known physiologist, declares in his *Dieu et science* that while the "soul" is intimately bound to the functioning of our organs, the "spirit" or mind is independent of these organs, not subject to mechanical laws, but capable of unlimited activity, which is creative in the true sense of the term. Other books are: a translation of Jerusalem's *Introduction to Philosophy*, a popular elementary text which has passed through five German editions; Lindsay, *The Fundamental Problems of Metaphysics*; Dewing, *Life as Reality*; Petrone, *Il diritto nel mondo della spirito*; Snowden, *The World a Spiritual System*; Herrick, *The Metaphysics of a Naturalist*; Lieder, *Die psychische Energie und ihr Umsatz*; Cohn, *Ueber das Denken*. Among the contributions on the philosophy of nature may be mentioned: a translation of Ostwald's *Natural Philosophy*; Frost, *Naturphilosophie*; Keyserling, *Prolegomena zur Naturphilosophie*; Wundt, *Die Principien der mechanischen Naturlehre*; Lorentz, *The Theory of Electrons*; Hort, *Der Entropiesatz*; Darbon, *Explication mécanique et la nominalisme*; Duclaux, *La chimie de la matière vivante*; Auerbach,

*Ektropismus oder die physikalische Theorie des Lebens*; Stahr, *Der Begriff des Lebens*. Also of interest and value will be: Zeller, *Kleine Schriften*; Wundt, *Kleine Schriften*; B. Russell, *Philosophical Essays*; Stumpf, *Philosophische Reden und Vorträge*; *Correspondance de Renouvier et Secrétan*; Lodge, *Reason and Belief*; Planck, *Die Einheit des physikalischen Weltbildes*; Moon, *The Relation of Medicine to Philosophy*; translation of Houllevigne's *The Evolution of the Sciences*; Schneider, *Die Grundgesetze der Descendenztheorie in ihrer Beziehung zum religiösen Standpunkt*; Seward, *Darwin and Modern Science*; Dewey, *The Influence of Darwin on Philosophy, and other Philosophical Essays*; J. A. Thomson, *Darwinism and Human Life*; Baldwin, *Darwin and the Humanities*; Le Dantec, *La stabilité de la vie. Étude énergétique de l'évolution des espèces*; Hart, *Phases of Evolution and Heredity*; Reid, *The Laws of Heredity*; Herbert, *The First Principles of Heredity*; De Vries, *Intracellular Pangenesis*.

**ETHICS.** The literature on ethics is large and is turning more and more to the study of special problems. The following deal mainly with theoretical problems: Muirhead, *Elements of Ethics*, 2d edition; Leonhardt, *L'évolution. Doctrine de liberté*; Parodi, *Le problème moral et la pensée contemporaines*; Piat, *La morale du bonheur*; Nicholson, *The Concept Standard*; E. Wentscher, *Der Wille*; Ach, *Ueber den Willensakt und das Temperament*; Fite, *The Individual*; McConnell, *The Duty of Altruism*; Sawicki, *Das Problem der Persönlichkeit und des Uebermenschen*; Kriek, *Persönlichkeit und Kultur*; Bovet, *La conscience de devoir dans l'introspection provoquée*; Künzle, *Ethik und Aesthetik*.

**PRACTICE.** The following are concerned with questions of practice: *Everyday Ethics* (a series of lectures delivered at Yale University); Pollock, *Hygiene of the Soul*; Bryce, *Hindrances to Good Citizenship*; *Justice Wanted: Modern Thoughts on Social Problems* (edited by O. O.); Jones, *The Working Faith of a Social Reformer*; Melin, *L'organisation de la vie privée*; Lazzati, *Liberté de conscience et liberté de science*; Rüstow, *Der Lügner*; Dromard, *Les Mensonges de la vie intérieure*; Angell, *The Ethics of Animal Experimentation*. A number of excellent books have appeared on the history of ethics and the history of moral ideals: T. C. Hall, *The History of Ethics within Organized Christianity*; Bussell, *Marcus Aurelius and Later Stoics*; Hicks, *Stoic and Epicurean*; Adams, *Israel's Ideal*; King, *The Ethics of Jesus*; A. Alexander, *The Ethics of St. Paul*; Monod, *Nouvelles esquisses de morale évangélique*; H. C. Taylor, *The Mediaeval Mind*; Schlatter, *Die philosophische Arbeit seit Cartesius in ihrem ethischen und religiösen Ertrag*; Cohen, *Die Begründung von Kants Ethik*; Kelly, *Kant's Ethics and Schopenhauer's Criticism*. F. B. Jevons, *The Idea of God in Early Religions*, and Hobert, *La religion de la Grèce antique*, may also be consulted with profit.

**SOCIAL PHILOSOPHY.** Worthy of mention also in this connection are works on legal, political, social, and sociological problems which have a bearing on ethical questions: Bosanquet, *The Philosophical Theory of the State*; Carreño, *Filosofía del derecho*; Charmont, *La renaissance du droit naturel*; Fried-

rich, *Die Bestrafung des Motivs*; Bruguilles, *Le droit et la sociologie*; Lévy, *La société et l'évolution juridique*; Small, *The Meaning of Social Science*; Ellwood, *Sociology and Modern Social Problems*; Le Bon, *La psychologie politique et la défense sociale*; Fouillée, *La démocratie politique et sociale en France*; Samuelson, *The Human Race*; Haddon, *The Races of Man*; Wetham, *The Family and the Nation*; Gaston, *La femme dans l'histoire*; Kisch, *The Sexual Life of Woman*; Ellis, *Studies in the Psychology of Sex*; Coit, *Woman in Church and State*; Odum, *Social and Mental Traits of the Negro*.

**MORAL INSTRUCTION.** The following deal with moral instruction, a subject to which greater attention is being given every year: DeGarmo, *Ethical Training*; Hart, *Critical Study of Current Theories of Moral Education*; Sully, *Teacher's Handbook of Psychology*; Gaultier, *La vraie éducation*; Namas, *La pédagogie sociale de P. Bergemann*; Roehrich, *Philosophie de l'éducation*; Cellérier, *Esquisse d'une science pédagogique*; Mendousse, *Du dressage à l'éducation*; Lemaitre, *La mentale de l'adolescent*; Talbot, *The Education of Women*; Carreño, *La educación sexual*.

**ÆSTHETICS.** Of works in æsthetics we note: Volkelt, *System der Aesthetik*, vol. III; Croce, *Problemi di estetica*; Babbitt, *A New Iacono*; Paschal, *Esthétique nouvelle*; Prandtl, *Die Einfühlung*; d'Udine, *L'art et le geste*; Lewkowitz, *Hegels Aesthetik im Verhältniss zu Schiller*; Eckwitz, *Nietzsche als Künstler*.

**HISTORY OF PHILOSOPHY.** The history of philosophy shows the usual large number of productions. Besides the books already cited in connection with other fields, we mention: Windelband, *Lehrbuch der Geschichte der Philosophie*, 3d edition; Reyes, *Historia de la filosofía y terminología filosófica*; Cushman, *Beginner's History of Philosophy*, 2 vols.; Eisler, *Geschichte des Monismus*; Hibben, *The Philosophy of the Enlightenment*; Rupp, *Ueber Klassiker und Philosophen der Neuzeit*; Santayana, *Three Philosophical Poets* (Lucretius, Dante, and Goethe); Forsyth, *English Philosophy*; Inoué, *Confucian Philosophy in Japan*; Goebel, *Die vor-sokratische Philosophie*; Werner, *Aristote et l'idéalisme platonicien*; Joyau, *Épicure*; Bréhier, *Chrysippe*; Guthrie, *The Philosophy of Plotinus*; Endres, *Petrus Damiani*; Bauemker, *Beiträge zur Geschichte der mittelalterlichen Philosophie*; Neumark, *Geschichte der jüdischen Philosophie im Mittelalter*; Grundfeld, *Die Lehre vom göttlichen Willen bei den jüdischen Religionsphilosophen*; Lutz, *Die Psychologie Bonaventuras*; Kercher, *Raymundus Lullus*; Serpillanges, *St. Thomas d'Aquin*, two volumes; Péladan, *La philosophie de Léonard de Vinci*; Douglas, *The Psychology and Philosophy of P. Pomponazzi*; Wolff, *F. Bacon und seine Quellen*; Hamelin, *Le système de Descartes*; St. Cyres, *Pascal*; Alberti, *Die Grundlagen des Systems Spinozas*; Dunin-Borkowski, *Der junge Spinoza*; Lempp, *Das Problem der Theodicee bei Leibniz*; Mackinnon, *The Philosophy of John Norris*; Pryer, *Cabanis*; Katzer, *Luther und Kant*; Bolland, *Schelling, Hegel und Fechner in der neuen Theosophie*; Heller, *Die Weltanschauung A. von Humboldts*; Gwinner, *Schopenhauers Leben*, 3d edition; Covotti, *La vita e il pensiero di A.*

*Schopenhauer*; Keyserling, *Schopenhauer als Vorbilder*; Mühlethaler, *Die Mystik bei Schopenhauer*; Ziegler, *Das Weltbild Hartmanns*; *The Letters of John Stuart Mill*, edited by Elliot; Barzellotti, *Monte Amiata e il suo profeta* (Lazzaretti); Remacle, *La philosophie de S. S. Laurie*. English translations of the works of Aristotle and Nietzsche have been appearing during the year.

**PHOSPHATES.** See FERTILIZERS.

**PHOSPHORUS.** See ATOMIC WEIGHTS.

**PHOSPHORUS POISONING.** See OCCUPATIONAL DISEASES.

**PHOTOTHERAPY.** As familiarity with the Roentgen ray increases and technique improves, new uses are constantly being found for this agent, especially in the field of medical and surgical diagnosis. According to Finckh, 150 patients with suspicious stomach symptoms were examined at Tübingen University, and the presumptive diagnosis of cancer was confirmed by means of the X-ray before any tumor could be perceived by manual examination through the abdominal wall. Adler was able to photograph ulcers of the stomach and duodenum by means of the X-ray, after first administering to the patient a certain amount of subcarbonate of bismuth. The bismuth is deposited on the ulcerated surfaces, and a dim shadow of the outline of the ulcer shows in the photographic plates. Tumors of bones, pus cavities, aneurisms and the outlines of the abdominal organs can now be made out from negatives taken with the Roentgen ray, by those skilled in the reading of these plates. This agent was extensively used to designate purulent processes in the accessory sinuses of the nose and in the bony structures about the ear. As a means of treatment, the rays are being restricted to certain chronic skin diseases, such as lupus and eczema, and in superficial cancer.

**RADIUM.** It is now believed that radium emanations are not essentially different from those of the X-ray in their external therapeutics. Independently of each other, Wolff and Friedländer investigated the effect of radium emanations on tuberculosis, and reached the conclusion that no bactericidal action could be shown. In Wolff's experiments, cultures of the bacillus, subjected to the action of radium, still proved virulent, and killed animals inoculated with them. He also applied radium to tuberculous glands in animals, with complete failure to reduce them, even under irradiations intense enough to produce severe inflammation of the skin.

The supply of this rare metal, hitherto derived almost exclusively from the mines in Bohemia, was increased during 1910 by the discovery of two new sources of production. The most important was that in Cornwall, England, where a pitchblende, comparative rich in this element, has already yielded 550 milligrams of pure radium. The importance of this new source of supply will be understood when it is remembered that, according to Sir William Ramsay, there are only 5500 milligrams of radium in the world, apart from the Cornwall product. A new process was also devised by which the element could be extracted from the pitchblende within two months. The second new source of supply was found in Portugal, near Guarda, in the bed of a stream.

The extent of this latter deposit is as yet unknown. The price of radium has been considerably reduced. The sale of the element in the form of the barium chloride salt was authorized by the Austrian government, which has taken the trade into its own hands. The price is now 400 kronen or \$80 per milligram (one-sixtieth of a grain). The substance is put up in brass capsules, partly lined with lead, upon which the salt is deposited. An opening in the capsule, covered by a mica plate, permits the use of the radium for therapeutic purposes, without opening the capsule.

A bank for the storage and rental of radium to physicians and scientists was established in London. Portions of 50 milligrams of radium, having a value of \$4000, could be hired for periods of time at the rate of \$200 for one day's use, and one-half per cent. of the value for each subsequent day.

**PHYSICAL EDUCATION.** See EDUCATION IN THE UNITED STATES; and UNIVERSITIES AND COLLEGES.

**PHYSICS.** As has generally been the case during recent years, the most striking advances in physics have been made in those sections which deal with the ultimate constitution of matter, such as radioactivity and the electrical phenomena in gases, and light. A great deal of the work in any experimental science, and particularly in its older and more developed branches, is necessarily of a statistical character, and not so interesting and novel as the work on new theories and phenomena, although of great importance to the science as a whole.

**RELATIVITY THEORY.** No entirely new acquisition of great importance has been made in the domain of theoretical physics during the past year, but the applications of the relativity theory have been greatly extended. It is proper to note that the fundamental and even revolutionary significance of this theory is becoming more widely understood and accepted. The theory was evolved from the efforts of physicists, particularly Lorentz and Einstein, to explain satisfactorily the failure of the extremely careful experiments which had been made in the attempt to discover some influence upon optical phenomena caused by the motion of the earth through the ether. Assuming that there is some fundamental principle back of these failures, the relativity theory postulates that motion of matter has meaning only when it is motion as referred to some other portion of matter, and that to speak of absolute motion or motion through a universal ether is meaningless. This amounts to giving up the ether, for a mechanical conception of which many of the most brilliant scientists have long labored, but in vain.

**ATOMIC THEORY OF RADIATION.** No direct and conclusive experimental test of the atomic theory of radiation has yet been brought to a successful completion. This "light-bundle" hypothesis, which explains some phenomena that appear to conflict with the older theory of radiation, is one of the most important advances of recent years. It has long been considered that the emission of radiation from any body is due to some sort of electrical vibration in some of its very small constituent parts. According to the older theory each such vibration causes radiant energy to travel out in all directions. According to the "light-

bundle" hypothesis the energy from a single vibration is concentrated in certain units, each contained in a definite volume, and proceeding from the source in a straight line.

An ingenious experimental test of this has been attempted by Dr. N. Campbell. According to the "atomic" theory of radiation, the beams of radiation proceeding in two different directions from a source would be made up of "bundles of energy" from different vibrators. Suppose the mean intensities of these beams were equal, there would yet be momentary differences in their intensities, and it can be shown that if the emission were in accordance with the "atomic theory of radiation" the mean fluctuation of the difference would not be zero, while on the older theory it should. Campbell tried to test this, measuring the intensities of the light beams by the photo-electric currents which flowed from a sodium-potassium alloy when the light fell on its surface in a high vacuum. The theory developed for the experiment was partly confirmed, and Campbell found that the number of electrons liberated by one of the hypothetical "light-bundles" would be about 3, which agrees with the results deduced from other theoretical grounds. But the main object of the experiment was not fully attained because of the impossibility of finding a suitable light source, so that direct evidence that light is sent out in discrete units of energy remains still to be sought for.

In this connection the results obtained during the past year by O. Stuhlmann are of interest. He passed a beam of light through a film of platinum so thin as to be translucent, and compared the photo-electric effect, that is, the number of electrons thrown out of the surface of the metal by the radiation, at the side of the film on which the light fell, with that at the other side, from which the light emerged. He found the photo-electric effect 17 per cent. greater on the emergent side, that is, when the electrons are torn out of the metal more of them are thrown off in the direction in which the light is traveling than in the opposite direction. This lack of symmetry is in accord with the light-bundle theory, but the difference is larger than can readily be explained on the older theory of light.

**RADIOACTIVITY.** Probably the most important event of the year in its relation to the science of radioactivity was the meeting of the Second International Congress of Radiology and Electricity at Brussels in September, attended by about five hundred physicists and medical men. The meeting of so many men interested in the new and growing science could not fail to give a strong stimulus to work in this field. The recommendations adopted by the Congress lead toward greater uniformity and definiteness in the science, particularly in the important matters of physical standards and nomenclature.

It was pointed out that a number of the quantities measured in investigations in radioactivity (for example; the volume of the radioactive emanations, the heating effects of radioactive substances, the rate of production of helium, and the rate of emission of  $\gamma$  and  $\beta$  particles) can now be determined with a fair degree of accuracy. But the value of any one of these measurements depends upon the accuracy of the radium standard with which the radioactive substance under investigation is

compared. A comparison of standards in use at different laboratories has revealed errors in their supposed content of radium as great as 20 per cent. in some cases. The committee on standards recommended the adoption of a definite standard, and Mme. Curie has undertaken to prepare a standard containing 20 milligrams of radium in a suitable sealed tube. Such a standard can be used for comparison without opening the  $\gamma$  tube, by measuring the intensity of the rays from it. It is proposed that all national laboratories, such as the Bureau of Standards at Washington, obtain sub-standards compared with this international standard.

Among the interesting suggestions regarding the matter of nomenclature was the proposal to use the name "curie" to designate the "amount of radium emanation in equilibrium with one gram of radium."

**METALLIC RADIUM.** The year 1910 witnessed another interesting event in the history of radium. It has hitherto been known only in the form of some of its salts, but this year Mme. Curie and A. Debierne have obtained metallic radium. They electrolysed some chloride of radium, using a mercury cathode, and obtained an amalgam of radium. This amalgam was then freed from mercury by careful heating in an atmosphere of hydrogen in a quartz tube. The residue, metallic radium, had a shining white color, and when heated to volatilization attacked the quartz tube. It decomposed water, and when exposed to air blackened rapidly, forming probably a nitride of radium. For further details concerning radium, see the articles **CHEMISTRY** and **PHOTOTHERAPY**.

**RADIOACTIVE RECOIL.** The recently discovered phenomenon of radioactive recoil has received due attention during the past year. This phenomenon consists of the expulsion of atoms of the radioactive disintegration product from a layer of the parent material, which is due to the fact that when an atom of the latter disintegrates with the expulsion of a  $\alpha$  or  $\beta$  particles, equal and opposite momenta, in accordance with the principles of mechanics, are given to the atom of the product and to the particles. Hence if a particle is emitted toward the interior of the active layer the "recoil-atom" is given a velocity, small because of its greater mass, away from the surface of the layer.

Working with the "recoil atom" of radium B, obtained from a layer of radium A, Russ and Makower, and Makower and Evans have measured the deflections which it suffers in passing through electric and magnetic fields. The directions of these deflections indicate that the "recoil atoms" of radium B are positively charged. Their velocity as determined from the deflections and the known field strengths agrees with that computed from the relative masses of the atom of radium  $\beta$  and of the  $\alpha$  particle (from which it recoils) and the velocity of the latter.

Wertenstein has found that the distance the "recoil atom" of radium B moves in a gas before being stopped (its "range") is inversely proportional to the pressure of the gas, and would at atmospheric pressure be about 0.12 millimetre. By depositing very thin layers of silver over a layer of the radioactive material it was found that most of the "recoil atoms"

passed through a layer of 10 millionths of a millimetre in thickness, but not through one twice as thick. A layer of silver 16 millionths of a millimetre in thickness would be equivalent in weight to a layer of 0.12 millimetre of air at atmospheric pressure.

**RADIUM HALOS.** When a particle of radium remains enclosed in glass or in some forms of mica for a considerable time it causes a discoloration of the surrounding material. Examination of this "pleochroic halo" has shown that the color effect extends out from the radium particle for a distance just equal to that which the  $\alpha$  particle can travel in the material before losing its ionizing power. Corresponding to the emission of  $\alpha$  particles with different velocities and ranges of ionization by different radioactive products, there are found halos of different sizes, and often multiple halos, the radius of each darkened portion corresponding to the range of the  $\alpha$  particle which produced it. The amount of radium associated with, and producing, one of these halos is estimated at about  $10^{-16}$  grams. Forming thus a very sensitive indication of the action of  $\alpha$  particles at any time, the phenomenon may prove of considerable value in the investigations of radio-mineralogy.

**VELOCITY AND IONIZATION.** Dr. H. Geiger has made careful measurements of the change in velocity and in ionization produced by an  $\alpha$  particle at points along its path. He found the velocity to be proportional to the cube root of the remaining range of ionization instead of the square root as formerly believed. The results agree well with the earlier ones of Rutherford except near the end of the range. The ionization produced at any point by an  $\alpha$  particle is proportional to the rate at which it loses energy, which, in turn, inversely varies as the velocity, so that the ionization is inversely proportional to the velocity, or to the cube root of the remaining range. This explains the increase in ionization observed near the end of the range.

Careful measurements sustain the view (previously adopted on rather insufficient evidence) that all the  $\gamma$  particles from a single radioactive product have the same initial velocity, although when passing through air they acquire small differences in velocity and direction because of collision with the molecules.

**DEVIATION OF PARTICLES.** The scattering of  $\alpha$  particles by matter has also been investigated by Geiger. Placing various thicknesses of metal foil in the path of a small parallel beam of  $\alpha$  particles he observed the scintillation pattern produced by these particles on a zinc sulphide screen beyond the foil. As thicker foils were used the mean distance of the scintillations from the axis of the beam increased. By careful observation of the scintillation pattern he was able to determine the relation between the scattering of the beam and the nature and thickness of the material traversed. These results he was able to state in terms of the most probable angular deviation experienced by an  $\alpha$  particle in passing through an atom. Thus a single atom of gold produces an angular deviation of about one two-hundredth of a degree. The deviation is proportional to the atomic weight of the metal.

**POSITIVE ELECTRICITY.** The nature of positive electricity is still an open question. We are well enough assured that negative elec-

tricity exists in definite units or atoms called electrons, but whether there are corresponding positive electrons or not is not known. It has often been the custom to regard positive electricity as distributed uniformly throughout a spherical volume of very large dimension as compared with the negative electron.

Professor Sir J. J. Thomson has approached the question of the positive electricity in the atom in a very ingenious manner. He showed that the mean probable deviation from its path experienced by a  $\beta$  particle in passing through an atom of matter would depend on the distribution of the electric charges in the atom. In particular he compared the deviation calculated on the hypothesis that the positive electricity in the atom is localized in definite units with that calculated on the hypothesis of a uniform volume distribution of positive electricity throughout the atom. The theory was put to experimental test by J. A. Crowther, whose results favor the hypothesis of uniform distribution.

Thomson's theory with the experimental results obtained by Crowther also affords an opportunity to compute the number of negative electrons in the atom. The number was found to be three times the atomic weight.

**ABSORPTION OF RAYS.** Investigating the absorption of homogeneous  $\beta$  rays, Crowther found that, after the initial scattering, the particles were absorbed according to an exponential law, that is the number of particles stopped in any thin layer of the material was proportional to the number incident upon it. The deviations from the exponential law, observed with thin layers of absorbing material, were shown to be due to the scattering.

It has been shown that there is a small but appreciable decrease in velocity of the  $\beta$  particles in passing thin matter. Crowther found, for example, that a certain beam of  $\beta$  rays decreased in velocity from  $2.735 \times 10^{10}$  centimetres per second to  $2.690 \times 10^{10}$  centimetres per second in passing through 0.47 millimetres of aluminum. Allowing for the decrease in the mass of the  $\beta$  particles as their velocity decreases, this would amount to a loss of only 10 per cent. of their energy, although 71 per cent. of the rays were "absorbed" in passing through this sheet of aluminum. This shows that the main cause of the absorption of the  $\beta$  rays does not, as in the case of the  $\alpha$  rays, lie in the decrease in their velocity.

Although the matter has not been very decisively settled, it seems most probable that the  $\beta$  rays emitted by a single radioactive product have all the same velocity, and that the results in opposition to this view obtained by some observers are probably due to the scattering of the rays by air before they reached the apparatus used to determine their velocity.

**ELECTRON.** The elementary electric charge ( $e$ ) carried by an electron, which is supposed to be the ultimate limit of divisibility of electrical quantity, is one of the most important physical constants. A knowledge of this constant makes possible the computation of the actual masses of atoms and molecules, the number of molecules in unit volume of any gas, or in a given mass of any substance, and other important physical quantities. Determinations of its value made in recent years have shown that the earlier values of about  $3 \times 10^{-10}$

**SIR J. J. THOMSON**

340

electrostatic units is probably too low, and that it is more nearly  $4.6 \times 10^{-10}$ .

Early in the year 1910 Professor R. A. Millikan published the results of a series of measurements of the elementary charge. In a chamber containing air saturated with water or alcohol vapor, and ionized by the radiation from a large quantity of radium, a cloud of fine drops was produced by a sudden expansion of the saturated air. The water (or alcohol) drops formed about the ions in the air and so behaved like fairly large charged spheres. It was usually possible to fix the attention on an individual drop and determine which electric field would just prevent it from falling under the action of gravity. From this field strength, and the velocity with which the drop fell when the field was removed, using the results of careful determinations of the viscosity of moist air, they were able to compute the electric charge carried by the drop. The charges carried by the many drops observed were all found to be multiples of the same number, so that it was at once evident how many elementary charges each drop carried. The result of this work was given as  $4.65 \times 10^{-10}$  electrostatic units of quantity, which agreed very well with the best results previously obtained.

In later work Professor Millikan has used drops of oil, mercury and glycerine, and has been able to keep a single drop in the field of view for an indefinite length of time. Changes in the motion of the drop indicating that it had taken up additional charges were observed, and from the measurements made each charge could be determined. It was found that the charges thus taken from the ions in the air were usually of the magnitude of a single elementary charge, although sometimes multiple charges were caught. Furthermore, every charge detected on any of the drops was within one-half of one per cent. of some multiple of the same quantity,  $4.917 \times 10^{-10}$  electrostatic units. This then is the value of the elementary charge as found from Millikan's later experiments.

From the fact that an ion present in the air could join one of the drops bearing a charge of the same sign, which would therefore exercise an electrical repulsion upon it, Millikan computed that the ion must have been in motion with a kinetic energy of about  $5 \times 10^{-14}$  ergs, which agrees with the value computed from the kinetic theory of gases.

**NATURE OF THE THERMIONS.** The charges carried by the ions emitted by hot bodies (thermions) have been further investigated by Professor O. W. Richardson and Mr. Hurlbirt. In earlier work it had been found that the negative ions had the same characteristics as the electrons, as was expected. It was also found that the positive ions from platinum, carbon, and iron had a value of  $e/m$  (the ratio of the electrical charge carried by the ion to its mass) corresponding to an atomic weight of about 26 if they carried the elementary charge. Seven other metals and three alloys recently investigated also produce positive ions having very nearly the same value of  $e/m$ . This makes it seem probable that it is sodium atoms, present in the metal as an impurity, which carry the positive charge. However, as severe chemical treatment of the metals did not cause any change in the phenomenon, it is certain that any impurity which accounts for the carriers of the positive charge must be very

deep-seated in the metal. Investigations on the positive ions emitted by the alkali sulphates furnish additional evidence that the positive ions are due to the presence of alkaline impurities in the metals.

**THE MAGNETIC RAYS.** It was observed many years ago that when a discharge tube was placed longitudinally in a magnetic field the cathode rays were bent in a helix, but when the magnetic field was increased beyond a certain value this helix changed to a continuous band of light, and the potential across the tube changed abruptly. Attempts which were made to detect any electric charge carried by this radiation failed. The radiation was found to be deflected by an electric field in a direction perpendicular to the lines of electric force, although radiations of charged particles are ordinarily deflected along the lines of force. These considerations led to the belief that this was some new form of radiation, and various explanations of it were offered.

H. Thirkill has shown that this phenomenon may be explained as the effect of cathode rays, coiled up into a very close helix by the action of the magnetic field. The sudden appearance of the band of light when the magnetic field is increased is due to the fact that the cathode rays are concentrated by the field, increasing the current density in the strongest part of the field, and, as Thomson has shown, such an increase in current density is often accompanied by an abrupt increase in the luminosity. As the luminosity is accompanied by increase in ionization the difficulty found in detecting the negative charge accompanying the rays is explained by the increased leakage of charge from the metal cylinder. The negative charge carried by the rays Thirkill has detected (using a very sensitive galvanometer, and taking precautions against this leaking away of the charge). The unusual direction of deflection in the electric field can also be explained on this theory. It is thus concluded that the magnetic rays are slowly moving negative particles whose paths are coiled up into helices by the strong magnetic field along which they travel.

**LIGHT PRESSURE.** The pressure exerted by light on solid reflecting and absorbing surfaces was proven experimentally several years ago by Lebedew, Nichols and Hull, and others. During the past year Lebedew has experimentally demonstrated the pressure exerted by light on a partially absorbing gas. This pressure is proportional to the coefficient of absorption of the gas for the light used, and to the amount of radiant energy falling on the gas per second. Several different gases were used, and in all cases the pressures measured agreed with those theoretically computed within less than 30 per cent., which, considering the difficulties of the experimental work, is as good an agreement as could be expected. It may be noted that the highest pressure observed was about 4 microdynes (approximately  $4 \times 10^{-9}$  grams) per square centimetre.

Theoretically, when a beam of light is emitted there should be a backward pressure exerted upon the source (the "recoil from light," from analogy with the recoil of a gun which "emits" a projectile). The measurement of this recoil in the case of a body in which heat is developed by some internal change (for example, by electrical heating or by combustion) is beset with many experi-

mental difficulties and uncertainties. But when radiation falls on an absorbing body, that body is heated by it and itself emits radiation in the form of very long heat waves, sending out, in the steady (final) state, as much energy as it receives. The back pressure exerted by this heat radiation will combine with the direct pressure due to the incident radiation, and the resultant can be measured. The pressures on discs with reflecting or absorbing surfaces and light incident on one side or the other can be theoretically calculated. If  $P$  is the pressure exerted by the incident light on an absorbing disc, it can be shown that for a disc which is perfectly absorbing on both sides the resultant pressure will be  $P$ ; if black on receiving side but polished on the other,  $5/3 P$ ; if polished on receiving side, or on both sides,  $2 P$ . Poynting and Barlow have measured the pressures on various discs, and found them in good agreement with the values calculated from the amount of incident energy and the character of the discs investigated. Thus the "backward pressure" of radiation on the source may be considered as experimentally proven.

**THE "ECHELETTE" GRATING.** The diffraction grating, consisting of a great number of very narrow grooves ruled very close together on a reflecting surface, has long been of the greatest service in forming spectra for investigation. It possesses the great advantage of giving a regular and long spectrum, accompanied by the disadvantage of distributing the light through several spectra, thereby giving a less intensity in any one spectrum. The manufacture of these gratings was brought to its greatest perfection by the late Professor Rowland at the Johns Hopkins University. Professor Wood of Johns Hopkins has brought out a grating designed particularly for forming the spectrum of the infra-red radiations, which are of so much importance in the optical researches of to-day.

The theory of the grating shows that with grooves of the proper shape, a large part of the energy falling upon the grating can be concentrated into a single spectrum. It is mechanically impracticable to give a very definitely known shape to the groove in the ordinary grating because of the exceeding fineness of the rulings, but for work in the infra-red, where the wave-lengths are many times longer than in the visible spectrum, the grooves may be made correspondingly larger. On account of this Professor Wood has been able to rule grooves of definitely known shape, which are yet fine enough for infra-red work. Ruling with carborundum crystals on gold-plated copper plates which had been made as nearly plane as possible, he has secured some very good gratings, in which the metal was not cut at all, but simply compressed to form the groove.

The action of these gratings has been investigated by Professor A. Trowbridge and Professor Wood, using the vacuum spectrometer recently devised by the former. With infra-red radiation they throw practically all the energy into one or two spectra. They give considerably higher "resolving power," that is, greater angular separation of radiations having a given difference in wave-length, than any other apparatus that has been used in the remote infra-red portion of the spectrum. The results obtained with the gratings agree with the theory and show that by the use of these "echelette" gratings the theoretical relation between the dis-

tribution of the energy and the groove-form can be experimentally confirmed. Further experiments with the use of various groove-forms are in progress.

**LONG HEAT WAVES.** The fact that by repeated reflection from a selectively reflecting surface nearly monochromatic radiation can be obtained has for several years been used to locate certain lines in the infra-red. During the past year Rubens and Hollnagel have obtained in this way the "residual rays" (after multiple reflection) from rock salt, sylvine, potassium bromide, and potassium iodide. Their measurements of the wave-length were made with an interferometer of the Fabry-Perot type, with quartz plates. Wave-lengths longer than any before obtained in the infra-red were measured, the longest being those of potassium iodide, whose "residual rays" have a wave-length of  $96.7\mu$ , or nearly one-tenth of a millimetre. This brings the known region of heat radiation a little nearer to that of short electrical waves in which radiation of about 2 millimetres wave-length has been obtained. On the other hand, the lowest wave-lengths yet obtained in the ultra-violet are about  $0.12\mu$ , about one eight-hundredth as long as these new waves in the infra-red.

**THE LIGHT OF THE FIREFLY.** Coblenz and Ives have made an interesting study of the spectral distribution of energy in the light emitted by the common firefly. As the radiation is, of course, discontinuous and of very low intensity, it was found impossible to apply any of the more ordinary methods, so the spectrum was photographed and the intensities of different portions compared with those in a photograph of the spectrum of an electric lamp, whose spectral distribution was determined. The firefly radiation has a luminous efficiency of 96.5 per cent., while that of the carbon lamp is 0.4 per cent., and that of the most efficient artificial light 4 per cent. It is probable that the firefly gives out light as a result of some physiological-chemical process. The high efficiency stated refers only to the comparison of the visible radiation with the total, and nothing is known about the efficiency of the process which causes the emission of the light.

**PHYSIOGRAPHY.** See GEOLOGY.

**PHYSIOLOGY.** Of perennial interest is the question of the physiological effect of alcohol on the animal body. Mendel, working on men and dogs, to the former of which he gave small doses, to the latter doses sufficient to produce intoxication, found that alcohol increased the output of uric acid, though he was unable to give a satisfactory explanation of this effect. Even with the dogs there was no indication of any pronounced alteration indicating disturbed protein metabolism. This seemed to indicate some regulating mechanism of the body. Mackenzie and Hill found that alcohol increased the ability to work, and to hold the breath, and Hamill showed that an isolated heart will utilize limited amounts of alcohol given to it in its nutrient fluids. Burrage stated that fatigue is not due to an effect on the central nervous system, but is rather due to the action, probably of potassium salts, upon the nerve endings. It seemed certain that the nerve endings were the parts affected, and potassium salts were shown to be capable of producing this effect. Lactic acid in the blood would give the same results. Jacobson reported results indicating that there are no specific "trophic" nerve fibres governing the

nutrition of the body. From a study of goitre in cats and dogs, Carlson and Woelfl decided that while in normal conditions the thyroid and parathyroid glands have distinct functions, each may assume the function of the other. There is as yet no definite test for the secretion of either gland, but it is probable that this secretion passes directly into the blood and not first into lymph vessels. See BIOLOGY and BOTANY.

**PICTON, JAMES ALLANSON.** An English non-conformist clergyman, politician and writer, died February, 1910. He was born in 1832 and was educated at Owens College, Manchester, and London University. He served as independent minister in various places in England from 1856 to 1876. From 1869 to 1878 he was a member of the school board for London. He was a Member of Parliament from Leicester from 1884 to 1894. Among his published writings are: *New Theories and the Old Faith*; *The Mystery of Matter*; *England's Resurrection*; *Oliver Cromwell, the Man and his Mission*; *The Religion of Jesus*; *The Religion of the Universe*; *Spinoza: a Handbook to the Ethics*; and *Man and the Bible*.

**PITMAN, BENN.** An inventor and author of works on phonography, died December 28, 1910. He was born at Trowbridge, England, in 1822 and was educated in the academy of his brother, Sir Isaac Pitman, the original inventor of phonography. He promulgated the art in Great Britain by lectures and teaching for ten years. In 1853 he settled in the United States and founded the Phonographic Institute in Cincinnati, of which he remained president until the time of his death. He was the inventor of the electro process of relief engraving in 1856. During the Civil War he was military recorder of State trials. From 1873 to 1892 he lectured on art, and was a teacher of artistic wood-carving, etc., in the Cincinnati Art Academy. He was the author of the *Reporter's Companion* (1854); *Manual of Phonography* (1854); *Phonographic Teacher* (1857); *History of Shorthand* (1858); *A Plea for American Decorative Art* (1895); *Phonographic Dictionary* (with Jerome B. Howard, 1899); *Life of Sir Isaac Pitman* (1902); and *A Plea for Alphabetic Reform* (1905).

**PLAGUE.** The plague in India increased somewhat during 1910, 27,000 deaths occurring during one week in March. (See VITAL STATISTICS.) Prophylactic injections are still regarded with distrust by the native population, only five or six thousand submitting to it during the year. Amasuyama states that according to his observations the most effective treatment was the incision or removal of the glandular swellings (buboes), combined with serum injections. Under ordinary symptomatic treatment, only 4 out of 163 patients recovered; under incision

or enucleation of the bubo, 47 out of 82 cases recovered, while under the combined treatment over 78 per cent. recovered. Japanese anti-plague serum was used in large doses.

The discovery of plague-infected rats in Suffolk, England, occasioned considerable anxiety. Hares and rabbits were also found dead from the disease, and two ferrets died from plague after eating a dead rabbit. Plague-infected rats have also been found in the London docks. A vigorous campaign in the affected districts was undertaken against the rats, and in London especially elaborate precautions were instituted against the introduction of plague. Thousands of rats were destroyed in vessels and dock warehouses, and it is believed that any danger of human infection is past.

**PLATT, O. H.** See LITERATURE, ENGLISH AND AMERICAN, Biography.

**PLATT, THOMAS COLLIER.** An American public official, former United States Senator from New York, died March 6, 1910. He was born in Owego, Tioga county, N. Y., in 1833. His father was a lawyer and practiced in Owego. He attended the public school and academy in Owego and in 1849 entered Yale College, but was unable to complete his course on account of ill health. He returned to Owego and began practice as a country druggist, forming a co-partnership under the name of Platt and Hull, but sold his interest in this business in 1872. He had in the meantime become identified with other business interests, being director in several mercantile companies in New York, Michigan, and other parts of the country. He was also for many years president of the Tioga National Bank at Owego. Following his retirement from the drug firm he removed to New York City, where, with others, he started a newspaper called the *Republic*, devoted to the interests of General Grant. The *Republic* had a brief existence. In 1878 Mr. Platt became secretary and general manager of the United States Express Company and in the following year was chosen president, and in this position he remained during the rest of his life. Although his business career was important, the main interests of his life were political. As early as 1858 he had been elected county clerk of Tioga, and there learned his first lesson in practical politics. He had considerable musical ability and organized a glee club for the Fremont campaign, which was accustomed to sing between the speeches at rallies of his party. Through this means he became known to all in the county who took an interest in public affairs. He also wrote campaign songs and verses, Mr. Platt was unable to serve in the Civil War on account of ill health, but he was an advocate of President Lincoln. He was also a strong admirer of William H. Seward, President Lincoln's chief rival for the nomination of the Chicago convention of 1860. The name of Mr. Seward was presented by Mr. Evarts on behalf of the New York delegation, and it was the appointment of Mr. Evarts to be Secretary of State by President Hayes in 1877 which began the famous struggle of Senators Conkling and Platt with

Hayes (see below). Mr. Platt's interest in politics continued and by 1870 he had become a considerable political power in New York City. In that year he was nominated without his knowledge or consent for representative to Congress. He declined the nomination on the ground that he had pledged his support to another and that he could not break those pledges. He was nominated again in 1872 and was elected. In 1874 he was renominated for Congress and was again elected. He declined another renomination in 1876. One of his last acts in the House was to make a speech which favored the bill for the Electoral Commission which seated President Hayes. Mr. Platt had by this time become one of the leaders in the politics of New York, and when Hayes took his seat as President, trouble at once arose between Senator Conkling of New York and the President. In this struggle, which is a part of the political history of the times, Mr. Platt steadily supported Senator Conkling. The latter had insisted to the President that Platt should be made Postmaster-General. President Hayes acted on the advice of James G. Blaine and James A. Garfield and refused to appoint Mr. Platt to this office, at the same time making William M. Evarts, who was the avowed enemy of Conkling, Secretary of State. Mr. Platt was made temporary and permanent chairman of the Republican State Convention in 1877. On taking the chair he made a bitter speech against President Hayes, which increased the feeling between the two parties. The Conkling-Platt faction continued in control of the State Republican machine and in 1879 Conkling was re-elected to the Senate. Immediately after President Garfield's election a movement was begun to make Mr. Platt United States Senator, and after one of the bitterest fights ever carried on in the State he was on January 18, 1881, elected to the Senate. Trouble at once began between the two Senators from New York and President Garfield. The latter declared that he did not intend to permit Conkling and Platt to dictate regarding Federal appointments from New York State, and he made several appointments which they could not approve. Later the President withdrew all nominations for Federal offices which were friendly to Platt and Conkling, and on May 16, 1881, they sent in their resignations to the New York State legislature, with the request that they be accepted immediately. A fight was at once begun to re-elect them, but they were both beaten. This so disrupted the Republican party in the State that another Republican governor was not elected until 1894. It was supposed that President Arthur would be more friendly with the former Senators as his relations with them had always been cordial. He refused, however, to recognize them as the Republican leaders of the State. Conkling retired from politics, but Platt continued the struggle. As a result of this dissension in the Republican party in the State, Cleveland was elected governor by 192,000 plurality in 1882. Platt then started out with the avowed intention of defeating Arthur's renomination. This resulted in the nomination of James G. Blaine. At the National Convention of 1888, Mr. Platt was one of the leaders of the delegates from New York State. After the nomination and election of President Harrison, he was a candidate for Secretary of the Treasury, but Harrison refused to appoint him to this office. By 1891 he had

so harmonized the Republican differences in the State as to be the acknowledged leader, and for years he remained the dominant power in Republican politics in New York. In 1897 he was returned to the United States Senate. His relations with President McKinley were, on the whole, friendly, and many of the appointments in New York State during these years were brought about by his influence. At the Republican National Convention at Philadelphia in 1900 he proposed Governor Roosevelt for the vice-presidency, and the latter was nominated and accepted the nomination. It was supposed that his intention in this matter was to eliminate Mr. Roosevelt from State politics. Mr. Platt remained in control of the State legislature until 1902, when, although his mental faculties were good, his bodily forces began to wane. Governor Odell in that year attempted to wrest the leadership from him and finally succeeded by having himself made chairman of the Republican State Committee. Platt continued to influence the legislature, however, and in 1903 was re-elected to the Senate. With his retirement from the Senate on March 4, 1909, Mr. Platt completed something over half a century of political activity. For nearly half this time he was the "boss" of the Republican party in New York State. Although Senator Platt was perhaps the most complete exponent of a type of politician of which much may be said that is not good, his personal integrity was never questioned. His last years of service in the Senate were not productive of important work. This was largely due to the fact that on account of physical disability he was incapable of taking a very active part in the proceedings of that body.

**POLAR RESEARCH.** ANTARCTIC. In February, 1910, Dr. Jean Charcot arrived in Magellan Strait, on his exploring vessel *Pourquoi Pas?* after successfully carrying out the Antarctic scientific programme arranged for his expedition by the French Academy of Sciences. His year's work supplemented the discoveries he made on his first expedition in the region of West Antarctica. He found new lands to the west and south of Alexander I. Land, relocated Peter I. Land and sailed between the 69th and 71st parallels to 126° W. long., far towards Edward VII. Land, discovered by Capt. Scott. Charcot has surveyed the coast of West Antarctica practically from Liège Island in 64° S. lat. to Charcot Land in 70° S. lat. He has found safe harbors at Wandel Island and at Petermann Island which may be used as bases for further explorations in this part of the Antarctic. His soundings, combined with those of de Gerlache of the Belgian expedition, point to the strong probability that King Edward VII. Land is a part of the coast of West Antarctica. It is

very likely that Captain Scott will be able to settle this question on his present expedition.

Captain R. Amundsen left Europe on the *Fram* in the summer, to round Cape Horn, go north to Bering Sea and enter the Arctic Ocean for his ice-drift of several years across the Polar area. It was announced, however, from Madeira, where he touched on his way south, that he had decided to take part in Antarctic exploration during the summer season in that region and, at the end of 1911, he would start north for San Francisco to carry out his Arctic plans. He did not state the nature of his plans for Antarctic work but as he has no dogs or other draft animals for land expeditions it is concluded that he probably intended to engage in marine explorations, perhaps in the waters adjoining West Antarctica which Dr. Charcot has been the last to visit.

The third British South Polar Expedition, under command of Capt. Robert F. Scott, sailed from Port Chalmers, New Zealand, on his vessel *Terra Nova*, on Nov. 20, 1910, for the Antarctic. He expected to establish winter quarters near his old station at the foot of Mt. Erebus and also at King Edward VII. Land, where he expects to land a small party. Before Capt. Scott left England an agreement was made between himself, Lieut. Wilhelm Filchner, in command of the second German South Polar Expedition, which is to start in the summer of 1911, and Dr. W. S. Bruce, who will head the second Scottish Expedition, to coöperate in their work and each to explore a certain territory. Scott will endeavor to penetrate from the Ross Sea to the South Pole and across the Antarctic land mass to Weddell Sea, while Filchner will advance in the opposite direction from Weddell Sea. If they meet, certain members of each party will join the other and they will then continue their explorations independently. It was agreed that the 20th meridian west of Greenwich shall be the boundary between the German and Scottish fields of work, the Germans working west, and the Scotch east of that line. Coats Land will be the land base of the Scottish Expedition, while the Germans will endeavor to find good camping ground a considerable distance to the west.

Sir Ernest Shackleton hopes to return to Antarctica in 1912, his plan being both to circumnavigate the land mass and also to penetrate it by one or more sledge expeditions. He plans to start from Cape Adare in South Victoria Land and go westward, aiming first to trace the coast that bears the name of Wilkes Land. It is highly desirable to complete the explorations that Wilkes began and the Antarctic offers no more important field for exploration.

From a study of all that is known of the distribution of atmospheric pressure over the Antarctic area, Prof. W. Meinardus has reached the tentative conclusions that the land area may have an extent of 8,680,000 square miles and that its mean height may be about 6500 feet. If these estimates are comparatively correct, Antarctica is one and a half times as large as Europe; and the mean height of Asia, the highest of the continent, is less than half that of Antarctica. Some scientific journals of Europe say that the values Dr. Meinardus gives for the size and the mean height of Antarctica may not be far from the truth.

**ARCTIC.** Captain Mikkelsen and a small

party in 1909 left Copenhagen in their ship *Alabama* to search for the papers and journals of the ill-fated Mylius Erichsen and his two comrades who lost their lives after completing the survey and mapping of the northeast coast of Greenland in 1907. In the fall of 1909, Mikkelsen with two companions reached Lambert Land, where they found the body of Brönlund, one of Erichsen's companions. No traces could be found of the bodies of Erichsen and Hagen. Mikkelsen's party spent the winter of 1909-10 on the coast and on March 3, 1910, Mikkelsen and Iversen started north with fifteen dogs and provisions for 105 days to explore Denmark Fjord in the hope of finding the lost records. The explorer planned, if conditions were favorable after completing his search, to travel round the northern coast of Greenland to Cape York and return home by whaler. Ten days after he left the winter camp, the *Alabama* was sunk in the ice and the party there were taken home in July, by a sealing vessel. Nothing has been heard from Mikkelsen, but ample supplies have been left for him and his comrades in case they return by the east coast.

In his third Arctic voyage on the *Belgica*, the Duke of Orleans made many soundings in the Greenland Sea, between Greenland and Spitzbergen, which so far supplemented his work of 1905 that we now have a good idea of the depths over a large part of this ocean area.

Captain Bernier, the Canadian Polar navigator, resumed his really remarkable work in Canadian Arctic waters, sailing from Quebec on the *S. S. Arctic*, in June, 1910, for a two years' cruise. From Chateau Bay on the Labrador coast he sailed for the northern shore of Baffin Island. He planned further to proceed to Beechy Island at the west end of Lancaster Sound, calling next at Dealy Island in Melville Sound, and then steaming to Winter Harbor on Melville Island at the entrance to McClure Strait, where he expects to spend the winter of 1910-11. In the summer of 1911, he hopes to complete the Northwest Passage to Hershel Island and finally reach Victoria, B. C., through Bering Sea.

It has been supposed for many generations that the Arctic land of Novaya Zemlya consisted of two islands, but a Russian expedition which returned from Novaya Zemlya some months ago brought the surprising information that a waterway from Cross Bay extends clear across to the Kara Sea and they have therefore shown that Novaya Zemlya consists of three instead of two islands.

One of the most interesting results of the recent explorations in Spitzbergen by Captain Dinnar Isachsen's Expedition, which returned to Christiania in September, was the discovery of a not long extinct volcano and hot springs in Bock Bay, a branch of Wood Bay in the northwestern part of the main island. The cone about 1650 feet high consists partly of lapilli and is of Quaternary Age and later than the general glaciation of the region.

**POLISH CANAL QUESTION.** See AUSTRIA-HUNGARY, *History*.

**POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF.** A learned society founded in 1889 for the purpose of promoting political and social science in the broad sense of the term. The society has a membership of

5360, of whom about 300 are residents of foreign countries. The academy issues a bi-monthly publication called *The Annals*, of which Professor Emory R. Johnson of the University of Pennsylvania is editor-in-chief. During 1910 numbers of *The Annals* were issued dealing with the following subjects: January, "The New South"; March, "Public Recreation Facilities"; July, "Administration of Justice in the United States"; September, "The Settlement of Labor Disputes"; November, "Banking Problems." There were also issued two supplementary reports, one in September dealing with the work of the National Consumers' League, and the other in December, entitled "The Need for Currency Reform." The Academy holds annual meetings each year, while several monthly meetings are also held. The 14th annual meeting was held in Philadelphia April 8-10, 1910. The subject selected for discussion was "The Administration of Justice in the United States." The sessions were largely attended. At the first session on Friday afternoon, April 8, Hon. John P. Elkin, Justice of the Supreme Court of Pennsylvania made an address on "General Problems Connected with the Administration of Justice." The presiding officer of the session held on Friday afternoon was Hon. James B. Dill, Justice of the Court of Errors and Appeals of New Jersey. Subsequent sessions were presided over by Hon. Charles P. Neil, United States Commissioner of Labor; Hon. Edward S. Stuart, Governor of Pennsylvania; and Hon. James S. Sherman, Vice-President of the United States. Among the speakers at the meeting other than those mentioned were Arthur von Briesen, President of the Legal Aid Society, New York City, Señor Francisco Leon de la Barra, Mexican Ambassador to the United States; Professor George W. Kirchwey of Columbia University, and others. Important papers were read dealing with the following subjects: "Administration of Criminal Law, Third Degree System," by General Theodore A. Bingham, former Police Commissioner of New York City; "Treatment of the Accused," by Major Richard Sylvester; "Treatment of the Offender," by Homer Folks, Secretary of the New York State Charities Aid Association and President of the New York State Probation Commission; "Probation Work for Women," by Maude E. Miner, Secretary of the New York Probation Association; "Reformation of Women," by Katherine Bement Davis, Superintendent of the New York Reformatory for Women; "Fallacies in the Treatment of Offenders," by F. H. Nibecker; "The Juvenile Court, Its Legal Aspect," by Bernard Flexner of Louisville, Kentucky; "Distinctive Features of the Juvenile Court," by Hastings H. Hart, Director of the Department of Child Helping, Russell Sage Foundation, New York; "Functions of the Juvenile Court," by Hon. William H. DeLacy, Judge of the Juvenile Court of the District of Columbia; "Responsibility of Parenthood," by Hon. Robert J. Wilkin, Justice of the Children's Court, Brooklyn, N. Y.; "Juvenile Courts and Probation in Philadelphia," by Hon. William H. Staake, Judge of the Court of Common Pleas, Philadelphia; "Private Hearings, Their Advantages and Disadvantages," by Hon. Harvey H. Baker, Justice of the Juvenile Court, Boston, Mass.; "Use and Abuse of Injunctions in Trade Disputes"; "Remedies for the Administration of Criminal Law," by Samuel Unter-

meyer, Esq., of New York City; "To What Extent are Insane Persons Amenable to Criminal Law?" by John Brooks Leavitt, Esq., New York City; "The Administration of Criminal Law in the Inferior Courts," by Hon. Julius M. Mayer, Former Justice of the Court of Special Sessions, New York City; "The Jury System: Defects and Proposed Remedies," by Arthur C. Train, Esq., New York City; "Reform in Criminal Procedure," by Hon. Everett P. Wheeler, New York City; "Respect for Law in the United States," by Hon. James S. Sherman, Vice-President of the United States, Hon. Frederick C. Stevens, Member of Congress from Minnesota, and Professor George W. Kirchwey, Dean of the School of Law, Columbia University. At the session of the Academy held on December 8, 1910, the need for currency reform was discussed. Addresses were made by Hon. Nelson W. Aldrich, United States Senator from Rhode Island, Hon. Theodore E. Burton, United States Senator from Ohio, Hon. Piatt Andrew, Assistant Secretary of the Treasury, and Hon. George E. Roberts, Director of the United States Mint. The officers of the Academy in 1910 were: President, L. S. Roe, Ph. D., University of Pennsylvania; and Secretary, Carl Kelsey, Ph. D., University of Pennsylvania.

**POLITICAL ECONOMY.** Besides the present article there are a considerable number giving an account of the economic progress of the year in different lines. Under the article **LABOR** will be found references to fourteen special articles on as many aspects of the labor movement and labor problems. Under **FINANCIAL REVIEW** will be found an account of the general economic and industrial conditions of the year; a statement of *Failures*; of *Bank Clearings*; of *Buildings*; of *Stocks and Bonds*, and other items. Special articles are devoted to **PRICES**; **SHIPPING SUBSIDIES**; **TRUSTS**; and the **TARIFF**. Besides a general article on **BANKS AND BANKING**, there are special articles on the different kinds of banking institutions. Under **TAXATION** will be found a discussion of the *Federal Corporation Tax*; the *Income Tax Amendment*; the *Inheritance Tax*; and the principal new laws of the year. Under **INSURANCE** is a treatment of *Life*, *Fire*, and *Fraternal* insurance. The class of subjects now frequently grouped under the term **Social Economics** will be found under their respective titles, such as **POPULATION**, **CONGESTION OF**; **JUVENILE COURTS**; **PENOLOGY**; **PROSTITUTION**, (which includes the *White Slave Traffic*); **OLD AGE PENSIONS**, etc.

**ECONOMIC ASSOCIATION.** The 26th annual meeting of the American Economic Association was held at St. Louis late in December. The total membership reported was 1700, an increase of more than 700 in two years. The programme of the session included an address by the President, Edmund J. James, on the "Economic Significance of a Comprehensive System of National Education." A special session was devoted to the problems of "Money and Prices," at which Professor Laughlin of the University of Chicago contended that the increase in the gold supply is a relatively unimportant factor in the rise of prices, while Professor Fisher of Yale contended that it is the principal factor. Both conclusions were based on elaborate statistical data. The centenary of David Ricardo was observed by a special session devoted to the discussion of his theories. Evidence of the growing interest of economists in the subject of "Business Ac-

counting" was shown in a special session on that subject. "Canals and Railways," "Population and Immigration," "Industrial Accidents and Industrial Diseases," "Taxation," and "Socialism" were other topics of special attention. The discussion of immigration brought out clearly the fact that the bad distribution of wealth is due in large part to the unequal distribution of men in the different ranks of society; the unskilled group in America is made enormously large both by immigration and higher birth rate of the poorer classes. The relation of races on the Pacific coast was discussed from the sociological view-point, the solution resting primarily on the question whether two physically different races can peacefully occupy the same territory on a basis of equality. One of the papers on taxation favored a State income tax; and another developed the proposition that the proportion of unearned increment not only in land values but in many forms of wealth is much greater than commonly supposed. The following officers were chosen for 1911: President, Henry W. Farnham of Yale; vice-presidents, F. N. Judson of St. Louis, Joseph French Johnson of New York, and B. H. Meyer of Washington, D. C.; secretary-treasurer, T. N. Carver of Harvard.

**DEATHS.** The deaths of several economists of international repute occurred during the year. Sir Robert Giffen, the English statistician and economist, was born in 1837; served as an editor on the *Economist*; and spent his best years as a government statistician. Nicholas G. Pierson, the distinguished Dutch economist, born in 1839, was at different times professor in the University of Amsterdam, president of the Bank of Netherlands, Minister of Finance, and Prime Minister of Holland. M. Léon Walras, born in 1834, one of the independent discoverers of the marginal utility principle, was after 1870, professor of political economy in the University of Lausanne. William G. Sumner, born in 1840, was for 37 years a professor in political and social science at Yale University. He achieved fame as a teacher, an economist and a sociologist.

#### BIBLIOGRAPHY

Following is a classified bibliography of some of the more important books of the year. For more extended lists see *The Economic Bulletin*, or *The Annual Library Index*.

**GENERAL WORKS.** Conrad, Elster, Lexis, and Loening, *Handwörterbuch der Staatswissenschaften*, vols. 2, 3, and 4 (3d ed. completely rev'd); further volumes of the *Documentary History of American Industrial Society* in ten volumes, edited by John R. Commons and others; *Bibliography of Social Science. The Monthly Journal of the International Institute of Social Bibliography*—being a complete international bibliography of books, periodical literature, government reports and public documents in every field of social science: Böhm-Bawerk (E. v.), *Kapital und Kapitalzins. P. iii, Positive Theorie des Kapitals* (3d ed., containing a revision of the first two books of the positive theory of capital, 1909); Grunzel (G.), *Grundriss der Wirtschafts-politik* (in 5 vols.), vol. iii: *Industriepolitik*; Philippovitch (E. v.) *Die Entwicklung der wirtschaftspolitischen Ideen im 19. Jahrhundert*; Smith (Adam), *The Wealth of Nations*, with introduction by Prof. E. R. A. Seligman (in 2 vols. of Everyman's Library); Leroy-Beaulieu (P.), *Traité théorique et pratique d'économie politique* (5th ed.—4 vols.).

**LABOR.** Abbot, *Women in Industry: a study in American economic history*; Andrews (I. R.), *Review of Labor Legislation*, 1910, one of a number of important publications of the American Association for Labor Legislation; McClean (A. M.), *Wage-earning women*; National Society for the Promotion of Industrial Education has issued a number of reports and studies bearing on the general subject of vocational training and on the education of workers in special trades; Rountree (B. S.), *Land and labor: lessons from Belgium*; *Social condition of labor in Germany*, being a report of a tour by British workmen published by The Tariff Reform League; Wood (G. H.), *The history of wages in the cotton trade during the past one hundred years*; *Reports of the National Immigration Commission*, have a great deal of matter bearing on labor conditions in the United States; Crosby (O. T.), *Strikes—when to strike, how to strike*. A books of suggestions for buyers and sellers of labor; Dawson (W. H.), *The German workman; a study in national efficiency*; Eliot (C. W.), *The future of trades-unionism and capitalism in a democracy*; Gompers (S.), *Labor in Europe and America*.

**MONEY AND BANKING.** Here should be mentioned the entire list of *Publications* of the National Monetary Commission, enumerated under the article on the Commission and constituting a rather complete library on these subjects; *Guarantee of Deposits*, being a report of the Wisconsin legislative committee on additional security for depositors in State banks; Disbrow (C. W.), *An analysis of the banking and currency system of the United States, indicating the cause of periodic panics and suggesting a remedy*; Ireton (R. E.), *A central bank*; Crane (W. H.), *A scientific currency*; Raffard (J. C.), *Le mouvement de concentration dans les banques de dépôt en Angleterre*; Ranking (D. F.), *Bills of exchange* (4th ed., rev. and enl.); Wolff (W. W.), *People's banks; A record of social and economic success*; Brace (H. H.), *Gold production and future prices*; Davis (J. F.), *Bank organization, management and accounts*.

**TAXATION AND PUBLIC FINANCE.** Dawson (W. H.), *The unearned increment* (3d ed.); Good (T.), *The real case for tariff reform. With facts for workmen by a workman*; Ashley (W. J.), *The tariff problem*; Jackson (C.), *Fiscal fallacies; a comparison (of Great Britain) with Germany*; Wateson (J. R.), *The case for tariff reform*—this and the preceding three are four of many books relating to the British fiscal problem; International Tax Association, *State and local taxation*, a report of the 3d international conference, Louisville, September, 1909; Howe (F. C.), *Privilege and Democracy in America*, a study of the single tax as a remedy for monopoly and exploitation; Seligman (E. R. A.), *The shifting and incidence of taxation* (3d ed., rev. and enl.); Taussig (F. W.), *The tariff history of the United States* (5th ed., including a study of the Payne-Aldrich Act of 1909); Wright (C. W.), *Wool-growing and the tariff. A study in the economic history of the United States*; Chomley (C. H.), *Protection in Canada and Australia*; United States Commissioner of Corporations, *Taxation of corporations*, parts I and II covering the New England and Middle Atlantic States; Meredith (H. O.), *Protection in Germany: a history of German fiscal policy during the 19th Century*. This list is by no means inclusive.

**TRADE AND TRANSPORTATION.** Dixon (F. H.), *A traffic history of the Mississippi River system* (1909); Haney (L. H.), *A congressional history of railroads in the United States*; Johnson (E. R.) and Huebner (G. G.), *Railway rates and traffic*; Lustig (H.), *Études sur les chemins de fer de l'Amérique du Nord*, a manual for bankers and investors; Paxton (F. L.), *The Pacific railroads and the disappearance of the frontier in America*; McPherson (L. G.), *Transportation in Europe*; Morris (R.), *Railroad administration*; *Preliminary Report of the United States National Waterways Commission*; Walker (A. H.), *History of the Sherman Law of the United States of America*; Bureau of the Census, *Special report on street and electric railways 1907*; Clark (J. M.), *Standards of reasonableness in local freight discriminations*.

**POLITICAL SCIENCE ASSOCIATION, AMERICAN.** A learned society founded in 1903 for the study of the subjects implied in its title. It has grown rapidly since its organization and had a membership in 1910 of approximately 1350. The Association holds annual meetings and the meeting of 1910 was held December 22-30 at St. Louis. The president of the Association, Woodrow Wilson, at that time governor-elect of New Jersey, made a notable address entitled "The Law and the Fact." In this he emphasized the peculiar province of political science. The address was a valuable one, both for its high literary quality and its elevated moral tone. The topics to which the various sessions of the meetings were devoted were the following: "Recent Constitutional Developments in Europe"; "Municipal Government"; "Judicial Organization and Procedure"; "Primary Elections," and "International Law." The first of these subjects was discussed in an exceptionally interesting series of papers dealing respectively with pending or recent constitutional changes in England, Germany, Russia, and Turkey. Among those who participated were: Professor T. F. Moran, Professor W. A. Shepard, I. A. Hourwich, and Professor A. H. Sybber. In the session devoted to city government, recent tendencies in municipal charters were summarized by Dr. H. E. Flack. The session devoted to primary elections was especially interesting as it afforded an opportunity for reports on the practical working of the direct primaries in Illinois, Missouri, Iowa, and other States. In the discussion relating to judicial organization procedure the defects of the present conditions of administering justice in this country were pointed out and remedies for these conditions were suggested. A portion of one session was devoted to the discussion of topics within the field of international law and diplomacy. The Association publishes the *American Political Science Review* and an annual volume of *Proceedings*. The following officers were elected for 1911: President, Simeon E. Baldwin; first vice-president, Albert Bushnell Hart; second vice-president, Emlyn McClain; third vice-president, Ernest Freund; secretary and treasurer, W. W. Willoughby.

**POLO.** The game of polo enjoyed a season of great popularity in 1910, a condition largely brought about by the visit to the United States of the Hurlingham and Ranelagh clubs of England. The Hurlingham players won all of the important matches, their most notable victories being the two over the Burlingame club which gave the visitors possession of the American

Polo Cup and the Spreckel's Cup. The Ranelagh team played more matches than Hurlingham and suffered several defeats. In most instances, however, the reverses were due to the handicaps the English players gave the Americans. A summary of the principal international contests follows: Hurlingham defeated Burlingame for the California championship and Spreckel's Cup by a score of 8 to 4 and for the American Polo Cup by a score of 9 to 1 and also came out victorious in a game with the Meadow Brook Club, the score being 5½ to 4. Ranelagh defeated the New Haven Country Club 2d in a handicap match by 18 to 16½; Point Judith by 8 to 1; Perroquet Club in the final for the national championship by 7½ to 3½; a picked team composed of W. Baiding, J. M. Waterbury, Jr., L. E. Stoddart, and D. Milburn by 12 to 6½ and 6 to 5, and Rockaway Club by 10 to 8. Ranelagh lost to the Freebooters, a picked team, in a handicap match by 4 to 6½; to Point Judith by 8 to 11; to Meadow Brook Club in the finals for the Point Judith Cup by 4½ to 10½; and by 7½ to 9½; and to Bryn Mawr in a handicap match by 12½ to 14½.

The national senior championship of the United States was won by the Meadow Brook Club which defeated Bryn Mawr in the deciding match by 13½ to 3 and the national junior championship by the Myopia Club 2d, which defeated Bryn Mawr 2d. In other important matches between American teams Meadow Brook defeated Rockaway by 15 to 3½; Bryn Mawr defeated New Haven by 8 to 6½; New Haven defeated Perroquet Club by 6½ to 3½; The Wanderers defeated Point Judith by 8 to 7½, and Gladstone defeated New Haven 2d by 13½ to 12½.

**POMPEII.** See ARCHÆOLOGY.

**POOLE, REGINALD LANE.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**POOR, CARE OF THE.** See CHARITY.

**POPULATION.** See PARAGRAPHS on the subject in articles on countries and on States of the United States; also UNITED STATES CENSUS.

**POPULATION, CONGESTION OF.** The Ninth International Housing Congress met at Vienna, Austria, May 30 to June 4, with 1400 delegates, representing governments and societies. Conferences were held on municipal ownership of land and of dwellings, municipal loans for private building, tenements versus single houses, and how to build cheaply. The experience of German cities in buying land and building houses for rent was told in detail. The congress was agreed that cities should lend money to private builders at low interest. The single cottage plan, after the models of the English garden cities, was considered the ideal solution of the problem of housing workingmen's families. An exhibit was held in connection with the congress.

The Second National Conference on City Planning and Congestion was held at Rochester, New York, in May. Repeated distinction was made between room congestion, which may occur anywhere and is not uncommon even in villages, and site congestion which is peculiar to the larger cities. This latter is due largely to the desire of people to be near their work. Forty-five minutes was thought to be the limit for transit to and from work. Congested areas

have their own attractions in the way of variety and amusement, and competition reduces prices of commodities. The gregarious instinct, especially the desire of aliens to be near their own countrymen, is an important cause. Once so settled, ignorance of better conditions elsewhere and inertia result in their staying. The necessity and means of developed transit facilities; the advantages of a scientific city plan; the results of city planning in various American cities, notably Hartford, Conn., and Denver, Col., and in England and Germany; and the effect of taxing land values only, buildings being exempted, as an incentive to putting highest possible improvements on land, were discussed. The Conference adopted as its future title, the American Conference on City Planning. Its membership fee is five dollars. Its sessions are to be held in various cities, and its proceedings published in full.

**NEW YORK.** The subject was discussed at the first annual meeting of the New York City Conference of Charities and Corrections in May. Prof. Frank J. Goodnow, chairman of the committee on congestion, stated his belief that no significant improvement in living conditions in the city would be possible until congestion is relieved. He gave as the causes of congestion, a bad system of transportation; lack of a city plan; high rents that make the taking of boarders necessary; and a system of taxation conducive to over-crowding. The cure was to be found in better transportation, building restrictions in the suburbs so as to insure light and air, better distribution of immigrants, and tax reforms. Dr. J. S. Billings of the Health Department presented statistics showing a direct correlation between the death rate and the density of population. A similar correlation exists with sickness and ill-health, which reduce economic efficiency and standards of living.

As a result of the agitation by the Committee on Congestion of Population in New York, a resolution was passed by the Board of Aldermen in April asking the Mayor to appoint an unpaid City Commissioner on Congestion of Population. This was done. This Commission was to follow up the work of the Committee and to report by March, 1911, a comprehensive plan for the relief. The Commission organized fourteen sub-committees dealing with the following phases of the subject: parks, playgrounds, schools and recreation centres, streets and highways, transit, docks and ferries, housing conditions, regulation of buildings, and location of new settlements, factories, taxation, legislation, public health, immigration, administration of laws and municipal ordinances, labor and wages, charities, public squares and buildings, crime and delinquency. Numerous hearings were held. Experts before the taxation committee recounted the results accomplished in Northwest Canada and in Germany by lower rates upon improvements than upon the land itself or by taxing at high rates the unearned increment in land values. The Committee on labor and wages was making an intensive study of the earnings of different classes in different parts of the city; the proportion spent for rent; and the relation of low wages to poverty. It presented plans for an authoritative arbitration and conciliation board for the city and for a municipal labor bureau to coordinate and supplement the 900 licensed employment bureaus in the city. The committee on parks etc., found

that certain parcels of land owned by the city had increased many fold in value since purchase; its study of foreign experience showed that some German cities own from one-tenth to one-half the land upon which they rest and their income from this source is sufficient to make taxes unnecessary. Dr. Albert Snedekum, a member of the German Reichstag, stated that German cities solve the housing problem in part by cheap commutation rates for workmen on the railways, which are there owned by the cities. Thus workmen living 20 miles from Berlin travel back and forth for 40 cents per week. He discussed the success of the cooperative building associations, which have multiplied in Germany and England. They buy a tract of land which is thereafter owned in common. In Germany they get the use of funds derived from the compulsory workmen's insurance for building cottages. The committee on charities found hundreds of philanthropic and charitable societies and institutions; it estimated that there were about 135,000 sick people in the city all the time; and that about 500,000 were given relief of some kind each year, at a total expense of \$35,000,000. The factories committee took up a study of model villages and the development of factory sites, shipping and terminal facilities in Hamburg and elsewhere.

Plans were developed by the Russell Sage Foundation for the creation of a model village on Long Island at a cost of \$2,750,000.

The National Housing Association was formed in New York City in February with Robert W. De Forest, John M. Glenn and Lawrence Veiler as executive officers. It will study the causes of congestion; develop opinion favorable to good legislation, and seek to improve housing conditions by every possible means. Its board of directors includes many leading social workers from the entire country.

Almost the last official act of Governor Hughes was to appoint an unpaid commission of twelve members to study methods of distributing population in New York State.

**BOSTON.** The Housing Committee of Boston after a six months' investigation reported that "this fact of congestion stands on the threshold of the better housing problem, and until it is dealt with no important progress can be made." It correlated a steady rise in land values in the North and West Ends with an increasing congestion, accompanied by an increase in the manufacturing carried on there. It reported that some manufacturers had admitted that it is cheaper to "burn men and women than coal." The committee stated its belief that manufacturing is not only attracted to a section by the presence of abundant labor, but also, by raising rents, forces laborers to over-crowd their dwellings. In the tenement sections of the sixth and eight wards, where 44,000 people live, 16 per cent. of the rooms were dark; almost one-half of these people had less than 400 cubic feet of air space per occupant in their bed-rooms. Though streets are narrow, over 80 per cent. of the land is covered by buildings. Water and toilet facilities were below proper standards of health and decency. In four blocks studied intensively, 22 per cent. 32 per cent., 45 per cent. and 54 per cent. respectively of the families kept boarders. The report points out that in order to bring about better conditions in Boston a policy extending to all parts of the metropolitan area must be

developed; for little good would be accomplished by relieving congestion in Boston by increasing it in surrounding towns. Mr. Estabrook of the committee recommended workmen's trains; location of factories in suburbs; tax reforms, and coöperative tenant societies. The Massachusetts Civic League organized two committees, one to secure an enforcement of laws in Boston relating to health and housing, and the other to develop opinion favorable to a constructive housing policy throughout the State.

**POBK.** See MEAT AND MEAT INSPECTION.

**PORT ARTHUR.** See KWANTUNG.

**PORTER, CHARLES TALBOT.** An American mechanical engineer, died August 28, 1910. He was born at Auburn, N. Y., in 1826 and graduated from Hamilton College in 1845. For several years he practiced law and then engaged in engineering, forming a partnership with John Allen to control the Porter-Allen engine. This firm was the first to use with success high rotative speed in stationary engines. He was the inventor of a central counterpoise governor for steam engines (1859) and of an isochronous centrifugal governor for marine engines (1861). He published *Mechanics and Faith, Spiritual Truths in Nature* (1885).

**PORTER, WILLIAM SYDNEY.** An American short story writer, better known under his pen name, "O. Henry," died June 5, 1910. He was born in Greensboro, N. C., in 1867 and received an academic education in Texas. He spent some time on a cattle ranch in that State and then secured a position as reporter on the *Houston Post*. While still engaged on this paper he purchased the famous local paper known as *Brann's Iconoclast* and made of it a ten-page weekly story paper, writing most of the stories himself. He soon renamed this paper the *Rolling Stone*, but did not continue it long. He then visited Central America where he obtained material for some of his most amusing stories. After an unsuccessful attempt to raise bananas he returned to Texas and for a few weeks was employed in a drug store. He then removed to New Orleans and began literary work in earnest. His stories were sent all over the country but few of them were accepted until 1901, when he went to New York. His work soon became well known and he was in a few years probably the most popular writer of short stories in the country. His stories were marked by a remarkable freshness of style and by keen penetration and considerable originality. His short stories were collected under the following titles: *Cabbages and Kings* (1905), *The Four Million* (1906), *The Trimmed Lamp* (1907), *The Heart of the West* (1907), *The Gentle Gaffer* (1908), *The Voice of the City* (1908), *Options* (1909), *Roads of Destiny* (1909) and *Whirligigs* (1910). See LITERATURE, ENGLISH AND AMERICAN, Fiction.

**PORT OF LONDON ACT.** See GREAT BRITAIN, History.

**PORTO RICO.** A territorial possession of the United States, ceded by Spain as a result of the Spanish-American War by the treaty of December 11, 1898. It is the easternmost of the four Great Antilles.

**POPULATION.** According to the Thirteenth Census, the population of Porto Rico in 1910 was 1,118,012 as compared with 953,233 in 1900.

**AGRICULTURE.** The local industries of the islands are almost entirely confined to the preparation of agricultural products for the market,

and under ordinary conditions the activity of local industries increases or decreases in proportion to changes in the quantity of agricultural products. An exception to this rule, however, occurred during 1910 with respect to fruit canning. Prices offered for fresh fruits, especially pineapples, in the United States was so high at times as to warrant shipment instead of the sale as usual of undersized fruit to canning factories. There was a material increase in the amount of distilled spirits, cigars and cigarettes manufactured. Increased industrial activity in all directions was further represented by the registration of 14 domestic and foreign corporations for sugar making, 18 for the purpose of raising, canning and packing fruit and 22 to engage in coffee and cattle raising, shipping and transportation, and numerous other enterprises.

Porto Rico being an agricultural country, a comparatively small proportion of its principal products are used in local consumption, hence the shipments of its principal crops furnish a fairly accurate index of agricultural conditions. These shipments showed a marked increase during 1910 in the exportation of each product and indicate that, with the exception of tobacco leaf, oranges and canned pineapple, the quantities exported in 1910 exceeded those shipped during any previous year. The shipments of sugar during 1910 aggregated 284,522 tons valued at \$23,545,922, representing over 60 per cent. of the valuation of all products exported. This may be compared with the exportation of 68,909 tons in 1901.

The exports of cigars and cigarettes has shown a marked increase during recent years. In 1910 151,724,438 cigars were exported as compared with 140,302,271 in 1909. During the same period 13,142,000 cigarettes were exported as compared with 11,244,500 in 1909. A considerable quantity of tobacco leaf was also exported.

Although the coffee industry has not yet reached the stage of development that it should and can by scientific methods profitably attain, the exportation during 1910 exceeded that of any previous year in quantity and aggregate value. It amounted to 45,209,792 pounds valued at \$5,899,602, as compared with an export of 28,489,236 in 1909 valued at \$3,715,744.

The fruit industry has grown to marked commercial importance since 1907. The aggregate value of the fruit shipments during 1910 was \$1,635,617, of which \$582,716 represents oranges and \$505,044 fresh pineapples. A considerable quantity of cocoanuts was also shipped and the growing of grapefruit began to be important.

**COMMERCE.** The total exports of Porto Rico during the fiscal year 1910 amounted to \$37,960,471 of which \$32,095,897 represents the value of exports to the United States and \$5,864,574 to foreign countries. The corresponding figures for 1909 were \$30,391,325 the value of exports; \$26,394,312 to the United States, and \$3,996,913 to foreign countries. The imports for the fiscal year 1910 amounted to \$30,634,855. Of this amount, \$27,097,654 represents imports from the United States. The purchases made from Porto Rico were greater than from any other non-contiguous American territory. The total volume of trade for the fiscal year 1910 amounted to \$68,595,326 as compared with \$56,935,551 in 1909. For the calendar year ending December 30, 1910, the imports from the United States amounted to \$31,389,794, while the ex-

ports amounted to \$35,706,029. The imports from foreign countries in the calendar year amounted to \$3,826,393 and the exports to \$6,147,000. The value of the sugar exported to the United States in the calendar year 1910 was \$26,876,709; tobacco, \$4,840,945; fruits and nuts, \$1,183,232.

**TRANSPORTATION AND SHIPPING.** Improvements in the roads and communication on the Island were continued during 1910. The legislature of 1909 appropriated \$595,000 for the construction of roads. This law also created a commission to be known as the Road Commission to determine what roads should be constructed under this appropriation. During the year over \$71,000 was spent on the municipal roads of the Island. During the fiscal year there were 526 vessels entered in the port of San Juan with a total tonnage of 1,275,376 tons. 263 of these were American steamers with a gross tonnage of 765,879 tons; 84 were American sailing vessels; 125 were foreign steamers, and 54 were foreign sailing vessels. There was urgent necessity for better facilities for loading vessels in this harbor.

**EDUCATION.** The number of pupils enrolled in all the schools of the Island, including special schools, was in 1910, 121,453. Of these 90,917 were white and 30,536 were colored. The average daily attendance was 84,258 and the number of teachers employed was 1743, of whom 1548 are white and 195 colored. The year was a prosperous one so far as educational advance was concerned, and although less money this year was available for educational purposes, 15 per cent. more pupils were enrolled in the schools. The total expenditures for school purposes in the fiscal year 1909-10 was \$825,339 by the insular government and \$419,161 by the local government. The island is divided for purposes of administration and supervision into 43 districts; these districts are divided into three classes, first, municipalities having more than 100 schools; second, municipalities having between 50 and 100 schools; third, municipalities having less than 50 schools. During 1910 there were two first-class, three second-class and 38 third-class districts. The rural schools of the Island are by far the most numerous, and with few exceptions are located in country districts. During 1910 36 one-room and one two-room buildings were constructed in the country. The schools in the 66 towns and cities of the Island are carefully graded and compare very favorably with the better school systems of the United States. A new course of study for graded schools was put into effect throughout the Island during 1910. This requires a separate textbook in English for pupils from the first grade up. There are maintained in nineteen different parts of the Island partial or complete high school courses. Eighteen of these are known as "continuation schools" and offer only the first or first and second years of the high school course. On March 1, 1910, there were enrolled 456 pupils in the high schools of San Juan, Ponce and Mayaguez, in which cities are maintained first-class high schools. Night schools were maintained during the year in 65 of the 66 municipalities of the Island. The total enrollment in these schools was 8624. A notable feature of the school system are the school savings banks, which have been established in 31 towns in the island. At the end of the year 1909-10 deposits in these banks amounted to

\$8883. School libraries have been placed in nearly all the important schools of the Island.

The University of Porto Rico, established by an act of the Insular legislature on March 12, 1903, includes the department of natural sciences and engineering, a department of liberal arts, department of medicine, department of laws, department of pharmacy, department of architecture and the university hospital. The university as at present organized consists of three departments or colleges, each with its dean and corps of instructors, but all under the supervision of the chancellor of the university. These colleges are the normal department, college of agriculture and college of liberal arts. The latter was inaugurated at the beginning of the school year September 26, 1910.

**HEALTH AND SANITATION.** The number of deaths per thousand during 1910 was 22.10, which was lower than that of any year since the last two decades, excepting 1908-9. The seven principal causes of death were tuberculosis, diseases of infants, bronchial diseases, malaria, intestinal diseases, anæmia and old age. The total number of births during the year was 37,443 and of deaths, 27,451. In connection with the work of safe-guarding the food supply of the people the health authorities inspected 84,250 animals to be slaughtered for consumption. The work of combating tuberculosis was continued during the year. An Anti-Tuberculosis League has been organized which raises funds for the prosecution of the work.

Anæmia or hookworm disease (q. v.) is known to have resulted in 1339 deaths in Porto Rico during 1910. The presence of this disease was first discovered in Porto Rico in 1900. Dispensaries are maintained throughout the Island at which 49,407 patients were treated during the year with the result of 19,423 complete cures and the improvement of 6966 cases. A conservative estimate places the number of those afflicted at not less than 300,000.

**CHARITIES AND CORRECTIONS.** By an executive order of March 23, 1910, a board of visitors was appointed to inspect charitable and correctional institutions with a view to reporting upon and making recommendations, if necessary, as to improvements in their management, control or condition. In the insane asylum of the Island there were in 1910 338 inmates; at the blind asylum at Ponce 163 patients were admitted during the year; and in the Leper Colony maintained on Cabras Island there were 25 patients.

The Island has no suitable buildings for its penal institutions. With one exception its district jails, as well as its penitentiary, are maintained in inadequate buildings, originally constructed for other purposes. The building occupied by the penitentiary, in which at the end of the year 1910 there were 594 convicts, is wholly unsuited for such use. A number of convicts are profitably employed upon the insular road system. A reform school for boys was completed and occupied during the fiscal year.

**FINANCE.** The total assessed value of all property of the Island at the end of the fiscal year 1910 was \$121,806,149 as compared with a total valuation of \$117,616,625 in 1908. Personal property was assessed at \$23,536,414 and real property at \$98,329,736. The total resources at the end of 1910 were \$16,694,881. The total income for the fiscal year amounted to

\$3,737,893 and the balance at the end of the fiscal year amounted to \$711,022.

#### POLITICS AND GOVERNMENT

Governor Colton in his annual message for the fiscal year ending June 30, 1910, points out the salutary effect of the Act of Congress, approved July 15, 1909, and the executive order which followed it upon the same day, placing matters pertaining to the government of Porto Rico in the jurisdiction of one department of the United States. Following a visit of the Secretary of War and Chief of the Bureau of Insular Affairs in December, 1909, a bill was introduced into the 61st Congress which contained recommendations for a new form of government for Porto Rico. This measure after exhaustive hearings and various amendments passed the House of Representatives June 15, 1910. This measure grants collective American citizenship to the people of Porto Rico; a partially but progressively elective senate; subdivides the territory into representative and senatorial districts; bases the right of suffrage upon educational or contributory grounds; extends the appointive judiciary system; establishes a coordinate and cohesive form of insular government in which the legislative and executive functions are to be separated; and an effective health service throughout the Island.

**LEGISLATURE.** The fifth legislative assembly of the Island convened in its second session on January 10, 1910. The most important matter requiring attention was the appropriation of funds to meet the expenses of government during the ensuing fiscal year.

Governor Colton in his annual message to the legislature recommended the reduction of the budget by \$300,000, the publication of an official gazette, the extension of the public school system, better care of prisoners in jails and insane persons in the asylums and the establishment of a leper colony. In the Assembly the leaders of the Unionist party again introduced six bills which in 1909 caused a deadlock and led to the passage by Congress of a bill providing for the annual appropriations. The House of Delegates passed on January 29 the budget for the expenses of the government. This was contrary to the custom of the dominant party, which heretofore had delayed action on the budget, and a refusal of such action brought about the enactment of the Olmsted law by Congress in 1909, which provided that the same budget as in the previous year should be in force if the legislature refused to pass one for the current year.

In August the governor called a special session of the legislature to correct defects in the act which ceded land on the water front to San Juan. A hotel will be erected by a New York company at a cost of \$1,000,000. Governor Colton is one of the directors. The company will also erect and maintain in various parts of the Island several small hotels situated upon roads used by automobile parties and other tourists.

**ELECTIONS.** At the elections held in November the Unionists won every seat, but the Republicans were successful in several cities. Señor Luis Munoz Rivera was elected resident commissioner at Washington to succeed Senor Tullio Larrinaga.

**OFFICERS.** Governor, G. R. Colton; Acting Secretary, M. Drew Carrel; Treasurer, S. D. Gromer; Auditor, —; Attorney-General, F.

V. Brown; Commissioner of Education, E. G. Dexter; Commission of the Interior, John A. Wilson; Resident Commissioner of Territory at Washington, Luis Munoz Rivera.

**JUDICIARY.** Chief Justice, José C. Hernandez; Justices, Emilio del Toro, James H. McLeary, Adolph G. Wolf and one vacancy; United States District Judge, John J. Jenkins; United States District Attorney, José R. F. Savage.

The **INSULAR LEGISLATURE** consists of an upper and lower house. The lower house is the elective branch and has 35 members, five from each of seven districts. All belong to the Unionist party. The legislature sits for sixty days each year, the sessions beginning on the second Monday in January.

**PORTUGAL.** Since Oct. 5, 1910, a republic (formerly a constitutional monarchy) on the western coast of the Iberian peninsula. Capital, Lisbon.

**AREA, POPULATION, ETC.** Total area, 35,582 sq. miles (including the Azores, 922, and the Madeira Islands, 314). Population (1900), 5,423,132. Marriages (1907), 35,357; births, 176,417; deaths, 113,254; emigrants, 41,950 (1908, 40,056). Emigration is chiefly to Brazil and the United States. Lisbon had (1900) 356,009 inhabitants; Oporto, 167,995; Braga, 24,202; Setubal, 22,074.

**EDUCATION.** Primary instruction is free and nominally compulsory, but the law is not enforced, and few of the children of the poor are sent to school. In 1900, 75.1 per cent. of the population above the age of six were illiterate. Schools (1908): 5247 public and over 1600 private elementary; 23 normal (1905), with 1168 students; 32 secondary, with 8624 students; besides special and technical schools and colleges. The University of Coimbra had (1909) 1266 students. Religious toleration prevails, though Roman Catholicism is the State religion.

**PRODUCTION.** The cultivated area of continental Portugal is 26.2 per cent. of the whole; under vines, 3.5; fruit trees, 3.9; forest, 17.3. Wheat, corn, and rye are the principal cereals raised; wine is produced in increasing quantities; about 543,600 acres in 1909 were planted to olives, and the yield of oil was estimated at 11,306,000 gallons. Figs, onions, and potatoes are grown and stock-raising is carried on.

The mines employed, in 1908, 7160 persons; output of sulphur ore, 24,522 metric tons (valued at the mines at 597,478 milreis); wolfram, 620 (340,052); copper precipitate, 3041 (386,150); cupreous iron pyrites, 95,609 (166,995); arsenic, 1655 (90,360); auriferous silver ore, 2224 (58,779), gold (fine), value, 36,990 milreis; anthracite, 4614 tons (19,913); cupreous pyrites, 1121 (19,053); lead ore, 481 (9225); tin ore, 28 (9153).

The value of the fisheries products in 1908 was 5,477,556 milreis (of which sardines, 2,530,260; tunny fish, 440,772); besides 21,152 milreis from the Azores whale fisheries and 393,213 from the cod fisheries.

**COMMERCE, ETC.** The special trade, exclusive of coin and bullion, is given below in thousands of milreis for four years:

	1905	1906	1907	1908
Imports .....	60,678	60,391	61,453	67,257
Exports .....	28,969	30,593	30,410	35,462

For 1909 no totals were available. The principal articles of export are given below, together

with the principal imports and exports for 1908, with their value in thousands of milreis:

Imports 1908	Exports 1908	1909
Wheat .....5,764	Wine .....9,254	9,366
Iron, etc. ....5,053	Animals ....4,051	4,142
Cotton .....4,357	Cork .....2,992	4,132
Coal .....4,232	Fish .....2,223	2,406
Codfish .....3,916	Cottons .....947	1,807
Cottons .....2,180	Fruits .....1,216	1,553
Sugar .....2,516	Timber .....854	970
Machinery .....2,234	Copper .....1,123	905
Rice .....1,878	Olive Oil ....482	694

Of the wine exported, more than half is sent to Brazil and Great Britain. The total (1908) wine exported was divided as follows: Oporto (port), 4,945,417 milreis; *vin ordinaire*, 3,673,973; madeira, 489,184; liqueurs, 145,275. The latest available figures for the principal countries of origin and destination are for 1907: Great Britain, imports 21,046,000, exports 7,368,000 milreis; Germany, 11,940,000 and 2,475,000; France, 6,940,000 and 673,000; United States, 6,315,000 imports (exports not given); Spain, 4,306,000 and 4,971,000; Belgium, 2,237,000 and 937,000; Brazil, 1,901,000 and 5,624,000; Portuguese colonies, 1,988,000 and 4,513,000. Vessels entered (1908), 11,045, of 19,352,976 tons.

Length of railways in operation Dec. 31, 1909, 1758 miles (672 state-owned); of telegraph lines (1907), 5880, and of wires, 13,299; telegraph offices, 516; post-offices (1908), 3682.

FINANCE. The unit of value is the milreis, worth \$1.08. The revenue and expenditure for four years are given below in thousands of milreis:

	1905-6	1906-7	1907-8	1908-9
Revenue .....	60,523	59,943	71,039	70,169
Expenditure .....	63,279	63,265	77,121	75,275

The budget for 1909-10 is given below (1000 milreis):

Rev.	1000 mls.	Exp.	1000 mls.
Indirect taxes .....	29,147	Debt .....	31,057
Direct taxes .....	13,625	Public works .....	10,215
Rec. d'ordre .....	12,712	War .....	7,969
Stamps, etc. ....	6,698	Interior .....	5,594
Domains, etc. ....	4,495	Finance .....	4,590
Other taxes .....	960	Marine .....	3,975
		Civil list, etc. ....	2,896
Total ord. ....	67,637	Justice .....	1,415
Extraord. ....	1,625	Colonies .....	1,125
		Various .....	1,422
Total .....	69,262	Total ord. ....	70,258
		Extraord. ....	4,347
		Total .....	74,605

The expenditure has for many years greatly exceeded the revenue; this deficit has added to the national debt. Total foreign debt, June 30, 1910, 184,448,640 milreis; internal debt, 534,873,260; floating debt (August 31, 1909), 78,540,632. The Bank of Portugal is capitalized at 13,500,000 milreis. The savings banks (2) had (December 31, 1909) 23,576,000 milreis deposits.

ARMY. The participation of the army of Portugal in the political crisis of the year as described below renders difficult any discussion of its strength and organization. Service in the army is obligatory, but exemption by purchase can be secured for certain classes. The army is recruited from three great conscription districts from which an annual quota of about 17,000 men has been obtained. This serves

to form an army maintained on a peace footing of about 30,000 men, these in 1910 being divided as follows: Infantry of the line, 20,000; cavalry, 3000; dragoons, 1800; light infantry, 1200; field artillery, 3400; horse artillery, 600. Guns to the number of 448, a portion of which are of the improved Schneider type, were included in the armament. The figures for the war strength of the Portuguese continued at about 100,000, of which 53,000 were militia, but it was estimated that the ultimate war strength available might amount to 260,000. There is a colonial army of about 10,000 in addition to the regular forces of the republic. There are 4 military districts. Lisbon, Vizeu, Oporto, and Evora, in addition to garrisons at the Azores and Madeira, and the organization of the forces consisted of 4 divisions of the active army; cavalry, artillery and engineers independent of the divisions, the garrisons of the Azores and Madeira, and the reserves.

NAVY. The effective navy (1910) included one armored coast-defense vessel (3200 tons); 5 protected small cruisers (aggregate, 11,266 tons); 14 gunboats, (6876); one torpedo-boat destroyer (530); 4 torpedo boats (240); besides a schoolship, transports, river gunboats, and obsolete gunboats. The personnel includes (1907) 420 officers and 5687 men.

GOVERNMENT. The king (Manuel II) was deposed and a republic proclaimed Oct. 5, 1910. Order was speedily restored by the provisional government, composed as follows: President, Dr. Theophilo Braga (born 1845; assumed office, Oct. 5, 1910); Minister of Justice, Dr. Afonso Costa; Foreign Affairs, Bernardino Machado; Finance, José Relvas; Public Works, Dr. Antonio Luiz Gomes; War, Col. C. Barreto; Interior, Dr. Antonio José de Almeida; Marine, Amaro Azevedo Gomes.

THE REPUBLICAN REVOLUTION: CAUSES. For years past the monarchical parties in Portugal have been weakened by dissensions and unable to form a stable and honest government. The system of rotation in office appeared to be the result of an understanding that the party temporarily in power should not be checked in its corrupt financial practices. When Premier Franco endeavored by illegal means to remove these abuses he succeeded only in stirring up opposition on all sides to his dictatorial policy and in casting further discredit upon the dynasty. His downfall followed the assassination of King Carlos and the Crown Prince in February, 1909. There had been no improvement in general conditions under King Manuel. Rotation in office continued and there were five ministries in the short time that elapsed after his accession. During the recent elections the Republicans had doubled the number of representatives. They were well organized and were ready to seize the first opportunity for decisive action. Plans for a revolution were secretly formed in the early part of 1910, and when the time came for carrying them out the government was unprepared for resistance. The visit of the Brazilian president to the Portuguese Court no doubt called to the mind of the people the overthrow of the Braganza dynasty in Brazil, and the successful setting up of a republic there. Then came the murder of Professor Bombarda, of which the Republican agitators made a very effective use. He was killed by a royalist who had been recently discharged from an insane asylum, and the Royalists denied

that it had any political significance. But inflammatory speeches citing it as a political crime stirred up street riots in Lisbon. These were mainly aimed against the clergy.

**THE OUTBREAK.** Lisbon was in a state of considerable excitement on Saturday, October 1. On the evening of that day the King entertained the Brazilian president at a State banquet and on the following night the Republican civilian leaders held a conference with the military conspirators. What their decision was is not known, but on the night of Monday, October 3, the 14th Regiment raised the standard of revolt and called upon the civilians to join them in marching to the artillery barracks. On Tuesday morning, October 4, this regiment went to the barracks of the First Regiment of artillery. Bands of sailors and hastily armed citizens joined them, and they seized and intrenched an elevation on one of the boulevards to the north of the town. It was only a small body and there were in the city at the time a considerable force of government troops. Only the municipal guards, however, offered any serious opposition, and it looked at one time as if they might drive the small force of revolutionists from their position, but at this juncture guns of two warships opened fire on the Royalists and saved the day. Meanwhile the King remained at the palace until the guns of the fleet were trained upon it, when he fled in a motor car to Mafra and thence by boat to Ericeira. Lisbon was now in the hands of the revolutionists. A republic was declared on October 5, and on the same day a new provisional government was proclaimed under Dr. Theophilo Braga (a professor of literature and well known writer on political subjects) as President, and Bernardino Machado as Minister of Foreign Affairs. A programme of reforms was immediately announced.

**THE PROVISIONAL GOVERNMENT.** The programme of reforms comprised the following promises: Amnesty to political and press exiles and to petty offenders; repeal of the law of summary arrests of February 13, and of Franco's Press law; reform of official style and titles, and a new form of the official oath; extension of legal periods to ten days; vigorous enforcement of the laws of Pombal and other legislation against the Jesuits and religious orders; reorganization of the Lisbon police and the disbanding of the municipal guards for which Republican guards were to be substituted. On October 10th the provisional government published its declaration concerning the religious communities, declaring in force from that time the laws of 1759, 1767 and 1834, which proscribed Jesuitical establishments. It forbade the meeting of any assembly of three or more Jesuits and it confiscated properties of the Jesuits and other monastic orders. On October 12 the new Minister of Finance declared that the government would respect all existing contracts, treaties and orders, and the national debt; that it would reduce the deficit in the budget by revising the taxes and by granting financial autonomy to the colonies; that it would strengthen the army and navy and develop the colonies and that it would maintain the alliance with Great Britain. The two chief internal reforms were the establishment of compulsory secular education and the separation of Church and State. Soon afterwards it issued a proclamation proscribing

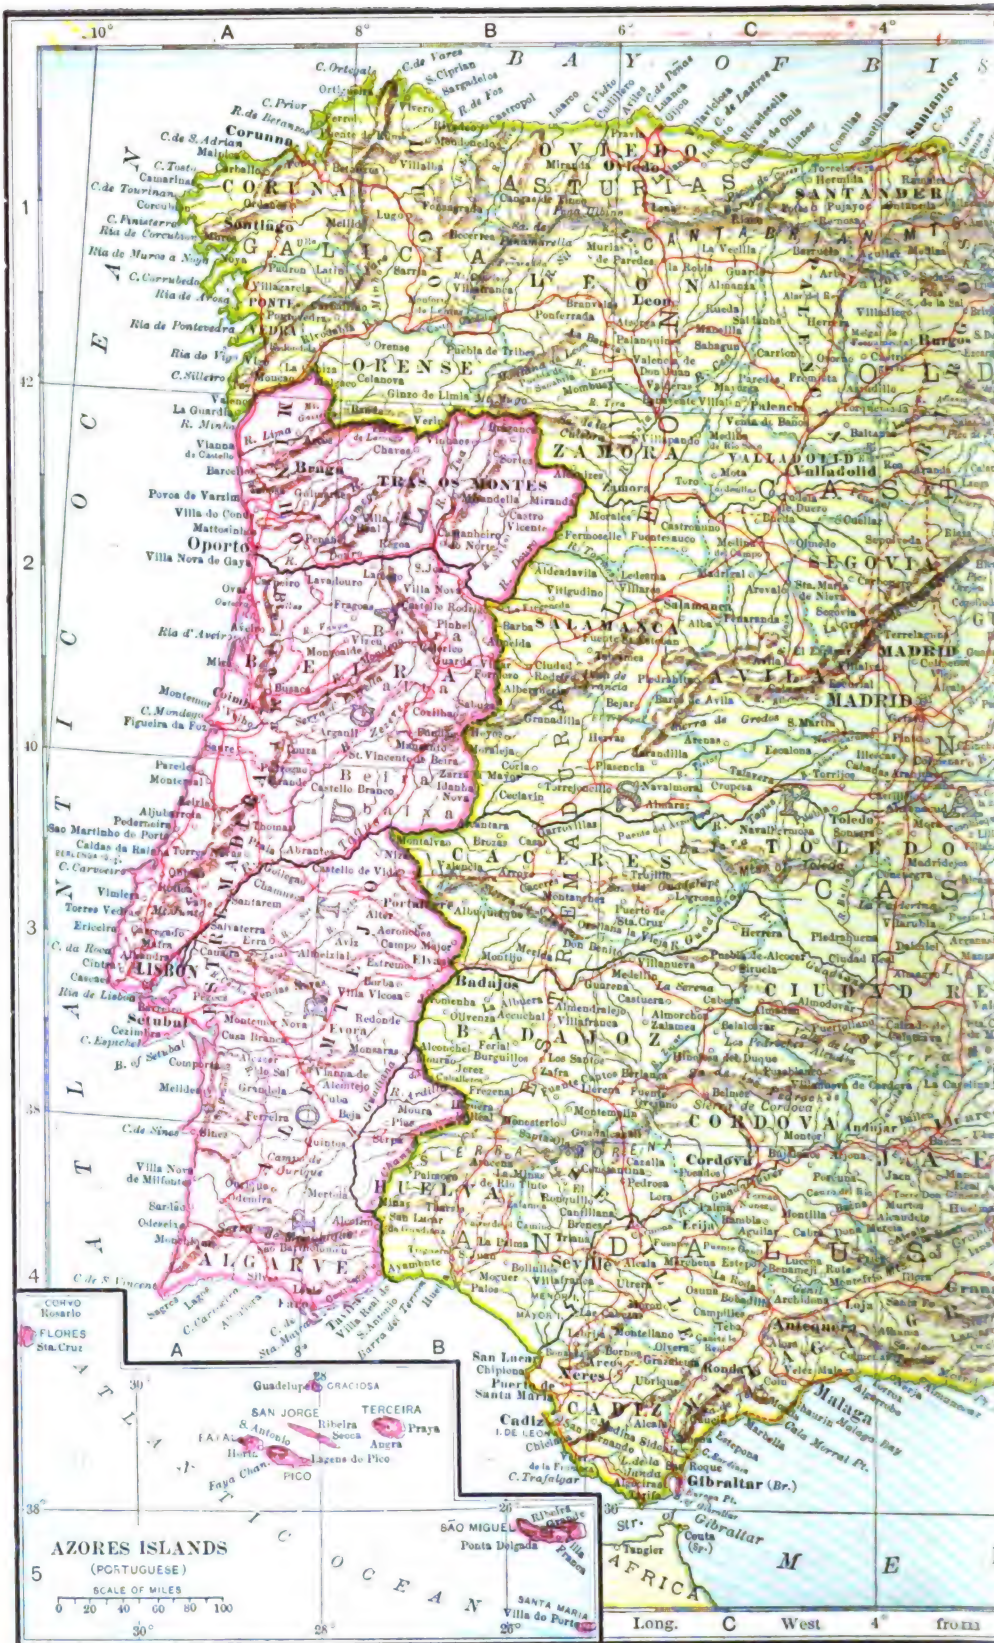

the Braganzas. This declared that the Braganza family was deposed by the revolution of October 5 and exiled for all time, and that this proscription included the ancestors and descendants of ex-King Manuel to the fourth generation. On October 15 it abolished the Council of State and the House of Peers. At the end of October a new press law was promulgated authorizing free discussion in political and religious matters, and providing for trial of press offenses by jury. On October 30 Senhor João Franco, the former "Dictator," was arrested on the charge of illegal administration and the enforcement of dictatorial decrees, but was released on bail. The expulsion of the Jesuits was complete by November 4, when a body numbering 50 were sent on a steamboat to the Netherlands. By November the new Portuguese government had been recognized by four foreign Powers, namely, Great Britain, France, Italy and Spain, and later it was recognized by Brazil. At the close of the year 1910 it was still too soon to determine how effective the new government was likely to be, but from various accounts it appeared that the President was hardly more than a figurehead, being a visionary person of scholarly habits, incompetent to deal with practical affairs, and that he had been virtually superseded in the administration by his nominal subordinates. The movement did not seem to be a popular one, but to proceed from the educated middle-class. The people at large were illiterate, and apathetic toward political questions. The percentage of illiteracy in Portugal has been estimated at nearly 80 per cent. The difficulties before the new government were very serious, the public debt being enormous and the finances in a state of great confusion.

**PORTUGUESE EAST AFRICA**, or **MOZAMBIQUE**. A Portuguese colony on the east coast of Africa. Area, about 293,860 square miles; population, about 3,120,000. Capital Lorenzo Marques (also a port), with about 10,000 inhabitants. Other ports are Mozambique (5500), Beira (4500), Inhambane (3400), Chinde (3000), and Quilimane. The chief products and exports are rubber (in 1908, from the state territories 104 tons, from the Mozambique Company's territories 75 tons), sugar, coconuts, beeswax, and minerals (coal and gold). The Mozambique Company leases from the government and administers the Manica and Sofala region; the Nyassa Company, the region between the Rovuma, Lake Nyassa, and the Lurio. The trade is shown below for 1908 in thousands of milreis:

	Impts.	Expts.	Re-eps.	Trans.
State Ter.....	5,617	3,905	4,836	20,588
Moz. Co.....	1,611	1,377	3,875	3,021
Nyassa Co.....	348	334	38	14

Vessels entered at ports of state territories (1908), 1174, of 2,392,758 tons; at Beira, 381, of 384,499; at the Nyassa Company's ports, 181, of 166,208. The Delagoa Railway from Lorenzo Marques has a length in the colony of 57 miles, and is continued to Pretoria (290 miles). The Beira line to Umtali, on the border of Rhodesia, has a length of 204 miles in the colony, and is continued from Umtali to Salisbury. The line under construction from Lorenzo Marques to the Swaziland border is completed for 42 miles. There are over 2200

miles of telegraph line. Estimated revenue (1909-10), 5,291,444 milreis; expenditure 5,112,758. Governor-General of the state territories (1910) E. A. Garcia Marques.

**PORTUGUESE GUINEA.** A Portuguese colony on the west coast of Africa. Area, about 13,940 sq. miles; population, about 820,000. The adjacent archipelago of Bijagoz, with the island of Bolama, is included with Portuguese Guinea. Capital, Bolama, on the island of Bolama. Rubber, wax, oil seeds, ivory, and hides are exported. Imports (1908), 857,155 milreis; exports, 492,238. Tonnage entered, 128,176. Chief port, Bissau. Estimated revenue (1909-10) 272,860 milreis; expenditure, 332,349. Governor (1910), Lieutenant C. A. Pereira.

**PORT WINE.** See LIQUORS, FERMENTED AND DISTILLED.

**POSITIVE ELECTRICITY.** See PHYSICS.

**POSSART, ERNST VON.** See DRAMA.

**POSTAL SAVINGS BANKS, ARGUMENTS FOR AND AGAINST.** The steady development during the past few years of a public opinion favorable to a national system of postal savings banks finally secured the enactment of a desirable law in 1910. The arguments for and against this measure advanced during the early months of the year differ little from those of previous years. On the one hand the banking interests opposed the measure on the ground that the 24,000 banks of the country rendered adequate service; that postal banks would cut into their deposits; that mutual savings banks are already developed in the industrial States; and that the best method of cultivating thrift is to extend the present system of such banks. There was considerable opposition also on the ground that the measure is socialistic and would lead to an extension of the activities of the national government. Stress was laid also on the administrative difficulties, especially that of investing the deposits. The chief contentions in favor of the measure were that the millions of foreigners in the country are distrustful of established banking institutions and accustomed to government savings banks; that in times of money panic the millions of dollars withdrawn from existing banks would be brought back into circulation through the postal savings banks, whose deposits are guaranteed by the government; and that the postal savings banks would form an important agency in the development of thrift. In connection with this latter argument it was pointed out that even in States like Massachusetts, where the savings banks are very well developed, there is abundant need of the postal banks. Thus in that State there were only 188 savings banks, but 900 post-offices. There are many small manufacturing villages, miles from any bank, but none without a post-office. In that State 91 per cent. of all the deposits of savings banks are credited to 25 per cent. of the depositors, showing apparently that the poorer depositors are reluctant to enter the elegant private institutions now existing.

**THE NEW LAW.** The bill as passed created a board of trustees composed of the Postmaster-General, the Secretary of the Treasury and the Attorney-General. The deposits of any one person are limited to \$100 a month or \$500 in all; an account may be opened with one dollar. Certificates of deposit are to be used in place of pass books; and stamps for small deposits. Two per cent. interest is to be paid. It is pro-

vided that deposits may be exchanged for two and a half per cent. government bonds in denominations of \$20, \$40, \$60, \$80, \$100 or multiples thereof and \$500 or multiples thereof. Special issues of such bonds are authorized. One of the knottiest problems was what should be done with the deposits. The feeling was very strong that the deposits should in some way be available for business purposes in the vicinity where originally deposited. It was declared that they should not be placed in national banks on account of the probability that they would be transferred to commercial centres to be used in speculation; and that they could not be deposited in local State banks without passing from the jurisdiction of the national government. In opposition to this it was held that farmers and others not now using any bank would deposit savings with the post-offices, which would then become available for loans through local banks. Moreover it was held that State banks should be available depositories because national banks cannot make loans on real estate. It was provided in the law that deposits should be transferred to national and State banks of the vicinity; these are required to pay 2¼ per cent. interest thereon, and to secure deposits by public bonds or other securities supported by the taxing power. Five per cent. of the deposits are to be held by the Secretary of the Treasury as a cash reserve. In case of emergency the government may withdraw 39 per cent. of the deposits for investment in government bonds yielding not less than 2¼ per cent. interest.

Congress appropriated only \$100,000 to cover all the expenses for the first year, including equipment, engraving and printing of forms, certificates and bonds, as well as clerk hire. On this account it was possible to establish the banks in a limited number of post-offices only. On October 22, the board of trustees designated one post-office in each of the forty-eight States and Territories. In December the post-masters from these offices were in Washington receiving detailed instructions as to the starting of the new undertaking. The postal banks to be opened on January 3, 1911, were located as follows: Bessemer, Ala.; Globe, Ariz.; Stuttgart, Ark.; Oroville, Cal.; Leadville, Colo.; Ansonia, Conn.; Dover, Del.; Key West, Fla.; Brunswick, Ga.; Cœur d'Alene, Idaho; Pekin, Ill.; Princeton, Ind.; Decorah, La.; Pittsburg, Kans.; Middleboro, Ky.; New Iberia, La.; Rumford, Me.; Frostburg, Md.; Norwood, Mass.; Houghton, Mich.; Bemidji, Minn.; Gulfport, Miss.; Carthage, Mo.; Anaconda, Mont.; Nebraska City, Neb.; Carson City, Nev.; Berlin, N. H.; Rutherford, N. J.; Raton, N. M.; Cohoes, N. Y.; Salisbury, N. C.; Wahpeton, N. D.; Ashtabula, Ohio; Guymon, Okla.; Klamath Falls, Ore.; Dubois, Pa.; Bristol, R. I.; Newberry, S. C.; Deadwood, S. D.; Johnson City, Tenn.; Port Arthur, Tex.; Provost, Utah; Montpelier, Vt.; Clifton Forge, Va.; Olympia, Wash.; Grafton, W. Va.; Manitowoc, Wis.; Laramie, Wyo.

The table at top of next page, from the report of the Comptroller of the Currency, shows statistics for savings banks throughout the world; dates are 1908-9. See also table under SAVINGS BANKS.

**POTASH. See FERTILIZERS.**

**POTASSIUM. See ATOMIC WEIGHTS.**

**POTATOES.** The potato crop of the world in 1910 was a little below normal on account of dry weather in parts of North America and of heavy rain-fall in parts of Europe. In Germany, the leading potato-growing country of the world, the crop was attacked by diseases of the growing plant and by rot of the tuber as a result of excessive moisture. The yield of Prussia was estimated at 1,115,000,000 bushels, which was insufficient to bring the yield for the entire country up to the average production of  $1\frac{1}{4}$  billion bushels. The yield of potatoes in France was estimated at only 310,000,000 bushels as compared with a normal yield of 400,000,000 bushels. In consequence of the small crop the French government raised the embargo against American potatoes with the provision that only sound and clear-skinned tubers be admitted. In Belgium the potato crop was largely a failure and the yield did not meet the country's requirements. Great Britain produced approximately 130,000,000 bushels, which is generally exceeded. The potato crop of Ireland was reduced by a wet and cold season. A large proportion of the crop was small in size as a result of insufficiently high temperatures for the proper development of the tubers. In Hungary, which produced about 170,000,000 bushels, and in Russia with a yield of about 1,000,000,000 bushels the production was normal.

In the United States the potato crop of 1910 was reasonably satisfactory, the total yield being 338,811,000 bushels, as compared with 376,537,000 bushels in 1909. The total value of the yield as based upon the farm value per bushel on December 1st of each year fell from \$206,

545,000 in 1909 to \$187,985,000 in 1910. The area devoted to the crop this year was 3,591,000 acres against 3,525,000 acres the year before. The potato crop suffered much through an extended midsummer drouth in the north-western part of the Mississippi valley, but a partial recovery occurred when the breaking of the drouth was followed by a long favorable autumn. Short crops were produced in Iowa, Minnesota and North and South Dakota, while in the middle and eastern States good yields were secured. The New England States, chiefly Maine, produced a good crop, and Ohio, Pennsylvania, and New York, largely due to better cultivation, the rational use of fertilizers, and adequate rains during the later weeks the plants were growing, also obtained satisfactory yields, although the New York crop was 8,000,000 behind that of the year before. While the crop the country over was uneven in size it was generally sound and the tubers were smooth and presented a good appearance. In the drouth-stricken sections many small tubers were harvested. The yields in the more important potato-growing States were as follows: New York produced 44,676,000 bushels on 438,000 acres; Michigan, 35,175,000 bushels on 335,000 acres; Pennsylvania, 28,160,000 bushels on 320,000 acres; Maine 27,940,000 bushels on 127,000 acres; Wisconsin, 24,700,000 bushels on 260,000 acres, and Ohio, 14,924,000 bushels on 182,000 acres. The average yield per acre by States varied from 41 bushels in North Dakota to 220 bushels in Maine. The acre-yield was low in all the States west of the Mississippi and east of the Rocky Mountains, while in the New England and Pacific Coast States the average acre-yield was over 100 bushels.

**PRATT INSTITUTE.** An institution of practical and technical knowledge in Brooklyn, N. Y., founded in 1887. The number of students in 1910 was 3773, while the instructors and teachers numbered 153. Among the changes in the faculty during the year were the resignation of Miss Edith Greer, director of the school of domestic science, and Arthur L. Williston, director of the school of science and technology. Samuel S. Edmands was appointed to the directorship of the school of science and technology, and the schools of domestic science and school of domestic arts were reorganized and combined, making the school of household science and arts, and Miss Isabel Ely Lord was appointed to the directorship of this school.

Edward F. Stevens was appointed librarian in place of Miss Lord, who had been the Institute librarian for a number of years. The productive funds of the institute amount to \$4,748,337 and the total income for the year was \$359,404, of which \$254,467 was from endowment and \$104,937 was from tuitions. The President is C. N. Pratt.

**PRESBYTERIAN CHURCH IN THE UNITED STATES, often called the SOUTHERN**

**PRESBYTERIAN CHURCH.** A religious denomination organized as a separate body in 1861 as a result of the withdrawal of 47 presbyteries from the jurisdiction of the General Assembly of the Presbyterian Church in the United States of America, because of political action taken by the latter denomination which these presbyteries held that it was incompetent for a spiritual court to take. The denomination in 1910 numbered 281,920 communicants with 3217 churches and 1625 ministers. In the Sunday schools were 226,645 officers and teachers. It has 14 synods and 83 presbyteries. It sustains home and foreign missions and contributes liberally to educational purposes and to evangelical work among the negroes. The total annual contributions to all causes is \$3,500,000. The stated clerk is Rev. Thomas H. Law, and the next General Assembly of the denomination meets at Louisville, Ky., May 18, 1911.

**PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.** A religious denomination which had its beginning as an organization in 1706, when the first presbytery was formed. Presbyterian congregations existed for many years previously, however, among them the congregation at Hempstead, N. Y., which was founded in 1644. The General Synod was established in 1716 and the first General Assembly met at Philadelphia in 1789.

According to the religious census made by the United States Census Bureau in 1906 and published in 1910, the total number of communicants in the denomination in 1906 was 1,179,566. There were 8185 church edifices and 7603 ministers. As compared with the census report for 1890 these figures show an increase of 391,823 communicants and 1223 organizations. Statistics gathered by officials of the denomination show the total number of communicants in 1910 as 1,339,000, with 10,011 churches and 9073 ministers. There were 37 synods and 293 presbyteries. The total contributions for all purposes throughout the year amounted to \$22,936,068, divided as follows: Home missions, \$1,479,271; foreign missions, \$1,311,413; education, \$149,437; Sunday school work, \$205,177; church erection, \$211,786; relief fund, \$172,988; freedmen, \$238,352; colleges, \$460,203; temperance, \$135,181; American Bible Society, \$22,900; General Assembly, etc., \$151,726; congregational, \$16,648,360; miscellaneous, \$1,777,074.

Foreign missions are carried on in nearly all the heathen lands. In 1910 there were 28 missions, 149 stations, 979 missionaries, 595 fully organized churches, 102,141 communicants, 1588 schools and 147 hospitals and dispensaries in which were 519,697 patients. Home missions are carried on in the whole of the United States, including Alaska and Porto Rico and also in Cuba. Mission schools are maintained among the Indians, Alaskans, Mormons, mountaineers and people of Porto Rico and Cuba. Among the institutions maintained whose titles sufficiently indicate their purpose are the Board of Home Missions, Board of Foreign Missions, Board of Education, Board of Publication and Sabbath School Work, Board of Church Erection and a Committee on Temperance. Under the auspices of the denomination are many universities and colleges, among them Princeton University and New York University. Theological seminaries are maintained at Princeton, N. J., Auburn, N. Y., Pittsburg, Pa., Walnut Hills and Cincinnati, O., Danville, Ky., Han-

over, Indiana, and San Francisco, Cal. There are theological departments also in several of the colleges under denominational control.

The real governing board of the denomination is the General Assembly. The 122nd General Assembly of the denomination was held at Atlantic City, N. J., beginning May 19, 1910. Among the important acts of the Assembly are the following: The consolidation of Home Missions, Church Erection and Board for Freedmen was recommended; it was declared that candidates shall not be admitted to the ministry unless their views are in harmony with the essential and necessary articles of the Confession. The action of the Presbytery of New York in ordaining two candidates against the strong opposition of a considerable minority was declared unwise. A historical statement of the relations of the Presbyterian Church and the Reformed Church in the United States was approved. The denomination was asked to raise, during five years, \$3,000,000 annually for the support of the colleges. The work of the Federal Council of the Churches of Christ in America was approved as was also the Laymen's Missionary Movement. A memorial service was held for the late John Stewart Kennedy. The consolidation of the smaller theological seminaries was considered. A plan of coöperation with the United Presbyterian Church was approved. The terms of union with the Welsh Presbyterian Church were reaffirmed. The officers of the General Assembly in 1910 were as follows: Moderator, Rev. Charles Little; Vice-Moderator, Charles L. Thompson; Stated Clerk, Rev. William Henry Roberts; Permanent Clerk, Rev. William Brown Noble; Assistant Clerk, Rev. James M. Hubert.

**PRICES.** The average level of commodity prices remained high during the year though there was some tendency toward decline. This high level was, in the view of many, the chief factor in producing a feeling of doubt and uncertainty in what were otherwise promising trade conditions. It was an important cause of the political upheaval of the year and a topic of general and scientific discussion. Bradstreet's price index, based on the wholesale prices of ninety-six articles, stood at 9.2310 on January 1; February 1, at 9.0730; March 1, at 9.1113; April 1, 9.1996; May 1, at 9.0385; June 1, 8.9105; July 1, 8.9246; August 1, 8.8222; September 1, 8.9519; October 1, 8.9267; November 1, 8.8666; December 1, 8.7844; January 1, 1911, 8.8361. The index for January 1, 1910, was the highest recorded in recent years; there was a decline of 4.2 per cent. for the year. That for January 1, 1911 was 6.9 per cent. above that for January 1, 1909; 6.5 per cent. above January 1, 1908; .9 per cent. less than January 1, 1907; 6 per cent. above January 1, 1906; 9.3 per cent. above January 1, 1905; 10.6 per cent. above January 1, 1904; 10.2 per cent. above January 1, 1900; and 56.7 per cent. above the minimum of July 1, 1896.

Among the articles which showed increased prices for the year were the following: barley, rye, beef in carcasses, mackerel, codfish, coffee,

peas, apples, cranberries, raisins, standard and cotton sheetings, bituminous coal, linseed oil, glass, turpentine, tar, and hay. Among the articles showing decreases were: wheat, corn, oats, flour, milk, pork and pork products, butter, cheese, sugar, tea, molasses, salt, rice, beans, potatoes, lemons, hides, leather, cotton, wool, hemp, flax, pig iron, steel billets, tinplates, steel beams, copper, lead, coke, petroleum, yellow pine, spruce timber, hops, rubber, tobacco, paper. Twenty articles moved upward during the year and sixty-one declined, while sixteen remained stationary.

**CAUSES.** As in the discussions of the preceding year the causes assigned for the high level of prices were numerous and varied. Among the causes mentioned were the unsound banking conditions; cold storage; speculation, both in commodities and in securities; over capitalization; trade-unions; shorter hours and increased wages of labor; the changing status of woman; pure food laws; fraudulent practices by retailers; increase in the number of retailers and the expenses of handling the retail trade; advertising; growth of population; bad distribution of the population; wasteful farming; unreasoning extravagance on the part of consumers; inordinate increases in government expenditures; the tariff; trusts; increase in gold production.

**SENATE COMMISSION.** The causes were investigated by two special commissions, one from the United States Senate under the chairmanship of Senator Lodge, and the other from the Massachusetts legislature. The former, consisting of eight Senators, brought in a majority and minority report; five Republicans signed the one and three Democrats the other. The majority found the chief causes of higher prices to be: increased cost of production of farm products; increased demand for farm products and food, due to the shifting of the population to the cities and to the great stream of immigrants who go to cities and mines instead of to the farms; reduced fertility of the soil; cold storage plants, which enable wholesalers to buy and sell to the best possible advantage; increased cost of retailing due to advertising and high profits needed by many small dealers; increase in the supply of money; higher standards of living. They declared that the tariff was "no material factor" for "the greatest advances have been made in commodities upon which the tariff has had little or no effect"; "the advance in prices during the past ten years appears to have no relation to tariff legislation." They did not find in industrial combinations an important cause. Also "labor unions have not been apparently a serious factor in contributing toward advancing prices." The minority said, "We find the three substantial causes for the advance in prices are: (1) The tariff; (2) trusts, combines, and monopolies; (3) increased money supply."

**MASSACHUSETTS COMMISSION.** This commission was appointed in February and reported May 1, in a volume of 752 pages. It found that "the primary cause of the world-wide advance of prices since 1897 is the increase of the gold supply." "The advance of prices in the United States has been accelerated greatly by the enormous waste of income" through military expenditures, extravagance, and wastage. Considerable influence was attributed to the effect of the shifting of the population to the cities and the exhaustion of natural resources. Neither

trusts, the tariff, nor trade unions "can be regarded as a direct and active cause of the recent increase in prices." Both of the public reports were regarded by the public as influenced more or less by the political bias and interests of those preparing them.

From the standpoint of economic theory the causes of increased prices may be classed under the two general heads of supply and demand. Since prices are merely the ratios of the value of gold to the values of other commodities, prices will be affected by any conditions affecting the supply or demand of gold or the supply or demand of other commodities. Under this classification the most obvious cause is the enormous increase in the supply of gold. The world's production rose from \$118,000,000 in 1890 to \$202,000,000 in 1896; to \$396,000,000 in 1899; to \$401,000,000 in 1906; and to \$454,000,000 in 1909 and in 1910. This great supply of the standard metal could not but cheapen it in relation to other things; as its value fell prices rose. This increase in gold production, due to the discovery of the cyanide process and the development of dredging in California, both methods greatly lessening the cost of extracting gold from what were previously unavailable sources, is the most reasonable explanation of the world-wide rise in price levels. Of almost equal generality is the increase in population and the concentration of people in cities. This has increased the numbers demanding to be clothed and fed, at the same time that the number of persons engaged in raising food products and raw materials has been relatively diminishing. Then in the United States the great expanse of virgin territory so long available has been taken up, and we have begun to pay the cost of the exploitative methods of farming which prevailed until recent years.

The rise of prices in the United States since 1897 has been about one-half more than in England; this can only be explained by factors peculiar to this country. Of such factors the tariff and the combinations fostered largely by the tariff are the most conspicuous. The first object of the tariff is to raise prices of the protected articles high enough to make possible their production in this country; consequently, so long as the tariff is retained, prices must be higher on all articles to which it applies than they would be without it. Then by keeping out foreign competition the tariff favors the formation of combinations, which seek to maintain a profitable price level. It was these relations of the tariff to the increased cost of living that were largely responsible for the defeat of the Republican party in the November elections. See **TARIFF**.

No doubt other causes have contributed to the result. Of especial importance appear the increased demand for goods due to higher standards of living and increased extravagance of expenditures. This latter is shown in the meteoric rise of the automobile industry and the increased importation of luxuries. Trade unions have certainly affected the prices of some things. Retail methods have affected many. See **FINANCIAL REVIEW**.

**PRIMARY ELECTIONS.** See **NOMINATION REFORM**.

**PRIMITIVE MAN.** See **ANTHROPOLOGY** AND **ETHNOLOGY**.

**PRINCE EDWARD ISLAND.** An insular province of Canada (since July 1, 1873). Cap-

ital, Charlottetown. Area 2184 square miles. Population (1901), 103,259. For details, see CANADA. The government consists of the Lieutenant-Governor, appointed by the Governor-General of Canada, the Executive Council (responsible ministry), and the unicameral Legislative Assembly of 30 elected members. In 1910, Lieutenant-Governor, Benjamin Rogers; Premier, Francis L. Hazard.

**PRINCETON UNIVERSITY.** An institution of higher learning at Princeton, N. J., founded in 1746. In the academic year 1910-1911 there was an attendance of 1442 students, divided as follows: Graduate students 141, students in the school of electrical engineering 8, seniors 246, juniors 311, sophomores 325, freshmen 345, students qualifying for regular standing 62, specials 6. The faculty and instructors numbered 174.

Most conspicuous of the events of the year was the retirement of Dr. Woodrow Wilson from the presidency of the university. He resigned on October 20, 1910, to accept the Democratic nomination for governor of New Jersey. See NEW JERSEY. The Hon. John Aikman Stewart, A. M., Senior Trustee, was on that date appointed President pro tempore. Members of the Board of Trustees elected in 1910 are Parker D. Handy, Esq., and Dr. J. M. T. Finney, life trustees; and John W. Barr, Jr., Esq., alumni trustees, to succeed John D. Davis, Esq., whose term had expired. On July 25, 1910, the faculty lost by death Dr. Samuel Ross Winans, professor of Greek and instructor in Sanskrit. The faculty has also lost by resignation Dr. Henry Bedinger Cornwall, professor of chemistry and mineralogy, who becomes professor emeritus; and Mr. Henry Nevius Van Dyke, since 1873 registrar of the university.

The elections to full professorships made in June, 1910, include Dr. William Foster, professor of chemistry; Dr. Roger Bruce Cash Johnson, professor of philosophy; Dr. Robert McNutt McElroy Edwards, professor of American history; Dr. Oswald Veblen, professor of mathematics; Dr. Rudolph Ernest Brinnow, professor of Semitic philology; and Dr. Frank Jewett Mather, Jr., Marquand professor of art and archaeology.

Holder Hall, the dormitory given by Mrs. Russell Sage, was completed in 1910 and furnishes accommodations for approximately 150 men; and another dormitory building which may be ultimately connected with the southerly side of Holder Hall, has been built, partly from memorial gifts of the classes of 1881 and 1885, and partly from the general funds of the university.

Plans for the graduate college (the residential hall for graduate students) have been completed and work will be begun in the spring of 1911. This group of buildings is to include the John R. Thompson graduate college; a memorial dining hall, the gift of Mr. William Cooper Procter; and the Cleveland memorial tower. They are to be located on the golf links, and it is expected that they will be completed by September, 1912. The future development of the graduate school on broad and enduring educational foundations seems secure, through the beneficence of the late Isaac C. Wyman, who has left to the graduate school his residuary estate of between two and three million dollars; and through the generosity of Mr.

William Cooper Procter, of Cincinnati, who has given \$500,000, part of his gift to be used for the memorial dining hall, and the greater part for the endowment of fellowships in the graduate school.

The equipment of the university has also been substantially increased by the endowment of a department of physical education.

The receipts for the year were: \$692,066.92, of which \$180,999.39 were from gifts. In addition there was received for endowment \$789,413.33. The total productive funds of the university amount to \$4,995,200.

**PRIOR, MELTON.** An English artist and war correspondent, died November 2, 1910. He was born in London and was educated in the schools of that city and in Boulogne. He began his career as a war correspondent in the Ashantee campaign in 1873, and in succession served as correspondent and artist through the Carlist rising in 1874, the Herzegovinian, Servian, Turkish, Kaffir, Basuto, Zulu, Boer and Russo-Japanese wars, the Egyptian campaign in 1882, the Sudan and Nile expedition, the Burmese war, the Venezuelan, Brazilian and Argentinian insurrections, the Jameson raid, the Matabele and Afriidi wars and the Creton insurrection. In all, he took part in 24 campaigns and revolutions. In 1875 he went to Athens with the Prince of Wales suite, and traveled with the King of Denmark's expedition through Iceland. He traveled through Canada with the Prince of Wales, now King George of England, in 1901, and through India, 1902. He accompanied the Somaliland expedition in 1903.

**PRISON CONGRESS.** See PENOLOGY.

**PRISON LABOR.** See PENOLOGY.

**PRITCHETT, CARR WALLER.** An American clergyman, educator and astronomer, died March 18, 1910. He was born in Henry County, Va., in 1823, and was mainly self-educated. In 1858-9 he was a special student of astronomy and mathematics in Cambridge, Mass. He entered the Methodist Episcopal ministry, but his main work was as teacher. To this he gave thirty years of his life. He helped organize Central College at Fayette, Mo., and was twice its president. He organized Pritchett College at Glasgow, Mo., in 1866, and was its president for seven years. From 1875 he devoted most of his time to astronomy. He was elected a fellow of the Royal Astronomical Society in 1879 for discoveries concerning the planet Jupiter. For several years he was in charge of the Morrison Astronomical Observatory at Pritchett College. He was the author of the *Publications of the Morrison Observatory*, No. 1 (1885), and contributed to reviews and magazines in the United States and Europe.

**PROHIBITION.** The movement for the restriction of the liquor traffic in 1910 was not attended with such important results as in the two or three years previous. This was due partly to the fact that in the South, where the most active and efficient efforts have been made to restrict the selling of liquor, the areas which can be affected by further legislation are becoming limited. The advocates of restriction,

however, were not idle during the year, and in nearly every State of the Union efforts in some form were made to put bounds on the selling and manufacture of liquor.

Interesting historically was the election of a Democratic legislature in Maine which is pledged to resubmit to the people the question of constitutional prohibition which has been in force in that State since 1858. The chief local issue in the Democratic platform was the resubmission of the prohibition question, and it is practically certain that the people of the State will be given an opportunity to show their sentiment in 1911.

The important events relating to liquor legislation will be found in general treated in the political history of the various States. Early in the year a campaign was begun to secure a petition for a vote on the liquor question in Chicago, and a petition containing 74,805 names was filed, calling for a vote to make the city dry. The City Board of Election Commissioners in March, however, declared this petition invalid. The legislature of Texas in January passed a bill making the sale of liquors in no-license territory a felony, punishable by from three to five years in the penitentiary. In the same month the county supervisors ordered elections to be held under the county local option law in 26 "wet" counties and 10 "dry" counties of Michigan. An active campaign was carried on during February and March. In the election held in the early part of April, 20 counties voted "dry," making a net increase of 10 counties for no license in the State, and voting out of business 319 saloons and 6 breweries. In March a bill in the Kentucky legislature to extend the county unit law to all counties alike was defeated. Local option elections were held in Minnesota in the same month and the temperance forces made a net gain of 27 villages. For the first time in the history of the State more than half the towns voted "dry." The legislature of Maryland defeated the local option bill by a majority of 2. In April the largest number of no-license elections ever held in the State took place in Wisconsin, resulting in a net gain of about 25 communities for no license. In the same month 64 saloons were voted out of 21 towns and cities in South Dakota, making a large net gain of "dry" subdivisions in that State. In May the Supreme Court of Washington declared the county local option law operative in every county of the State, whether under township organization or not. In June the Supreme Court of the State sustained a law passed in 1909 prohibiting the sale of intoxicating liquors to Indians. In the same month the Supreme Court of Kansas handed down a decision declaring that a club cannot maintain lockers in which its members may keep liquors for their private use.

In September the Supreme Court of Michigan handed down a decision declaring that a druggist who sells to a confirmed drinker is guilty, even though he may have sold the liquor on a prescription. In the same month State elections held in various counties of Arkansas showed a majority against license of 23,102. The Kentucky Court of Appeals in September affirmed the action of the lower court declaring it illegal for railway companies to carry intoxicating liquors into local option territory.

In the November elections many important

questions relating to the regulation of liquor traffic were decided. Rural Newcastle county, Delaware, remained "wet" by a majority of 748 votes. The towns of Warren, Westery, Charleston and Portsmouth in Rhode Island voted license. Of 49 cities and towns in Washington voting under the local option law, 28 voted no license. These include the two seaport cities of Bellingham and Everett. The effort to secure a county local option law under the initiative in South Dakota failed. In New Hampshire 8 cities and 23 towns voted for license, and 3 cities and 201 towns voted against license. The vote against prohibition in Oklahoma resulted in the defeat of the liquor amendment by over 22,000 majority, and the effort to adopt a State-wide prohibitory amendment to the Constitution in Missouri was defeated by a majority of 200,000. A similar amendment to the Constitution of Florida was defeated by a majority of about 4600. The prohibition amendment to the Constitution of Oregon was defeated by a majority of 20,000, and as a result of the elections in this State, 15 counties are "dry" as against 21 in 1909. The method of regulating the liquor traffic in force in the various States on December 31, 1910, is shown in the following table taken from the *Anti-Saloon League Year Book*.

#### LICENSE STATES

State or Territory	Peculiarities of License Law
Dist. of Colum.	Licenses granted by commissioners.
Nevada	Licenses granted promiscuously.
New Jersey	Some territory "dry" under special acts
New Mexico	No license can be granted outside of incorporated towns.
Pennsylvania	Licenses granted by Court of Quarter Session.
Utah	Saloons are closed by local decree of councils and county boards.
Wyoming	No license can be granted outside of incorporated towns.

#### PROHIBITION STATES

Name of State	Form of Law.
Alabama	Statutory.
Georgia	Statutory.
Kansas	Constitutional.
Maine	Constitutional.
Mississippi	Statutory.
North Carolina	Statutory.
North Dakota	Constitutional.
Oklahoma	Constitutional.
Tennessee	Statutory.
Total	4 Constitutional, 5 Statutory.

#### LOCAL OPTION STATES

Name of State or Territory	Voting Units
Arizona	Rural County and Municipalities.
Arkansas	Municipalities.
California	County and Municipalities (1).
Colorado	Municipalities, Wards and Precincts.
Connecticut	Townships.

Delaware .....	Counties (2).
Florida .....	Counties and Municipalities.
Idaho .....	Counties.
Illinois .....	Townships, Municipalities and Precincts.

(1) Local option legislation is in hands of county supervisors. (2) Only "wet" county votes in November, 1910. (3) Townships option is by Remonstrance. (4) Iowa is under prohibition except where option is exercised under the Mulct Law. (5) County voting unit does not include cities of 2000 or more. (6) County option granted to certain counties by special legislation acts. (7) County voting unit does not include cities of 2500 or more. (8) By County Courts and City Councils.

The table at the top of next column, taken from the same source as the above, shows the relative "wet" and "dry" population in the different States on December 31, 1910.

**PROJECTILES.** See NAVAL PROGRESS.

**PROSTITUTION.** The report of the Page Commission and subsequent legislation dealing in part with the night court for women in New York City occasioned extended discussion of the proper methods of dealing with public prostitutes. A law was passed, effective September 1, providing separate night courts for men and for women; detention quarters in connection with the court, in which the young can be separated from the hardened; finger-print identification of prostitutes in order to determine the old offenders; medical examination to detect the presence of venereal diseases; enforced hospital treatment for a period of not more than one year, if diseased; less crowded

courtrooms; more and better probation officers, with salaries; and modification of cumulative sentence law, and the fining system, whereby the same woman may appear in court time after time, be fined and turned on the street again to ply her trade. While this bill was pending serious opposition was shown to it on the grounds that the presence of venereal disease was made a condition of conviction; that release from the enforced hospital treatment was to be determined by physical rather than moral cure; that these provisions led in Europe to the public licensing of prostitutes and to an increase in prostitution, and did not result in a decrease of venereal disease; and that women are punished for offenses in which men are at least equally guilty.

Those leading the campaign against the social evil looked upon this law as only a short step in the right direction. Other things to be accomplished included the abolition of the short term workhouse sentence; commitment for indefinite terms to institutions providing physical treatment, industrial, mental and moral training; and adequate punishment of all contributors to and profitors from prostitution, including venal policemen, procurers, professional bondsmen, cadets, politicians, saloonkeepers, and owners of property used; and the suppression of Rains law and other so-called hotels that thrive on this business.

By a decision of Justice Bischoff in the New York State Supreme Court, clause 79, of the Page law, providing for the medical examination of convicted prostitutes, was declared unconstitutional. The court held that this clause was entirely within the police powers of the State and that it was not class legislation, although it applied to only one sex. The decision of the court, therefore, rested upon a point of legal procedure, namely, that the "nature of the sentence, after conviction, is made to depend upon the report of a physical examination without the opportunity of a hearing upon the fact entering into the report." Since the court was thus bound by the report of an examining physician, the decision held that the convicted person was deprived of the benefit of due process of law, the accused having no opportunity to be heard on the facts stated in the report. Plans were at once laid for the securing of legislation providing for the medical inspection and treatment after commitment and their more general use of the Bedford Reformatory for Women, with an abolition of the custom of workhouse sentences. Moreover, the case was appealed.

**WHITE SLAVE TRAFFIC.** During the local political campaign in New York City in 1909 a great sensation was created by charges that Tammany Hall was in league with persons engaged in the white slave traffic. Governor Hughes in his annual message called attention to the gravity of the matter. There resulted the formation of a special grand jury, headed by John D. Rockefeller, Jr., for the purpose of investigating the traffic in Greater New York. From this there resulted a few arrests, but no extensive developments. Another result was to hasten the investigation into the subject already begun by the National Immigration Commission. The report of this Commission on the white slave trade was submitted to the Senate in December and ordered printed as a public document. This detailed the manner by which men and women entice girls from their homes, import them into the country in defiance of the immigration laws, and place them in various American cities. It shows that the police force of New York City, under General Bingham, had greatly reduced the profitability of prostitution, but with the deplorable effect of scattering the prostitutes through the apartment house and residence sections of the city. Likewise in Buffalo, which had at one time been a favorite port of entering for the victims from abroad, police action had greatly reduced the amount of traffic. The Commission concluded that there was no single monopolistic organization controlling the transportation of girls intended for this traffic from one country to another, but rather that there were two loose organizations, one French, the other Jewish. They estimated the average price of girl slaves when bought outright to be about \$500. The report recommended that agents be placed abroad in order more effectively to resist the importation of alien women; and that national authorities cooperate with the States in the suppression both of the trafficking from one locality to another and of the local vice in the larger cities.

On the basis of this report, Congressman Mann introduced a bill aimed at stamping out the traffic by means of the power of Congress to regulate interstate commerce. This bill makes it illegal to furnish transportation from

one State to another for any person engaged in this trade, or to assist any such person from one State to another. Punishment for violation is fixed at ten years' imprisonment and \$5000 fine. Alien women engaged in this traffic, and this is believed to include the majority, are to be deported; and alien traffickers are to be excluded, deported and punished according to circumstances. In the debate on this bill the opposition held that it was unconstitutional since the traffic is not interstate commerce; and also because the attempt of Congress to regulate morals is an invasion of the police powers reserved to the States. In answer to this the defenders of the bill pointed out that the Supreme Court in the lottery case had upheld the right of Congress not only to regulate but to prohibit a business in the interest of the public morals. Moreover, since the States are expressly prohibited from interfering in the transportation of women from one State to another, Congress is the only authority empowered to deal with this commerce. This bill was finally passed on June 25. On September 6, the first indictment under this act was returned by the Federal grand jury in Chicago. Mr. Edwin A. Sims, United States district-attorney at Chicago, who had been engaged in a special investigation of the subject, stated that literally thousands of girls from the country districts are entrapped in the cities in all parts of the country. He stated that ignorant and innocent country girls in search of employment in the city are preyed upon by various methods; and, once located in a prison house of prostitution, cut off from all means of communication with friends and so clothed that they dare not appear in the streets, they are helpless. He stated his estimate that "not fewer than 15,000 girls have been imported into this country in the last few years as white slaves." On this same point the record of the immigration commission had stated that "the numbers imported run well into the thousands each year." Yet Attorney Sims stated that the chief source of supply is not importation from abroad, but from the country into the city.

Investigation of the traffic in New York City was carried on by a Research Committee of the Committee of Fourteen organized in 1905. The report of this Committee, published in the summer, pointed out as a fundamental distinction necessary in any consideration of this subject the difference between the voluntary illegal association of the sexes which it termed the usual "demand and supply," and the real "business of prostitution" engaged in for profit and frequently controlled by persons holding others in involuntary confinement. It points out that the failure to secure effective enforcement of the law is very largely due to the lack of cooperation among the voluntary agencies organized for the prevention, repression, and remedy of the social evil. In the absence of a central committee, political pull and business interests work their will. The report shows the futility of attacking the evil in one form regardless of others. Thus a successful attack on disorderly houses resulted in scattering the evil through the tenement houses, the dance halls, the massage parlors and so-called hotels. The report lays down the proposition that "the laws which the community really desires it can secure, and the

exact degree of other enforcement which it really desires, it can also secure." While therefore, the direct responsibility for the traffic is laid to business interests and political expediency which combine to protect, perpetuate, and deliberately increase it, the entire body of citizens is indirectly responsible. Among the recommendations of the committee are publicity for all, the profit sharers, as well as the unfortunate women; the separation of recreation from vice; the coöperation of officials in prevention and repression; the abolition of fines for repeated offenses in lieu of imprisonment; a system of identification of old offenders; and the codification of laws respecting the social evil. Especially does the report urge the appointment of a centralizing committee, either public or private. The report concludes against the segregation of the social evil within districts defined by law and by police regulation; but it did not present adequate solutions of the extremely difficult problem of what to do with those inhabiting disorderly houses when the latter are suppressed.

The City Council of Chicago authorized the appointment of a committee of thirty citizens to investigate conditions in that city; to propose amendments to the law and means of enforcement; to centralize responsibility in dealing with the matter; and to create, educate and organize public sentiment in support of such measures. Such a commission, to be permanent and to serve without salary and to be appointed by the governor or mayor in New York was recommended by the New York Committee.

Maryland, Massachusetts, New York, New Jersey, Ohio, Oklahoma, Rhode Island, and Virginia passed laws dealing with one or another phase of this traffic.

Two Diplomatic Conferences on the White Slave trade were held in Paris in July, 1902, and April, 1910. The Conference of 1902, attended by delegates from fifteen countries, outlined elaborate investigations and made proposals for a number of international agreements. The report of what had been accomplished at the 1910 Conference showed relatively minor achievements. Laws punishing with imprisonment those enticing girls or women into prostitution were passed in France, Hungary, Norway and the United States. Several countries had organized central information bureaus and had instituted government control of employment bureaus and the examination into the past history of prostitutes. Some coöperations of private and public agencies have been secured, an international organization with headquarters in London has been organized and hundreds of private homes for young girls have been established.

#### PROTESTANT EPISCOPAL CHURCH.

A religious denomination which traces its descent as a member of the Anglican Communion through churches established in the American Colonies by the Church of England. The church in 1910 comprised in the United States 68 dioceses and 23 missionary districts, including those in Alaska and the insular possessions. There were also 11 foreign missionary districts. There were living on December 31, 1910, 105 bishops of the Protestant Episcopal Church, including 33 missionary bishops. During the year seven bishops were chosen. The Rev. Rogers Israel was elected bishop of Erie, and

five were appointed to newly created missionary districts, namely: Rev. George Allen Beecher, of Omaha, Neb., was appointed to be bishop of the missionary district of Kearney to succeed Bishop Graves; Rev. Theodore Payne Thurston to be bishop of Eastern Oklahoma; Rev. Francis L. H. Potts, to be bishop of Wu-hu, China; Rev. Louis Sanford, to be bishop of San Joaquin; Rev. Julius Walker Attwood, to be bishop of Arizona, and Rev. Edward A. Temple to be bishop of Northern Texas. Dr. Potts declined the election.

According to the religious census of the United States made in 1906 and published in 1910 the total number of Protestant Episcopal communicants reported in the former year was 886,942. The church edifices numbered 6922, and the clergymen, 5368. The value of church property was \$125,040,498. As compared with the census report for 1890 these figures show an increase of 354,892 communicants, 1827 organizations and \$43,821,381 in the value of church property. Statistics of the church are gathered yearly by the *Living Church Annual* and *Whittaker's Churchman's Almanac*. According to this authority, the communicants in the United States in 1910 numbered 928,780; the clergy, 5286; the scholars in the Sunday schools, 441,485; Sunday school teachers, 49,396. The increase of communicants over the preceding year was 19,005. The contributions from all sources during the year amounted to \$18,382,609. The statistics reported to the General Convention differ somewhat from those given above. The number of communicants reported to the Convention in 1910 was 937,861 and the clergy numbered 5513. The denomination maintains several theological institutions, a number of collegiate institutions, 114 academic institutions, 66 church hospitals, 62 orphan asylums, 77 homes, and 94 other institutions. Foreign missions of the church are carried on in West Africa, China, Japan, Mexico, Brazil, Isthmian Canal Zone, and Haiti. The denomination also has jurisdiction over certain American churches in Europe and charges a bishop with this oversight. Domestic missions are carried on throughout the United States and its possessions.

The General Triennial Convention of the denomination was held in Cincinnati October 8-21, 1910. Much important legislation was enacted at this session and many matters of general interest and importance were discussed. Perhaps the most interesting of these was the proposition to amend the title-page of the Prayer Book so as to eliminate the word Protestant and to substitute therefore a declaration of the catholicity of the church. This proposal was due to the action of certain prominent laymen and members of the clergy who held a joint conference previous to the convention to discuss the matter. At this conference the following preamble to the constitution of the church was agreed upon: "Amend the title-page to read as follows: 'The Book of Common Prayer and Administration of the Sacraments and other Rites and Ceremonies of the Holy Catholic Church.' According to the use of that portion thereof known as the Episcopal Church in the United States of America, together with the Psalter or Psalms of David." At the opening of the convention the matter was referred to the proper committee of which a majority reported against

the amendment. The debate before the convention occupied two days. When the vote was finally taken it was found that the proposition was defeated by a non-concurrence of the clerical and lay orders, divided dioceses being counted in the negative. The vote was: Clergy, yes, 42; no, 15; divided, 10; Laity, yes, 31; no, 24; divided, 8. It was plain that a large numerical majority of both houses favored the change, but by the system of voting by dioceses the proposition was lost. Perhaps the most important action taken by the Convention was the passage of a constitutional amendment creating suffragan bishops. An amendment was also adopted providing for the election of a presiding bishop who now holds office by seniority of consecration. The Convention resolved to appoint a joint commission "to bring about a conference for the consideration of questions of faith and order, and that all Christian communions throughout the world which confess our Lord Jesus Christ as God and Saviour, be asked to unite with us in arranging for and conducting such conference."

With regard to Canon 19, the so-called "Open Pulpit Canon," enacted at the General Convention of the denomination in 1907, the House of Bishops declared, in reply to a memorial presented by over 1100 of the clergy, that "the clause which restricts to the bishop the right to give permission to those who are not ministers in this church to make addresses in any of our pulpits on special occasions, was not intended to alter and cannot be fairly interpreted as in the least degree modifying the position of the church as expressed in the Common Prayer Book and Ordinal, which restricts the Ministry of the Word and Sacraments in our congregations to men who have received Episcopal ordination." The House of Bishops voted to forbid the remarriage of any divorced person whatever, even of the innocent party, but to this the House of Deputies refused to agree. The Convention refused to adopt a service for the unction of the sick. The Woman's Auxiliary United Triennial offering, which was a special gift from the women of the church for missions, amounted to \$242,110, a substantial gain over the offering of 1907. The proposition to authorize a racial episcopate, with especial reference to negro congregations was defeated by the House of Deputies.

The sessions of the Protestant Episcopal Church Congress for 1910 were held at Troy, N. Y. The following subjects were discussed: "The Individual and the Common Interest in Society," "The Teaching of the Old Testament to Children," "The Church of To-day as a Factor in Human Progress," "Architecture as an Expression of Religion," "The Formative Influence of a Democracy upon the Christian Church," "Revivals and Culture in Religion," and "The Moral Limits of Prayer."

Members of the denomination took an important part in the World's Missionary Conference at Edinburgh (see MISSIONS, PROTESTANT FOREIGN), and work was carried on under the auspices of the Layman's Missionary Movement. The next General Convention meets at New York City, October 8, 1913.

The Church of England in the Dominion of Canada in 1910 celebrated the bi-centennial of the founding of the Church of England in the Dominion. The service was held in the French Chapel of St. Anne at Halifax, and the events

included the dedication of the new edifice of All-Saints' Cathedral, on September 3.

For the social work carried on by the denomination see SOCIAL WORK OF THE CHURCHES.

**PRUSSIA.** See GERMANY.

**PSYCHICAL RESEARCH.** In *Studies in Spiritism*, the author, A. E. Tanner, reaches a negative conclusion regarding the alleged supernatural character of the trance-revelations discussed by the Society for Psychical Research. During six sittings with Mrs. Piper, the author, and G. S. Hall, carried out various rather crude experimental tests, most of which came to an uncertain issue. They believe with others that Mrs. Piper presents a case of secondary or divided personality. The book contains also general arraignment of spiritism. It is to be regretted that the stout assurance with which the author and Dr. Hall write is not more convincingly supported by their empirical evidence. That the persons interested in "research" do not consider the case against spiritism as closed, is made evident in a long and destructive criticism of the Tanner "Studies," written by J. H. Hyslop for the *Journal of the American Society for Psychical Research* (vol. v., p. 1). This review should be read in connection with the book. The examination undergone by Mme. Palladino while visiting this country (YEAB BOOK, 1909, p. 604), convicted the "medium" of using trickery and fraud and tended strongly to discredit her pretense to superhuman powers. The *Proceedings* of the Society for Psychical Research were occupied during the year with the report and interpretation of trance and other automatic writings. The president of the Society was H. A. Smith.

**PSYCHOLOGY.** In pure psychology the main centre of interest in 1910 continued to lie in the problems of intellection and will. The success of the experimental attack upon the more complex processes of mind has made a deep impression upon the science. New problems and new methods within this part of the psychological field have been springing up in abundance. Emphasis has shifted somewhat from thought to will. Doubtless the approach of psychology to common life, with its dominant interest in action, to criminology, and to the pathology of wish and desire, in the Freudian sense, has had something to do with this tendency. But it should also be pointed out that current psychology finds that the problems of thought and will are very closely related. One of the recent revelations of psychology is that thinking and doing depend less upon a special momentary form of consciousness than upon the "purpose" or "task" or "intent" under which these functions are carried out. Thought and volition, that is to say, are alike determined by conditions, mental and physiological, that extend backward through the history of the individual and of the race.

**MEETINGS AND GENERAL NEWS.** The annual conference of American experimentalists was held in Baltimore, April 19-21, at the laboratory of the Johns Hopkins University. A similar conference occurred at the same time in Innsbruck. The American Psychological Association met at Minneapolis and the Southern Society for Philosophy and Psychology at Chattanooga during the Christmas holidays. The New York State Teachers of Educational Psychology con-

vened for the first time at Ithaca, on April 8. *The Journal of Educational Psychology* completed its first year in 1910. It is a new and important resource to the science. An addition from another direction is the *Journal of Animal Behavior*, the first number of which is to appear in January, 1911. The magazine will be devoted to studies of animal behavior from the laboratory and from the field. Upon its appearance the *Journal of Comparative Neurology and Psychology* will discontinue its psychological articles and will devote itself entirely to neurological research. The neurological list for the year is unusually long. The following deaths are to be recorded: William James, John A. Bergström, Noah K. Davis, Paolo Mantegazza and Angelo Mosso. Twenty doctorates in psychology were conferred by American universities during 1910.

**GENERAL BOOKS AND TREATISES.** In *The Evolution of Mind*, J. McCabe has attempted to give, somewhat after the manner of Herbert Spencer, a synthetic account of the racial evolution of consciousness. To this end he has "sought aid in the whole relevant literature of Europe and America." He believes that the world is reducible to two orders of reality, ether and mind, and that it has undergone a twofold evolution, physical and mental. The author takes a conservative view of the distribution of mind among the lower forms of animal life. "The question to be answered is not, can we find any actions in a lower animal which are consistent with a theory of consciousness, but can we find any that are inconsistent with a purely neural action." Choice, purposiveness, and profit from experience are all found to be insufficient criteria of consciousness. The only reliable criterion is the structure of the brain. It is unnecessary to assume the existence of mind so long as the neuro-muscular apparatus can explain behavior. Fish and reptiles may possess a dim, vague consciousness; but there is no final proof that mind appeared before the Tertiary period, or below the higher vertebrate forms. Great changes of climate the author holds to be responsible for the animals that tended their young, that possessed heat-regulators and a bodily protection of hair, fur and feathers. With these creatures the evolution of consciousness progressed at a rapid rate. It is to be regretted that the author's psychological knowledge is not of the same order or range as his biology. He confuses consciousness with "intelligence" and "reason" and limits it quite arbitrarily to creatures with cerebral cortexes like our own. His view of the descent of mind rests upon the doubtful assumption that consciousness must have had some specific biological use and that its presence is to be denied wherever neural and muscular functions suffice for the maintenance of life. The rôle of consciousness in organic and social evolution was the subject of the presidential address of C. H. Judd of the American Psychological Association (*Psych. Rev.*, xvii, 77). Taking self-sufficiency or individual autonomy as the end toward which evolution moves, the speaker contended that "consciousness is a function which promotes self-sufficiency by literally taking up the environment into the individual and there remoulding the absorbed environment in conformity to individual needs." *The Revelation of Present Experience*, by E. Montgomery, seeks to derive a philosophical conception of the

world from the gradual development of the sensory-motor life of organisms. The second and last part of *A Text-book of Psychology*, by E. B. Titchener, appeared during the fall. Part ii includes chapters on perception, association, memory and imagination, action, emotion and thought. The systematic interpretation of recent work upon association, memory and judgment is the best to be found in textbooks. *A First Book in Psychology* (M. W. Calkins) is an elementary text which regards mind as a "self," sustaining relations with other selves and with external objects. The author questions the significance and the adequacy, and depreciates the abstractness, of a science of impersonal mental processes. The book is attractive and interesting in manner. The science and art of devising and administering "tests" of mental capacity were distinctly advanced during the year by the publication of a *Manual of Mental and Physical Tests* (G. M. Whipple). The manual contains instructions for the application of more than fifty tests. It will accomplish much for the critical use and standardization of methods throughout the world. The addresses delivered at the international conference of psychologists at Clark University (see *YEAR BOOK*, 1909, p. 604) have been printed in the *American Journal of Psychology* (April and July, 1910) and also published separately. The lectures contain the best material to be had in English upon psycho-analysis, the association-method, and the psychology of testimony. In a small volume of essays in appreciation, *The Qualities of Men*, J. Jastrow discusses human character and temperament and their expansion under nurlural influences.

**SENSATION AND PERCEPTION, Visual.** The poverty of classical and primitive languages in color names, especially names for green and blue, has for many years puzzled philologists and anthropologists. Gladstone concluded from his study of the Homeric poems that the color sense was poorly developed in the Greeks of the heroic age. Subsequent research has made it plain that the absence of color names, however, does not necessarily imply absence of the visual qualities concerned. R. S. Woodworth now suggests (*Psych. Bull.*, vii, 325) that the discrepancy is to be explained by the small need that primitive peoples experience of designating blue and green objects by color names. Differences between growing and ripe vegetation and changes in the appearance of the heavens, he admits, are indeed important, but they are adequately expressed by terms for fresh and dry, living and dead, clear and hazy, fair and overcast. On the other hand, the coloring of animals has led, so Woodworth thinks, to the practical importance and hence to the wide development of names for the reds and the yellows. "If cows had affected the blues and greens, the history of color vocabularies would probably have been quite different." It is also true, this writer continues, "that the most accessible and most used pigments are red and yellow, and the use of pigments might easily give rise to a variety of objects alike save in color and needing to be designated by reference to their color. With the introduction of green and blue paints and dyes, these colors became important marks in distinguishing household objects; and it is probably owing to the use of pigments that names for green and blue have become stereotyped in European languages."

**Auditory.** When two tuning forks are struck at the same time, certain accessory tones, "combinational tones," are sometimes produced. The pitch-relations of these combinational tones have of late been much in dispute. C. Stumpf, director of the Berlin laboratory, has gone over the whole subject and he finds (*Zeitschr. f. Psych.*, lv., 1) as a result of experiment that the pitch of the most important group of them may be expressed by the formulas,  $h-t$  and  $2t-h$ , where  $h$  stands for the rate of the higher fork and  $t$  for the rate of the lower. Stumpf refuses to accept Helmholtz's reference of these accessory tones to the movements of the drum-skin; though he contends, against Hermann (see YEAR BOOK, 1908, p. 602), that they are truly "subjective." They are probably conditioned both by processes within the ear and within the brain. In his *Studies in Melody* (*Psych. Rev., Psych. Monographs*, 50) W. V. D. Bingham sought in experiment the answer to the question "What is it that makes a sequence of tones melodic?" His results led him to the conclusion that unitariness is the fundamental attribute of melody and that it arises from motor adjustments and attitudes. "It is contributed," he says, "by act of the listener. When tone follows tone in such a manner that the hearer can react adequately to each, when the response to the successive members of the series is not a series of separate or conflicting acts but rather in each instance only a continuation or further elaboration of an act already going forward, then the tones are not felt as discrete, separate, independent, but as 'related' to each other. And when, finally, the series of tones comes to such a close that what has been a continuous act of response is also brought to definite completion, the balanced muscular 'resolution' gives rise to the feeling of finality, and the series is recognized as a unity, a whole, a melody."

**ACTION AND WILL.** *Ueber den Willensakt und das Temperament*, by N. Ach, is an experimental study of the "act" of will. In a previous work (1905), the same author had posited a neural factor, the "determining tendency," which serves to regulate thought and action and to direct consciousness toward a definite goal. Its acceptance by psychologists has helped toward a comprehension of the purposiveness and efficiency of action. It explains, for example, how it is possible for a person to continue at a given task long after the conscious resolution to perform the task has lapsed. In his present study, Ach attempts to ascertain by experimental means what power the will, once "determined," develops; in other words, how and to what degree the act of willing accomplishes its purpose. The "strength" of will is measured by the amount of resistance which is overcome. In the experiments, the observer read over and over a series of nonsense-syllables until the sight and sound of any given syllable tended to bring into consciousness the next following. Instead, however, of allowing the second syllable to enter consciousness, the observer was instructed either to think of a syllable that rhymed with the first or to transpose certain of its letters, thus making a new nonsense-word. His success in carrying out these instructions, (i. e., of suppressing the second syllable), taken together with the intensity of the reproductive tendency, measured the strength of the voluntary act. The suppression of a syllable when the series had been thoroughly learned by heart obviously required

a stronger "will" than suppression in a half-learned series and so on. The number of repetitions of a series which must not be exceeded if the voluntary suppression is to be carried out Ach calls "the associative equivalent of determination." Even where the serial association was not strong enough to destroy the intention to rhyme or transpose, it made itself felt in mistakes and in the delay of the voluntary act. In one case, the associative equivalent was found to lie between 100 and 120 repetitions distributed over nine or ten days of learning. The equivalent depends, of course, both upon the strength of the association (or the reproductive tendency) and upon the strength of the voluntary intention. This pioneer work upon action suggests new and important extensions of the reaction-experiment; it is, moreover, in line with much recent work upon thought. Ach's book has received a long and appreciative criticism by O. Selz (*Zeitschr. f. Psych.*, lvii, 241). Instead of the nonsense-syllables of Ach, H. S. Langfeld (*Psych. Bull.*, vii, 200) displayed to his observers small pictures, and he instructed them to suppress the name of the object shown each time and to answer with any other word that should occur to them. He found that during the course of the experiment, the suppression of the name—at first very difficult—became automatic. The result tends to show that a negative instruction may keep out of attention processes that would otherwise advance to the foreground of consciousness. It has an obvious bearing upon the question of the suppressed (*verdrängt*) complexes of the Freudian school. The differential of voluntary movement is thus stated by E. C. Rowe (*Amer. J. of Psych.*, xxi, 513): "voluntary movement is not a matter of initiation of movement nor a peculiar species of movement per se, but is essentially a form of control and in this respect alone differs primarily from other kinds of movement." The control is sensory, although imaginal processes also play a part. This view differs from the Wundtian conception that the *motive* makes the volition. Rowe discovered that the automatization of a voluntary movement passes through three successive stages: First, perceptual attention to details; secondly, the substitution of images for perceptions, the lowering of the attentive level, and the organization of a conscious "set" which carries the whole action; and thirdly, the elimination of everything but the "set" or *Aufgabe*. The whole process of degeneration may be observed in learning the use of the typewriter. *The Why of the Will*, by P. W. van Peyma, is a popular discussion of the determination of the will in action and thought. It appears to have been worked out by persistent reflection without much historical knowledge of the problems involved. The book is a plea for a form of determinism which would recognize the claims of the moral order and personal responsibility. Like most popular treatises that are self-consciously "scientific," its terminology is at times loose and inaccurate. The ethical tone of the book is wholesome.

**Instinct.** In July, a symposium upon "Instinct and Intelligence" was held in London, and the papers contributed were published in the *British Journal of Psychology* for October. These views of instinct were represented: (1) The terms under discussion are pure abstractions, relating to different aspects of the same mental process, not to different processes

(C. S. Myers). (2) Lloyd Morgan suggested a specific biological function of instinct which was conceived as "practically serviceable on the occasion of its first performance." (3) H. W. Carr defended M. Bergson's view that mind has developed in two very different directions; that instinct, which is an intuitional form of cognition, reaches its highest development in the insects, intelligence in man. (4) G. F. Stout distinguished instinct from the reflex, importing intelligence into the former state, which nevertheless remains congenitally determined. (5) By assuming the presence of "perceptual dispositions" in instincts, W. MacDougall went almost to the length of innate ideas. The symposium, while it betrays the British bias for "cognition," helped to clarify two terms which have long suffered from ambiguity of definition. An historical sketch of instinct from the time of the Greek philosophers is given in H. E. Ziegler's *Der Begriff des Instinktes einst und jetzt* (revised edition, 1910).

**Practice.** Flat stretches, "plateaus" as they are technically called, in the curve of practice have frequently been observed. The learner of a new language or of a skilled performance improves for a time and then either stands still or drops temporarily in proficiency, before further improvement appears in the function. E. J. Swift has suggested (*Psych. Bull.*, vii, 149) that the plateau is due to the fact that "the learner has reached his highest degree of efficiency with the material which the mind has already assimilated, and that further progress requires time for the automatization of new associations." The suggestion lends itself to experimental verification.

**ASSOCIATION, MEMORY, IMAGINATION AND THOUGHT.** The topic of associative learning was much discussed during the year. Methods of learning (i. e., of committing and reproducing series of words or objects) and the use in applied psychology of paired-associates (such as "horse-animal" "day-night") were the two problems most widely considered. A. von Sybel (*Zeitschr. f. Psych.*, liii, 257) had subjects of different-memory type (eye-minded, ear-minded, etc.) commit series of nonsense-syllables by visual reading, by hearing, by articulation, and by the combination of various sensory resources. He found a surprisingly small dependence upon memory-type: i. e., the amount learned was much alike for all learners, despite large differences in the observers' general command of imagery. In the second place, the work shows a tendency for learners to become less visual and more kinesthetic (movement of lips and tongue) with difficult series. This tendency may be related to the violent motor discharges incident to great effort. The validity of the associative law of similarity (one word or idea calling up a similar word or idea) has long been questioned. Peters (*Zeitschr. f. Psych.*, lvi, 161) concluded from wide inquiry, that similarity forms a real basis for reproduction and he explains the result as a "partial perseveration" (i. e., the common part of the ideas associated tends to rise to consciousness through a perseverative tendency), while the unlike part falls away because it is less practised. But it must be remembered that the term "similarity" may mean a great variety of things all of which must be taken into account by a theory of association. The subject needs further investigation. Among the several uses to which the

method of paired-associates may be put is the determination of the common or customary response which different individuals make when a given idea is presented. The "stimulus-word" is placed before, or called out to, the observer, who is asked to respond with the first word which suggests itself. G. H. Kent and A. J. Rosanoff reported (*Amer. J. of Insanity*, lxvii, 37) results from 1000 normal and about 250 insane observers. The normal persons gave many more common responses than the abnormals. Thus to the word "table," 267 normals responded with "chair," to "dark," 427 with "light" and 221 with "night;" while the responses of the insane were much more individual and scattering. The method promises to be of some service in the diagnosis of mental diseases. (Compare a similar study by F. Reinhold, *Zeitschr. f. Psych.*, liv, 183). The psychoanalysts make much of what they call the "complex;" i. e., a specific consciousness which issues from the concealment (either voluntary or unintended) of some fact or event. L. R. Geissler made an attempt to fathom the voluntary form of the complex (*Amer. J. of Psych.*, xxi, 597). The observer chose one of a pair of pictures or stories laid before him at the beginning of the experimental hour and afterward responded in the usual way to a list of words prepared by the experimenter. When a word that was connected associatively with the picture or story chosen called out a complex, the observer made the following introspective note. The complex "is a strongly unpleasant group of ideas (connected with the concealed object), reinforced by certain organic sensations, and characterized by a quick change from focal crowdedness through a momentary blankness to the dominance of a single focal idea."

**Imagination.** In an experimental study of imagination, G. W. Perky (*Amer. J. of Psych.*, xxi, 422) compared the image of imagination with that of memory and also with the perception. She found (1) that the memorial differs from the imaginative image in bodily movements which accompany it, in its peculiar mood of familiarity, in its temporal course, and in its high associativeness; (2) that under proper control (i. e., dimly illuminated figures thrown upon the screen of a dark-room) the imagination and the perception may be easily confused. This fact points to the ultimate likeness in the mental processes involved in perceiving and in imagining objects. The higher and more complicated forms of imagination still remain to be studied.

**Thought.** The largest contribution of the year to the subject of thought is W. B. Pillsbury's *The Psychology of Reasoning*. Reasoning has been treated almost exclusively as a logical problem. It is of the greatest importance, therefore, that a capable psychologist, who is, at the same time, familiar with current logical doctrines, should write a psychological treatise upon the more complex forms of intellection. The author makes a clear distinction between the "concrete individual consciousness" and the logical forms of thought as expressed in language. He lays stress upon the constant organization of consciousness in thinking and upon the "purpose" or "momentary mental set" as the factor which determines the ascription of meaning in the organized consciousness. One further conquest in the experimental psychology of thought is the methodical study of the "concept." In work

done at Leipzig and Berkeley (*The Process of Abstraction*; Univ. of Calif. Pub. in Psych., i, p. 73), T. V. Moore exposed series of geometrical figures, one set after another, instructing his observers to note the recurrence of any figure in the sets. The "abstraction" of the common figure represents the "abstraction" of common elements (as redness, tallness) which go to make up concepts. Over and above the attentive perception and the recognition of the abstracted figures, Moore found a specific mental process, the "concept," which is, he thinks, neither image nor feeling. F. Schwiete, who made use of the tachistoscope and the reaction-method in pursuing the same subject (*Arch. f. d. ges. Psych.*, xix, 475), characterizes the concept as "familiarity," plus either imagery, or an ideational constellation, or a "defining" procedure. Each of the factors is further resolvable. Schwiete carried his analysis further than did Moore. Still, the two researches are to a degree complementary, since one is based upon the use of objects and the other of words. In his study of the processes involved in learning the use of the typewriter, W. F. Book (*Psych. Rev.* xvii, 381) found, in agreement with a suggestion of Titchener's (*Thought Processes*, see YEAR BOOK, 1909, 604), that the conscious attitudes or *Bewusstseinslagen* become imageless, "non-sensory," only after a period of condensation and short-circuiting. He is inclined to posit a like history for the whole class of attitudes and imageless thoughts; namely, that they are genetically derived from, and may be traced back to, imaginal sources.

**Belief.** An experimental study of belief by T. Okabe (*Amer. J. of Psych.*, xxi, 563) revealed the fact that a true belief- or disbelief-consciousness is comparatively rare; that what we call belief is frequently a mechanical acceptance of fact or opinion. When true belief and disbelief were called out in the laboratory they were found—contrary to our accepted notions—not to be opposites but to inhere in one and the same kind of mental state.

**ANIMAL PSYCHOLOGY.** H. Piéron's new book on the evolution of memory (*L'évolution de la mémoire*) rests upon the thesis that mental development is continuous throughout animate nature. The phenomena of memory, he believes, may be traced down to the foot of the scale of living beings and even into inorganic substance. The book follows a fashion in current biology,—a fashion that encourages the drawing of superficial resemblances. It is of doubtful value to psychology. An explanatory psychology of the animal mind which draws upon innate ideas, psychical energy, and the universal mind, appeared from the pen of K. C. Schneider, a Viennese zoölogist (*Vorlesungen ueber Tierpsychologie*, October, 1909). The book is a counterblast to the mechanistic tendency of the physiologists. It adds but little to our knowledge of the consciousness of the animals; though it contains a good deal of clever argumentation.

**Imitation.** From his work with Manx cats, Berry (see YEAR BOOK, 1908, 604) was led to believe that it is through imitation, not instinct, that the average cat learns to kill and to eat mice. But subsequent experiments carried out upon younger kittens in the Harvard laboratory have failed to confirm this belief. Yerkes and Bloomfield write (*Psych. Bull.*, vii, 253): "we are inclined to believe that Berry's results would have led him to quite another conclusion

had he tested his Manx kittens at the age of one to two months in a cage which did not permit the mice readily to get out of sight or reach of the kittens." They themselves found that one kitten less than a month old and another less than two months old "without opportunity for imitation and without other experience with mice than that described above, began to kill and eat mice." They feel fully justified in calling it instinctive. At a later age, the instinct becomes increasingly difficult to evoke. "The practical inference is: allow a kitten to exercise its killing instinct when young if a good mouser is desired." J. P. Porter studied imitation in birds by allowing one that had first learned to open a puzzle-box to watch another go through the same performance (*Amer. J. of Psych.*, xxi, 1). He noted that in some cases the observing bird tended later to modify his movements in the direction of the other's performance. Porter finds what he calls "intelligent imitation" fairly common among birds. A novel test of learning in rats was devised by F. Richardson (*Psych. Rev.*, *Psych. Monographs*, 48) who taught both normal and blind rats to jump from one platform to another. Two blind rats learned to jump eleven inches, showing that the sensory control for such actions is not necessarily visual. To the student of the behavior of insects the new book of W. M. Wheeler's: *Ants; their Structure, Development and Behavior*, is of the first importance. The work includes chapters on sensation, habits, instincts and modifiable behavior. A. Forel, an author much more generous in his attribution of mental powers to insects, has added to his long list of works, *Das Sinnesleben der Insekten*. The book deals chiefly with Forel's own investigation into the sensory life of insects. The teaching and training of animals depend in large measure upon making the desired performance agreeable and lapses disagreeable or even painful. No one, however, has been able to say why an agreeable experience tends to be repeated and "stamped in" and a disagreeable experience avoided and "stamped out." S. J. Holmes (*J. of Comp. Neur. and Psych.*, xx, 145) adopts a suggestion of Hobhouse to the effect that the difference in motor organization may be responsible. If the response is "congruous" (as picking up and swallowing food), it is organized with the food-seeking movements and tends to be repeated. But if it is "incongruous" (as the rejection from the mouth of nauseating substances), there is no assimilation of motor impulses, and the result is subsequent inhibition of the food-taking movements. The hypothesis thus reduces to the principle of physiological facilitation and inhibition. It deserves an experimental test.

**PSYCHOLOGY OF SEX.** A competent review of recent literature on the psychology of sex (H. T. Woolley, *Psych. Bull.*, vii, 335) indicates that heritable mental characteristics are much less dependent upon sex than was formerly supposed; that the observed differences between the minds of men and women are largely owing to social and other environmental influences. The writer finds that current popular opinion tends to believe "that it is the highest duty of woman to refrain voluntarily from developing her own intellectual capacities for fear of injuring society—a form of asceticism to which it is hard to subscribe." E. L. Thorndike expresses the opinion (*Educational Psychology*, 2d ed., 1910) that the dominant position of the male in intel-

lect and action is due in part to social conditions, in part to his aggressive attitude, and in part, finally, to his greater variability to which is owing the preponderance among males both of idiocy and of unusual talent. New books that consider the social, pathological and educational problems of sex are: *Studies in the Psychology of Sex*, vol. 6 (H. Ellis), *Das sexuelle Problem und seine moderne Krise* (E. Mertens), and *The Sexual Life of Women* (E. H. Kisch). In a study of the handwriting of men and women, J. E. Downey (*Psych. Rev.*, xvii, 205) came to the conclusion that "it is possible to determine sex from handwriting in perhaps 80 cases out of a hundred." The "sex-sign," however, is largely influenced by practice, age and professional requirements; i. e., it is not a true "sex" character. Miss Downey used Binet's method of judging the sex of unknown persons from an examination of envelopes addressed by them.

**ABNORMAL.** In the report of a symposium, *Subconscious Phenomena*, Münsterberg, Ribot, Janet, Jastrow, Hart and Prince have distinguished six different meanings of the term "subconscious"; namely, marginal processes, dissociated ideas, secondary selves, potential memories, the subliminal reservoir, and purely neural functions. Of these the first and last are matters of fact; the others are attempts to explain various observations in normal and pathological psychology. The symposium serves to bring together and also to distinguish from one another clinical observation, introspection, medical and psychophysical theory, and mystical speculation. The first instalment of a compendious three-volume *Traité international de psychologie pathologique* written under the editorship of Marie, Bechterew, Clouston, Ziehen, and others appeared during the year. The work is designed to cover all branches of pathological psychology. I. H. Coriat's *Abnormal Psychology* is reviewed under *Psychotherapy*. The use of the associative reaction in the discovery of criminal knowledge voluntarily concealed was discussed in the 1909 YEAR BOOK. Further analysis of the conditions determining the time and the quality of the reaction has recently been made (*Amer. J. of Psych.*, xxi, 162). Twenty-six persons were, in one case, tested with the alternative-box method. But one error in fifty-three tests was made by the experimenter. The reaction-time for the "significant" words was found to be a safer clue than the nature of the response-word. But it also transpired that *irrelevant* words gave abnormally long times when (a) they aroused strong emotions or when (b) they were abstract or unusual in character. The longest single time given to a relevant word proved to be the best criterion of the concealed bit of knowledge. A. Binet insists (*L'année psychologique*, xvi, 372) that the success of the method depends in large measure upon the skill of the experimenter, while F. Ritterhaus denies (*J. f. Psych. u. Neur.*, xvi, 1) that its results can be made the basis for legal action.

**PSYCHOTHERAPY.** *Abnormal Psychology*, written by Dr. Coriat of the Boston City Hospital, treats of a group of functional disorders which includes hysteria, neurasthenia, and psychasthenia. The book interprets these disorders as the result of mental "dissociation." Dissociation means that the mind is disintegrated or "split"; that its normal coherence is dissolved, and that it has become, in part, at least, "subconscious." The problem presented to the
